Unlike most Government offices whose hours for transacting business are usually limited, one will find this genial official in the midst of activity from early in the morning until late in the afternoon. So enthusiastic is Mr. Dannahower in the interests of Porto Rican tobacco and the Tobacco Guarantee Stamps that he carries conviction even to the most skeptical.

There is no question but that much of the success of the Porto Rican product in New York is due to his untiring efforts and personal popularity among the trade. Besides being an exceedingly good judge of a cigar he seems to know just where and how to spend his rather limited advertising appropriation to get the utmost results. The benefits of this propaganda are already attested by the increased demand and firmer prices for Porto Rican tobacco.

Not satisfied with familiarizing the manufacturers as to the superiority of cigars that contain all Porto Rican tobacco or blended with other high grade tobacco, he recently had a booklet compiled, which is called, "The Story of a Porto Rican Cigar," and with a first issue of 30,000 he started to disseminate this information among the smokers.

With an increased crop of excellent grade this year, and higher prices prevailing, he no doubt will have an extra appropriation to spend on advertising, and judging by the results already obtained we look for even greater accomplishments from Agent Dannahower in the future.

Tri-State Co-operative Reports

RALEIGH, N. C., June 11.—More than $500,000 was paid out this week to members of the Tobacco Growers' Co-operative Association from their warehouses in the Dark Fired Belt of Virginia on tobacco delivered since February 17. This payment will be followed by further cash distributions to members of the co-operative association in three states as soon as sufficient sales of tobacco by the Leaf Department of the association warrant third payments to the members in North Carolina and Virginia, and a fourth payment in South Carolina.

That there will be a crop shortage of bright tobacco in Virginia of at least 30 per cent, or well over 30,000,000 pounds, as compared to last year, now seems inevitable. Similar losses have been suffered by the farmers of the Old Belt of North Carolina, and it is generally agreed that the bright tobacco crop of the Old Belt will be 50,000,000 pounds less than in 1922, even with the most favorable conditions hereafter.

Prospective Shortage of 21 Per Cent

More than 800 crop reports from local units of the Tobacco Growers' Co-operative Association have now reached Raleigh headquarters. According to reports from the county secretaries of the tobacco co-operative in 22 out of 28 tobacco growing counties in Virginia there was a prospective shortage of at least 21 per cent in the bright tobacco production of that state up to June 1. It is estimated that since that time the continued dry weather and the loss of plants have increased the shortage of the next crop in Virginia alone at the rate of 1 per cent a day, up to June 11.

The prospects for eastern North Carolina, though far more favorable than in the Old Belt, have been impaired by the lack of rain and the unprecedented migration of negro labor. South Carolina reports the most favorable crop conditions for many years at this season, but there, as in the Eastern Belt, the loss of negro labor is seriously handicapping the tobacco farmers.—S. Pennsylvania Tobacco Market Once More Norma

Early Spring Buying Rush Now Succeeded by a Welcom "Normalcy"— Greater Part of Lancaster Seedleaf Ab sorbed—Everything Running True to Prosperity Form.

LANCASTER, Pa., June 11.—Conditions in local tobacco circles, after one of the most hectic periods in the cigar leaf history of Lancaster county, are once more normal. The customary routine of buying was shattered, and the well-established calendar of tobacco movement went for naught in the splurge of buying that absorbed the greater part of Lancaster seedleaf this spring, and the return to "normalcy" may not be wholly unwelcomed by tobacco men. In the usual run of events the packer, after finishing the casing of his goods during April, would now be following the market with an eye "peeled" for prospective customers who ordinarily commence their operations no earlier than August. And if he had not disposed of a pound of his goods up until this time, with industrial prosperity on the rise as it is at the present, he would feel quite optimistic over the outcome and consider himself "sitting pretty." Everything is running true to regular "prosperity" form in the case of the 1922 crop, except that most of it has passed out of the hands of the packer. No establishments are any longer in possession of a considerable quantity of tobacco and it may be prophesied with every degree of certainty that by the time the demands of fall buyers are met, the warehouses of Lancaster tobacco men will be stripped clean of every case of 1922.

Lasting Good Business Indicated

While selling has ceased almost entirely, and no seedleaf has changed hands during the past week, the dropping off of sales is no indication of a slow market; packers are one in expressing amazement that the very unexpected early rush on Pennsylvania has continued for so long a period. The unprecedented demand for Lancaster leaf is taken as an omen of lasting good business for the grower and packer, and indicates that Pennsylvania tobacco is "coming into its own" as the ideal type of cigar filler.

Coming Out in Excellent Shape

Despite the fact that last year was a very poor tobacco season and presented the most unfavorable growing conditions that have prevailed for years, the 1922 crop is coming out of the sweat in excellent shape. The quality of the leaf is exceptionally good and packers are, on the whole, very well pleased. More than the usual percentage of "black rot" is showing up and in some packings has caused considerable loss. Where the seedleaf was "double bulked," the packers report one hundred per cent sound tobacco and feel themselves amply repaid for the extra time and expense entailed in the additional work on their tobacco. Those who did not bulk sweat their goods, or put it through the bulk but once, are finding, however, that a large percentage of the leaf is damaged by the rot and will be busy during the entire summer, in many cases, sorting the good from the bad. The recurrence of "black rot" in Lancaster-grown tobacco year after year is steadily gaining advocates of the bulk sweat, and it is quite likely that before many more seasons have rolled around the entire production of the county will be subjected to this treatment.

A New Ten Cent All Pennsylvania Probable

That two of the large cigar manufacturers who annually purchase quantities of tobacco in Lancaster will begin the manufacture of a ten-cent solid Pennsylvania cigar in the near future is persistently rumored here. The effect of such a move on the Lancaster marke should the new product meet with the ap proval of smokers, would be very bene ficial. A good quality of tobacco woul be demanded for the manufacture of thi type of "smoke," and the entire Pennsyl vania market would feel the stimulatio of the increased demand.

Favorable Crop Prospects

Several weeks of dry, warm weathe have hastened the transplanting of th 1923 crop along to a point where th greater portion of the plants have bee set into the fields. If the favorabl weather holds, another week will see th end of the transplanting. Usually th grower figures on having his plants in th field by the early part of July, but th excellent growing conditions which force the seedlings along after the period harsh weather early in the season hav resulted in a much quicker stand of plan than was looked for, and the 1923 cro is getting away to a good start. Plan diseases and the various blights whic often greatly lower the quality of th seedleaf are almost unknown this yea and have made their appearance only i isolated spots. Insect pests have deve oped into the most serious menace, an strenuous control measures are bein taken by growers. Altogether, the cro up to this point, is in fine shape ar should come through heavy in yield ar good in quality.

A Queen City Visitor

George M. Berger, the Cincinnati jol ber and dealer, known as one of the big gest tobacco men in the Middle Wes stopped in Lancaster several days la week, en route to his native heath fro the New York convention. Mr. Berg visited the warehouses of his Lancast county representatives, Long & Taylo at Landisville. Long & Taylor packed the neighborhood of 12,000 cases of cig leaf this year.—KEYSTONE.

York County Activities

YORK, Pa., June 11.—An expansion the business of the General Cigar Co. York county is indicated by recent event The company now has seven factories the county and has appointed Howard Cressman, foreman of the York plant the company, to be the superintendent these factories. The factory at Dalla town was purchased recently from th Wertheimer Cigar Co. of Baltimore, ar opened on June 4 with 30 employes as General Cigar Co. plant, with Willia Reiss, who was formerly connected wi the Seven Valleys factory, as forema He has been instructed to add five cig makers a day until the total reaches 16 The White Owl brand of the compa will be made exclusively at the Dalla town factory. It is said the pay is cents a hundred for rolling and 35 cen a hundred for bunching. The Dallastow factory is a two-story frame building.

Cressman came to York from Quake town to become foreman of the Gener Company's plant here three years ag His advancement is a well deserved pr motion, his service with the company ar with T. & O. Co., which was absorb by the General having covered about years. The York factory, which emplo about 350 persons, will have as forem Harry Bubb, who was previously er ployed as foreman at the Seven Valle plant. Paul Emig, foreman of th

D. DREUX, Inc.
Successors to Wm. Quanjer, Inc.
Importers of Sumatra and Java Tobacco
Telephone John 2709 136 Water Street, New York

Windsor factory, will replace Bubb at Seven Valleys. The building at Yoe used by the General as a factory has again been leased by it. The factory which had been owned by H. L. Haines was recently purchased by T. M. C. Smith, John Slenker, and Orey Sechrist who have leased it to the General.

The seven factories of the General Cigar Co. in York county are located, one each in the following towns: York, Hanover, Dallastown, Windsor, Yoe, Spring Grove and Seven Valleys. All the factories are being operated on full time.

The I. Lewis cigar factories in this city and at Yoe are working full force. The York factory is managed by A. H. Richter.

The May business of J. C. Winter & Co., Red Lion Cigar manufacturers, was the best for the year. The shipment of cigars for the month was 2,000,000. The company recently reopened the cigar factory at Bittersville, which had been closed for several months.

The large warehouse of the East Prospect Cigar Co., at East Prospect, is almost completed. It is 135 feet long, 35 ft wide and 14 feet high. The warehouse is built of concrete blocks. It contains a large sweat room; the foundation and entire floor are concrete. The gables are finished in old Dutch style.

Charles A. Rost, tobacco broker, Red Lion, has returned from a business trip through the South.

Stewart D. Shindler, manager of the C. N. Foreman Cigar Co., Red Lion, left recently for New York City, and thence on a business trip through the New England states.

John T. Fiddler, Dallastown, returned home a few days ago after a two-weeks' trip through the Eastern states for the J. W. Minnich Cigar Co., Dallastown.

Vincent Noll has accepted a position as foreman with the Tampa Cigar Co., Red Lion. He will replace Grover Smith, who resigned several weeks ago. Noll was formerly manager of the Red Lion factory of Otto Eisenlohr & Bros.

The H. F. Martin & Co., cigar factory, McKenzie street and Boundary avenue, this city, has been on a three-day-a-week schedule, for the past several weeks, owing to a lack of orders.

A. Shuhart, cigar broker and jobber, Bethlehem, was in York last week on business. He is a distributor of the York Imperial cigar.

York Factories Make Incomplete Reports

York, Pa., June 11.—Notice that the monthly reports filed by the cigar manufacturers of York county are incomplete, inasmuch that they do not contain the number of cigars manufactured each day, as required by regulation No. 8, was received by Collector G. Frank Lindemuth, of the York office, from the commissioner of internal revenue, Washington. Complaint was also made of failure to report as to each day removal of tax-paid cigars, whether of class A, B, C, D, or E. The commissioner informed Collector Lindemuth that if the reports are not made out in accordance with regulation No. 8, they will be returned to the manufacturers.

Attention was also called to the number of invoices. All invoices, it is stated, must be numbered, starting with January 1 of each year, consecutively, from one up. Failure to comply with this instruction will not only mean the return of the monthly forms, but, according to a letter from the commissioner, a penalty will be attached.

To Study European Methods

Washington, D. C., June 13.—Federal Trade Commissioner Houston Thompson and W. F. Notz, chief of the Export Trade Division of the commission, have just sailed for Europe, it has become known, to make some studies for the commission. Mr. Notz will study the operation of export trade associations in various of the European countries while Commissioner Thompson will study the working of the European cooperative associations. It is expected that they will be away for about three months.—Lamm.

Prices of Cigarettes in Germany

Washington, D. C., June 9.—One of the earliest surprises which a stranger visiting Germany for the first time, or returning after a long absence, encounters is given him in the retail tobacco store which he has entered wishing to buy cigarettes, according to a report received by the Department of Commerce on the high price of cigarettes in Germany, from American Consul Richardson at Berlin. The report continues:

The stocks displayed are varied and abundant and at first glance he sees no evidences of abnormal conditions. He makes his selection and asks the price—the stranger's way. Then the surprise comes. He has chosen a box of fifty, probably, with gold tips—the gold-tip cigarette is very popular in Germany—and is then told that the price is 5,000 marks, a normal average figure today. Of course, 5,000 marks just now represent only about 25 cents, American, but the stranger has not yet become accustomed to buying cigarettes at prices involving thousands—even thousands of marks, and he marvels. Perhaps he does not buy.

But there are present reasons why cigarettes are expensive in Germany. The situation, as explained by a recent review of the tobacco industry, is not obscure, but is clearly the consequence of general conditions governing purchase of raw materials, manufacturing difficulties and taxation. This review states, categorically, that a cigarette manufactured from pure tobacco cannot now be retailed at less than 100 marks, and adds that it is certainly not the cost of production alone that is the cause of this enormous advance and is ruining the tobacco trade, but rather the huge charges to be borne by the finished product. It must be remembered that for a cigarette, the retail price of which is 100 marks, the manufacturer does not receive 30 marks, the rest being swallowed up in excise, duty on the raw tobacco and turnover tax. This cigarette corresponds, more or less, to the 1½ pfennig pre-war cigarette, so that the retail price of the cigarette has in reality risen 6,666 fold since 1914, although, after deducting taxes, the price obtained by the manufacturer has really only risen 3,530 fold. It is the taxes that have been increased so enormously and are the cause of the high prices. The pre-war tax for such cigarettes of 2 marks per 1,000 is now 40,000 marks per 1,000, or an increase of 20,000 fold. As the manufacturer does not receive 30,000 marks for 1,000 cigarettes, and the tax paid is 40,000, it will be seen that the tax alone exceeds the manufacturer's gross receipts by more than one-third. Knowing all this, a stranger need no longer wonder that cigarettes are expensive in Germany.—Lamm.

To Sell Flor de Gumbal

Sam Schatt, who for the past 15 years has been with the Hudson County Tobacco Co. of Jersey City, has resigned that position to become representative in the State of New Jersey for the Flor de Gumbal cigar. Mr. Schatt is known throughout Jersey as one of the most energetic and capaple men covering that state. It goes without saying that the Hudson County Tobacco Co. regrets the severance of relations with Mr. Schatt, but it extends to him every good wish for success in his new undertaking. Mr. Schatt is a likeable chap, and has a legion of friends in the trade who will rally to his support. He is a prominent member of the Newark branch of the Tobacco Salesmen's Association.

Showing Sumatra Wrappers

Samuel Holzman, representing Joseph Holzman, leaf dealer, is in Pennsylvania this week, displaying samples of high-grade Sumatra wrappers recently purchased by his organization.

Philadelphia Business Going in Usual Fashio

Week Brought No Changes from Recently Past Performance —Some Progress Made Toward Normalcy in Big Ciga Factories—Leaf Trade Confident of the Future.

PHILADELPHIA, June 12.—The week brought no variation from recently past performances. But some progress has been made towards normalcy in the factories of the big producers having national distribution. Small factories, with restricted outlets, have been experiencing a quiet, not to say depressing period. All the big producers report that the increment of the seashore and mountain vacation period is reflected in the very decided increase of orders for goods in vacation trip packings, and furthermore, that the improvement in the size of orders for current requirements from dealers located in far away points, indicate that the market now has absorbed the large volume of stock, whose delivery early in the year, was delayed by congested transportation facilities. This condition holds true particularly with reference to the big comsuming district along the northern border of the States. Western demand has been continuously good and the Southern is improving.

Retail Situation

Locally, the gain of the week, slight at best, still was most noticeable in the sale of box goods. Counter sales improved too, but relatively not as much. The inordinately hot weather of the week, which had a tendency to close pocket books, was held accountable for the temporarily retarded upward movement of the retail trade. The jobbers generally reported a rather quiet city business but a much more active market throughout the State and particularly in the hard coal region.

While the leaf trade reports continuance of the quiet buying experienced all through May, it is just as confident as ever that ahead there lies good business, and so while there is disappointment, there is nothing even approaching despair in its ranks.

The Halpern Sale

The sale at auction of the effects of the Halpern Cigar Manufacturing Co., which took place during the week, brought to the premises a large number of buyers and spirited bidding. It was most intense for the two labels, Lexie and Edmund Halley. Both were bid in by the Post Cigar Co. at about $800 for the first named, and $575 for the latter. The 50-50 label was bought in by Joseph Halpern, brother of the former proprietor Louis Halpern, who then presented him with it. The brother also bought in a considerable amount of the equipment. It is understood that Louis Halpern will manufacture the 50-50 brand upstate, and that he will enter the stripping busin for the trade here in Philadelphia.

Getting Under Way

With the granting of the charter duri the week to the newly organized As ciated Cigar Manufacturers, whose Phi delphia office and factory is at 1037 R street, and whose Reading plant is Cedar and Green streets, that city, th was launched by the three proprietc Thomas H. Coll, Greg F. M. Smith George I. Watson, a very active sa campaign on the firm's two leaders Rey Oma, brought to it by Mr. Wat as half owner of the old firm of C. Mayer & Co., and the Dependo, wh had been produced by the Smith Ci Manufacturing Co. of Reading, of wh Greg F. M. Smith was president. third member of the firm, Thomas Coll, was on of the originators of H. C. Nolan Co., 23 years ago, and has retained his connections with it. offices are located in the Denckla build Mr. Watson has been in the business 20 years, starting out with the century old firm of that time, Ma Weiner & Co., which made the w known Statesman brand. Coll and V son will travel, while Mr. Smith wil in charge of the factories. The con has engaged 300 hands in the Rea factory, producing 30,000 Dependos day. While the Rey Oma is being duced in the Philadelphia factory. Sev factories will be added to the st throughout Pennsylvania, with Hanc Pa., as the next location.

In New Location

During the week, the old establi firm of Gumpert Bros. removed to Market street. President A. A. Gun has returned from an extended and successful trip to the West, particu in the interests of its new Triangu shape. The firm will occupy the se floor of the new quarters where the offices and store room will be mainta The manufacturing end of the bus will remain in the Tampa factory w recently took over the contract for manufacture of Philadelphia Club an Morena, the firm's old established b The old location at 227 Church stree been used as a factory and sales since the early days of the firm's bus career and it was here in 1856 that the La Morena cigar was made by the gr father of the present proprietor w name the firm still bears. Efforts o company are now concentrated on newly introduced brand of Philade

Cb which is made in 16 sizes and which s ing pushed in this territory, while La M ena is being featured in the West v re it enjoys large sales. Under the e ganization, there was elected to the fiers in the firm: president, A. A. Jupert, vice-president and treasurer, a Schmidt, and secretary, William H. Hartley. The latter was a member of hu firm Hartley & Winslow, long en- ad in business at 2333 N. 8th street.

Closed Out the Business

avid A. Longacre, secretary of Phila- e hia Association of Credit Men, as re- eiver in the voluntary bankruptcy peti- ic filed by Howard W. Little, who suc- eded to the proprietorship of the former Pe. Brothers store at Juniper and Wal- u streets, during the week, sold the ef- ec and closed the establishment. The ot assets were about $2,000 and the a ilities about $6,000.

illiam Breyer has taken title to the et l establishment formerly conducted y A. Weinstein at 12th and Filbert r ts.

At Bayuk Headquarters

Irvis Crane and his brother, members f ie Crane Candy Co., Fort Smith, Ar- a as, and distributors of the Bayuk r hers brands, paid the Philadelphia e quarters of that firm a visit during e week, enroute home from a convention a attended in Atlantic City. The a k firm reports especially good results o the work done in the Baltimore r ory by D. Victor Marks. Joe a sle, long on the sick list but recently c ered, and doing special work in New o state, visited the factory during the e .

Needles Pointing Both Ways

Ilig & Langasdorf entertained during e week B. L. Howes, of the Howes- n maker Co., Detroit, one of the firm's r Western distributors. He stopped r on a motor vacation trip South. The w Needles shape is reported to be dup- c ng in the East the success it met o its very introduction in the West. r ails at two for 25 cents and is packed in 1/20's. Under the supervision of Manager Simon Dietz, a newspaper campaign is broadcasting the merits of the news shape in the Eastern States, and especially in the local territory where it is productive of increased sales.

General Manager Frank Will of the G. H. P. Cigar Co., 3rd and Brown streets, manufacturers of the nationally known El Producto, is on a week's vacation trip through the South.

Howard F. Pent of the Marshall Field Cigar Co., recently made a trip to the New York leaf market where he purchased 212 bales of the finest grade of Java wrappers of the Vorstenlanden crop.

Chinese Tobacco Industry

WASHINGTON, D. C., June 13.—Tobacco is produced in marketable quantities in nearly every province in China and figures in the exports of 40 out of 48 customs stations, according to a report in the hands of the Department of Agriculture. Estimates of the annual production, the report says, vary from 200,000,000 pounds to 900,000,000 pounds. The Chinese Ministry of Agriculture and Commerce estimates the total production in 1915 as 300,000,000 pounds and in 1916 as 900,000,000 pounds.

The importation of leaf tobacco is approximately balanced by exports, the report says, but there is a net annual importation of 8,000,000,000 cigarettes and 30,000,000 to 50,000,000 cigars.—LAMM.

National Crop Prospects

WASHINGTON, D. C., June 13.—The Bureau of Agricultural Economics of the Department of Agriculture, in its weekly comment on crops, has the following to say in connection with tobacco:

"Transplanting of tobacco is in full progress. Plants are late but are apparently plentiful in most areas. Rains have caused some delay and operations are somewhat backward. An increase of acreage over last year seems certain."—LAMM.

No. 1,455,983. CIRCULAR BOX FOR CIGARS. Aaron H. Balliet, Allentown, Pa. Filed Dec. 26, 1919. Serial No. 347,283. 4 Claims.

1,455,983

A cylindrical box comprising two walls of separate thin sheets having opposite edges of each sheet extending parallel to the axis, abutting, spaced circumferentially from the abutting edges of the other sheet and, throughout the greater part of their lengths having the edges free from fastening devices intended to hold the edges to each other or to the other sheet, in combination with uniting means holding the sheets at the top and bottom of the box.

Nitrogen Necessary

(*Continued from page* 31)

In localities where drouth was severe nitrate of soda showed a much greater superiority over sulphate of ammonia, and other nitrogen carriers in increasing yields, than in those localities which had no drouth.

From these results it is recommended that most of the nitrogen for flue-cured tobacco should come from nitrate of soda and sulphate of ammonia, and only sufficient from organic sources to make a fertilizer which will not cake, and which will drill easily through any machine. This will not require over two or three hundred pounds per ton of dried blood, cotton or linseed meal.—H. A. FREEMAN, M. Sc., Tobacco Specialist.

Dark Growers to Get Second Payment

(*Continued from page* 33)

it. Among the bankers present were, Richard Bean chairman of the Louisville bankers committee, Louisville; James C. Utterback, president of the City National Bank, Paducah, the financial trustee for the association; N. H. Dosker, vice-president of the National Bank of Kentucky, Louisville; B. H. Lang, of the First National Bank, St. Louis; C. W. Bailey, of the First National Bank, Clarksville, Tenn.; W. F. Bradshaw, of the Mechanics Trust & Savings Bank, Paducah; H. A. Alexander, of the American National Bank, Nashville; J. H. Payne, of the Bank of Arlington. Arlington, Ky.; J. E. McPherson, of the Bank of Hopkinsville, Hopkinsville.

The matter of whether or not the association should borrow from the War Finance corporation, which has offered a credit of $7,500,000 developed a difference of opinion among the bankers themselves. Mr. Bean advised borrowing a part of the money for the second payment from the War Finance corporation, for the sake of precedent if nothing else. Mr. Utterback thought the loan should be made from the banks of Louisville, Nashville and St. Louis. Mr. Dosker told the directors his bank does not favor the association borrowing from the War Finance corportaion.

R. E. Cooper, director of warehouses estimated that between five and eight million pounds of the 1922 crop remain to be delivered to the pool floors. Mr Cooper's report also should that 163,454,455 pounds of tobacco had been received by the pool from January 15 to June 1. Of this amount 99,444,45 pounds was in the Dark Fired district The amount delivered to purchasers totaled 112,138,165. The unsold tobacco on hand May 28 was 50,344,120 pounds

Driving for More Members

On motion of Clifton Rodes, chief of the field service division, it was decided to open a membership campaign in the Stemming district immediately after the second payment is made to the growers there. It is to close August 25. It was made very positive that that will be the closing date and no extension of time is to be made.

Mr. Rodes reported to the directors meeting a total of 491 new contracts totaling 1,202 acres, as having been received at the headquarters as the result of the membership drive now under way in the One Sucker district. One of the most pleasing features of that campaign which will close finally on July 31, is the support being accorded by the business and professional men and the bankers. In several towns business houses have been closed for a day while the employes went out and helped in the canvass for members.

Mr. Rodes also made a report on the growth of the movement to organize the members throughout the district in neighborhood "Locals," not alone to give direct and quick contact with the headquarters and for the dissemination of information regarding the association, but also to afford the farmers recognized forums for the consideration of any of their neighborhood or farm problems. These locals are being organized rapidly now and a keen interest is being evidenced all over the district and they are being largely attended. Written records are kept of each meeting and a copy of this is sent to headquarters. These reports are furnishing valuable information to the association officials especially in the way of crop reports. These indicate the setting of tobacco has been interfered with by the freaki weather of this spring, and two counties at least, Trigg and Hopkins, have announced that there would be a substantial reduction in the crops. Trigg counties puts it at 25 to 30 per cent less than last year.

The directors adopted a resolution forbidding the association to employ as landlord or tenant who is not a member of the organization. This will apply to all persons who are to become members if they desired. It was stated in the resolution that all association employes must be absolutely free from any outside business involving the manipulation of tobacco.

Former United States Senator Leroy Percy, of Mississippi, addressed the directors on "Co-operative Marketing." Senator Percy said: "The farmer class of the population of the United States is the one out of which better citizenship can be more readily fashioned, and can be made what the demagogue has always told him he was—the bulwalk of safety of the American government—given equality of opportunity. Co-operative marketing is here to stay, just like prohibition and woman's suffrage."

Paducah extended splendid hospitality to the visitors, breakfast being served them in the morning and an elaborate luncheon at the Country Club.

The July meeting of the directors will be held at Clarksville, Tenn.—M. BACON.

Chicago Ready to Celebrate National Pipe Week

Dealers Have Many Fine Window Displays to Observe the Event in Appropriate Style—Practically All Leading Makes of Pipes Being Featured—Some Notable Displays.

CHICAGO, June 16. — National Pipe Week will be celebrated by the Chicago dealers in fitting style. Many fine window displays are now being shown, featuring the well-known lines of pipes, and more are being installed. Chicago has long been a good market for pipes and the sale runs to the better grades. Here are located some of the largest pipe factories in the United States. Among the largest are the Reiss-Premier Pipe Co., I. Linkman & Co. and the Perry Pipe Co., whose products are distributed all over the United States and whose brands are widely known. Among the leading jobbers of pipes, whose headquarters are located here are Iwan Riess & Co., Louis Newman Cigar Co., The Western Pipe Co. and the Chicago Briar Pipe Co. They cover a large portion of the middle and north west.

Churchill's feature the imported Dunhill pipes to their customers.

Carry Only One Brand

Tebbetts & Garland, 16, 18 and 20 North Michigan avenue, feature exclusively "Karzan," a London made Italian pruyere, for which they are the United States agents, and to boost National Pipe Week, Manager Joseph Skala has a full window of Karzan pipes displayed.

Has Large Displays

Albert Breitung, in his 12 stores, has perhaps the largest retail pipe department in Chicago. Among the noted pipes that are now on display are Comoy, Dunhill, Sasieni, all London makes; Perry, Frank DeMuth, M. Linkman and Reiss—Premier Pipe Co.'s pipes.

Albert Breitung has been noted for many years as a handler of only the finest of pipes and in each one of his many stores entire cases are shown. For National Pipe Week his many show windows carry extra displays.

Shows Full Line

Schermerhorn, Inc., a large Loop main store company, features all the popular makes and at all times these stores display pipes in their windows. One of the big features is the imported Calabash line of pipes, which they carry in many fancy sizes.

Where Best Makes Are in Demand

At L. & I. Rubovits, 11 Board of Trade Court, pipes of the better sort are demanded by the stock exchange brokers, and the leading brands featured here are Dunhill, Frank Reiss, Premier and M. Linkman. Joseph Loeser, well up in the art of pipes, takes care of this department for the firm and he is noted as an authority on pipes.

Show Large Line

Iwan Ries & Co. feature in both their retail store and jobbing department a large line of pipes. Their leaders are Milano, from Wm. Demuth & Co.; Kaywoodie, from Kaufman Bros. & Bondy; Gold Dot, from Sam Frank; Sterus line, and the imported Comoy, Peterson and Dunhill. Iwan Ries & Co. carry the largest pipe stock of any jobber here and a large sales force covers the city. Wm. Tobias is manager of the pipe department.

The White Spot

Lilienfield Bros. show a fine display of the imported Dunhill. A large sign in their show window tells the public that they are the "Home of the Dunhill Pipe."

All Set for Event

Wengler & Mandell, in the Hartford Building, are all dressed up for National Pipe Week and Manager Charlie Daly shows Kaufman Bros., Bondy, Wm. Demuth & Co., and Reiss-Premier pipes in a great variety of shapes and sizes.

Every Week and Every Day

Egar & Co., 53 East Adams street, are large handlers of pipes and many extra sales are made by this firm on account of the fine displays they make each week in their windows.

The wholesale cigar and tobacco houses and the wholesale grocers carry large stocks of pipes, as do the mail order houses of Sears, Roebuck & Co. and Montgomery Ward & Co., whose business runs into thousands of dollars yearly.

The Special Pipe Number of Tobacco

The special pipe number of TOBACCO and the National Pipe Week have brought a new idea to the retailers—one that most of them have overlooked and that is, by featuring pipes as they do cigars and cigarettes, they will increase their daily receipts with no additional overhead. H. L. H.

Jesse A. Bloch Reelected President of T. M. A.

At a meeting of the board of directors of the Tobacco Merchants' Association of the United States, held at the offices of the association last week, Jesse A. Bloch, of the Bloch Bros. Tobacco Co., Wheeling, W. Va., was unanimously re-elected president of the association. Mr. Bloch has proven a most able presiding officer. The success of his administration was proven beyond question at the recent convention of the association, when the more

American Buying of Sumatra Slackens

Bayuk Bros., of Philadelphia, bought 517 bales of tobacco at the Sumatra inscription held in Rotterdam last week out of 700 bales purchased for American account.

The American Malaya Trading Co. secured 135 bales of D C M/Deli and D C M/Deli/M.

H. Duys & Co. purchased 48 bales of Pvd K/Deli.

Prices again ran extremely high.

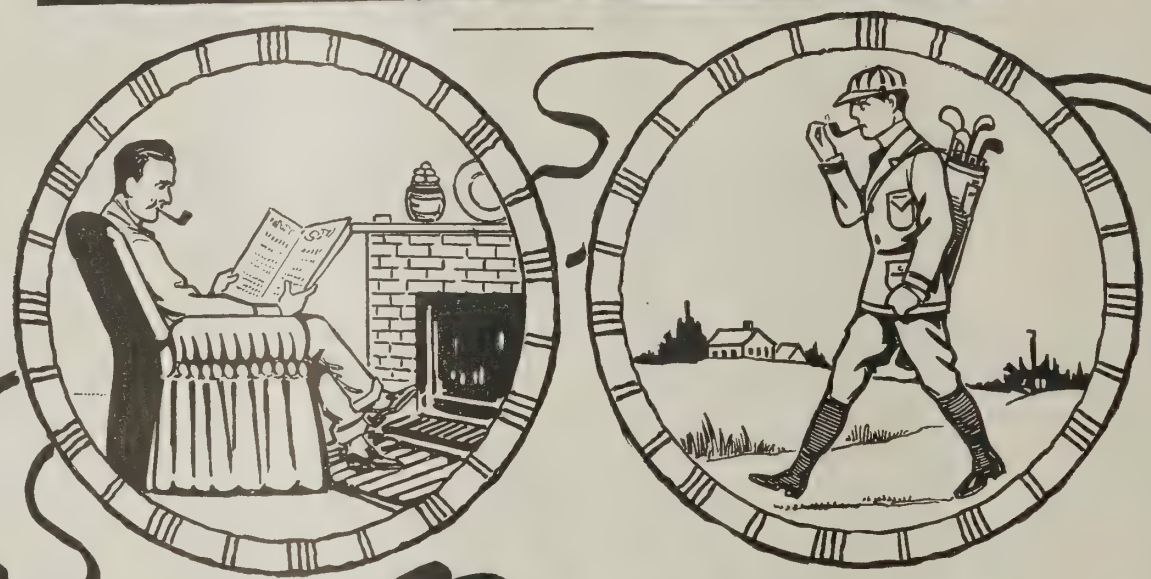
Bakelite Sues on Patents

On May 25, 1923, the Bakelite Corporation brought suit in the United States District Court for the Southern District of New York against D. A. Schulte, Inc., for infringement of the Bakelite Corporation's patents Nos. 942,700 and 942,809. The bill of complaint alleges that D. A. Schulte, Inc., is the proprietor of a large number of cigar stores in New York City and elsewhere and has infringed these patents by selling cigar holders, cigarette holders and other articles made of the resinous phenolic condensation product described and claimed in the patents. Licensees of the Bakelite Corporation manufacture and sell such resinous phenolic condensation product under the trade names of *bakelite* and *redmanol*.

The bill of complaint asks for an injunction restraining the D. A. Schulte, Inc., from sales of such resinous phenolic condensation product and for an accounting for the profits D. A. Schulte, Inc., has realized from past sales and for damages it has caused to the Bakelite corporation, and that the damages be tripled.

The attorneys for the Bakelite Corporation have been instructed to bring the case to trial as promptly as possible.

In Bankruptcy



S. Loewenthal & Sons, jobbers of leaf tobacco, 189 Front street, have been petitioned into involuntary bankruptcy by Edward Berger for $1,148. Benjamin P. DeWitt was appointed receiver under $5,000 bond by Judge Knox. Liabilities about $65,000; assets about $25,000. A petition by three others was also filed against the firm, which is composed of Harry S. and Bert Loewenthal.

A Big Consignment

More than 2,000 bales of Sumatra tobacco arrived this week on the steamer *Volendam*, consigned to H. Duys & Co., including many fancy marks, which are in heavy demand by cigar manufacturers.

Wisconsin Growers Having Favorable Weather

Weather Conditions During Past Week Were Favorable for Transplanting—Plants in the Field Taking Root Rapidly —The Association Holds Annual Election.

EDGERTON, Wis., June 18.—Growing conditions have continued very favorable in most of the tobacco areas of the state. There are a few dry spots, where rain is sorely needed. The cool nights have been generally prevalent, but plant growth is very rapid.

About all the crop will be planted as fast as it can be done, and the bulk of the state's crop will be in the ground by the first of July.

Bekkedal, Jefferson and Lorillard have canned up the remnants of the 1922 crop. The pool's warehouses are gradually getting more adequate crews of assorters, but are anxious for more.

Dispute Regarding Reports

The management emphatically denies any general regrading has been done this year, but admit that general corrections were made, of course; that was to be expected, but nothing took place on the grandiose scale commonly reported. However, employees of the pool will confidentially whisper confirmations of stories of very general regrading. Also, men in the country sections, one hears of many stories about regrading crops, to be classed as exceptional and necessary corrections. Perhaps the regrading has been very exaggerated by stories—that is very possible; and it is also possible that it has been underestimated.

Bekkedal Arousing Great Interest

Bekkedal is reported to be offering the growers not in the pool 25 cents for the '23 they will grow. The fifty or fifty-five per cent of the growers not in the pool in the north is being added to by Bekkedal, also. It is reported reliably that he has been going in the marginal areas, and inducing growers who have suitable fields to raise tobacco. He will loan them money; have experts out under his employ to educate the inexperienced grower; build for them their tobacco sheds—often, it is reported as a bonus to a five-year selling clause to himself. Also that he has been very successful in this rather unique plan to get new growers to raise tobacco, and to increase the non-pooled supply of leaf.

Must "Take Sides"

Certainly, the battle next year in the north between the new and the old systems of marketing, promises at this writing to be as vitriolic as last year's spectacular campaign. In the north, all one ever hears is fishing, La Follette and the tobacco pool. Even storekeepers can not straddle the question with much success, and are constantly under pressure to assume a stand on the question. Nor will their oldest and best satisfied customer continue his trade should their pool sympathies not coincide.—BADGER.

.M.A. Cigar Committee at Work

Unmistakably imbued with an intense ambition to carry out the mandate of the gar Group Meeting held at the recent M. A. Convention, the Cigar Committee appointed at the convention, of hich Henry G. Wemmer is chairman, ld its first meeting at the T. M. A. adquarters, Wednesday, June 13.

Besides Chairman Wemmer, who preded, the meeting was attended by:

George W. Van Slyke, President, G. . Van Slyke & Horton, Albany, N. Y.

Jacob Mazer, Secretary, Mazer Cigar fg. Co., Detroit, Mich.

D. Emil Klein, President, D. Emil lein Co., New York, N. Y.

R. E. Christie, Vice-President, Amerian Cigar Co., New York, N. Y.

William Best, Vice-President, General igar Co., New York, N. Y.

Julius Klorfein, of Julius Klorfein, ew York, N. Y.

Julian S. Bach, of Elias Bach & Son, ew York, N. Y.

Nathan I. Bijur, of E. Rosenwald & ro., New York, N. Y.

Geo. T. Glover, of The Deisel-Wemer Co., Lima, Ohio.

Interesting communications from Julius ichtenstein, Malvin Haas, Ben R. ichty and John H. Fendrich and others, ffering wholehearted co-operation, and ontaining constructive suggestions were ead by Mr. Dushkind, who briefly reted the events that led to the appointent of this committee, laying emphasis pon the fact that the main object was o devise ways and means to increase onsumption of cigars.

A most interesting discussion of every ngle of the cigar situation followed and ontinued for over two hours, with the esult that a sub-committee consisting of William Best, R. E. Christies, Julius ichtenstein, Ben R. Lichty and Samuel ayuk was appointed to give further nought and study to the entire situation, nd to report back to the committee such onclusions as they may reach.

In the meantime, and as a first conructive step, Mr. Best proposed that he individual advertising program now n progress, which is estimated to amount o over a million dollars, be utilized for he general promotion of the cigar busness by including in every advertisement a universal slogan to be adopted s soon as practicable, accompanied by a uniform statement, boosting cigar consumption. Mr. Best forcibly pointed out that this would at once serve the purpose of co-operative advertising, with approximately a million dollars' worth of space to start with, at no cost except to the individual advertisers.

Mr. Best also suggested that the slogan should be used on all posters, show cards, window displays, and all other advertising material.

These suggestions were unanimously adopted, with the understanding that the Slogan Committee be called upon to proceed with all possible speed to give further consideration to the adoption of a suitable slogan. A meeting of the Slogan Committee will accordingly be called within the next few days, when it is hoped that an appropriate slogan will be adopted.

Gans Cigar Co., Ready for Business

Ralph M. Gans has secured the rights, titles, brands and good-will of the old firm of Gans Bros., manufacturers of high-grade cigars, of 437 E. 77th street, New York, and has organized a new corporation under the name of the Gans Cigar Co., Inc.

A new list of stock sizes and prices is in preparation and will be ready in the near future. The corporation will shortly launch a new brand, the Superval, which is to be a fine quality, Sumatra wrapped Havana filler cigar.

The sales organization is rapidly being formed, and, in the meantime, the corporation is enabled to fill orders that the trade may send, as the factory is open and operating in full blast.

Pacific Coast Demand

J. J. Warner, of Grosvenor Nicholas & Co., is in Seattle this week. Mr. Warner reports a greatly increased demand for Cortez and Have-a-Tampa cigars from the Pacific Coast.

On Short Business Trip

Herman Diehl, tobacco commission merchant and exporter of Havana, Cuba, is spending a few days in New York, calling on some of the leading leaf houses. He is to return to Havana, Saturday.

esident Bloch Writes to Mr. de Pilis

lder recent date, Jesse A. Bloch, ident of the Tobacco Merchants' Asction, wrote F. A. de Pilis, vicedent of Patterson Bros. Tobacco ., 565 Fifth avenue, as follows:

'Ir. Dushkind has submitted to me several letters in which you saw fit ggest to reorganize the T. M. A., as ated by you.

'elying thereto, I have to advise you we can find no necessity for, nor do contemplate, reorganizing this assoon.

'hanking you, nevertheless, for your est in the matter."

rs Growers Should Not Go Into Pool

ENEVILLE, Tenn., June 16.—Commenton the co-operative marketing of to-, the *Democrat-Sun* of this city says:

'he *Democrat-Sun* has thousands of friends in Greene County; friends have helped build our business and it possible for a daily paper to be shed in this city today. We are inted in the welfare of these friends. want to see them enjoy the increased perity from year to year that a sucful tobacco market here will mean, we cannot think that this will be the if the county goes into the pool.

'he principle of co-operative marketis fundamentally sound, and if it can roperly worked out, will probably a great thing for the farmer, but lay for Greene County to go into erative marketing of tobacco is not We are just now endeavoring to the production of tobacco up to the it should reach in the East Tense tobacco belt. After years of effort been expended, it is still far below mark it will reach if left unhamrl for several years. This is not true entucky. There production has alreached its limit. While our toproduction is in its infancy, theirs ll grown. If we were to sign the all signers would be called upon to il their small crop in 1924 in the proportion as the Kentucky signers d curtail their large crop. Would e fair?

'he pool is as yet in the experimental . Whether it is to be a success or e has not been determined. When definitely and finally proven beyond ubt to be a solution of the problem arketing that meets the best needs rings the best returns to the farmer, be plenty of time for the Tennessee er to go in.

'n Kentucky the pooling of the crop resulted in night riding, burning of co barns, scraping of tobacco beds. ne County has always been, in the a law-abiding section, and we do want to introduce an element among people that will promulgate lawlessss When the pool has worked out to lace where it is permanent, and en- fair in every respect to the planter, conditions will not exist. We ld not join until that is the case.

'reene County has been getting for ast few years the top price paid out burley tobacco. For the 1921-1922 the Greene County farmers received 31 cents, while those in the pool re- d less than 20 cents. Our market year averaged over 30 cents, and our e have their money, and have met lations with it and invested it. Those e pool don't know yet what they will ve. Our people cannot afford to this way for their tobacco money. want it and need it and have a right when their crop is sold.

'hese are only a few of the arguments can be advanced against the advisa- of our people going into this organon. As we see it, there is only one argument for Greene County going the pool at this time, and that is the istic motive. By going in we should, aps, be helping Kentucky win her from which we cannot fail to reap enefit if we remain outside. Unselfss is a fine quality and is ordinarily e encouraged, but we don't believe county should be called on to make sacrifice now.

'ur market is a trembling, little infant, desperately trying to take its first steps alone. The pool people tell us it is not a drop in the bucket; that the small amount of tobacco we raise means absolutely nothing, in the general scheme of things. This may be true, but it means a great deal to the men, women and children of Greene County, and we want to keep it free from entanglements that would be placed on it by a five-year contract which would jeopardize the freedom of our people.

"If the pool is a good thing, we can go into it later when we are more grown up and better able to hold our own. There is plenty of time for that. In the meantime, let's keep out. We have everything to lose and nothing to gain by going in."

Dark Wrapper Question

Propagandizing on behalf of the dark wrapper, because it is as mild or more so than the lighter colored leaf, bids fair to assume national proportions and to do immeasurable good early in the spring; but the evangelical effort, aiming at more conversions to dark-wrapper preference, seems to have tapered off in favor of the trade's latest, an already quite successful innovation, "National Pipe Week"—may it deservedly succeed!

But one instrumentality for good in the trade has not forgotten the problem of popularizing the dark wrapper in the minds and palettes of the smoker—that's the Government of Porto Rico Tobacco Agency, with new and larger headquarters at 136 Water street, New York City, which is so successfully presided over by William L. Dannahower, the officially-appointed agent, who is commissioned as such by the Porto Rican Legislature and Treasury Department direct.

The latest advertising copy, as evolved by the Millsco Agency, of New York, which supervises all publicity for Agent Dannahower and the Porto Rican Government, plays up from the very head or top lines the all-important fact that a blind-folded smoker could not tell the difference between a light and a dark wrapped cigar.

It should be remembered that much of the advertising of the Porto Rican Tobacco Agency is "consumer copy," which is aimed at the smoker direct. Therefore, any and everything that the Porto Rican Government does through its Tobacco Agency on behalf of the cigars with dark wrappers is fraught with much significance and should be productive of substantial benefit.

Report has it that Agent Dannahower will shortly be flanked by a more formidable staff of assistant agents, and that the advertising campaign to the trade and to the consumer on behalf of Porto Rican tobacco and cigars will be notably augmented now that Porto Rican leaf has come into its own, as a product of highest quality, since the banner crop of last season, and now that the ruling price quotations have mounted up to normal with every prospect of rising even higher.

Agent Dannahower is doing missionary work on behalf of Porto Rican cigars and tobacco day and night, and he is already beginning to see the good effect of his well-directed efforts in that behalf and in the interest of the identifying and classifying guarantee stamps of the Government of Porto Rico, bear fruit.

Those not familiar with the governmental protective regime as initiated by Porto Rico should drop in to Agent Dannahower's headquarters at the address already given and he will describe every stamp of guarantee and classification in a simple, direct and convincing fashion.

Enjoying Europe

Percival Lowe and Mrs. Lowe are spending an enjoyable holiday in Europe. Mr. Lowe sends word that he intends to take in the June 29th inscription at Amsterdam.

Returning to Gotham

Joseph Mendelsohn, of the Stern-Mendelsohn Co., is expected back from Porto Rico towards the end of the month.

Soon to Return

Jerome Waller, of Rosenstadt & Waller, who is at present in Porto Rico, is due to return to New York about July 9.

Market Comment

Business during the month of May continued on a fair scale.

Western tobaccos of the 1922 crop, arrived and sampled, confirm that the crop is very suitable to English requirements, and it is anticipated that available stocks will find a ready market on arrival.

Planting generally in Kentucky and Virginia is reported to be about three weeks later than usual.

He buys by the box

BOX sales of cigars are made to men who have decided on the kind of cigar they like.

MANY Blackstone smokers are the type that buys by the box.

THE Blackstone has a long Havana filler and an imported Sumatra wrapper. Years of consistency in quality and advertising have made it a national favorite. It is made in the most hygienic manner known to cigar manufacture.

Perique Growers to Have Bonded Warehouses

U. S. Department of Agriculture Representative Visits Association Headquarters and Plants—Draws Up License Form —New Orleans Cigar and Tobacco Trade News.

NEW ORLEANS, La., June 16.—R. L. Newton, representing the U. S. Department of Agriculture and Bureau of Markets and Warehouses, was met during the week by President Sigur Martin and a majority of the directors of the Perique Tobacco Growers Co-operative Association, at Convent, La., the official headquarters of the Association. In company with these officers, Mr. Martin visited the State warehouses of the association at both Convent and Lutcher, which are to be converted into U. S. Bonded Warehouses. He selected a number of samples of the different grades of Perique tobacco to be forwarded to Washington, D. C., where they will be carefully preserved and safeguarded against deterioration. The purpose of the U. S. Government in doing this is to establish a uniform standard of grades and to learn through its experts by intensive scientific study what improvements, if any, can be made to the plant. By standardizing the grades, both the buyer and grower of Perique tobacco will be mutually benefited, since one, on the one hand, will know exactly what he is selling and the other, on the other hand, will know exactly what he is buying. It eliminates all possibility of deception, if such were contemplated or entertained.

A form of license was drawn up by Mr. Newton for use by the Association, and Mr. Eugene Mathern qualified to serve as official warehouseman and weigher, clothing him with authority to issue warehouse receipts. A bond of $5,000 was furnished to the government. It is anticipated that the federal warehouse will begin operations within ten days.

While Mr. Newton did not pretend to know much about the Perique tobacco plant, he showed an extended knowledge of the agricultural angle of the general tobacco industry and left a very favorable impression upon the directorate, who were delighted with his visit.

Hard to Shake Off Customs

President W. R. Jackson, of the New South Cigar & Tobacco Co., has his hand in a sling temporarily as the result of an encounter with a fighting crustacean a few days ago, while out "crabbing" on Mississippi Sound. This gives him more time to talk as he is usually a very busy man. Growing reminiscent in his chat with the representative of TOBACCO, he remarked with the knowledge acquired by experience that there have been no changes in the credit system and conditions of New Orleans since the days of the Louisiana Tobacco Co., more than a quarter of a century ago. The people seem to bear out the truth of general observation that custom is a hard thing for some people to forget and overcome. Anent the flurry in the local cigarette world, about which much has been said and written, Mr. Jackson ventured to say that he was unable to see from either a mathematical or a dollar and cent standpoint, the difference between 5 per cent for cash and 2 per cent at 90 days. It was simply a question of who wanted to "tote" the load.

Reports Increased Cigarette Sales

M. G. Davidson, of W. Duke Sons, was a caller at the New South Cigar & Tobacco Co.'s headquarters during the week. He reports a big increase in the sale of Chesterfield and other cigarette products of the company.

L. H. Thomas and "Dick" Stevens, representing Salvador Ricou of Tampa, manufacturer of U. S. A. Cuba cigar, of which the New South Cigar & Tobacco Co., is distributor, drew some attention to themselves and to their product, by driving through the city in a big advertising car of unusual design and construction. The body of the chassis was shaped like a twelve-foot lighted cigar, emitting smoke. The New South Cigar & Tobacco Co. reports an increase of 18 per cent in May business over April. It has added $5,000 to its paid up capitalization during the month.

Surprised at Manila Sales

W. J. Oberle, broker, received an other consignment of Philippine cigar during the week, which provoked th remark from a knowing one that it coul hardly be realized that Manila cigar that sold in this city in 1914 at an aver age price of $9.14 per thousand wer bringing today about $25 a thousand, o an average.

A Queen City Product

The Cigar Co. has taken on a new li which is going like wildfire. It's th Nickel Ford, a product of the L. N Crump Cigar Co., of Cincinnati. It said to be a likely piece of goods. Th outdoor force of the company is battin 100 per cent in handling them.

"Buddy" Gotthelf, factory represent tive of Henry the Fourth, of which t City Cigar Co. is the jobber, was the city during the week. He is ver enthusiastic about his piece of mercha dise. The City Cigar Co. has put two additional men on its outside forc J. W. Cheatham and J. R. Combel, w are said to be proving good producers

Important Real Estate Deal

The United Retail Stores, the holdi company of the United Cigar Stores, a Furst & Kraemer, candy manufacture an auxiliary of the holding company ha purchased the Godchaux building, fron ing Canal and Chartres streets in th city, for $500,000. The Godchaux peop on the other hand, have obtained a 9 year lease on the Macheca building, Canal street, the lower floor of whi is occupied by Max Guiraud, the ma store of Fuerst & Kraemer, Guiraud lease does not expire until 1925. T these kaleidescopic changes of realty the last few days threaten to ultimat change the aspect of Canal street.

Put in Charge of New Store

Leon Bainrauch, manager of Schulte chain of stores, with headqu ters at Canal and Royal streets, on return from his trip to Europe, hustled of to Houston, where he placed in charge of a new Schulte ci store, recently established at the H Hotel. J. Dominques will succeed h

Falk & Babin have appointed W. ledge their Texas representative w headquarters at Houston.

Ralph U. Faulkner, representing Cadiz, Annis & Co., of Tampa, was caller on Valloft & Dreux, their ci jobbers, during the week.

"Bill" Urlidge, of S. J. Freeman Sons, New York, importers of Ma cigars, visited Valloft & Dreux, have the distribution for this city territory of the Flor de Intel brand.

Under Doctor's Care

The friends of George Mayer, se member of the firm of Phil D. Mayer Son, Ltd., have received the painful n telligence from New York, that follow his trip to Washington where he atte the meeting of the Tobacco Merch Association, he was taken seriously He is still there under a doctor's car

Moving to Detroit

The Victor Cigar Mfg. Co. has cl its doors, and Victor Moreau and fa have left for Detroit, to where he move his factory.—CRESCENT.

A Good Georgia Crop

SYCAMORE, Ga., June 16.—Perhaps only crop which has not been he damaged by the recent deluge of ra this section is tobacco. Accordin authorities, this year's tobacco crop p ises to be one of the finest ever prod The tobacco which was planted a l late is especially fine and will beg ripen in a few days.

St. Louis Trade Topics

Doing Satisfactory Business

ST. LOUIS, Mo., June 18.—A good, satisfactory business is reported by the cigar and tobacco jobbers and retailers, and sales show substantial increases over the sales of the same period last year. A big business is expected this week during the convention of the International Rotarians, which will be in St. Louis for several days. A good stock of the leading brands has been provided and none of the Rotary boys need fear but what they can get their favorite brands, and plenty of them.

Moved to New Quarters

The D. & S. Tobacco Co. has moved out in the West End to 4833 Delmar Boulevard, from their former location, at 520 North Third street. The company is going to operate a retail store in conjunction with their jobbing department.

Had Plenty of Smokes

A number of cigar salesmen went to Poplar Bluff, Mo., recently to attend the 27th annual convention of the Southeastern Missouri Drummers Association. "Billy" Leach, sales manager for the F. R. Rice Mercantile Cigar Co., had charge of the local contingent and plenty of good cigars were provided, both going and coming on their special train.

Fred Cody is now connected with Chas. J. Stanley, in the Chamber of Commerce Building cigar store. He did not like the idea of going out to the West End, with the D. & S. Tobacco Co., with whom he was connected, so made a connection with the Stanley stand. Too many of his customers were located in the business district to suit him, and having to make new customers.

To Show Smokers How to Light a Harvester

The Harvester cigar, made by the Consolidated Cigar Co., and distributed by Stickney-Hoelscher Cigar Co., will soon put on an advertising campaign, and Harry W. Lewis is here getting ready for it.

Ben A. Obermer, formerly manager of the local store of the General Cigar Co., has gone with the American Tobacco Co., and has been succeeded by C. E. Ellis, formerly with the General Cigar Co., in New Orleans.

Haymer Lowenhaupt, of Moss & Lowenhaupt, who has been "doing" Europe with Mrs. Lowenhaupt, for the last two months, is back and telling his friends of the many sights he saw over the water.

Arthur Terry of the Mid-West Cigar Co., and C. E. Terry of Bayuk Bros., are back from a trip through southern Illinois.

Norman A. Jones, is now the local representative of the Consolidated Cigar Corp., manufacturers of the Harvester cigar, which is distributed by Stickney-Hoelscher Cigar Co.

Ned Hanks is back in St. Louis, selling Webster cigars, made by the Webster Cigar Co., of Detroit.

F. P. Baldwin, representing the Mendelsohn Co., in the west and central west, selling the famous Paramount cigar, had Grover J. Mendelsohn, from headquarters at Cleveland, Ohio, as his guest for several days recently. They made a campaign, what seems unnecessary, on the Paramount cigar.

Several well known cigar salesmen, who have been in St. Louis, are now covering their respective territories. Among them was Frank Wingfield, of the I. Lewis Cigar Manufacturing Co., who is out through Illinois, Indiana, Missouri and Kansas.

"Among Those Present"

Many cigar representatives have visited St. Louis recently. Among the "Who's Who" in their line, are: E. B. Embry, president of the Embry Tobacco Co.; A. Dallman, of William Demuth & Co.; Irving J. Hain, of R. Steinecke Co.; H. A. McCrary, of San Martin & Leon; Sig Meyer, of F. Lazano, Sons & Co.; Jack Merriam, of M. Bustillo & Merriam; W. P. O'Brien, P. Lorillard Co.; Jose Diaz, of the Preferred Havana Tobacco Co.; Ing. Chamberlain, of Lincoln Bros.; F. L. Nicherson, of the American Cigar Co., and George E. Lewis, of the same company, and B. B. Spector, of the Val Roma Cigar Co.

Notable Window Displays

Several attractive window displays seen recently are those of the Harvester at Stickney-Hoelscher Cigar Co.; Garcia-Vega at Dengler & Hatz; Perfecto Garcia, at Moss & Lowenhaupt; Cuesta Rey, at William A. Stickney Cigar Co., and Robert Burns, at the General Cigar Co.

Ohio Burley Sales

DAYTON, O., June 16.—According to a report of the Burley Tobacco Growers' Association, 2,633,415 pounds of Ohio tobacco were sold through the three local organizations which sent in figures. The tobacco brought an average of $21.65 a hundred pounds. Officials of the organization declare enough growers have signed up this year to at least double the sales for the coming season.

A Welcome Guest

Clyde L. Davis, of the Old Dominion Tobacco Co., Norfolk, Va., has been visiting his old friends in New York.

Cigar Sales Reported Growing

KNOXVILLE, Tenn., June 16.—Officials of the H. T. Hackney Co. are highly pleased with big cigar sales made over the wide territory served by this firm. Salesmen for the company have completed a special cigar selling campaign and the results have more than justified the effort, it was stated.

The demand for cigars is now on the increase and the large numbers of orders recently received shows the good results of the drive.

Macedonian Leaf Through Germany to U. S.

WASHINGTON, D. C., June 20.—Vice Consul Brooks, at Dresden, Germany, reports to the Department of Commerce that large quantities of Macedonian leaf tobacco, amounting to 1,951,453 pounds and valued at $1,136,531 were collected in the Dresden Consular District for shipment from Germany to the United States during the first quarter of this year, as against 10,331 pounds, valued at $452,000 during the same period of last year.

Fiddler Wins Tobacco Prize

Feltman's Cigar Store at Richmond, Ind., recently donated considerable tobacco to the winner of an old time fiddlers' contest held there in one of the theaters. The tobacco was given to the oldest fiddler on the stage, by whom it was greatly appreciated.

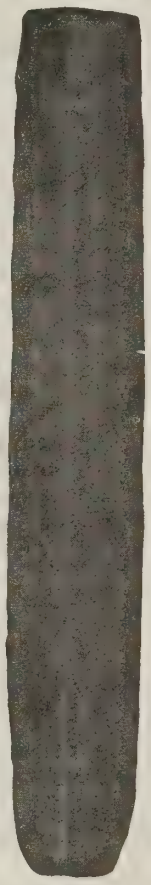
A Model Office

William Quanjer, of the house of H. Fendrich, Inc., has made his new office on the sixth floor of 136 Water street quite ship-shape. The office is handsomely furnished and artistically decorated, and his clients will find it a pleasure to transact business in such ideal surroundings.

Replenishing Stocks

A. Bornholdt & Co. are replenishing their stocks of high-grade Sumatra wrappers, and John Steur, their Amsterdam associate, is securing a good quantity of fancy marks for the organization.

Secures Many Orders



J. J. Riordan, of Grosvenor Nicholas & Co., has returned from the West, where he secured innumerable orders for the high-grade Cortez and Have-A-Tampa cigars.

Annual convention of the Tobacco Association of the United States, at the Grove Park Inn, Asheville, N. C., June 28, 29 and 30.

UPLIFTS AND TURNOVERS

Principally on the courage and resourcefulness of manufacturers depends the future of the cigar industry.

The path to prosperity, today, is obstructed by the high price of tobacco. Nor is there any immediate prospect of lower prices. Because of crop shortages and other things due to circumstances entirely beyond the control of cigar manufacturers, desirable leaf of every kind is scarce and costly.

For months to come, it seems certain that the sellers "will be compelled" to keep up the prices of all leaf suitable for use in cigar manufacturing.

Confronted as they are by prices and difficulties in obtaining the material absolutely necessary to their success, cigar manufacturers occupy an unhappy position. But their plight is not hopeless. Neither is there occasion to despair.

Under existing conditions, the manufacturer can do more than stave off failure. Though, for a while, tobacco prices do remain as high as they are, the capable manufacturer can make progress. He can strengthen his business. He can build up his brands.

The dependability of a brand is more important than the size of a cigar. Especially in Class A, it is a mistake to suppose that value is indicated chiefly by bulk.

The smoker's approval is not proportionate to the amount of tobacco in a cigar. The so-called "big stick" is not a symbol of great enjoyment. "Bigger value" is not shown by size alone.

What does it profit a manufacturer to have a smoker throw a thick butt away?

It is no compliment to the brand for a cigar to be discarded before it is fully smoked.

Waste and loss, to the manufacturer as well as to the consumer, are apparent when a cigar, only partly smoked, is tossed into a cuspidor.

Magnitude isn't always required to impress the customer with the desirability of a cigar.

Putting an excessive quantity of tobacco into cigars does not increase saleability. Cigars that are "oversize" or "heavy weights" do not win the favor of the average buyer.

Not by reducing sizes too much, nor by skimping quality at all, but rather by ceasing to produce cigars out of proportion to obtainable prices, manufacturers advantageously can effect some economies.

While hand labor is immensely important to the cigar industry it is equally true that numerous manufacturers have achieved real success through the utilization of machinery.

Production can be expedited, enlarged and made cheaper by machinery. Devices that save labor, time, money and material well may be considered by the cigar manufacturer who sees, on one side of him a continuance of high prices of tobacco, and on the other the unwillingness of consumers to pay more for cigars.

The manufacturer of a brand that justifies confidence is in a better position to advance prices if he has to; knowing consumers object more to any lowering of quality than they do to a rise in price.

If now or in the future, a cigar manufacturer honestly is unable to sell quality merchandise at ordinary prices, it is his privilege to raise, it is a duty that he owes to himself to ask more. If some customers desert him or if he loses trade here and there because of price increases, his recourse is to get new customers. Among the millions of smokers in the United States, there are many who appreciate what satisfaction good cigars can give. Such smokers, for the pleasure they derive, are willing to pay fairly. If he hustles, if he advertises judiciously, if he builds up a reputation that justifies a higher price, an enterprising cigar manufacturer may acquire more business than he had before.

Congress, possibly, could be induced to give some relief to cigar manufacturers. Without injury to the country, internal revenue taxes on cigars could be reduced or at least modified.

Probably no taxes ever were or will be so absolutely equitable that complaint was out of the question. But the inequalities of the present internal revenue taxes on cigars are shown rather easily, thus:

Class A

Retail Prices		Tax per M.	per cent
3 for 10c. or 33.33⅓	per M.	$4	12
10 for 40c. or 40	per M.	$4	10
6 for 25c. or 41.66⅔	per M.	$4	9 6/10
5c. each or 50	per M.	$4	8

While, theoretically, internal revenue on cigars is supposed to be a tax on the retail price, as a matter of fact according to the four divisions of Class A usually made in retail stores, the tax varies from 12 to 8 per cent.

Class B

Retail Prices		Tax per M.	per cent
6c. each or $60	per M.	$6	10
3 for 20c. or 66.66⅔	per M.	$6	10
2 for 15c. or 75	per M.	$6	8
3 for 25c. or 83.33⅓	per M.	$6	7½

As cigars in Class B are commonly retaile the taxes range from 7½ to 10 per cent.

Class C

Retail Prices		Tax per M.	per ce
3 for 25c. or $ 83.33½	per M.	$9	10 8/1
10c. each or 100	per M.	$9	9
2 for 25c. or 125	per M.	$9	7 2/
15c. each or 150	per M.	$9	6

In the four most frequent divisions of Class the variation of taxes computed on retail pric is from 6 to 10 8/10 per cent.

In each classification it is seen that the low the prices are, the higher is the percentage taxation. Is this fair?

Is it reasonable that three cent cigars shou pay taxes in excess of 12 per cent while 15 ce cigars are taxed only 6 per cent.

Increased prices in Java and Sumatra wra pers, attributable in part to higher duties ma it virtually impracticable now for Class A ciga to have Sumatra or Java wrappers. Nor is the a great percentage of Havana fillers in ciga retailing for less than five cents each.

The tariff doesn't result in heavy collectio on account of Class A cigars. But cigars Classes B and C represent most of the cigar le tobacco upon which import duties are paid.

If internal revenue taxes on cigars are r reduced, the next thing to do would be to mod the classification.

Properly Class B might include all cigars tailing for 7½ cents each and not more than cents each.

More than ten cents up to not more th fifteen cents would designate the cigars Class C.

If the cigar manufacturers of the count practically unanimously, should ask for a mo fication of the classification probably they wo get it. And such a modification, in effect, wo be an important help to many manufacturers

It would be an aid to brand building.

On various sizes it would enable quality to maintained despite rises in tobacco prices.

It would not be too big a concession to ask Congress under existing circumstances.

WAKE UP! AND MEET YOUR FRIENDLY RIVAL.

Progressive and Prosperous Tobacco-Growing Community

Gadsden County, Little Heard of, Modestly Advertised, Slow at Boasting, Is a Florida County Deserving of More Than Passing Consideration as an Agricultural Section—South Georgia Shares Honors With It in the Tobacco-Growing Industry

By DICK STANMORE

LORIDA'S greatest marketed agricultural crop is citrus, considered in dollars and cents, with truck crops following close behind. People are told that those industries are intensive; that s growing and vegetable growing in South ida are on a very high plane; that the nern half could well look to the southern of the state for precept and example.

it here is to enter another applicant for rs when it comes to up-to-date, intensive, ressive agriculture. Gadsden County, little d of, modestly advertised, slow at boasting, Florida county that deserves more than ng thought and consideration, when it s to agricultural standing.

Not Envious of Other Sections

is county is the heart of the tobacco grow- ndustry of this state and of South Georgia. ionor justly due to South Florida counties he very high place they have attained in production of citrus fruits and vegetables, what they have achieved entitles them to all redit and honor that have or ever will be owed upon them, for that matter, but there other honors to be laid at other doors. out trying here to name other doors de- ng of honer and commendation, just praise due consideration, let it be said without vations or any equivocation that Gadsden ty, Florida, is one of the foremost agricul- counties of the great South. However, it truth that the major product of this county etter known, more widely used and more us even a thousand miles away than right in other Florida counties.

Handsome and Wholesome Returns

ere may be others whose grand and total pped products" equal a little more than of the county receiving special mention is article, but there is none which can claim gle industry of a single crop giving such some and wholesome returns to the man e soil.

aking enough of the staple and food crops ed herself, Gadsden county can say, "I am y rich kingdom in myself."

ery farmer grows his crops of corn, hogs, its, potatoes, sugar cane, fruits and vegeta- enough of each to supply his own needs maybe a little to sell. The growing of r cane and the manufacture of sirup has be- so important here that it is considered d only to tobacco, from the standpoint of y brought into the county. Cattle raising dairying has the same and as good a chance as elsewhere, and the farmers are rising to opportunities along these lines. Within ast few months they voted to clean out the This work is proceeding to a successful , and already the cattle business is becom- profitable one.

en there are other industries in Gadsden. ably more fullers earth is mined in this y than in the rest of the world. But we vriting of Gadsden county as a grower of co; then, enough of this.

Tobacco Culture

bacco is grown extensively and intensively adsden county, more intensively than ex- vely, for of the 346,240 acres of land in county, the tobacco business is confined to about 3,400 acres, it is grown extensively, at fully three-fourths of her people make most of their living from this one staple crop.

Tobacco is grown intensively here in that the time, thought and energy of an entire family and some hired help are devoted to only eight or ten acres on many farms. Besides the initial cost of constructing the shade it has been estimated that it costs about $500 to get an acre of tobacco ready to pack and market, and these latter operations cost an equal amount. During the growing season men and teams work like their very lives depended upon it. Millions of dollars of money is invested in the growing of tobacco in Gadsden county, in cleared land, barns, shades, stock and machinery. And the lives of thousands are devoted to the business of growing, packing and marketing the plant.

Fortunes Have Been Made

Intensive is right, but it is also remunerative. Many fortunes have been and are being made in the tobacco business in Gadsden. Fully $2,500,000 a year for the crop as it leaves the field! That is no small amount of money. By the time this crop is cured and packed and marketed, it may sell to the cigar makers for as much as six or seven million dollars. Intensive agriculture for a fact! A paying business? Indeed, yes!

Just how long tobacco has been grown in this region it is impossible to say with much degree of certainty. However, it can be said that it has been grown under shade on an appreciable scale for about thirty-three years. Previously sun tobacco was the only kind of leaf grown, but in 1887 it was learned that tobacco grown under shade was lighter in color and produced a better wrapper for cigars. After that discovery this industry grew very rapidly, so rapidly, that within a year or two it reached a degree of major importance.

The Pioneer in Shade Growing

No article should be written about the rise of the tobacco industry without due mention of the name of F. A. Schroeder. It was he who grew the first shade tobacco and taught the tobacco world its greatest lesson. The story is told that this extensive grower of "the weed" observed the ultimate color and texture of the tobacco grown under the shade of palms and other trees in Cuba. That observation gave him an idea, and he chose to try out that idea on his plantation at Quincy. He constructed a shade over a quarter of an acre of land and in growing that crop of tobacco he taught the industry, as already said, its greatest lesson.

However, he did not teach it everything. He had many sad and expensive experiments. He did not know then that the shaded soil responds differently to fertilizer and cultivation than does the unshaded. He had to learn this by experimentation. He and others had to learn that cotton seed meal and horse manure produces a wrapper of better quality than other fertilizers containing like amounts of nitrogen. Early growers thought that this crop could be grown on the same land year in and year out. They know better now.

The Expensive School of Experience

Many lessons had to be learned, and usually they were paid for with whole crops of tobacco, maybe—dear and precious prices. But those lessons have been learned. Wise and studious men—and business men, hard-headed business men—have studied and experimented and the knowledge they have gained has enabled them to compete with growers in foreign countries. Florida wrapper tobacco is rapidly gaining favor with cigar manufacturers and, consequently, with the consumers.

The coming of the shade was probably the real birth of the industry on a scale of appreciable magnitude. In the last quarter century tobacco has surpassed all other crops grown in that county, and it is because of the shade. Mr. Schroeder, because being an extensive grower and making a fortune himself, has made it possible for many others to make fortunes, some large and some small, some even larger, no doubt, than his own. Figuratively speaking, at least, we can say that the tobacco industry of North Florida and South Georgia is a monument to F. A. Schroeder. Would that he were living today to look upon this monument.

Many Commendable Features

Besides growing in size, this industry has grown in other ways. If you ever visit this "weed"-growing county, you will come away saying it is progressive. The people are industrious, thrifty, up-to-date, educated, religious—in short, good citizens. It is a common maxim that wherever you find money, there you will find people "up-and-a-doing." True or not true, there is money in Gadsden county and the people there are not letting the grass grow under their feet. In step with the advance of the main industry of that section, are the fundamental and social interest of the people.

Good roads, good schools, good churches, good neighbors, are things one may have in and around Quincy. As students of more and better production, better and quicker harvesting and marketing, those people have formed the habit of doing things in the right way. Within the last few years, almost over-night, several miles of paved streets have been laid and many business houses and dozens of fine residences have sprung up in Quincy and its surrounding territory. And still more paving, more building and other civic improvements are under way.

New Tobacco Experiment Station

A further outstanding evidence of the progress of this county is the new tobacco experiment station, which is the largest indication of that progressive Gadsden county spirit. So far as we are able to learn there has never been any industry of man that was ever free and independent of trials and troubles. Citrus has its canker. Corn has its brown spot. Sugar cane has its mosaic. Railroading has its washouts and holdups and strikes. Banking has its bankrupts. Boxing has its frame-ups. They may remain free and pure for a time, but sooner or later the inevitable comes. For a long time tobacco was grown in this area free and unhampered by insect pests or diseases, but, following a law of Nature, these things have one by one come into the community. At present there are a number of diseases taking an annual toll from the tobacco crop. Prior to 1921 this loss was small except in limited areas.

That year the industry appeared threatened with a new disease, which puzzled the growers for a method of control. This emphasized the need of a specially trained scientist for this phase of the work. Therefore, the growers called in specialists from the University of Florida Agricultural Experiment Station at Gainesville, and made known their needs and

position. By concerted action, in co-operation with the State Legislature, they have established in their midst an institution having for its major purpose the control of diseases of tobacco. It is also intended that this institution shall work out problems in fertilization and plant breeding, in particular. In fact, all phases of tobacco culture will in time constitute the work and study of this research institution.

This new undertaking is known as the Tobacco Experiment Station and is organized and maintained as a branch of the main state agricultural experiment station at the University of Florida, Gainesville. Of course, it will made a study of all problems of the tobacco growers; that is, general culture, fertilization, controlling diseases and insects, harvesting, marketing, etc.; but its primary and immediate purpose is to work out control measures for those diseases causing loss and alarm at the present time.

Experienced Men in Charge

Administering the affairs of this branch station is Dr. Wilmon Newell, director of the main experiment station. Minor administration and the actual field and laboratory work is done by Dr. V. B. Tisdale, who has been on the ground since March, 1922. He has only one helper at present, because the finances of the little institution do not permit more help. However, it is hoped that in the near future the income of the branch station will be increased to such an extent that the number of investigators and helpers can be increased.

Already Dr. Tisdale's work and observations have enabled him to write a bulletin on certain diseases of tobacco. In it is discussed such diseases as "mosaic," "root-rot," "black shank." Dr. Tisdale in his discussion of the diseases speaks of the different plants affected by each disease, of the appearances of the diseases, of their causes, and finally of how to control them.

This bulletin is the first published by this new station and is known as "Florida Experiment Station Bulletin 166." Its title is "Diseases of Tobacco Occurring in Gadsden County in 1922." It is well illustrated and is a clever and concise treatise.

Growers Are Well Trained

With all possible facts before one, the outlook for the tobacco growers of Gadsden County, and closely surrounding territory, seems bright indeed. Certainly it is already one of the major industries of the state, if considered in proportion to the area in which it is grown. The growers are as well trained in this work as are the growers of citrus or truck crops in South Florida or California. These men are not backward-lookers, but rather forward-lookers. They are students of their business and are always ready to adopt new and better methods, although they are slow (and wisely) to try out "special" or "unproved" theories.

Already this business commands the respect of all who know it. If what many of its most enthusiastic backers predict can be looked for—and I believe it can—there is coming a time, and that not far off, when all the Nation will know of and be respectors of Gadsden County. And cigars wrapped in Gadsden County tobacco will be in universal demand, commanding prices that are best.

MORE TOBACCO GROWN

The report of the Department of Agriculture on last year's American tobacco crop contains little to encourage the members of the No-Tobacco League or Lucy Page Gaston, the prime mover of the anti-nicotine cohorts. The total of 2,000,000 acres planted in the "weed" was not large, but the value of the product for the year amounted to $500,000,000. The intensive character of tobacco growing is shown by the fact that the crop covers only one-half of 1 per cent of the acreage devoted to all the crops of the country.

Most of the tobacco is grown in a few state Kentucky, North Carolina and Virginia bei the leaders, but a total of forty-two states rai a sufficient quantity to be recognized in t government's statistics. Kentucky alone pr duces a third of the crop and the other tw states just mentioned raise almost another thir Although far behind the leaders, Indiana rais a considerable quantity of tobacco, chiefly i the Ohio river counties. In 1919, the last ye in which tabulations were made, tobacco w grown on approximately 450,000 farms in t United States. There were 10,291 manufacti ing establishments employing 183,000 perso and the internal revenue from the indus amounted to almost $300,000,000.

The industry has made remarkable progr in the last twenty-five years, partly through t work of the Agricultural Department, in the i of new methods, better varieties and greater u of fertilizers. The yield per acre has been creased along with the improvement in quality of the product. The growing of ci wrappers under shade has reached considera proportions in some states, resulting in a hi grade leaf which formerly it was necessary import. One of the outstanding developme of the tobacco industry has been the great crease in the use of machine-made cigarettes, total climbing from 4,000,000,000 in 1895 60,000,000,000 a year at present.—*Indianap (Ind.,) Star.*

THROWING THE ANIMAL AROU

At last the big tobacco drive that was follow on the heels of prohibition is here. will go about as far as its sponsors can thr a large bull by the tail. The public is gett sick of "drives" of every kind.—*Fort Atkin (Wis.) Union.*

Some of them are remarkably adept at toss the bull, however.—*Milwaukee Sentinel.*

EVERYTHING you need to know about tobacco and the tobacco business, is in this remarkable book. It covers the entire subject—History, Literature, Cultivation, Manufacturing, Merchandising, Taxation and Regulation.

Once you have it, you will wonder how you ever could have done business without it. Price $3 delivered, anywhere in the U. S. and Canada. Price to other countries, postpaid, $3.25.

No books sent C. O. D. or on approval

THE TOBACCO LEAF PUB. CO., 140 Front St., New York

General Cigar Has 40 Per Cent Gain in Business

Strength of General Cigar shares in the market decline reflects the 40 per cent increase in its business for the first four months of this year, compared with corresponding period a year ago, when increase was 23 per cent over 1921. Conservative policy in turning surplus earnings back into the property, uninterrupted growth in business, and stability of the industry offer promise of continued improvement in value of its shares. The company has built up earning power and strengthened financial position before increasing dividends unless such payments could be continued. Cash dividends have been paid without interruption since 1909, and available earnings for the last four years have averaged nearly double requirement of present 6 per cent rate. If earnings are maintained at present level, increase in dividend distribution may be expected.

The following shows capitalization (all stocks have $100 par value):

	Authorized	Outstanding
Funded debt	.....	.....
7% cum. pfd stock	$5,000,000	$5,000,000
*7% cum. deb. st'k	5,000,000	4,200,000
Com. (6%) stock.	25,000,000	18,104,000
Total	$35,000,000	$27,304,000

*Convertible, share for share, into common stock.

Preferred and debenture stocks rank in order in their preference as to cumulative dividends and as to assets. Preferred stock is non-callable, whereas debenture stock is redeemable at 110 and carries sinking fund providing for retirement each year of at least 3 per cent of original issue.

The General Cigar Co. added $1,160,804 to liquid assets in 1922, bringing working capital, as of December 31, last, up to $15,212,455, its highest point. Net profits for the year, after federal taxes and interest, were $2,732,209, equivalent, after preferred dividends, to $11.53 a share on the 181,000 common shares outstanding, against $2,113,885, or $8.08 a share in the preceding year.—*Wall Street Journal.*

Bayuk Dividends

PHILADELPHIA, June 15.—Bayuk Bros., Inc., declared a quarterly dividend of 1¾ per cent on the new 7 per cent first preferred stock and usual quarterly dividend of 2 per cent on second preferred, both payable July 1 to stock of record June 30.

Do You Take Options Like This?

It will be interesting to the readers of his department to note if they can see ithout explanation the reason why the eal set forth in the following correspondence fell down.

A manufacturer and a large retailer ere dickering over the sale of a large lock of goods. They weren't quite toether as to terms, after considerable orrespondence, and the manufacturer nally wrote his prospective customer he following letter:

"Dear Sir:—In regard to the 300 cases f ——— about which we have had corespondence, I cannot shade the price ny further, but will meet all other rms. The price quoted you in my letr of the 16th is the very lowest I can ake for these goods. You can take my pinion that these goods are a splendid uy at the price quoted and will show good profit whether sold today or held x months.

"I should like to sell you this block f goods, and to help the deal along I ill give you the option on the entire lot, n terms understood, until the first of ext month. You can turn the matter ver in your mind.

"Respectfully yours,

* * * *"

Upon receipt of the above the retailer plied as follows:

"Dear Sir:—Have yours of the 17th eferring to the 300 cases of ———. ppreciate what you say and will accept ption until the 1st.

"Yours,

* * * *"

Now it happens that the thing the reiler was uncertain about was whether e could resell these goods—he did a ombination retail and wholesale business -and after he had the goods, as he thought, safely sewed up through the option he sent out a salesman, and ascertaining that he could resell them without difficulty—in fact, he took contracts for the entire lot—he wrote the manufacturer on the 29th of the month that he would take the entire block.

Meanwhile, however, the manufacturer had had a chance to sell at a slight advance over the price he had quoted the retailer, and needing to speak quickly, he sold, hoping in some way to get out of the option he had granted.

That then was the position. The retailer had made contracts to resell the whole 300 cases, and was of course bound to his customers either for delivery of the goods or for damages for non-delivery. The problem I will submit to the readers hereof therefore is—what is the liability of the manufacturer who thus violated his option, and what can the retailer recover from him in the way of damages?

The answer is that the manufacturer has no liability at all, and the retailer can recover nothing from him. The reason it may be useful to know and remember. It is that the option was unenforceable and invalid because it had neither consideration nor was it under seal. An option is like any other contract—to be enforceable it must have a consideration. Under the old law it didn't need consideration if it was under seal, but the rule has been largely modified in recent years, and now in most cases an option is unenforceable if it has no consideration whether it is under seal or not.

Thousands of options are given every day on one thing or another, but probably 99 per cent are unenforceable because they have no consideration.

What do I mean by consideration? I mean that if the option is to be good something must be paid for it. Not necessarily money, although that is the usual consideration, but some benefit or detriment to one party or the other must pass by way of consideration. For instance, in the deal referred to in the above correspondence, if the manufacturer had said "for $25 I will give you an option," etc., etc., and the retailer had accepted that, the option would have been 100 per cent good, and the manufacturer would then have sold the goods before the first at his peril.

You can lay it down practically as a hard and fast rule that an option which has no consideration is simply words. It can be revoked at will by the person giving it, or ignored. He doesn't need to pay any attention to it at all.

Sometimes this rule works great hardship. For instance, in one case I know of, the owner of certain property gave an option on it to a prospective buyer. The option had no consideration—it was just another of those indefinite arrangements which I have been discussing. Before the option was exercised by the buyer the seller died. The buyer then called on the executor of the seller to deliver the property, but the executor refused and a law suit resulted. The court held that as the option had no consideration, it had no validity—the seller himself could have revoked it in his life time and his executor could do the same. The buyer in this case lost a lot of money, simply by forgetting that an option to be good must have consideration. It doesn't matter how much the consideration is, but it must be something.—(*Copyright*, 1923, *by Elton J. Buckley.*)

San Francisco Improvements Seen All Along Line

Review Shows That the Trade is Beginning to Make More Encouraging Reports—Some Theories as to Cause of Recent Dullness—A Short Dissertation on Salesmanship

San Francisco, June 12.—The review of the week shows that the trade in San Francisco is beginning to report some improvement all along the line. Retailers, jobbers, wholesalers, and factories, all have practically the same report.

Harry Bercovich, president of the Bercovich chain of stores, attributes the quiet we have had to two main causes. The first is that people have had an economy streak, trying to save a little of their money. Another is that they have found it desirable to buy a few more spring clothes and household comforts for the wife and the children; and above all it has been necessary to save on the cigar bills to make the payments on the countless Tin Lizzies they have been buying for the summer vacation. At that, the depression seems more than it should have been, considering that there has been ample employment for labor and need for more skilled mechanics than we really have; and commerce has been growing at a lively rate. The truth probably is that there are more in the cigar business, and that we have become accustomed to expect more than we have a right to expect.

An Active Trio

Dave Horn, of the Golden State Leaf House, says that business is coming back well to normal again with the factories. E. Horn, his brother, is up Sacramento way and is sending in some good batches of orders. Mack Horn, who went into business for himself at Los Angeles the first of the year, made a flying trip in and out, in from Los Angeles and out for the Northwest. He reports that his business has been so fine since the first of the year, that he considers himself a fixture in the Angel City.

Opinions on Salesmanship

Mr. Suarez, of Cimino, Cortini & Co. is a salesman of long experience, his experience mostly in Canada. His statement of some of the difficulties of salesmanship in pushing local brands is of trade interest. Of course the big thing they run up against is the gigantic advertising campaigns of established brands, making them easy sellers. And as most of the little retailers are not in any sense salesmen, the easy seller appeals to them. Against this the local man can only place better margins, for the margins on many of the established brands is ridiculously small. One difficulty here is that too many have tried some special and cheaper brand in order to make a larger profit; and have made the mistake of putting in something cheap in quality as well as price. They were stung, of course, and shrink from the possibility of being stung again.

Says Wage Scale is Low Enough

Speaking of the labor problems brought out during the recent strike, Mr. Suarez says he thinks that the union scale is low enough, and that it would be better if all the workers could be brought into a single union, and then the wages made uniform for every shop. This would give every shop the same deal. The difficulty is not as to whether wages are a little higher or a little lower; but whether every shop has the same scale and the same opportunity to compete at a profit. The cigar trade, of all trades, should stand for high wages, for the great bulk of their trade comes from the surplus nickels and dimes that the workers have to spend.

Mr. Dingman, of Dingman & Van Dyke reports that the Val Leau is moving stronger, and that the first of the year lull has passed away.

George W. Webb has gone to Los Angeles to look over the business situation there. His recent trip north resulted in some very good placements for the J. M. Martinez and for Webb's Hand Made. The local trade in San Francisco has been exceptionally good, and has been overselling orders so that they are up against a constantly low stock.

Pleased with Progress

Morgan and Leghorn of the Morgan Cigar Co., have been giving the city in turn, visiting their distributors, the Boquet, Cohn Cigar Co., and express themselves well pleased with the way their goods have been featured in the San Francisco market.

Arthur Bachman, president of S. Bachman & Co. organization, has departed for a trip to Europe. He will join his family, who are already there. Maurice Falkenstein, vice-president of the same company, has been enjoying a well-earned vacation.

W. Peters, sales manager for the Bachman Co., has been making the near-by cities, with excellent results.

Charles Kneubel, representative of Charles the Great, and allied lines, is making his home on his farm at the present time, but running in to see the boys of the trade and to see that they behave themselves. It is rumored that Charl is about to become independent of the cigar game as he has a bumper crop coming on.

The H. Barcovich Cigar Co. is installing a new manager in its Fresno store in the person of J. V. Stayton.

Solly Spring of the Spring Cigar Co. of Seattle, has been spending some little time in the city in company with his wife. He is taking time to call on many of his old friends and business acquaintances.

A Big Favorite

Johnny Green, representing the Hava-A-Tampa Cigar Co., of Tampa, Florida breezed into New York last week, and made as big a hit as the Hava-A-Tampa cigar has made in Gotham, which is going some, to say the least.

Returns to Cuba

Walter Sutter, of the Walter Sutter Co., Havana, returned to Cuba last Saturday on the steamship *Calamares*, after a several weeks stay in New York.

Studying Local Market

Ed Reis and George Reis of Louisville, Ky., are in New York this week studying the local market.

Legal Lore

One Kind of Case in Which Your Delivery Driver Can't Let You in for Damages

You men who use delivery motor rucks or delivery wagons in your busi- ness—and no doubt most of you do—and who as I have explained in previous rticles are largely at the mercy of your lrivers when it comes to the negligent lriving which breeds damage suits, will e interested in a case just decided by an Appeal Court bearing on this question.

As I have explained, the driver of a lelivery vehicle is the agent of the owner, nd anything he does within the scope of iis employment binds the employer. This ias often let the latter in for heavy dam- ges. For instance, the books are full of ases in which drivers, in ordering off oys who climbed on behind, were un- ecessarily harsh and caused injury to ome boy. In almost all those cases the mployer was mulcted in damages because he driver was acting within the scope of is employment.

The case before me, however, shows hat there is a line beyond which the em- loyer's liability does not extend, and it s very interesting and at the same time nportant to note where that line is. In his case a driver, in the course of deliv- ring certain merchandise, left the truck tanding in the street while he took the oods inside. While he was gone a 3- ear-old boy crawled into the truck and layed there out of sight of the driver, 'ho climbed on the truck again and drove ff. In a little while the boy got scared nd while trying to get out fell off the nning board and was badly hurt.

The child's parents brought suit against ie driver's employer on the ground that ie driver had been negligent in operating ie car, as he should have seen that no ildren were on it before driving off, or ther to state it differently, should have oticed that this child was on the truck id removed it. This negligence the aintiffs tried to charge up against the nployer.

The lower court, which tried the case, rew it out on the ground that the driver dn't been guilty of negligence, but even he had, it wasn't the sort of negligence hich could be charged to the employer. he case was carried to the Appeal ourt, which has just affirmed the deci- on. I say again that I regard of great nportance the line between the kind of gligence on the part of a delivery hicle driver which lets his employer in r damages, and the kind that does not. The following extract from the court's cision shows that the crux is whether e driver, when he committed the negli- nt act which was the cause of the in- ry, was acting within the scope of his nployment, or in other words, doing the ings he was supposed and hired to do a driver:—

"The suit was instituted against the vner of the truck, and not its driver. a recovery is to be had, it must appear at the injuries were the result of some gligent act performed by the driver ithin the course of his employment, or at the conduct causing them was wilful. ven though the boy was on the car by vitation or permission of the driver, un- ss the consent was authorized, express- or impliedly, the employer is not to be ld liable, except for injury resulting om some wilful act. The driver has no ght to impose upon his master an oner- s liability by holding him responsible for the safe carriage of any person he may see fit to accept as a passenger. * * * The employee's duties were those of an ordinary driver of a truck, and at the time of the accident he was engaged in the performance of such duties. He had no implied authority to permit boys to ride on his truck, and acted beyond the scope of his employment when he did so.

The driver had no implied authority to carry the injured child or any other—indeed, it is uncontradicted that his express order was to the contrary. Such privately given directions to perform duties in a specified manner will not relieve from liability, when the employee proceeds in a different way, causing injury, provided the act is done as a part of the master's work, and apparently falls within the general line of the servant's duty. Here, however, the undisputed facts show the driver, in permitting the boy to ride, was acting outside the course of his employment, and it was the duty of the court to so declare as a matter of law.

"Plaintiff insists the conduct of the driver in failing to remove the child from the truck, while employed in his master's business, though acting beyond his authority, was so wrongful as to justify a finding that the injury was inflicted wilfully or wantonly, thus imposing liability upon the defendant. The fact that the injured one was of tender years, though relieving it from any charge of contributor negligence, does not alter its status as a trespasser. In such case, a recovery can be had only where the injury was wantonly or intentionally inflicted. Thus verdicts have been sustained where the trespasser has been forcibly removed or driven from cars while in motion. Where, however, the proof fails to show the wilful infliction of some harm, or facts from which such purpose may be inferred, the master cannot be held liable.

"A careful review of the record now presented leads to the conclusion that the driver of the truck had no implied authoritory to carry the injured child. He was not engaged in furtherance of his master's business in so doing, and for his negligence, if any appeared, the employer cannot be held responsible. Though engaged in the work of the company, the harm was caused by act done beyond the scope of his authority, and no liability attached to the defendant."

What the "scope of employment" means in these cases is the work a driver is supposed to do. He is supposed to drive the vehicle for the purpose of delivering goods. He is supposed to keep it free from trespassers. Anything he does within the range of these acts, if done negligently, can let the employer in for damages. But he is not supposed to carry passengers and if he does that, and somebody gets hurt, the employer isn't liable.—*Copyright, June, 1923, by Elton J. Buckley.*

Corona Case in England

After deliberations lasting well over a fortnight from the termination of this protracted case, Justice Russell delivered his deferred judgment in favor of the plaintiffs, the proprietors of La Corona brand. The judgment is clear and convincing, and lays it down definitely and for all time that if a customer asks for a La Corona cigar the onus is upon the dealer to either supply a La Corona cigar or ascertain that the customer requires a Corona size cigar in some other brand. The plaintiff company, Havana Cigar and Tobacco Factories, Ltd., was entitled, in Justice Russell's opinion, on the evidence in the case, to an injunction:

and agents from selling or supplying in response to any order for some cigars, Coronas, or Corona cigars, or a Corona cigar, or Coronas, or a Corona, cigars or a cigar not of the Corona brand unless it be first clearly ascertained that the customer giving the order does not require cigars or a cigar of the Corona and no other brand."

He granted an injunction in these terms and ordered the defendants to pay the costs of the action. Thus ended one of the "biggest" legal cases in the history of the trade. It occupied the minds of people engaged in the Havana cigar trade for months, the actual hearing taking something like sixteen clear days. Into the moral aspects of the case it is scarcely for us to enter. "Business," it is commonly stated, "is business," and it is difficult to associate a moral standpoint with business, or to dissociate it from it, without being "disputacious." Justice Russell inferred that defendant's personal views constituted a moral defence, and to that extent he exculpated him, although he condemned his said personal view as ill-founded, as shown by his own witnesses, and both exculpation and condemnation must, presumably, be shared by those who were admittedly behind Mr. Oddenino. Justice Russell's valedictory remarks are worth quoting in full.

"Before parting with the case, I desire to make it clear that my decision does not involve any moral reflection upon the defendant's conduct in the past. I accept his statement that his personal view (opposed as it is to that of many of his own witnesses) was that the word 'Corona' in the phrase 'a Corona cigar' referred to size and shape only and not to brand. The evidence in this case has convinced me (and I hope will have convinced him) that his personal view is ill-founded, and that in the majority of cases the word refers to brand only. Assuming him to have been so convinced, he would, I hope of his own accord, have altered the practice which prevails in his establishment. In view, however, of the right asserted through him by those who are behind him in the defence of this action, it is necessary that an injunction should be granted in the terms which I have indicated."

There is one point which should not be lost sight of in this matter, however, and that is, that while there is only one brand La Corona (which now has a legally defined popular version "Corona") there is also a size Corona. Nothing in the Corona case alters that fact. Neither manufacturers, importers nor dealers need have any hesitation in making or supplying a cigar of Corona size and called such. There is no embargo upon either the size or its name.—*London Tobacco World.*

Buys Broad Leaf Crops

Strouse & Holzman, the Water street leaf dealers, have purchased two small crops of high grade Connecticut broad leaf tobacco.

Night-Riding

By ROBERT J. BRECKENRIDGE

In *Lexington Herald*

"The men of my own stock,
Bitter bad they may be,
But, at least, they hear the things I hear
And see the things I see;
And whatever I think of them and their likes
They think of the likes of me."

Daddy can't join the Ku Klux,
The Ku Klux, the Ku Klux,
Daddy can't join the Ku Klux,
'Cause Mamma ain't got no clean sheets.

That's a sweet little song and we think it is about time that some one should write a tender, pathetic little ballad that might go something like this:

Daddy can't scrape no tobacco beds,
Tobacco beds, tobacco beds,
Daddy can't scrape no tobacco beds
'Cause Bobby hid his hoe.

We started this column with a little bit of poetry that seems to mean that all of us Kentuckians ought to understand each other. It's pretty hard to do sometimes. As an illustration, we are a Democrat, a newspaper man and a fox hunter. Now you take a Republican who can't read and who don't like foxhounds. Right there is a dandy chance for an argument, but we don't want to fall out about it.

Lately it seems that the papers are featuring more and more where tobacco beds have been destroyed at night. The chaps who have set those plants out have a perfect right to do that very thing. Evidently there are a lot of folks who don't think so, but nevertheless it's true.

Here is the account that appeared in one of the expeditions:

Night Riders Leave Threatening Note for Growers Outside Pool

"Night riders, who left no clue, destroyed four large tobacco beds belonging to E. L. Proctor on his farm five miles from Winchester on the Cabin Creek pike, this week. Beds belonging to G. Rowland and Hunter Peters, of the same neighborhood, also were destroyed. They left a note threatening Proctor with fu-

Tampa Tidings

TAMPA, Fla., June 16.—Notwithstanding the high prices of leaf, the Tampa manufacturers seem to be well supplied, and able to keep supplied with the finest quality of filler and wrapper. To a degree they are independent of the market fluctuations, short crops, etc. Many of them taking over the same crops year after year, and operating their own curing and packing plants and warehouses in Cuba. And, too, there seems to be a slacking in the demand for the so-called "mild cigars"—the light wrappers.

Optimists A Plenty

Judging from reports coming in from the salesmen representing the Tampa manufacturers, they have every reason to feel, and are, optimistic of the future. Few pessimists to be found here. And this is all based, of course, on actual results being obtained by the salesmen. From California to Maine there seems to be no dead spots. Even Florida, once a 95 per cent consumer of domestic goods, is now the equal of any southern state in consumption of Tampa cigars. The writer remembers when retailers right here in Tampa sold mostly domestic cigars made in the north, and even the "stogie" was a popular smoke. Now a "shipped" cigar would be a curiosity. Nothing but the best made here will do for a Tampa smoker. Judging from last month's record, the wonderful increase in sales of the higher priced, finer quality cigars, the same holding good this month, the smoker at large is recovering his taste for something good. And that's why the Tampa manufacturers are feeling good. Tampa manufacturers are permanent. Their brands stay put.

Illustrates the Point

The following from the *Times*, under caption of "30 Years Ago," demonstrates the statement:

"Letter to TOBACCO dated June 5 says 105,000 cigars shipped the previous week by Sanchez & Haya, 47,000 by Lozano, Pendes & Co., and 25,000 by Emilio Pons & Co. The custom house reports of Havana leaf amounted to 346 bales."

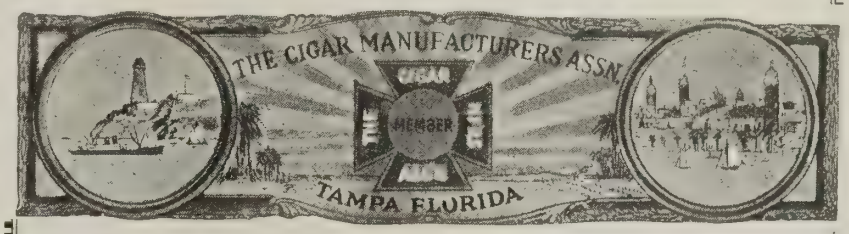
"Pancho" Arango, of Arango y Arango, is visiting New York.

Manuel Garcia, of Perfecto Garcia & Bros., is due to return from Havana.

Manuel Correll, of Correll-Wodiska y Co., leaves soon for Cuba.

Morris Scadron, of the Nordac Cigar Co., is back in Tampa for an indefinite stay. He is speeding up the production end of his business.

Florida Harvesting a Fine Crop



MADISON, Fla., June 16.—Harvesting of one of the finest, if not the finest crop of tobacco this county has ever produced, is now about half over, while some few shades of the first setting are complete. Nature has certainly been good to this county this year sending the needed rains just almost perfect and not sending any hail or storms up to the present time, and if we have two more weeks of good weather we will be in a position to show tobacco that no apologies for will be needed, as the tobacco is now curing up in the barn as nearly perfect as possible.

First of 1923 crop is being taken in the Hardee Tobacco Co.'s packing house and put in sweat today, just twelve days earlier than last year.

Large Barn Full of Tobacco Burns

W. Goldberg, of Friedman Goldberg Tobacco Co. had the misfortune to lose a large barn and it brimming full of his finest first middles, or second priming of shade tobacco Thursday night by fire. It is estimated that the barn contained about six thousand pounds of fancy tobacco, which would be worth about one dollar per pound thereby making his loss quite heavy as he only carried $3,000 insurance on tobacco and $1,000 on the barn. Mr. Goldberg has the sympathy of the other growers, as he was already undershedded, having only four barns for twenty-seven acres of very fine

tobacco and he fully expected to be able to refill this barn with his last primings. It is thought that fires that were built for the purpose of drying or wilting down the tobacco was built too close to a lot of charcoal that was in one corner of the barn, was the cause of the fire.

A. E. Fraleigh, Jr., owner of Florida Leaf Tobacco Co., is expected home from New York shortly. Mr. Fraleigh has been away on a selling trip for more than a month spending most of his time in the west, he reports good business; while orders are small they are rather plentiful as the manufacturers' stocks are very low.

Gadsden County Breaking Records

QUINCY, Fla., June 16.—One of the Gadsden County plantations will send some tobacco in to the Growers Tobacco Co.'s warehouse next week, which will probably be one of the earliest deliveries on record here.

The growing and curing seasons have been unusually good thus far; plenty of rain, but not too much. The crops are curing out evenly and the colors look better than they have done in ten years before.

On one farm here the first priming was taken off the tobacco fifty-two days after it was transplanted, and all of the older packers here agree that such luxuriant growth produces exceptionally fine quality tobacco.

With about sixty per cent of our crops in the barns, we would like to have an office representative of TOBACCO here to look the situation over, in order that the local conditions might be adequately broadcasted to the tobacco trade.

"Tramp" Cigarmakers

YORK, Pa., June 18.—"Tramp" cigarmakers like "tramp" printers, according to the impression of the general public, exist only in memory. Your correspondent is assured, however, that the tramp cigarmaker, like the cigar store Indian has not entirely passed out. In York county, it is said, Yorkana is a great rendezvous for this kind. Several summers ago, so goes the story, a number of these tramp cigarmakers established a hobo boarding house there. They rented an old barn and equipped it with sleeping bunks and facilities for cooking and washing clothes. Some of these birds of passage remain for only a few days, others a few months, while others continue a year. A few have remained and become permanent residents, married and established families. Yorkana, East Prospect and some of the other small cigar manufacturing towns are located in "dry" territory and therefore there is no drunkenness among these traveling cigarmakers. Coming from Lancaster county most frequently, they travel by trolley or get "lifts" on motor vehicles on the Lincoln Highway to Hallam, and then "hike" to East Prospect or Yorkana, a distance of five or more miles. Many of these cigarmakers are typical hoboes. Nearly all, however, are good mechanics and know their business. When they work, they make good wages.

Cigar Factory to Open July 15

CLARKSVILLE, Tenn., June 16.—In view of the opening of the cigar factory on or about July 15, the American Cigar Co. has written to the local authorities asking that full publicity be given to the probable date when the opening will occur, in order that as many people as are interested may apply for positions.

Baltimore Market

Sales Fare Larger Than Receipts

BALTIMORE. Md., June 14.—Gieske & Niemann, leaf tobacco merchants make report as follows:

MARYLAND.—While receipts were only 169 hogsheads, sales totaled 648 hogsheads for the past week, the greater part of which were taken by the buyers for the French Regie. Prices held very firm for all grades.

OHIO.—Receipts, 8 hogsheads; sales 2 hogsheads.

Crop Prospects

MARYLAND.—Farmers have finally had a good planting season this week, and probably about 75 per cent of an average crop has now been set out. Considerable replanting is being done.

Earl Rost Takes Bride

YORK, Pa., June 16.—Earl Rost, cigar manufacturer of Red Lion, and Miss Erma Husson, daughter of Mr. and Mrs A. E. Husson, of Dallastown, were married Thursday, in the United Brethren church, Dallastown. The ceremony was performed by the Rev. E. C. B. Castle the pastor. Miss Beulah Castle played the wedding march. A few invited friends witnessed the wedding. The newlyweds after the ceremony were greeted upon leaving the church with a shower of rice and confetti. The automobile in which they came to York, where they boarded a train for Buffalo and Niagara Falls, was decorated with tin cans and appropriately worded placards. After a 10-day honeymoon trip, Mr. and Mrs Rost will return to Dallastown, where they will make their home. The bride is a graduate of the Dallastown high school and during the past year was a teacher in the Red Lion public schools. The bridegroom is the son of Mr. and Mrs. C. A Rost and is a graduate of the Red Lion High School.

Daniel Spangler, one of the oldest cigar manufacturers of Red Lion, finding the business dull, has decided to launch a new industry in that town. He will conduct an automobile "laundry" in the loft at the rear of his factory.

All "CHARLES DENBY" and "LA FENDRICH" cigars, strictly hand made, are manufactured in this ONE factory, under ONE management—under ONE supervision thus always insuring that ONE dependable quality.

Night-Riding

(*Continued from page 22*)

her violence if he continued to raise obacco outside the pool. The note was igned 'X Y Z.'"

It says the notes were signed "X Y Z," Ve don't know who X Y Z is, but the A B C of justice says it's wrong, and naybe if X Y Z would only stop and gure on it he or they might agree with s. We suppose that primarily the night iders desire to issue a warning that here must be no tobacco raised except y those who have joined the pool. Perhaps they have hurt those whose beds ney destroyed, but they have hurt the ool, the burley organization, a great deal ore. They have also hurt the old state f Kentucky, because these reports are roadcasted throughout America and it eeps men of influence, of wealth and poition who desire to invest in the future f our commonwealth from doing so.

We hate to think that our sort of olks would deliberately do a thing that a reproach to the Old Kentucky Home. don't look right for a crowd of upanding Kentuckians to wait for the ark of the moon and then go and jump a little wiggly tobacco plant, does it? f course it don't.

We're a night rider. Lots of these ghts you'll find us chugging along the kes or down under the cliffs by the ver trying to keep dry (you know the rt of dry we mean), and we have alays felt that no Blue Grass Kentuckn would want to hurt anything after ark. Those that do have the wrong ea.

If a chap does something he thinks is ght and you think is wrong, it's a detable subject. Talk it over, try and t together on it, if possible. The state Kentucky is bigger than you or us any group of men. She should have e best support we can give her. It's ly by trying to be a decent lot of chaps at homes can be made happy, women d children contented. When you ride night, intending to hurt someone, you rt her you should support and ultiately hurt yourself.

We're not preaching. We can't talk e a preacher—we wish we could. e're talking like a Dutch Uncle. If u have to ride at night come and go ith us fox hunting. That can't hurt ything, not even the fox. You'll hear e night birds call to their mates. You ill feel the evening breeze, clean and eet, as it ripples across the bluegrass eadows. You'll listen to the mellow, elodious notes of the flying hound and u'll have the pleasure of meeting some the biggest liars in the state of Kencky, and that's more sport than jumpg in the middle of a tobacco bed.

he men of my own stock,
They may do ill or well,
ut they tell the lies I am wonted to,
They are used to the lies I tell.
e do not need interpreters
When we go to buy and sell."

Soil Economy

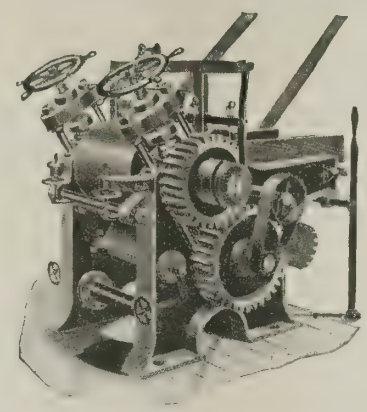
The proposal of Clifton Rodes to bring e farmers of Kentucky, Tennessee and diana who are members of the Dark bacco Growers' Co-operative Marketg Association into touch with the Agultural Colleges of these three States r the purpose of putting into effect e best methods of diversification of ops deserves the careful consideration every farmer in the section. Conditions may be allowed to go on as they are with the constant drain on the soil that tobacco takes or there may be provident conservation that will insure the land from being impoverished. It is the latter alternative that Mr. Rodes seeks, and the Agricultural Colleges are heart and soul in the movement.

Tobacco, as is generally known, is destructive to the soil. Where raised consecutively over a period of years it has left the land practically barren. Acre after acre in Central Kentucky has been reduced to grass as the result of this improvidence, and time and toil and money will be necessary to bring back to it the nitrogen that has been taken from it.

It has been the fertility of the soil that has made the Kentucky farmer careless of the future—this and the fact that tobacco has been one of the most remunerative crops. Yet no father wants to bequeath to his children useless land, because he has drained from it the last vestige of its wealth. The other expedient, care and diversification, will bring an equal if not a better yield and his children or his children's children will make the proverbial two blades grow where one grew before on exactly the same soil, by scientific methods of agriculture.

A recent bulletin from one of the Agricultural Colleges suggested a three-year diversification programme which had been found by experimentation. It called for the first year for a crop of tobacco; the second for a crop of orchard grass and red clover mixed; the third year for red clover.

Perhaps there are other plans of rotation which might be more remunerative and equally effective. The farmer, of course, wishes, and should wish, to get the best return from his land. It has only been natural that he has grown tobacco where he could get a greater return from tobacco. But it can be demonstrated that he can get the best return in the long run from conservation, from diversification and at the same time take cognizance of the future welfare of the State and his children.



An organized movement looking to this end will mean much to Kentucky.—*Louisville Courier-Journal.*

Troubled With Wildfire

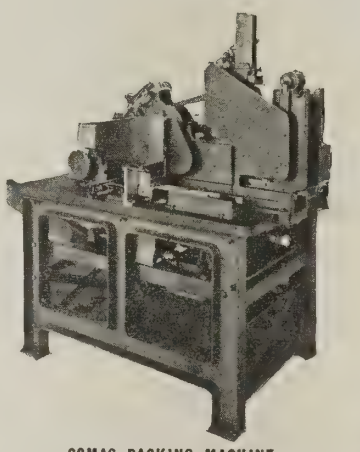
Growers in Hartford County are reporting considerable trouble with wildfire, the disease which came from the South three years ago and has interfered to a considerable extent with the culture of the crop. For several days reports have been sent in to the office of the Hartford County Farm Bureau regarding this troublesome disease. Under the direction of Manager Benjamin G. Southwick, liberal spraying has minimized the trouble except in the case of some seed beds which had got beyond treatment.

While there are cases of this disease here on the east side, the most of the trouble seems to be in the tobacco belt on the west side. It is hoped that by proper treatment of soil and plants at the time of setting out the trouble may be checked. For the past three years tobacco growers had met hardships and it will be a serious matter for many if they encounter another unfavorable season this year. Last season the rains were too frequent resulting in the washing of the gum from the leaves and making the light weight. —*East Hartford (Conn.), Gazette.*

"ADT" Tobacco Machinery

The "Adt" Stem Flattening Machines

will pay for themselves in a very short time. Manufacturers using these machines claim them to be one of their best paying investments.



It will pay you to install one of these machines.

Our catalog No. 50 contains full details and illustrations of 88 Tobacco Machines. We will be pleased to send you a copy.

Connecticut Tobacco Crop Makes Good Getaway

There Are a Few Dry Spots Where Rain Is Much Needed—Plants Making Rapid Growth Despite Cool Nights—Bekkedal's Plans Penetrate the Future.

HARTFORD, June 16.—During the past week conditions were very favorable for the transplanting of the 1923 tobacco crop throughout the valley, and today many crops are all set out. Other growers are well along with the work, and another week the work of transplanting in the valley will practically be done.

The weather as yet has not been extremely hot and the plants have not burned up as they do sometimes at setting time. The ground is still moist, except on the surface, and the plants are taking root quickly. The fields look fine.

Some of the seed beds that were not dusted, the growers trusting to pot luck, now some "wildfire" and have been abandoned. However, in most instances plants have been plentiful and have kept the growers well supplied. Some growers have been crowded to keep up with the growth of plants in beds. But just now there is some demand for plants, as some of the larger growers did not put sufficient seed beds for their acreage; as a result they have "pulled down" very close.

Hoeing got a good start during the last few days, and while earlier in the season it looked as if the crop would be late in getting started, weather conditions have become favorable and the crop will not be as late as was at first anticipated.

Association Affairs

The election of directors of the Connecticut Valley Tobacco Association on the 12th inst., resulted in the re-election of 20 of the 21 members of the old board and on the 19th they held a meeting to reorganize and elect their officers for the ensuing year.

Very little criticism is now heard on the part of the growers, not as was the case a few weeks ago, and this would indicate that the growers are well pleased with the work of the management by having the old board of directors practically a unanimous re-election. In fact the work of taking over 85 per cent of the stalk cut tobacco grown in the Connecticut Valley (over 22,000 acres), assorting it, putting it into cases and securing proper warehouses to handle it all 6 or 7 months was a tremendous "stunt" as much of the tobacco could not be gotten into the bundle until April and May, owing to the lack of damp weather during December, January and February and many of the warehouses during those months did not have much tobacco to work on and to keep running were forced to take in part crops.

Had "damps" enabled the growers to get their tobacco in the bundle earlier, the work of the final clean-up of the crop would have been a month earlier than it actually was.

Many of the warehouses closed down early in April for lack of tobacco. The officers are to be congratulated with the way they pulled out of what looked like an almost impossible task to accomplish. Also, while the work of putting up the tobacco was going on, the officers entertained the trade and practically sold out all the Havana seed and shipped it as fast as it was out of the sweat, and several hundred cases of No. 2 seconds, broken fillers and loose leaves from the Broadleaf, also were sold and shipped. It was surely a case of "coming in and going out," and tobacco was on the move all the time.

The work of getting the Broadleaf ready is now going on, and within a short time that which is in shape will be ready for the trade.

During all this busy campaign of handling the 1922 crop, the work of formulating a hail insurance protection for the association's members has been worked out and on June 1 a "binder" was placed and the insurance became effective. The amount of the blanket policy issued to the association was $4,000,000. This is a very liberal policy and the saving of over 100 per cent in the rate over former years. The amount written per acre is $300 and with this protection the growers have established a better credit with fertilizer concerns and banks.

Assists Father in Vacation

Seymour Gans, son of M. J. Gans, is devoting his vacation-time helping his father with his tobacco business. Seymour is a Yale student.

A. Sariego, who has been traveling for the past four months throughout the United States, is now at the headquarters of M. J. Gans, 219 State street, Hartford. Señor Sariego has a legion of friends in the tobacco trade and important connections both in Porto Rico and Cuba, as well as being the representative of the old reliable house of M. J. Gans.

Crop Conditions Around Oxford

OXFORD, N. C., June 16.—The crop in this section is planted and good rains Monday and Tuesday enabled those, who were fortunate enough to have plants, to finish replanting their crop.

After a careful investigation, we find the following crops conditions:

The acreage planted as compared to last year is 82½ per cent, with the condition of the crop, 75 per cent.

Some of the early plantings show a tendency to button. A considerable quantity of the late plantings were large plants and what the outcome of the crop will be, it will be some time before an estimate can be made.

The bankers and government representatives report the cotton acreage increase in Granville county as 100 per cent.—W. A. ADAMS Co.

Clean-Sale at Richmond

RICHMOND, Va., June 16.—It has been some years since we have reported a sale of loose tobacco on the warehouse floor in the middle of June, but we had a very good sale this week. Owing to a good "season," after nearly a month's dry spell, the farmers were able to clean up their barns and get the balance of crop to market. Of course there was a large proportion of damaged tobacco in this last clean up, but prices were very good altogether. Since our last report, on May 19, which we thought would be the final report for this crop, this market has sold 34,280 pounds at an average of $10.25.

We think this is the final cleanup of the 1922 crop of suncured tobacco in Virginia. The copious rains of the past week have been the salvation of the growing crop.—R. C. MORTON & Co.

Says Crop Will Be Small

RICHMOND, Va., June 16.—Farmers seen about the tobacco warehouses yesterday declare that the plant situation has not been magnified and that the average this year will be small. An observant man in close touch with the farmers of the State says that reports coming to him from every section of the State tell of the small supply of plants. Land had been prepared and there was a fine season, but it didn't take very long to set out what plants there were.

"The trouble with the plant beds," said this man, formerly a grower of tobacco, "was that the few early plants not kille by the fly grew to be so large that the shaded and ruined the smaller plants.

"Then, too, many farmers used nitrat of soda on their plant beds and with th continued dry weather, the plants burne up. Hauling water to sprinkle the bec was too much to undertake with so litt labor as farmers have been able to get th year. No, sir, I don't believe in the ligl of the latest information that there can b more than 50 per cent of a crop planted

Co-operatives Claim Gain o $36,000,000

RALEIGH, N. C., June 18.—The fir year of co-operative marketing has r sulted in an increased payment of $36 000,000 to tobacco growers of Virgin and North Carolina alone.

According to the recent report of th Federal Reserve Board, there was a 4 per cent increase in the average price p hundred pounds for bright tobacco Virginia, where the growers receive $42,000,000 for their crop this past se son as compared with $19,000,000 in 192 22. Final returns for the North Carolir growers were approximately $76,000,00 an increase of $13,000,000 over the pr ceding year, according to the Federal R serve Board's statement.

In spite of a decrease of over 84,000 000 pounds in the exports of Unite States tobacco to foreign countries, r ported by the Department of Commerc and in spite of increased production Virginia and North Carolina, the fir season in which tobacco growers of th section have organized for marketir their crop, has resulted in raising th price of their product at practically a points in the tobacco areas.

With 240,000 farmers now marketir over 500,000,000 pounds of tobac through their co-operative association the planters of Kentucky, Indiana, Oh and Tennessee have also experienced th benefit of a steady rise in prices. Fro present indications organized tobac farmers of America will market mo than a half of the total crop of the Unite States during the season of 1923.

The benefits of co-operative marketir to the farmers of South Carolina we described by the Commissioner of Agr culture for that state in his annual r port as follows: "While the 1922 cr of tobacco was practically as large a that of 1921, and the quality was no be ter, the price was nearly 100 per ce higher. The result of co-operation."—W D. FRISSELL.

"What Raised Tobacco Prices?"

B. W. Snow, writing in the *Farm Journal* on the "1923 Crop Prospects," says:

"The tobacco situation this spring seems to me a good example of such faulty reasoning from insufficient data. The recovery in tobacco prices from the unwarranted low levels of 1920 has been credited to the establishment of co-operative tobacco marketing, and too many growers have jumped to the conclusion that a system of marketing can overrule the law of supply and demand. Such an idea at this time is exceedingly unfortunate, because the inevitable result will be to discredit co-operative marketing at a time when such a system rationally followed is capable of tremendous usefulness to both producer and consumer.

"The danger signal is already up. A tobacco acreage increased this year 10 per cent over that of 1922, equal to 9 per cent more than the war average of 1918-22, and 55 per cent greater than the pre-war average of 1909-1913, surely guarantees a supply far above world needs.

Too Much Tobacco

"It is unsafe to rely on business activity and good industrial wages tending to increase tobacco use. It is true, but it is not sufficient. The world's demand for tobacco is relatively uniform, and there is nothing in sight to offset a proposed acreage increase of 10 per cent. In the end demand and supply rule, and demand is too inelastic to adjust itself to any such inflation of supply."

University Tells How to Improve Tobacco

KNOXVILLE, Tenn., June 16.—Tobacco grown under methods suggested by the crops department, University of Tennessee, last year netted $150 more profit per acre than the average acre for the county of 850 pounds.

Since yield is associated with quality in tobacco this does not represent the full gain. The increase at average prices would be more than $150 per acre.

The farmers not only followed instructions on the one demonstration acre, but in many cases their entire crop was handled in the same way. At least 1,000 farmers in the county were inflenced by the experiment, and it is expected that many more farmers, both in Montgomery county and all over the state, will profit from the experiment.

In 1920 less than 100 acres of tobacco were grown in Knox and adjacent counties, all of which was shipped to Greenville. In 1921 through efforts of the extension service, county agents, and the East Tennessee Tobacco Association, 200 acres of tobacco were grown and marketed, averaging about 1,000 pounds per acre. The tobacco sold for slightly less than 30 cents per pound.

Great progress in the development of tobacco in Tennessee is anticipated.

Anticipate Prosperous Year

KINSTON, N. C., June 16.—A few brief weeks stand between thousands of eastern Carolina farmers and prosperity, in the opinion of authorities here. The thousands specifically referred to have not known prosperity since inflation "blew up" after the war. The finest tobacco crop in three years is maturing in fields for many miles in every direction from this city. Reports from scores of localities in Lenoir, Jones, Duplin, Wayne, Greene, Pitt, Cravèn and other counties during the past few days have indicated the best stand since 1920. Experts here, keeping an eye on the foreign as well as the domestic markets, since great quantities of eastern Carolina tobacco are consumed in Europe, Asia, Australia and other parts of the world, are frank to state belief that the prices for good quality "weed" in September, October and November will be "very satisfactory."

New Twist Tobacco Factory

GALLATIN, Tenn., June 16.—A new tobacco firm has opened its doors in Gallatin for the manufacture of twist tobacco. The new concern is located on West Main street and is owned by H. J. Renn and John A. Soper of Gallatin. They are well known tobacco men. Mr. Renn having formerly been buying agent of leaf tobacco for Liggett & Myers Tobacco Co., in North Carolina, South Carolina, Virginia, Kentucky and Tennessee. The firm will put out only twist and will use only the best grades of tobacco.

Tom Lee, for many years with the Anderson Tobacco Co., of Gallatin, will be with the new firm.

Jugoslavia May Export Cigarettes

The Administration of the Tobacco Monopoly of the Kingdom of the Serbs, Croats and Slovenes (Jugoslavia) is at present considering the question of opening up the exportation of cigarettes to foreign countries. The Administration can turn out cigarettes far in excess of domestic requirements. It has at present on hand a large quantity of cigarettes ready for export. In view of the very excellent quality of the tobacco grown in the Kingdom these cigarettes should find a ready market.

Owns Ford and General Ford Trade-Marks

Every once in a while some factory begins to manufacture cigars under the title "Ford," only to discover later that they have no right to use the name. For more than 25 years, cigars under the trade-mark "Ford" have been manufactured by John F. Convey & Co., of Middletown, Conn. All rights, title, and interest in the trade marks or trade names, "Ford,' and "General Ford," used in connection with cigars, together with rights issued by the U. S. Patent Office, are claimed to be the exclusive and joint property of John F. Convey & Co., of Middletown, Conn., and John A. McAdoo, of Charlotte, N. C.

Celebrates Anniversary

William A. Nelson, of Grosvenor Nicholas & Co., and Mrs. Nelson, entertained a number of their friends last Tuesday, on the occasion of the fifth anniversary of their wedding. May the happy couple be spared to celebrate many more anniversaries, silver, golden and otherwise.

Paducah Prospects

PADUCAH, Ky., June 16.—Receipts of loose tobacco have been very heavy during the past week at the Association receiving station, and they have been very busy with receiving, delivering and packing, and have had quite a rush. This is due to the fact that the Association had announced that the books would be closed on this date for making the second payment. No doubt though the rush will continue until the crop is all in, because farmers are anxious to deliver while the ground is too wet to work.

It is hard to estimate how much more there is to come to the receiving houses, but stocks are getting scarce and we don't think there will be more than 2,000,000 pounds left in the country after this week. The greater part of the deliveries are of the common grades, but the condition is generally good.

Our estimate for the 1922 crop was originally 90 million pounds for th Western District. Indications are tha we slightly overestimated the quantity and we now think that 85,000,000 pound will cover the '22 crop.

The weather for the past few day has been fair, which has given the farmers a chance to do some badly neede work in the way of cultivating thei crops and breaking land for planting The facts are we have had the mos unfavorable spring for doing genera farm work that we have had for years We have had rain since April wit very little fair weather for preparin land, but farmers have taken advantag of the time that they could work thei ground and have paid special attentio to planting tobacco, and we think th acreage is practically as large as las year. It looks as if some farmers ha overcropped themselves on tobacco, whic will mean inferior quality in many case Plants have lived and the stand is prac

tically solid. The early plantings have started growing and a good part of the crop will be early, due to the favorable growing weather since it was planted.

With a continuation of wet weather we will soon see the early plantings damaging by Frenching, but so far no damage has been done and the quality and quantity of the crop depends on weather conditions from now on.—W. B. KENNEDY.

Kentucky Tobacco Sales in May

FRANKFORT, Ky., June 16.—During May there were 1,626,375 pounds of tobacco sold by the warehouses, which brought $187,519.05 according to the May tobacco report issued this week by W. C. Hanna, Commissioner of Agriculture.

Of the amount sold $896,570 were of the 1921 crop and 729,805 of the 1922 crop. The 1921 crop sold for $100,735.55, or an average of $11.23 per hundred pounds and the 1922 crop for $86,783.50, or an average of $11.89 per hundred pounds.

The burley sales amounted to 919,035 pounds, of which 752,490 pounds were of the 1921 crop and 166,545 pounds of the 1922 crop. The 1921 crop brought $90,538.35, or an average of $12.03 per hundred pounds and the 1922 crop $19,001.84, or an average of $11.94 per hundred pounds.

The one-sucker sales for the month totaled 224,750 pounds, of which 127,875 were of the 1921 crop and 97,375 of the 1922 crop. The 1921 crop brought $9,529, or an average of $7.48 per hundred pounds and the 1922 crop $7,390.50, or an average of $7.58 per hundred pounds.

The fired dark sales were of the 1922 crop and amounted to 458,365 pounds, which brought $58,893.36, or an average of $12.84 per hundred pounds.

The Green River sales amounted to 4,225 pounds, which brought $1,266.

Sales at Low Ebb

HOPKINSVILLE, Ky., June 18.—Loose sales of tobacco reached such a low ebb last week that no detailed report was issued. The loose floors seemingly have decided not to announce a definite closing date for their houses, as is usually done, but to continue to keep open and to accept all tobacco which may come and do the best they can in disposing of it. At best this can only be very small amounts, and generally the odds and ends left from crops, and not much is expected from it.

The loose floormen express themselves as well pleased with their business during the season now ending, and are planning to be open for business just the same next winter when the crop is ready for market again.

Crops Need Cultivation

Rains have continued during the last week prolonging the long continued wet spell. It has been highly favorable to transplanting tobacco, but it is now turning the other way; the crop needs cultivation and getting rid of the weeds. Not much can be done in this respect until the rains cease and the ground dries out. It is taken for granted that the crop is now about all planted. Certainly if it is not it is the fault of the farmer and not because he hasn't had a "season."—M. E. BACON.

Owensboro Outlook

OWENSBOBO, Ky., June 16.—An excessively heavy rain during the early part of the week has greatly retarded cultivation of the Tobacco Crop, the planting of which is practically finished; and what seems most needful at present is good warm dry weather to facilitate cultivation.—J. S. PHELON, *Tobacco Broker.*

Dark Tobacco Co-operative Activities

HOPKINSVILLE, Ky., June 18.—It has been announced that the plan for distributing the checks for the second payment to members of the Dark Tobacco Growers' Co-operative Association in the Stemming and Dark Fired districts will be different from that employed in the recent payment to the growers in the One Sucker district. Instead of sending the checks to the various receiving houses and having the growers meet there on a designated day and the checks being passed out to them, as was done in the One Sucker district, the checks for the Stemming and Dark Fired districts will be mailed direct to the individuals for whom they are intended.

This plan was decided upon as being more expeditious and as probably saving the growers inconvenience and loss of time just at a time when they might be busiest with their crops.

The distribution will be made in the Stemming district by July 1 and in the Dark Fired district by August 1. The amount to be paid out will be about $4,500,000 and about 45,000 checks will be issued.

The Drive for New Members

In the One Sucker district, where the drive for new members is now under way, steady increase in the number of new contracts is reported. The campaign is increasing in vigor and reaching out into new territory and contracts are being received at headquarters here in substantial numbers. The last report showed 750 received, but this has been increased since the report was issued.

Considering Warehouse Accommodations

The need for several new receiving houses by the time the new crop begins to move next winter, and of remodeling

and enlarging some of the present houses, is being given attention already, for it takes time to let contracts and construct these houses. R. E. Cooper, director of warehouses; Charles A. Rogers, associate director; John M. Farra, assistant to the director, and Claude Cocke, director, are the committee having this in charge. Fred Manley, an architect of Knoxville, Tenn., has been employed to take charge of that part of the work and he will come to Hopkinsville this week and open an office in the headquarters building. Mr. Manley has planned a number of warehouses in the Burley district for the Burley association, and one of his buildings was selected as a model for that character of construction. He will do all the planning of the buildings and will superintend their construction.

Criticism at Meeting

At a meeting of the Christian county local of the association, held last Friday, a considerable spirit of criticism developed as to association affairs. These complaints had chiefly to do with a desire for information as to the salary list and a complaint against the second distribution. As to the salaries, Morris Gordon, of the field service division, read a list of the salaries of the head officials and assured the members of the association that they were entitled to any information desired at any time and could always get it.

As to the second distribution, the complaint was as to the amount, it having been announced that the payment would be for 70 per cent of the first advance. It was represented that the farmers are needing money badly and that a payment of 70 per cent of the first advance made them would not be sufficient to tide them over.

Among those making speeches were Douglas Graham, Cordy Hamby and W. W. Radford, and others. Mr. Radford said one need of the association was real "dirt" farmers as directors. These all stated that there was considerable dissatisfaction in their sections among the association members.

J. M. Neblett, secretary of the local, was instructed to get a salary list and to mail it to the secretary of each school district local and that the directors be asked to make the next payment equal to the first if it were at all possible.

Dr. C. C. Croft and W. J. Garnett made speeches urging caution in taking any drastic action. They said that conservative criticism is always welcome, and is sought, from any member and that the directors and officials welcomed all such. But they said that undue or captious criticism would possibly lead to extremes, and that if the members felt there were faults in the association or with the management, the thing to do was to correct these troubles, but to preserve the association in so doing.—M. E. Bacon.

Burley Pool Activities

Lexington, Ky., June 17.—The Burley Tobacco Growers Co-operative Association increased its membership the past week beyond the 85,000 mark, adding 435 new contracts, making the total number signed 85,042, according to the tabulation of reported contracts in the office of William Collins, chief of the Field Service Division.

Of the new additions 144 came from Campbell county, in the territory of Director Dawson Chambers; 57 from the burley counties of Tennessee, where Director W. Y. Allen is aiding J. H. Vantrease in signing up the growers of four counties; 50 from Monroe county, 27 from Taylor, 15 from Adair, 14 from Boone, 20 from Grant, 22 from Franklin, 10 from Henry, 10 from Barren, 8 from Jessamine, 8 from Carroll, 6 from Metcalfe, 7 from Owen, 6 from Harrison and 5 from Scott.

The tabulations do not include contracts signed by workers in West Virginia, Ohio and Indiana and not yet received by Mr. Collins' office.

J. Sherman Porter, editor of the *Burley Tobacco Grower,* returned today from West Virginia. He said that growers of that state, now having the protection of a co-operative marketing law, are joining the association. Logan county, in that state, was opened Saturday with a meeting at Big Creek, which was called by Tom Miller, one of the leading workers for the Association in West Vir-

ginia, and Mr. Porter said that as a result of Mr. Miller's excellent work and high standing among the growers the association would make a considerable increase in its membership in his territory.

Ralph M. Barker, director of warehouses, returned from Carrolton today. Preparations are going forward there for a great celebration of independence day, July 4. Mr. Barker said that very few growers are out of the association in that county.

Mr. Barker is to be the principal speaker to the men at the organization of a county local in Fayette county next Saturday afternoon at 2 o'clock, and Miss Verna Elsinger, director of social service, will address the women of Fayette, who will organize a woman's auxiliary at the same time.

Women Promise Aid

New Castle, Ky., June 17.—Steps were taken to organize a woman's auxiliary of the Burley Tobacco Growers' Co-operative Association in this county yesterday, when Miss Verna Elsinger, director of social service of the association, in an interesting address to an audience which filled the opera house, presented the plans and purposes of the welfare department of the association.

Between 300 and 400 persons were present at the meeting and about fifteen of the leading women of the county signified their intention to assist Miss Elsinger and Director Bourne in the movement to organize the women of Henry county.

A playlet, under the direction of Mrs. Ben Carroll, which contrasted conditions in 1921 and now, was one of the pleasing features of the program. Readings were given by Mrs. Wendell Berry on "Co-operation" and Mrs. William Muncy Pryor on "Jad, The Pooler," General James Tandy Ellis' famous poem of the old pool.

A Vanished Vanity

Those who read the *Wall Street Journal* yesterday might have seen a human interest story on the first page and, being short, it may be reprinted in full. It follows:

"Internal revenue report of tobacco consumption for April indicates growing preference for ten-cent and higher-priced cigars, which increased from 13.22 per cent to 33.41 per cent above a year ago. Five-cent cigar has not made its expected come-back, increase being only 2.33 per cent above the same month in 1922."

The Five Cent Cigar

Most of us have not yet met the five-cent cigar which has been able to increase itself 2.33 per cent in a year, but most of us, especially those of us who have attained maturity, are gratified to hear of any increase, and we look forward to the attainment of a 3 per cent growth by April of next year. Any increase is worth while, for the general opinion has been that the nickel cigar was more nearly extinct than the buffalo.

We should be glad to meet a specimen of the five-cent cigar merely to see if it still has with it the flavor and aroma which it possessed between 1880 and 1890 or even a few years later. In those golden days it was a thing worth buying, worth carrying and, certainly, worth smoking. To the frugal New England young men of that day it was the only cigar that could safely be used, for, if one bought a cheaper grade, which was then possible, he was marked as a skinflint or, what was almost as bad, poverty stricken, while if he ventured to buy a ten-cent cigar he was regarded as extravagant and, besides, was conscience stricken.

Cigar Smoking Essential

The five-cent cigar was, as it were, ethically correct. The use of the pipe was unpopular, except with folks who contracted the habit while in the war, and while one might, as most did, chew tobacco, to smoke was regarded as exhibiting a tendency toward depravity, even though it was not absolutely wicked. For this reason, if for no other, it was necessary to smoke cigars in order to be moderately popular with the young women of those days.

Then, as later, while no young woman cared to be seen with a youth who was an open and notorious evil liver, she was equally unwilling to be in the society of those who were close to perfection. It will be seen that smoking was a necessity, and five-cent cigars were to be had in all sizes from Tansill's Punch, which resembled a weathered beanpole, down to modest one, such as now sell as low as fifteen cents.

Were they excellent cigars? Memory answers the question with enthusiasm and in the affirmative. But who knows? Therein exists a reason why we should be glad to see an increase in the output so that the smoking public generally could pass judgment upon them.—*Hartford (Conn.) Courant.*

Let Them Smoke

Women who do not want their husbands to smoke are very short-sighted. All husbands must die some time, and in the meantime it keeps them out of mischief and happy to smoke. No man who is smoking a pipe can be hatching up deviltry at the same time. When the Indian wished to resume foreign relations he used the pipe as a symbol of peace. As long as he smoked, scalping had no charms for him.

According to Shakespeare, you remember, Cæsar said: "Let me have men about me that are fat; sleek-headed men and such as sleep o' nights." It is a good guess that Cassius did not use tobacco in any form. And look what he did. He was the kind of person who goes about wrecking cities and nations because he must have some fun. The trouble with such people is that they have denied themselves innocent relaxation, and haven't enough vices to keep them from being a menace to society.—*Life.*

A Smoker Blind-Folded or with His Eyes Closed

Can not tell whether he is smoking a cigar having a dark or a light wrapper.

Cigar manufacturers know that the mildness or strength of a cigar is governed solely by the Tobacco in the filler.

We feel that the consumer should be educated by means of a publicity campaign to the fact that when he wants a pleasant mild smoke it makes no difference whether he chooses a dark or light wrapped Cigar.

It is conceded that no Tobacco in the world combines so many essentials to the making of a good mild cigar as Porto Rican. Besides being aromatic and fragrant it possesses practically no chlorine and therefore burns evenly and freely.

This year's crop is of exceptional quality, which means that a treat is in store for the American smoker, as Cigar Manufacturers throughout the entire Country are realizing more and more that Porto Rican Tobacco used as a filler exclusively or blended with other Tobacco makes a cigar which pleases the majority of smokers who prefer a mild but fragrant cigar.

For Leghorn, by *S. S. Teresa.* 1100 hhds. tobacco.

For Antwerp, by *S. S. Burgondier.* 173 hhds. tobacco.

For Havre, by *S. S. Montana.* 501 hhds. tobacco.

Jugoslavia's Debt May Be Paid With Tobacco

The funding of Jugoslavia's debt to the United States will be provided for along something the same lines as the flotation of the recent Austrian loan, according to reports received here, and as in the case of Austria the Central European tobacco trade will play the most important part in defraying the national debt, says the New York *Times.* Tobacco occupies a position in Jugoslavia which is parallel almost to that of the steel industry in the United States, and Government proceeds from this source will be used to meet that country's obligations.

According to figures compiled by D. F. Andricevic of the Adriatic Bank, Ltd., revenues from the tobacco industry provide the Jugoslav Government with more than double the total interest obligations of all its loans, including private loans by American bankers and the war-time debt to the United States of approximately $60,000,000. The Jugoslav Government holds a monopoly over the tobacco industry, and the proceeds from it are more than $10,000,000 annually. Additional receipts from Government monopolies of matches, salt, kerosene and cigarette papers, based on the 1922 figures, provide a substantial amount which could be applied toward principal requirements. In addition, the Government has revenue from its railroads which exceeds by 28 per cent its tobacco receipts.

A Popular Manila Cigar

The B. Wasserman Co. recently took over the distribution of the high-class Alhambra Manila cigar in the Metropolitan territory. Smokers who have tried this cigar are enthusiastic over its mildness and fragrance, and the growth of its popularity seems assured.

A Good Time to Speed Up Advertising

"How's business with you?" I asked the head of a leading advertising agency. Instead of the reply now most often received to that question, "Slowing up," he said cheerfully, "Fine, doing better." He went on to say that more headway can be made now in selling advertising than was possible when so many manufacturers were oversold, during the recent spectacular activity. "When business is coming pouring in, without exercise of any effort," he explained, "advertising and sales work often are neglected. Manufacturers have had a chance during the last couple of months to reflect that all their production and all their profits and everything else must come from their advertising and selling efforts. Now that they can handle more business, they are willing to give more attention to advertising and selling. If this policy be followed generally, then we ought to see good business during the second half of the year."

True, is it not?—B. C. FORBES, in *Forbes Magazine.*

British Tobacco Market

WASHINGTON, D. C., June 20.—During March and April there were no changes in the prices in British tobacco markets, says a report to the Department of Commerce, but the rates were in the majority of instances, somewhat higher in April of last year.

The brokers report, says the dispatch to the department, that April was fairly active, most grades of tobacco being in demand, but the principal business done was in Kentucky leaf and strips of spinning character, with a good proportion of the Bright cigarette leaf of the new and those remaining of the 1919 crop.

It is pointed out that the Irish Free State, having now full fiscal control, will cause her manufacturers some difficulty in selecting suitable tobaccos from stocks in Great Britain, and the interchange of the finished product will be almost impossible with the difference in duty on manufactured goods.—LAMM.

French Regie Purchases

WASHINGTON, D. C., June 20.—During 1922 the French Tobacco Regie purchased 350 metric tons of leaf tobacco in Madagascar, according to a report received by the Department of Commerce from American Consul Burri at Madagascar. It is expected, says the report, that the purchases this year will amount to 800 to 1,000 metric tons.

The Regie specialist is of the opinion that Madagascar will never produce any particularly good qualities. However, the cultivation will be encouraged, and within the next three years the amount of purchaseable tobacco should increase to some 3,000 metric tons per annum. As a further indication of the trend in European countries to secure their raw materials from their colonies, the report continues, this item is of interest.—LAMM.

Norway Asks Data on Idaho Cigarette Law

BOISE, Idaho, June 12.—Through Charles E. Hughes, Secretary of State at Washington, the Norwegian government has placed a request with Governor C. C. Moore for information dealing with the state's laws regarding the use of cigarettes by minors. The foreign government also wants to know to what extent the state's laws on this subject are being enforced.

It was announced by Norman B. Adkison, secretary to Governor Moore, that the information desired would be compiled and forwarded through proper channels to Norway.

Pennsylvania Tobacco Market Shows More Life

Several Buyers Visited Warehouses and Looked Over Offerings During the Past Week—Requests for Samples Still Arriving Despite General Shortage.

LANCASTER, Pa., June 18.—The Lancaster market showed an increase in activity during the past week. Several buyers visited local warehouses and looked over the offerings of the packers and tobacco men report that requests for samples are still arriving in face of the generally existing shortage of Pennsylvania. All of which serves to substantiate the opinion held by Lancaster packers that the remaining 10,000 or more cases of seedleaf will find many ready to buy later in the season. Strictly speaking, there is no Lancaster market, as a rule, at this time of the year because there are no buyers. And while no goods have actually been sold, none of the independents would be willing to part with holdings at prices less than those which were paid earlier this year. There is no bearish tendency evident on the part of any of the buyers. All seem willing to pay the price for the type of tobacco they want, and a break in the market is the last thing that local packers look for. Indications, if anything, are for higher prices this fall than were paid last spring, and in some cases this will have to be done if the packer is to make any money on his 1922 tobacco.

The indications for a large percentage of damage through mush rot and black rot are being borne out and some warehouses are employing a large force of labor to clean up their seedleaf. The additional expense both in damage to the leaf and the labor employed means that the crop will not be a cheap one for the packer and that a drop in price would be out of the question.

Cased for the Summer

Practically the entire packing of Lancaster county tobacco is out of the sweat and cased for the summer. Several crops which came into the packers' hands late were in the bulk until the early part of last week but all of the seedleaf has now been stored to age over the hot summer months. There was a small percentage of tobacco this year that was withdrawn from the market by the growers and consigned to the co-operative packing warehouses. Most of this seedleaf was held at prices which the packers considered too high. When his price was not met the grower decided that he could do better and packed with the "co-ops." Some few growers in this class "weakened" as the season drew on and came to terms with the buyers at the last moment. All of these crops have now found their way into one warehouse or another and the 1922 crop, from the growers standpoint, is a matter of history.

Methods Have Changed

Case sweating and packing the tobacco by the grower himself, in considerable favor some years ago, was eliminated entirely this year by the prices paid for the crop. This method of handling the seedleaf has been rather uncommon for the last half decade and was directly the outgrowth of the very poor prices which often prevailed and which the grower was forced to accept until the advent of the co-operative warehouse. In a year of particularly low prices many growers were driven to casing and packing their own crops as the only answer to what they considered unreasonably low returns on their tobacco. Higher prices for tobacco, the establishment of the co-operative warehouses and the cessation of case sweating by the grower, all of these came simultaneously and it is not hard to place them in their logical order. Born of discontent with prices and marketing conditions, the co-operative establishments came into being. This led, the year after their inception, to higher prices, and subsequently, both because the price was more satisfactory and because of an agency at hand which would handle their crop in case it was not sold, the growers ceased the practice of packing their own crops.

Experimental Program

The first step in the exhaustive experimental program which has been mapped out for the coming season at the Experimental Station by Otto Olson federal tobacco expert, has reached a successful conclusion. Mr. Olson expects to make a very definite step toward greatly improving the quality of Lancaster-grown seedleaf as a result of the work being done this year and with his long record of more than twenty years of successful achievement in the Lancaster section, growers and manufacturers alike are looking with interest for important developments. The eradication of wild fire and "calico" was one of the projects undertaken by the experimenter this spring and the first phase of the work—that of effecting control of insect pests in the seed bed—has been accomplished. Fumigation with Rustica, the famous high nicotine-content tobacco, was the method used to rid the beds of the insects which are believed to carry the dread diseases which so often reduce the quality and lower the yield of Lancaster grown seedleaf.—KEYSTONE.

Tobacco in China

WASHINGTON, D. C., June 19.—The Chinese Ministry of Agriculture and Commerce estimated the total tobacco production in 1915 at 300,000,000 pounds and in 1916 at 900,000,000 pounds. The use of tobacco, particularly in the form of cigarettes, is increasing rapidly in China.

Purchases Sumatra Leaf

Joseph Holzman bought a quantity of Sumatra tobacco last week in Holland out of hand, including some very fancy marks. This house is experiencing a big demand for their high-grade wrappers.

York County Manufacturers Boost Short Filler

Association Members Dispute Propaganda to Effect That Long Filler Is Better Than Short—Say Better Tobacco Can Be Put Into Short Cigar at Same Price.

York, Pa., June 18.—That the country s waiting for a good 5 cent cigar is the tatement attributed to Thomas A. Marhall, former vice-president of the United tates. The cigar manufacturers of ork County claim it is this want which ey are prepared to fill. The relative erits of a long filler cigar and a short ller (scrap) cigar was the object of dission at a meeting of the York County igar Manufacturers' Association held st week at Red Lion. The members say iat propaganda is being circulated all ver the country to the effect that a long ller cigar is better than a cigar made f short filler. It is their contention that is is not true, especially of the 5 cent rade of cigar for which a far better qualy of tobacco can be purchased in shorts. On account of this propaganda, these cal manufacturers say, the short filler discriminated against and the long ller basks in popularity and the factories which they are made, prosper. The ajority of the York County factories ake short filler cigars and it is the conntion of the owners that the public ust be educated to the merits of the ort filler by a campaign of advertising, the propaganda is to be counteracted. committee was appointed to take arge of the campaign. The members re T. E. Brooks, C. S LaMotte and harles C. Meads.

The convention of the Tobacco Merants' Association of the United States, Washington, recently, came in for cenire from T. E. Brooks, a member of the ork County association. From what he w, Mr. Brooks reported, he is led to beve that the national association is not ndly disposed toward the York County sociation, which was the largest representative body in attendance at the conntion. He said that to all appearances e important business of the association stead of being taken up on the floor of e convention was transacted behind osed doors.

Mr. Brooks further told his fellow gar manufacturers that the eyes of the alers of the country are on the York ounty 5 cent cigar. From observations ade on a recent trip, he told them he beived that the 5 cent cigar being manuctured with short filler is better than ose made of long filler.

The need for having all over-charged ight bills and lost, stolen or damage aims placed in the hands of attorney mstead, of the Industrial Traffic Asciation, Philadelphia, for collection, as urged by C. S. La Motte. A motion the effect was unanimously agreed to. cretary Charles C. Meads was inucted to accept data from the shippers d place it in the hands of this agency. Those in attendance at the meeting re: B. M. Hanigan, C. H. Ehehalt, eorge Roseman, Charles C. Meads, C. LaMotte, W. M. Gemmill, Laurie vis, Spurgeon Pomraning, S. F. Latte, Latimer Sechrist, Sterling Knise- Paul Reichard, A. C. Frey, T. E. ooks, Quay Minnich, Arthur H. ompson, L. M. Sentz, S. M. Downs, S. Sentz, C. N. Dellinger, Ellis B. rickler, Herbert M. Smith, Arthur S. egler, T. C. Miller, H. A. Waughtel, mes W. Kelly, Harry Fischel, Charles Laucks, D. C. Waltreider, Jacob C. inter, Charles F. Roseman and L. Earl ove.

Making Inspections

Major Gillars, chief field deputy of the st U. S. Internal Revenue District Pennsylvania, conducted an inspection ur of Adams County last week, with vision chief G. Frank Lindemuth of York office, and D. J. Bowan, deputy lector at Gettysburg. The York inction will be made in the near ture.

The tobacco industry of Adams Coun according to figures compiled a short ie ago by the department of internal airs, bureau of statistics and informan, M. Hoke Gottschall, director, furhes employment for over 700 persons. ere are 43 establishments with an invested capital of $361,611 and their products are cigars, cigar cuttings and cigar boxes, which in 1921 were valued at $1,514,576. A total of 29,209,647 cigars were made in the 34 cigar factories and the cigars were valued at $1,302,815. Employment was given to 699 persons. There were eight establishments dealing in cigar cuttings and a valuation of $12,433 was placed upon the product. The county has only two box factories which employ a total of 53 persons. The factories produced 963,964 boxes valued at $139,328.

Most Important Section

McSherrystown is the most important town in the county in the tobacco and cigar industry. It has 24 establishments engaged in the industry. The capital represented in the business is $227,421 and the value of the product $1,019,563. Employment is given to 453 persons. There are 15 cigar factories, employing 427 persons and with capital invested of $202,421, which produced 19,712,527 cigars valued at $924,080. Eight factories produced 77,798 pounds of cigar cuttings valued at $12,433. The one box factory in the town gave employment to 26 persons. It is capitalized at $25,000 and the 562,559 cigar boxes made there were valued at $83,050.

The other towns in the county and the extent to which they contribute to the tobacco and tobacco products industry are here shown:

Abbottstown—Two cigar factories; seven employes; capital invested, $1,000; quantity produced, 321,000; value of product, $7,990.

Centennial—Three cigar factories; 34 employes; capital invested, $28,200; quantity produced, 1,625,150; value of product, $48,035.

East Berlin—One cigar factory; 20 employes; capital invested, $5,000; quantity produced 439,800; value of product, $19,255.

Gettysburg—Two cigar factories; 28 employes; capital invested, $6,785; quantity produced, 234,100; value of product, $10,000.

Kingsdale—One cigar factory; one employe; capital invested, $300; quantity produced, 17,000; value of product, $510.

Littlestown—Eight cigar factories; 161 employes; capital invested, $62,775; quantity produced, 6,096,920; value of product, $315,395. One box factory; 27 employes; capital invested, $14,500; quantity produced, 401,405 cigar boxes; value of product, $56,278.

New Oxford—Two cigar factories; 17 employes; capital invested, $15,629; quantity produced, 763,150; value of product, $37,550.

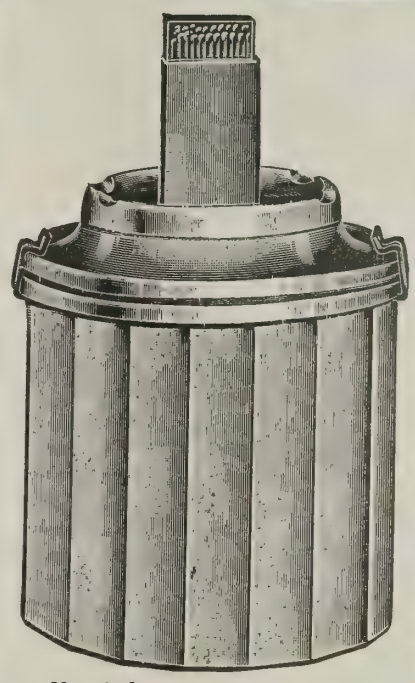
Trade Notes

Stewart S. Shindler, foreman for the C. N. Foreman Cigar Co., Red Lion, returned recently from a 10-day trip through the New England states.

Fred Horn has opened and is operating a small cigar factory in Yoe.

J. Harry Stewart, a former depty collector in the York office of internal revenue, has accepted a position as bookkeeper and office manager in the cigar factory of H. F. Martin & Co., Mackenzie street and Boundary avenue, this city. He has already entered upon his duties.

To Supervise Porto Rican Interests



Armanda Selgas, youngest son of Alfredo Selgas, head of Selgas & Co., leaf dealers and packers, sailed last Thursday on the S. S. *San Lorenzo* for Porto Rico, and will be engaged in supervising the interests of his organization on the island some considerable time.

Covering Keystone State

H. J. Curtis is covering the Pennsylvania territory for A. Bornholdt & Co., and is sending in lots of orders to headquarters.

LARGEST MANUFACTURERS OF TABLE GLASSWARE IN THE WORLD

MARSHALL FIELD

NO OTHER CIGAR IN AMERICA LIKE IT
IT IS DIFFERENT
THERE ARE REASONS FOR IT

The manufacturer has devoted his life in the science of tobacco curing, and the art of blending. The objectionable properties which tobacco contains are eliminated, such as Rosin Gum which makes tobacco strong, and the natural Ammonia which makes tobacco sharp and bitey. It is then ripened, mellowed, and blended.

All Marshall Field Cigars are

Very, Very Mild Regardless of Color

Distinctive Quality

Liked by all who smoke them

Marshall Field wrapped with finest Vorstenlanden Java.

Pioneer 10c., Field 2 for 25c., Bankers wrapped two in foil 2 for 25c., Marshall 15c., L. Corona 15c., Standard 3 for 50c.

THE CORAZA CIGAR CO.

HOWARD F. PENT, President

7th & Cherry Streets ***Philadelphia, Pa.***

BROKER actual size

SMOKERS insist on known quality in the cigars they buy. A store is judged by the merchandise it sells.

Girards are known as quality cigars. Smokers don't have to be talked into buying them. Just show a box on top of your counter. They'll sell themselves.

Girards are reputable cigars sold by reputable dealers. Link up with Girard.

Philadelphia Sees Much Gain All Along the Line

Recent Temporary Quietness Gives Way to Pronounced Improvement—Character of Buying Indicates Revival of Good Business—Evidences of Permanent Progress.

PHILADELPHIA, June 19.—The suspicion which many in the trade had that the comparatively quiet times which were experienced in the closing weeks of May and the opening of June, were transient in character, was confirmed by the experience of the past week. Business did not jump back into activity with a bound, but there was such gain all along the line and the improvement in the buying was of such a character as amply to support the opinion that it was but the beginning of a new revival and one that is of permanent character. It is true that all along the big producers with their national field have had no serious reverses and that their output all along had been absorbed by the market. At worst they experienced only some cessation from the orders which actually had been flooding them. Only in isolated cases were these manufacturers affected to the extent of going on part time in some of their upstate branches or of temporarily closing up entirely, taking advantage of the brief cessation to make necessary repairs and rearrangements. Such of these as curtailed output for the few weeks, now again are getting into the condition of working full time.

Meanwhile the very small manufacturers are still in a complaining mood, some because orders are lacking but more because the supply of competent help was not available; those of medium size are enjoying what to them is a very decided betterment of business. The short lull appealed to many as if industry generally, and therefore the worker-consumers of tobacco, were merely taking a deep breath for a new start. They opined that the start has now arrived, opinions differing only as to the extent that it will take and the length of time it will continue.

Cigar Box and Leaf Lines Improving

Manufacturers of cigar boxes are naturally enjoying better business because of the preparation for the greater volume of production which the cigar producers are making. The leaf market similarly is affected.

The leaf tobacco dealers who attended the Sumatra Inscriptions and purchased heavily, are now well satisfied with their purchases, the tobacco being of fine quality and disposition by sale being effected without much argument. The market for Havana leaf is entirely satisfactory, and there are more bright spots on the horizon of the domestic leaf market than have appeared for some time.

Getting Introduction at Home

The newest development in the retail trade is the very extensive introduction in both the centrally located and in the neighborhood cigar shops, of the Eisenlohr, Cinco De Luxe. This greater Cinco is very widely known through the West, particularly, although its field is national, but its local marketing is entirely new. The firm is conducting a newspaper campaign for the brand and is complimenting it with extensive window displays, the attractive De Luxe display card in colors being backed up with stacks of the boxes in which the goods are packed. The missionary work in window display activities is being conducted by William Dougherty of the sales force. The new product is of larger size than the regular Cinco, has a long filler and is Sumatra wrapped. It retails at 10 cents.

The Post Cigar Co. is steadily adding to its chain of retail stores, and has opened an additional one at 1732 Market street. The regular line will be carried but the Market street store also will go extensively into the radio business.

Reports Not Well Founded

Reports which have been circulated in the trade for some time to the effect that Sig C. Mayer, who recently retired from the company bearing his name upon its dissolution and thereafter entered employ of the G. H. P. Cigar Co., was about to start into business again in association with Louis Grabosky, son of Samuel Grabosky, senior member of the firm of the G. H. P. Cigar Co., manufacturers of El Producto of national distribution, was laid during the week by Mr. Grabosky. He said that reports of the character indicated had reached him from many sources and had even gotten into print, but that all were idle talk and that even if a movement of this kind were in contemplation, they could not take definite form for a long time. Benjamin Grabosky of the firm accompanied by General Manager Frank P. Will and Tom Dean, head of the sales force, is shaking hands with the distributors, old and new, in Pittsburg and the Central West, expecting to remain in the territory until the early part of next week.

Working at Full Capacity

Full capacity production was attained this week in the Philadelphia headquarters factory of the newly organized Associated Cigar Manufacturing Co., at 1029 Race street; the upstate factories at Reading and Hanover, Pa., are operating at the limit, and finally, from George I. Watson, a member of the firm, who has been traveling through New York State and the Middle West, there have come really surprisingly large orders from his old customers of the days of his association with the Sig C. Mayer Co. and from new ones developed in Detroit, Cleveland, Rochester, Buffalo, Binghamton and many cities and towns in Northeastern Pennsylvania for its leaders, the Rey Oma and the Dependo. The fact that the production of these brands will be carried on under the immediate personal supervision of Gregory F. M. Smith with his 40 years of experience gave a decided impetus to the sales to the several distributors. Mr. Smith in effect will "vibrate" between the three factories of the new company, constantly maintaining watchfulness that only the best materials of which he is so well qualified to judge by reason of lifelong experience in the leaf packing trade, will be worked up by the skilled cigar makers the company has gathered together. Thomas H. Coll is tying the activities of his partners together at the Race street headquarters.

New Size Forthcoming

There is shortly to be offered by the Marshall Field Cigar Co., 127 N. 7th street, a new foil wrapped Invincible size of the firm's leader the Marshall Field. Production of samples is nearing completion and then the offering to the trade will be made. This addition to the Marshall Field family will be the 7th created during the six months that the new firm has been in business. The Philadelphia factory is nearing the limit of its possibilities and there is in contemplation the opening up of a branch plant. President Howard F. Pent is back from a profitable trip to Chicago, Toledo and Canton, Ohio, where there is great demand for the brand.

Match Imports

WASHINGTON, D. C., June 20.—Figures which have just been made public by the Department of Commerce show that 439,315 gross boxes of matches were imported into the United States in March valued at $177,015. The largest quantity came from Norway and the second largest from Sweden.—LAMM.

Antwerp Official Coming

Lucien Theyskens, head of the Antwerp office of Theyskens & Shaw, is expected to arrive in New York about July 6 on the new Red Star liner *Belgenland.*

Back from Cuba

S. Ruppin of S. Ruppin, Inc., and Mr. Ruppin, returned last week on the steamer *Calamares* from Havana, after an enjoyable three weeks' sojourn in Cuba.

Chicago Handling Large Volume of New Business

Great Territory Served By Windy City Calling for Higher Price Cigars—Demands for Advertised Brands Steadily Increase—More Orders from Summer Resorts.

CHICAGO, June 16.—Throughout the great territory served by this market a remarkable volume of business for this season is being handled. There is a better demand for higher price cigars and the call for advertised brands grows larger and larger. With the opening of summer resorts in nearby states, orders to the local jobbers who cover the territory have been heavier this year than ever before, which is a good sign that thousands will leave the city during the next eight weeks.

The general report on collections is that locally they are very poor and the leading houses are tightening up on accounts that are behind.

Making Good Showing

Tom Palmer, clear Havana cigars, made by Wengler & Mandell at 1946 W. Madison street, continue to be leaders in their class. No matter what section of the city one may call at the dealer will say Tom Palmer leads the clear Havana field.

To Survey Situation

Elmer Epstein of the Frank P. Lewis Cigar Co., Peoria, is due in a few days. Elmer will look over the work being done here by Iwan Ries & Co., and his special representative H. L. Ruth, on the Emerson, Java wrapped cigar. Emerson, already has a wide distinction and displays are seen in many windows.

Steamer Baskets

Anderson, Thorson & Co., importers and fancy grocers, have advised the trade that they have made special arrangements with Park & Tilford of New York, whereby they can serve their friends who are about to sail for foreign ports with steamer baskets of fruits and delicacies.

Much in Evidence

Fatima cigarettes get quite a play here by the dealers. The show windows are loaded with Fatima displays at present.

New Store in Full Blast

The New Schermerhorn, Inc., store at Dearborn and Monroe streets, is now in full operation. In the windows, Principle De Gales, Harritos and Emanuelo cigars get a fine showing. The new store is one of the finest in the Loop and is visited by thousands of customers daily.

Delighted with Business

Jack Rosenberg of Eduardo Gonzales & Co., Tampa, is quite happy these days over the big orders he gets from the Hotel Sherman for their private brand that comes in fine sizes, boite nature packed. Personally I have seen some of the orders and I will say they run into six figures. Jack's, Gonzales brand, Jonathan and Estos-Si, are placed with many dealers and all over the middle west he has several good connections on private brands.

Making Good Headway

A steady increase in the sale of Pancho-Arango, Made-in-Bond cigars is reported by the dealers who handle them. The City Club of Chicago and the Planters Hotel are new accounts to take on Pancho Arango cigars.

Showing 'Em Off

The Blackstone cigar displays are now out in by Charles Andraé, who recently entered the window trimming business at 116 N. La Salle street.

Bunching Orders

Calling on the clubs, hotels and better dealers was that Armas del Casa star, Joe Banker. He left with a fat bunch of orders.

Meeting with Great Success

"Summer Deal 1923," is the new T. P. C. combination carton cigarette Deal being offered the dealers by the Tobacco Products Corporation. You buy 500 assorted Melachrino cigarettes, 100 Natural, 200 Herbert Tareyton and 200 Egyptian Prettiest and you get a rebate check from the factory for 75 cents. The deal has gone over big. W. D. Fleak is back at the Chicago headquarters of The Tobacco Products Corporation, 1020 South Wabash avenue. Mr. Fleak is general sales manager and is in charge of nineteen middle west states. The Tobacco Products will shortly put a crew out here working their Buckingham Mixture, a brand they recently looked over that was made in Detroit. Buckingham will be placed in two packings to sell at 10 and 15 cents.

Star Shifts Position

A big surprise was the news that "Doc" W. W. Rosobro has signed up to represent the New York-Tampa Cigar Co. Doc is widely known here, and no matter what he sold, and he has put out a few in the past, from M. Bustillo, and Epoca, to Las Vegas, his prospects for the placement of Jenny Lind and Personality cigars are very rosy indeed. "Doc," who is no longer a chicken, has a reputation as a sales star that is mighty hard to beat.

Harry Stolorow of the Sonora Cigar Co., Milwaukee, is here from Minneapolis, looking for a connection for his Sonora, Java wrapped cigar.

Many dealers now offer the new Pall Mall, 20 in a box retailing for 30 cents.

Windy City Growing

The new Chicago City directory is out and Chicago now has a population of 2,935,887. The big task of getting the new directory up required one year and the feat was accomplished by R. L. Folk & Co., at a cost of over $350,000. The last Chicago City Directory was published seven years ago.

Unique Advertising

Clown cigarettes are much in the limelight these days. A quarter page newspaper ad is shown of this "Balanced Blend" cigarette. A horse representing "Spark Plug" of the Sunday colored section, ridden by a clown, now covers the street of the Loop. The stunt is quite new in cigarette advertising and is creating quite a demand for Axton-Fischer Tobacco Co.'s product. They say, "Try a Pack, You'll Come Back, The Clown's Just That Good."

New Place Opens

J. P. Brill's Blackwood Hotel coffee shop and cigar store opens today. It is one of the finest on the north side. A full line of Pancho-Arango cigars will be featured, as will be Vega Del Rey, and Virginia Lee.

More Than Third of Century

In October Albert Breitung, the owner of 12 fine cigar stores in the Loop, will celebrate his 35th anniversary in the retail cigar business. Starting 35 years ago with one store in the Rookery Building, Mr. Breitung has today become the leading dealer in the down-town section. His stores occupy the most prominent corners and are the best equipped in the city.

Ed. Modiska, of Gonzalez, Mendez & Co., has left for Pittsburg.

Mort Hammer arrived from Tampa and is busy booking orders for Marcelino Perez & Co.

Lining 'Em Up

Sig Meyer is busy lining up orders for the well known Lozano clear Havana. This brand is well placed locally.—H. L. H.

for real enjoyment

EL PRODUCTO comes in many sizes, shapes and colors—at prices from 10c to 30c—but there is only *one* El Producto standard of mildness and character.

Smokers know this and the result is that an El Producto customer is a "steady repeat" customer.

CONNECTICUT NUMBER

Tobacco in Connecticut Valley from Colonial Days to Present Time

Leading Cigar Leaf Tobacco State Derives Its Name from Indian Word, "Quinnitakut," Signifying Long River — The Lands Bordering the Notable Stream Produce Millions of Pounds of Tobacco Yearly—The Shade-Grown Leaf a Prominent Feature

By DR. ARTHUR SELWYN BROWN

CONNECTICUT, one of the most important of the original New England colonies, derived its name from the Indian word "Quinnitakut," which signifies a long river. They gave the river that name and the first settlers bestowed it on the colony. Then, when they had reconnoitred the colony and had located the finest farming areas, they named them the Wethersfield, Windsor, Hartford, and New Haven. The first three were settled between the years 1634 and 1636. New Haven was settled in 1638. Other important settlements were founded at subsequent dates. King James, of England, granted a charter to the Colonists in 1632 which defined the boundaries of the Connecticut colony as extending from Narragansett Bay to the Pacific Ocean. This was a most generous gift of a proud monarch to grateful people. But, unfortunately, the gift, like that of Midas, in classical times, was too large and valuable for the colonists to utilize and, in the course of time, enterprising colonists from the motherland and from other American settlements occupied portions of the Connecticut territory until the major portion of it was ceded to the Federal Government in 1776. The area of the state now embraces 4,990 square miles.

Early Claims to Territory

The magnificent river which traverses the rich tobacco-growing valley appears to have been first surveyed and mapped by a Dutch engineer, Adrian Block, who, while in command of a Dutch ship, explored, sounded and charted the river in 1614. Captain Cabot, however, had entered the river in 1497 and 1498 and had taken title to all the territory for England. The present area of Connecticut comprises the grant made by King James I to the Plymouth Company in 1606, and which was confirmed in 1620. This company established an active and prosperous trading post at Windsor in 1633. A little before that, the Dutch had built a fortified trade post at New Haven on sufferance. The Plymouth Company established their post at New Haven in 1638.

Famous for Industries

Connecticut was, at the beginning of her history, famous for her trading posts, subsequently for her agricultural industries and in modern times is famed for her general industries, which represent an investment of more that $500,000,000. The state is pre-eminent in mechanical inventions, and the products of her busy factories are shipped over the whole civilized world. These products include watches and clocks, machinery, firearms, automobiles, hardware, Danbury hats, brass goods, sewing machines, typewriters, chemical and many other commercial products of importance.

Fame of Tobacco Is World-Wide

But it is doubtful whether any of those articles is so well appreciated as the tobacco plant which has given Connecticut such great fame among the world's tobacco markets. The tobacco grown over immense areas of the fertile Connecticut Valley constitutes one of the world's richest and most sought after tobacco crops.

The earliest settlers appear to have discovered that good tobacco may be grown successfully in all latitudes from Canada to the tropics and on a great variety of soils. They also knew, doubtless, that the commercial value of a tobacco crop is controlled by climatic and soil conditions as well as by the selection of the seedlings and the care taken in growing the crops.

Early Tobacco Culture Had Little Care

Little care was given to tobacco growing by the early settlers. Many farmers grew tobacco for their own use. When settlement increased, a few grew a little more than they could personally consume and sold the surplus in the trading posts. When the constitution was adopted in 1639, the Connecticut tobacco industries had attained sufficient importance to attract the attention of the politicians.

In 1641 the following enactment was made by the Legislature: "It is ordered that whoever, within this jurisdiction after September, 1641, smoke or use tobacco other than what is grown within their liberties shall forfeit for every pound so spent five shillings, except those who hold licenses from the Court."

Imports from Other Countries

Tobacco was imported into New Haven at the time the above protective ordinance was issued, from the West Indies, Mexico and Virginia. It is evident that the general smoker did not like the idea of the restriction of tobacco to that grown on local farms. The colonial records tell us that the first tobacco ordinance worked so badly that the General Court on January 28, 1646, issued the following proclamation: "The order concerning the payment of 5 shillings a pound for using tobacco grown beyond the jurisdiction of this court is hereby repealed."

Smokers Had to Be "Certified"

The public response to this relief measure was exciting. Smoking and tobacco-chewing became more fashionable than ever. The anti-smokers became greatly alarmed at the way their friends were spending their money in smoking and, as they mistakenly thought, injuring their health. They got busy in the political lobbies and persuaded the General Court to enact legislation to the following effect: "For as much as it is observed that many abuses are committed by much tobacco smoking, it is enacted that no person under the age of 20 years, nor any other who is not already an accustomed smoker, shall use tobacco until he has procured a certificate from a medical man stating that smoking or other use of tobacco is 'useful' for him. In addition, application must be made to this court for a smokers' license."

Restricted in Smoking Privileges

Even the above restrictions failed to give the

devotees to the fragrant weed the right to smoke wherever they wished to. They were prohibited from smoking in public on account of the bad examples they might give to persons innocent of the joys of the pipe and to adventurous boys. They could smoke in their homes after the ordinary time of repast commonly called dinner; but this delight was restricted to occasions when the smoker was alone or had another smoker as guest. Two other smokers constituted a public and this brought the prohibition of smoking in public into operation. A farmer, licensed to smoke, was not permitted to enjoy the charms of his pipe when in the fields and woods unless he was going "on a journey of at least 10 miles." There is little doubt that many a smoker started out on a 10-mile hike after he had enjoyed the supreme felicity of his permitted after-dinner smoke, so as to prolong the joy by refilling his pipe. Such hikes were continued until the smoker decided he had smoked enough for the time being. The hike was then postponed until there was another occasion for its resumption.

"In the Ol' Tobacco Patch"

The restrictive legislation worked hardships to many good citizens while they were enforced. But the enforcement was not general and never rigid. The early settlers enjoyed many a fine pipeful in brave defiance of the law, and like the inveterate smoker S. Q. Lapius describes in his poem entitled, *In the Ol' Tobacco Patch,* most of the farmers farmed and smoked and then soliloquized:

"I jess kind o' feel so lonesome that I don't know what to do,
When I think about them days we used to spend
A-hoein' our tobaker in th' clearin'—me an' you—
An ' a-wishin' that the day was at an end.
For the dewdrops was a-sparklin' on the beeches' tender leaves
As we started out a-workin' in the morn;
An' th' noonday sun was sendin' down a shower of burnin' leaves
When we heard the welcome soundin' dinner-horn.
An' th' shadders round us gathered in a sort of ghostly batch,
'Fore we started home from workin' in that ol' tobacker patch.
I'm a-feelin' mighty lonesome, as I look aroun' today,
For I see the change that's taken place since then.
All th' hills is brown and faded, for th' woods is cleared away,
You an' me has changed from ragged boys to men;
You are livin' in th' city that we ust to dream about;
I am still a-dwellin' here upon the place,
But my form is bent an' feeble, which was once so straight and stout,
An' there's most a thousand wrinkles on my face.
You have made a mint of money; I perhaps have been your match,
But we both enjoyed life better in that ol' tobacker patch."

Connecticut Shade Tobacco

The tobacco which makes Connecticut so famous today is known as the Connecticut Shade wrapper. During the past half-a-century this unique product of American agricultural skill has moved up into a strong position in the cigar-manufacturing centers. It has no superior in the qualities constituting a fine wrapper. It has an excellent general appearance, good color, quality, texture, venation, luster, aroma and burning capacity.

The soils in the Connecticut valley where the shade leaf is grown are mainly composed of loams, sandy soils, river silt and gravel loams. Tobacco crops raised on these soils at Windsor, Suffield and elsewhere from Havana seed produce a shade of tobacco which exhibits a general uniformity.

First Tent Experiment

The first tent is reported to have been erected at Poquonock, on the farm owned by John Do Bon. It was erected for experimental purposes by the Department of Agriculture, working in co-operation with the Connecticut Experiment Station. The tent was made of cheese-cloth and was the outcome of ideas imported from the East Indies by A. D. Shaw, of Quincy, Florida. Experiments carried on by Shaw proved that the tent protected the delicate growing plants, and acted like shade trees in promoting the stem growths and the sizes of the leaves. They led to heavier crops of finer quality leaves and reduced the damages done by insects to the growing plants. The success of the Shaw experiments in Florida led to the trial of tents elsewhere and finally Du Bon secured a test on his farm in the Connecticut Valley. Unfortunately the first experiments in Connecticut did not enable the experimenters to realize their hopes. Allowance was not made for the wildness of the northern climate. Wind and rain during the first few years of trial caused much damage to the tents.

Demonstrated Its Value

The Poquonock experiments in 1904 demonstrated that seedlings raised from seed grown in Cuba produced heavier crops of finer tobacco than plants grown from seed gathered from local farms. In 1909, the data secured by the leading experimenters, including Floyd, Ackerly, Stewart, Hazelwood, Griffin, Shamel, Pinney, Farnham, Soby, Whipple, Haas and many others, showed that Connecticut Valley shade-grown leaf had qualities which were unsurpassed by any foreign-grown wrapping tobaccos. All that now remained was to prove to the American cigar manufacturers that there was a home product which possessed advantages over imported leaf tobacco. This work was ardently taken up by many active business firms and within a few years the fame and qualities of Connecticut shade-grown tobacco was written in large letters of gold in every cigar-manufacturing center within the United States and Canada.

Farmers Became Interested

In the meantime, the farmers were showing interest in the new crop which, they were told, offered greater possibilities in the way of returns than any other crop which they could raise. Many of the broad-minded men sowed small areas and tested the commercial possibilities of tobacco.

The experts continued using the latest intensive cultural methods in raising and testing new types of plants and in studying the effects of seed-grading and culling.

Favorable Climatic Conditions

Climatic conditions necessitated close studies of the best ways of securing the tent frames and their posts, wires and stays and the adjustment of the cheese-cloth. Connecticut is blessed with a good climate. It is a fine summer resort. Thousands of visitors live in Connecticut each Summer in order to enjoy the salubrious and invigorating climate. The local farmers, particularly those who grow tobacco in the valley lands, realize that this fine climate has some drawbacks. Thunderstorms sometimes pass along the valley rapidly, which are accompanied by high winds and heavy rain showers. Unless the tobacco tents, which now cover immense areas, are well and strongly erected, they will become wrecked by some of the Summer storms and the crops would be damaged or destroyed.

Shade Calls for Careful Husbandry

Shade growing calls for the most careful husbandry. Seeds must be selected with fine judgment, the plants must be set in rows about three feet apart and repeated hoeing or machine cultivation must be given the growing plants. The leaves are harvested by trained harvesters who cull all damaged or immature leaves.

The curing of Connecticut shade-grown leaf has become a fine art. The best methods in other tobacco-growing states were investigated and their good points were selected and adapted to Connecticut conditions. The humidity and temperature of the curing sheds need the greatest attention. Fermentation is another part of the curing process that calls for experienced judgment. The state, fortunately, ever since the commercial value of its tobacco crops became realized, has had plenty of expert tobacco curers. They have largely contributed to the state's tobacco-producing fame.

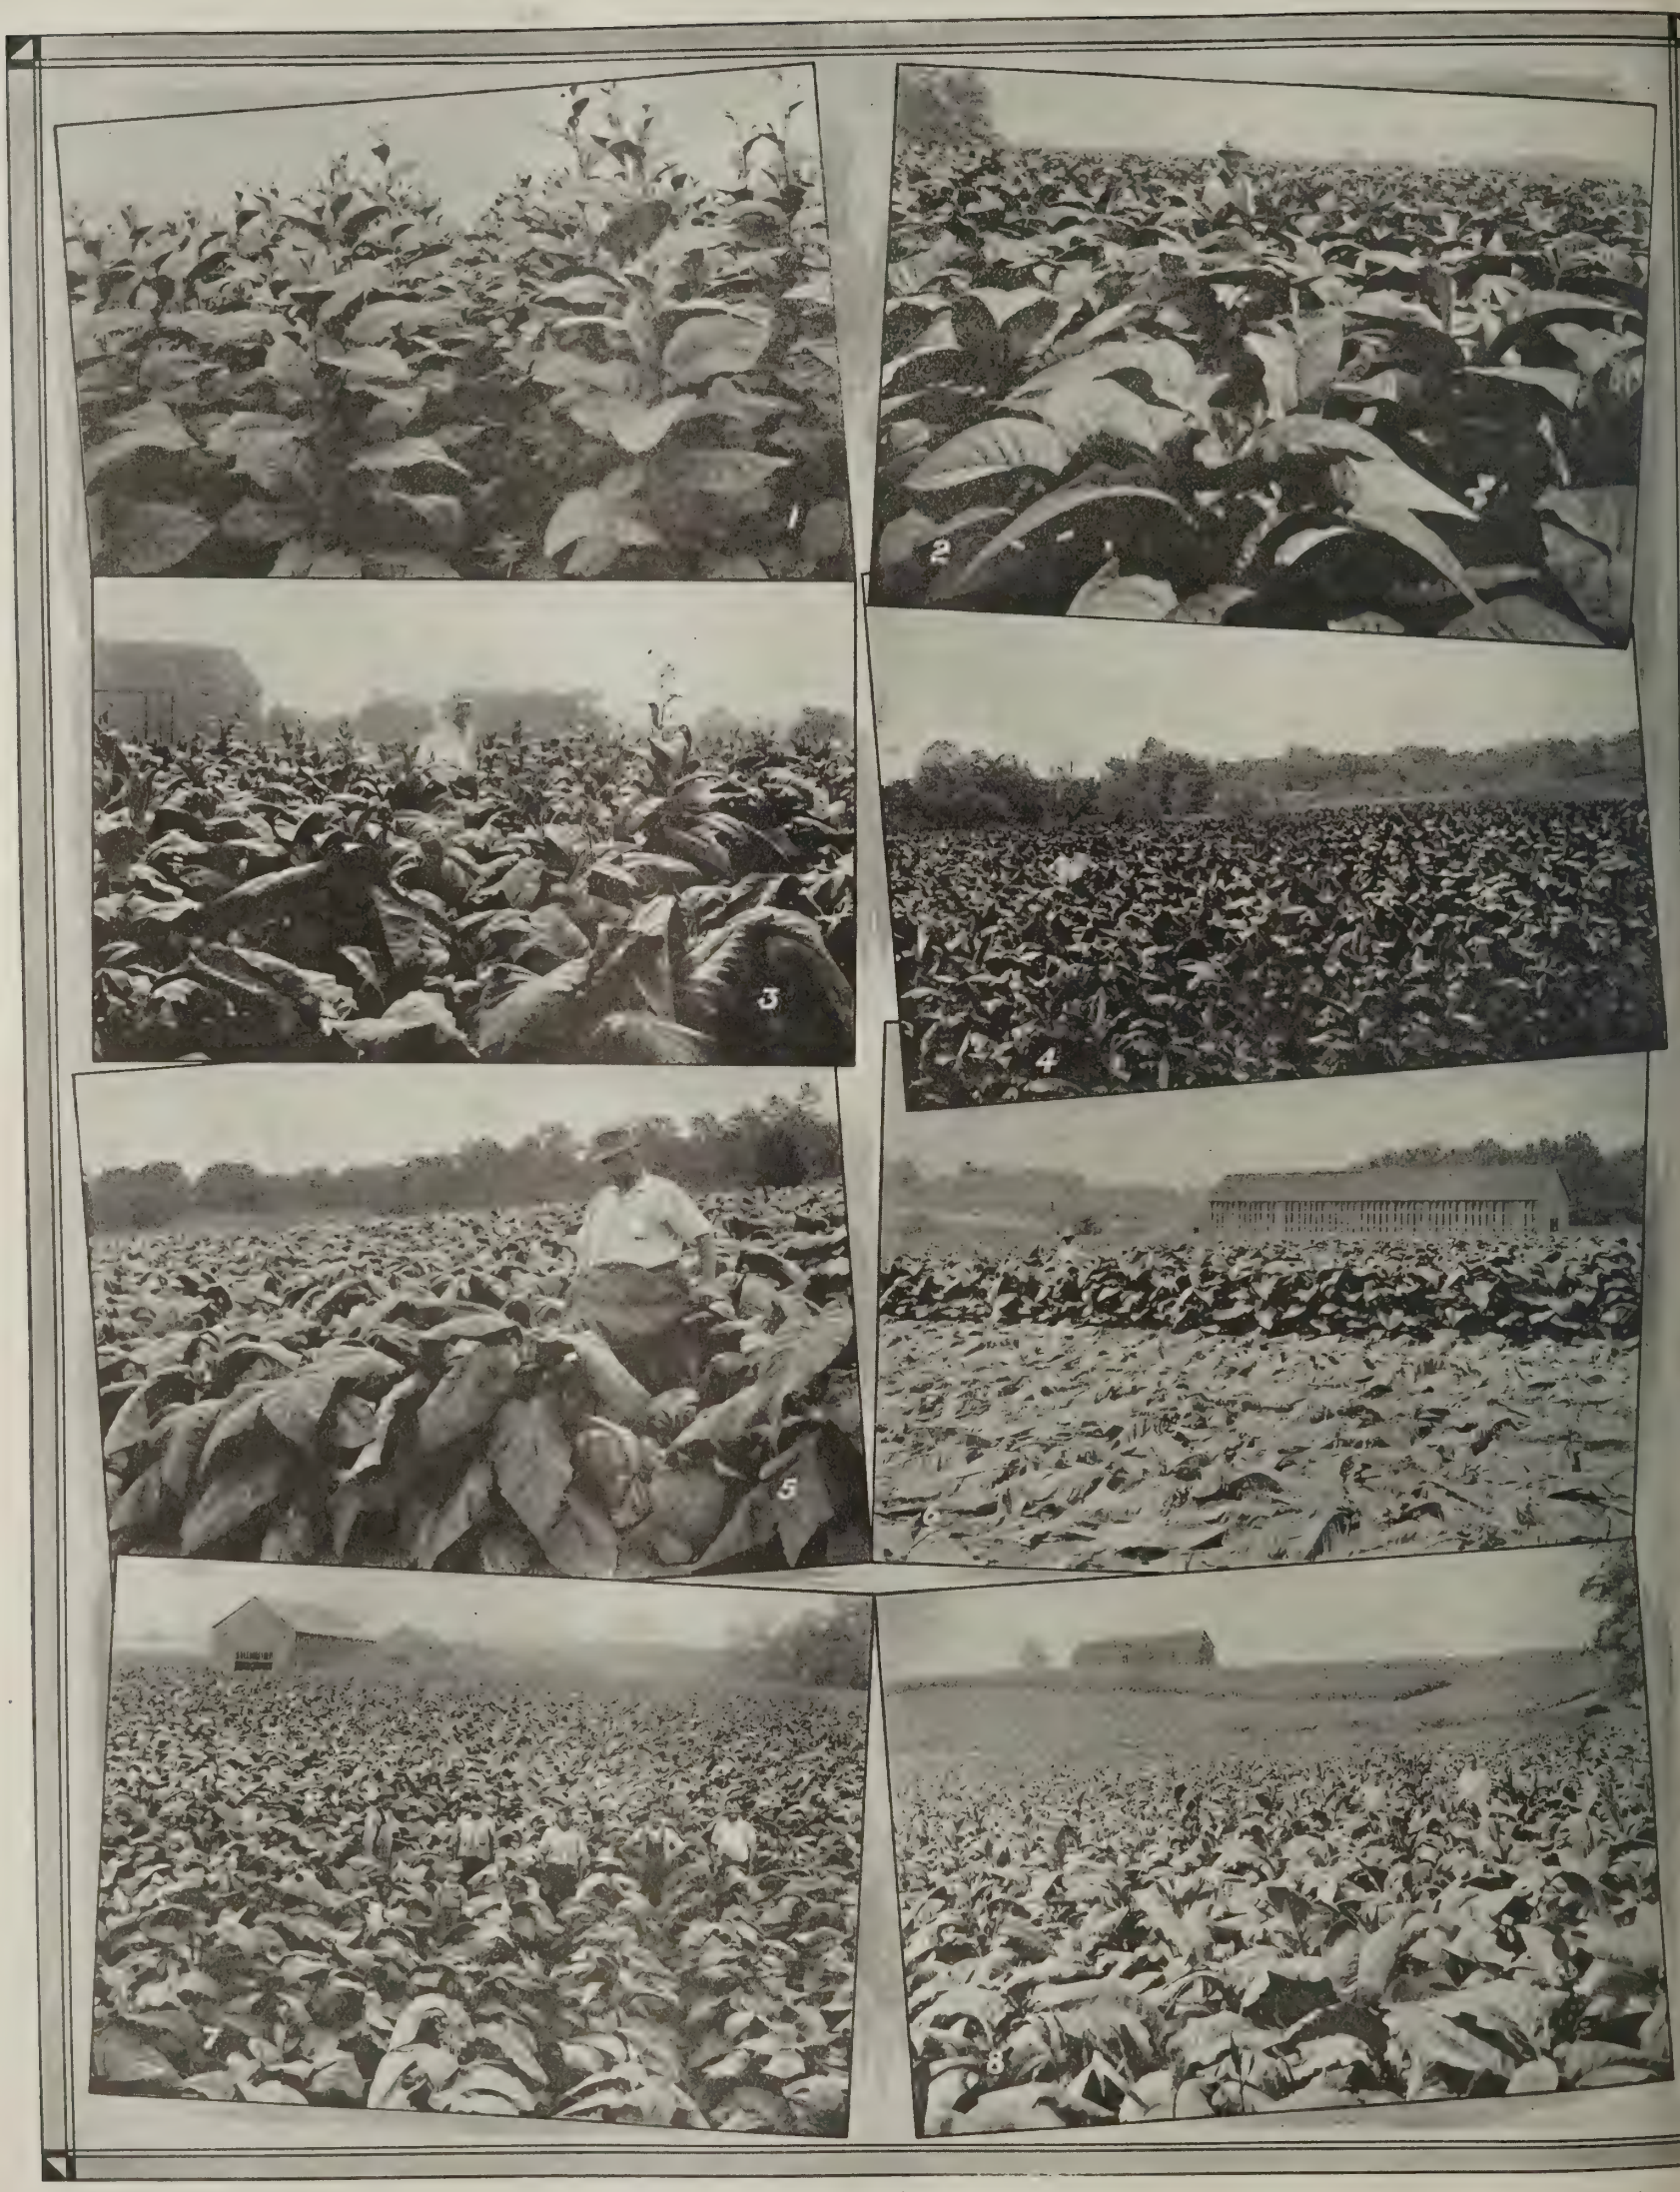
Burning Qualities

Most of the good qualities of a cigar tobacco are based upon good burning capacity. There is much variability in burning quality shown by leaves raised in remote districts. Curing and fermentation also exert potent influences upon burning capacity. That capacity includes the fire-holding properties of the leaf, the evenness and completeness of the burning and the amount, color and quality of the ash. The tobacco curer is a greater factor in developing the best burning capacity of any given leaf than the grower. The tobacco grower's influence upon the burning qualities of tobacco consumed in the form of cigars, smoking mixtures or cigarettes is indirect. The influence of the tobacco curer is direct. He can bring out qualities from a poor or immature leaf, or destroy the burning qualities of the finest grown leaves. This is realized in Connecticut and the utmost care is given to the curing of the local tobacco crops.

Statistics of the acreage of shade tobacco grown in the Connecticut Valley since 1900 tell an eloquent story of the hardships of the pioneering days, and the successful triumphs in recent years, of local tobacco industry.

Shade Acreage

The following figures present a graphic picture of the cumulative growth in popularity of Connecticut shade wrappers:



Year	*Acreage*
1900	⅓
1901	41
1902	720
1903	645
1904	33
1905	40
1906	40
1907	70
1908	200
1909	400
1910	1,000
1911	1,995
1912	1,906
1913	1,840
1914	2,574
1915	3,609
1916	4,939
1917	5,854
1918	6,100
1919	4,866
1920	5,930
1921	7,382
1922	8,001

Grading Tobacco

The warehousing and marketing of a tobacco crop have an important influence on the value of the product. Grading is done in the warehouses. The grading of filler-leaf by length, texture and colors can be well or poorly done. The value of the graded product is conditioned by the skill shown in the grading. The valley leaf shows a remarkable uniformity in size, weight and color. But, while this simplifies grading, it does not allow it to be carelessly carried out. Grading selects leaves of wrapping caliber from those best suited for fillers. Sometimes as many as 18 grades of leaf are sorted. Such sortings are based on weight and size of leaf or color and general appearance. Connecticut tobacco is also graded in accordance with standard leaf sizes. There is a grade for each inch of leaf-length from 10 inches up to 20 inches. There is a twelfth grade for the exceptional leaves of 22 inches in length.

A Boon to Farmers

The achievements of the Connecticut tobacco grower and curer, working under the advice of many of our greatest tobacco experts, have been astonishingly successful. The diligence, experience, skill, and painstaking care given to the raising of tobacco crops in the Connecticut Valley has led to the enrichment of the state and to the

pride of the farmer. It has kept people on the farm who otherwise would have flocked to the cities and it has abundantly rewarded the intelligent farmers who so loyally placed faith in the tobacco experts and so faithfully followed their advice and cultural practice.

Business Men Important Factors

The exertions of the Connecticut business men who undertook to market the valley crops were also important factors in the success of the local tobacco. In lean years and in others, every effort was made to spread the news of the good qualities of the Connecticut leaf and to show how excellent shade-grown tobacco wrappers and binders are. The combined efforts of the growers, curers, business men and experts finally triumphed in a signal manner, and today Connecticut shade-grown leaf is a peer with the best of the world's tobaccos. Its worth has been shown, and recognized, and the American cigar manufacturers have bowed to the inevitable and accepted the tobacco at its true value. It may be modestly claimed that Connecticut shade-grown leaf has attained its present eminence by its sterling smoking qualities and with the aid of those directly interested in it.

Continually Seeking Improvement

The growers are not content to rest. They are, and will continue, experimenting so as to make further improvements in the qualities of local tobacco in order that its use may be extended and so that larger acreages may be sown. The history of tobacco growing in the Connecticut Valley will make charming reading when it is told in a complete story. It will picture a sturdy people fighting against many obstacles in following a fine ideal. Their ultimate success did not induce them to rest on the wealth and laurels won, but has simply spurred them on to greater successes in the future. This picture will depict the triumph of American grit and farming skill and yield another chapter for the book which will record how American business acumen and progressiveness won a great place and reputation for a state's tobacco crop in one of the world's greatest industries.

New England Tobacco Production and the New Marketing Method

Bulk of Product Is Grown in Comparativly Narrow Strips, Less Than One Hundred Miles in Length, Along Connecticut River—Three Principal Varieties in Cultivation, Havana Seed, Broadleaf and Shade Grown—The New Co-operative Selling System

By WILLIAM K. ACKLEY

NEW ENGLAND tobacco culture is confined to a small portion of states of Connecticut and Massachusetts, with a few acres in addition in southern Vermont and New Hampshire. The bulk of the acreage is along the Connecticut River and is confined to a territory of less than one hundred miles along the river.

There are three varieties of tobacco grown, namely, Havana Seed, Broadleaf and Shade Grown. The acreage of Havana Seed and Broadleaf are about equally divided, varying somewhat from year to year according to the price, while the Shade Grown is mostly grown by corporations, and the combined acreage in 1922 was 28,000 acres, grown by about 3,750 individuals.

The better grades are used exclusively in cigar production, either as wrapper or binder tobacco; the lower grades, consisting of broken tobacco, hail cut and inferior crops, totaling on an average of from 15 to 20 per cent of the annual production, are disposed of to manufacturers of scrap tobacco. The total value of the crop runs from $12,000,000 to $20,000,000 annually. depending upon quantity and quality.

The tobacco as it comes from the growers' curing sheds is packed into bundles, all the leaves being stripped indiscriminately from the stalks and delivered to the warehouses where each leaf is examined and placed in its proper grade, according to character and size. For the Havana Seed there are 28 of these grades and sizes; for the Broadleaf tobacco there are 12 grades. After the tobacco is assorted and sized it is tied into "hands" and packed into wooden cases. It is then ready for the sweating process, and much of the tobacco is put through sweat rooms to cure for varying lengths of time, according to the grade, condition and variety of the tobacco. After the completion of the sweat, the tobacco is then removed from the cases and sampled by an expert, and is then ready for the market.

Havana Seed commences to come on the market about February 1 of each year and continues as fast as it is ready. Broadleaf tobacco requires a much longer time to cure and, with the exception of the lower grades, is not ready to offer for sale until about September 1 of the year following its production. The warehouse operations require skill and experience—practically a profession on the part of those who conduct them.

Warehouses are scattered all through the tobacco belt and are in the hands of men who have made it their life work to carry on this business.

A general feeling of dissatisfaction was manifest for a long time among the growers of tobacco throughout the entire Connecticut Valley. About a year ago they seemed to realize that the business of producing tobacco and that of marketing the product were ones that called for entirely different forms of training and equipment in the individual.

They had observed the mercantile industries of Connecticut and Massachusetts, many of which produced articles, the demand for which was not comparable with theirs, making long strides ahead annually, while the tobacco industry had for a decade shown no progress—if anything, a general decline. Many of them felt that the problem of merchandising or marketing of their product should not be more difficult than for any manufactured article, providing the difficulties entailed by individual rather than by group production could be overcome so that the marketing could be carried on as is done by any mercantile organization. During the Spring of 1922 this general feeling of dissatisfaction resulted in the formation of an Organization Committee to draw up an agreement and marketing contract with the view of forming a co-operative marketing association. This agreement provided for the formation of the Connecticut Valley Tobacco Association, on conditions that not less than 75 per cent of the total acreage be signed up to a marketing contract not later than August 1, 1922.

Meetings were advertised and held in each town throughout the entire tobacco belt of the Valley and the contracts were distributed for the growers to carefully study and decide if the plan was feasible, and at each meeting the Organization Committee emphasized the statement that it would prefer to see no association formed unless it could be done as the result of deliberate and careful thought on the part of the men of the tobacco section; and it was further emphasized that what would be attempted was the collective selling in an orderly manner and on a supply and demand basis, of the individually produced tobacco; and that no "holding" or "hold-up" movement was contemplated.

The result of this campaign was that on August 1, the Organization Committee found itself in possession of contracts representing 83 per cent of the total acreage, bearing the signatures of over 90 per cent of the individual growers.

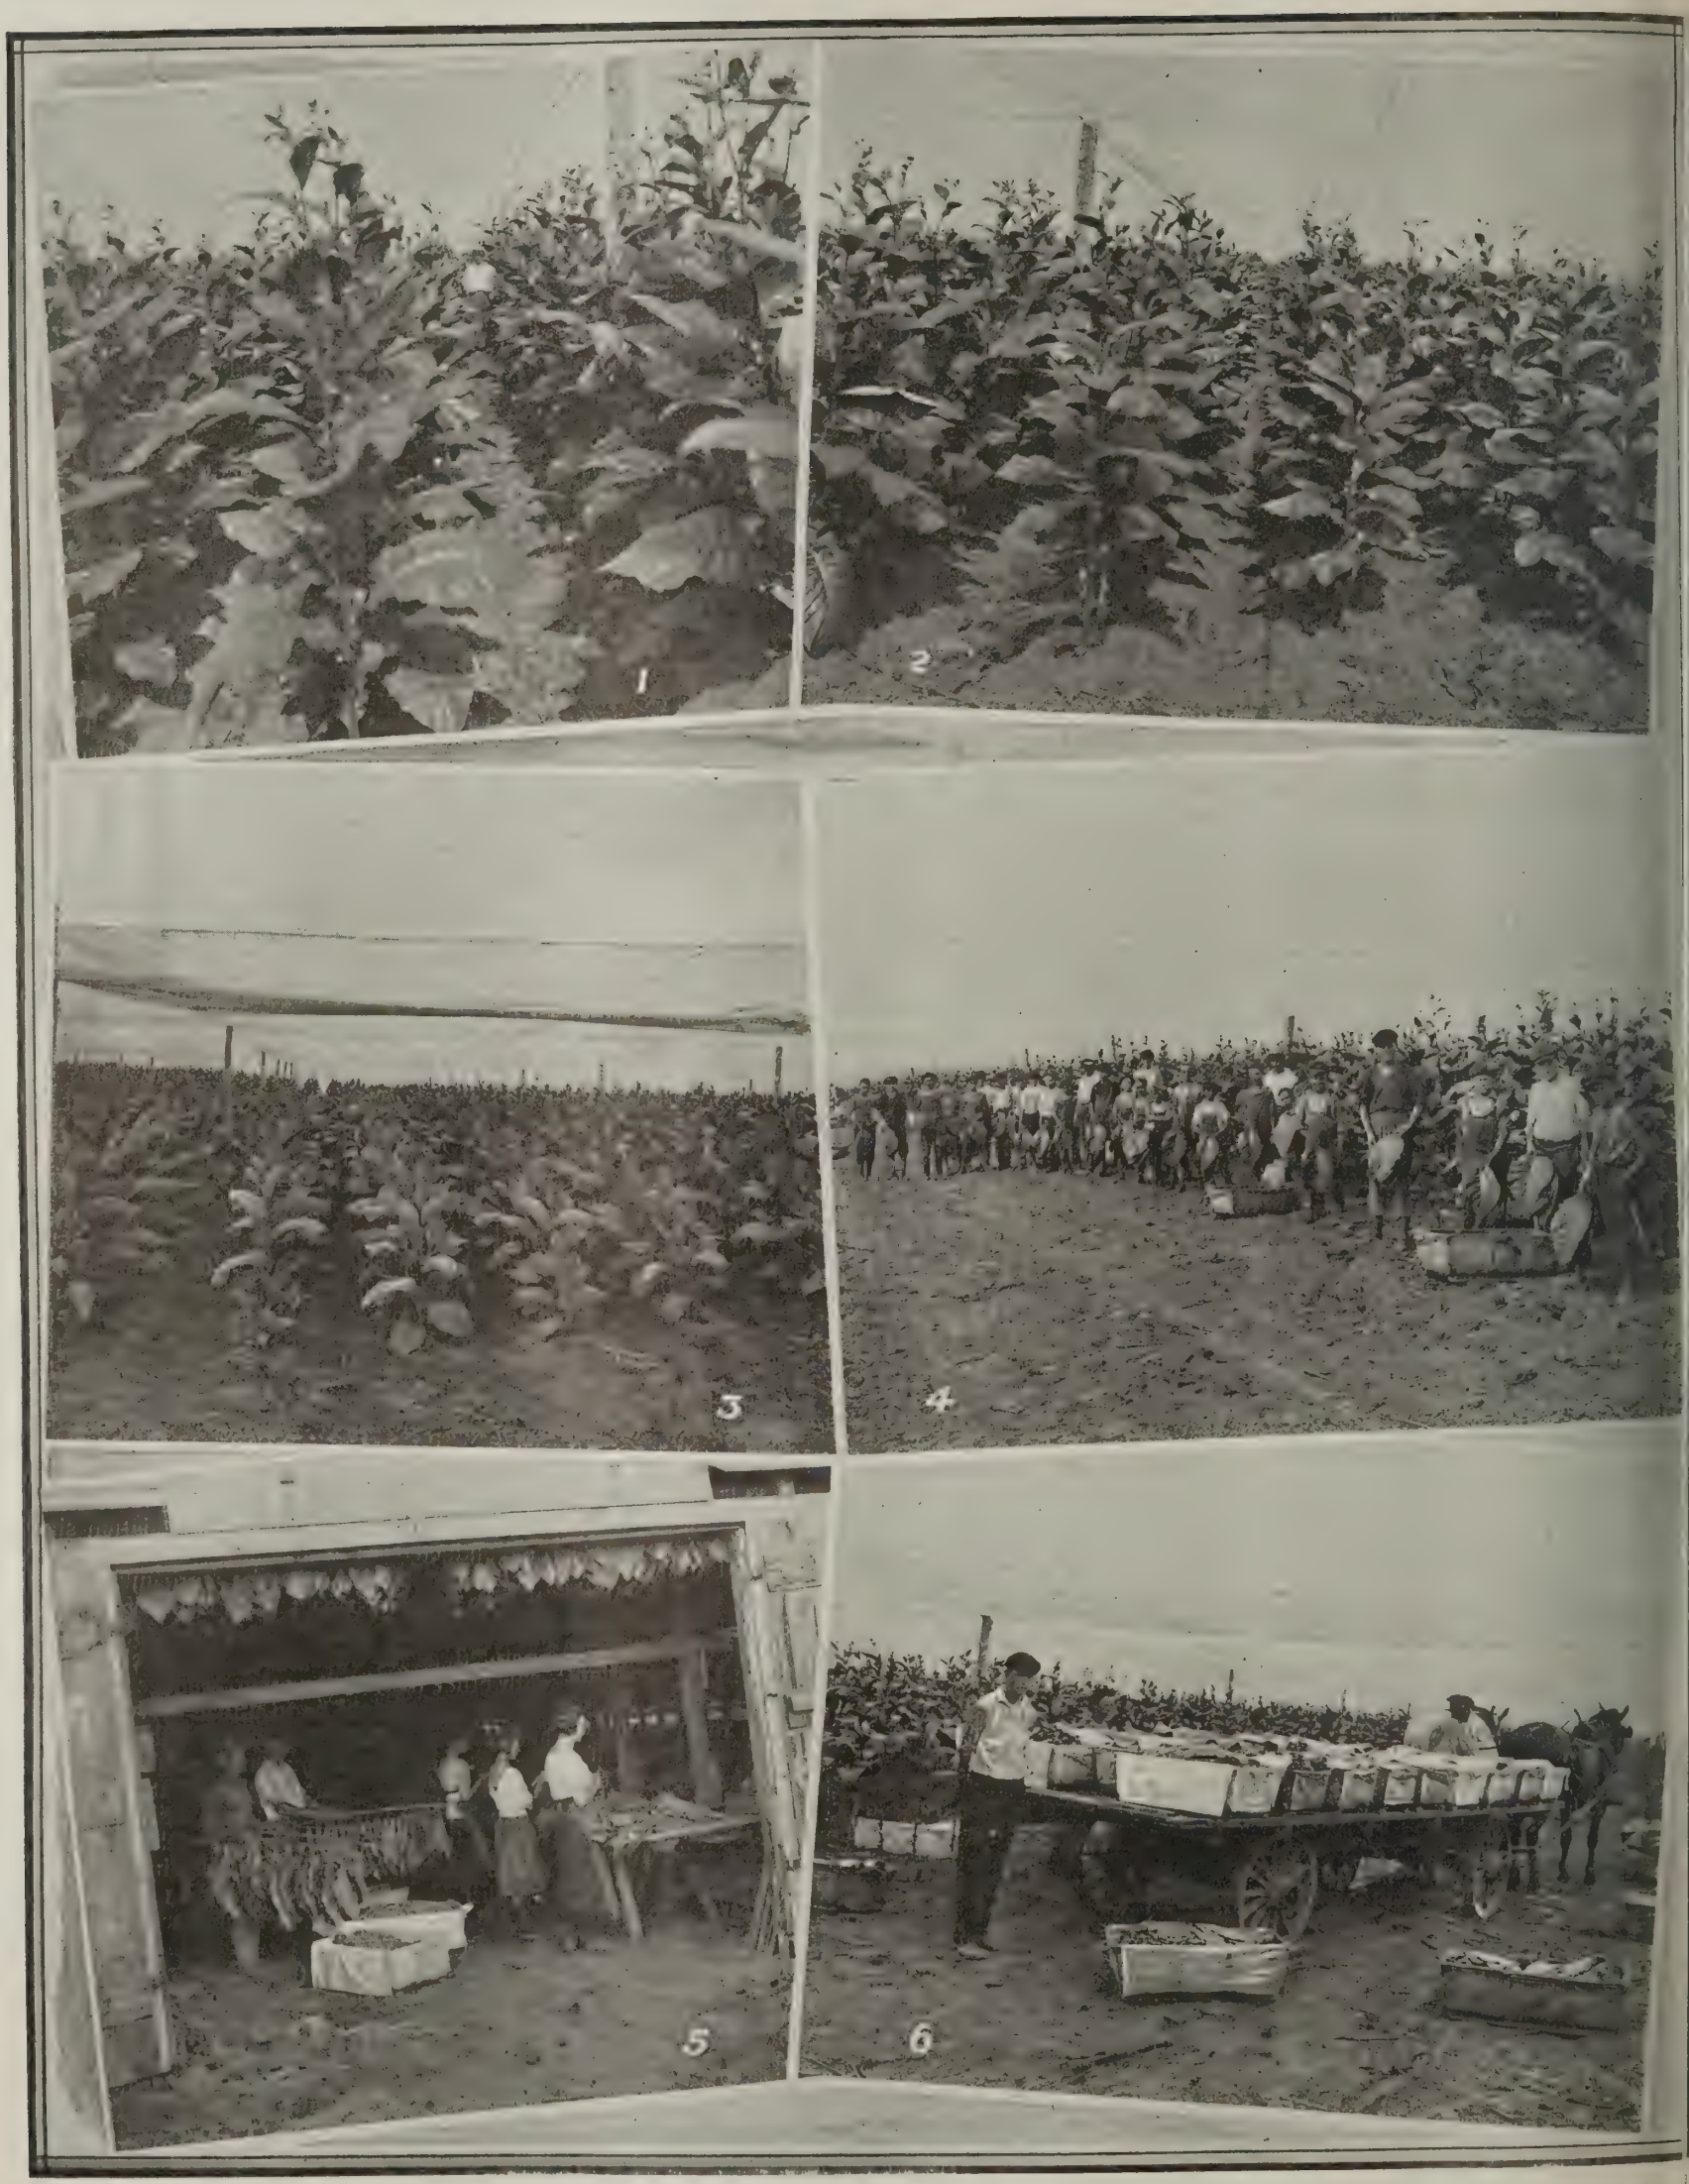
This contract, which was drawn on the so-called "California Plan," and which contains strong provisions against its violations, provides that the Association buys, and the member sells to the Association, all the tobacco produced by him from 1922 to 1926, inclusive. The Association is given entire authority as to time and place of delivery and as to methods of handling, grading and marketing; also full authority from the member to borrow money on the tobacco, "through drafts, acceptances, notes or otherwise, or on any warehouse receipts or bills of lading or upon accounts for the sale of tobacco, or on any commercial paper delivered therefor."

The tobacco belt was then divided into twenty-one districts, each containing approximately an equal acreage.

Primaries and general elections were held and a director was chosen from each district to act as an incorporator of the Association and subsequently as a director for the first year.

The task presented divided itself naturally into four parts:

First: To set up and operate an organization of tobacco, and to be able at any moment to to receive, assort, pack, classify, ferment and grade from twenty-five to thirty million pounds account for each pound of it to the membership.



Second: To finance the above operation and to arrange for reasonable advance payments to members in addition.

Third: To market the tobacco when ready as expeditiously, directly and widely as possible.

Fourth: To set up an organization to procure better methods of culture and production and to effect all possible economies and improvements therein.

It was stipulated that the Association should be conducted as a business project, with no "politics" tolerated; that its work must be conducted so as to benefit the consumer as well as the producer; that it must be so organized and operated as to be able to effectively compete with other districts or other producers at home; that its aim should be to utilize every organized and useful agency in the distribution of its product, and to set up no new machinery except where essential; that it should at once create and as fast as possible add to, a cash credit fund, from fair deductions from the sale proceeds of the tobacco; that its financial dealings should be established and conducted on a basis which would create permanent confidence on the part of the banks.

As fast as possible the officers of the Association have followed out these rules in the undertaking of the work. After the organization of the Association the first step was to engage as its General Manager the most capable and experienced packer and dealer in New England tobacco that could be found. Fred. B. Griffin was chosen for this work, and he immediately set the wheels in motion, and made arrangements with eighty-six warehousemen to pack the tobacco for the Association, under contract and by the pound; all work to be done under close

rvision of the Association, it reserving the to cancel any contract without notice should evork be in any way unsatisfactory.

he warehouses were then divided into dis-ts, according to their location, with super-rs in charge of each district, who looked e the crops of the members for general ty and condition, and ordered each into the houses as needed. They also inspected the of each warehouse and were responsible that part of the "packing" under their ge. All of these supervisors were men of experience in the business. The work of ling the tobacco was carried on faster than scheduled, in spite of the adverse weather abor conditions.

ll the Havana Seed was assorted in the As-tion's warehouses. Comparatively few of warehouses assorted the Broadleaf, as most e Broadleaf growers have always assorted own tobacco and are well equipped for the . Field supervisors were appointed to intend the grower-assorting; these super-s were traveling from place to place, and to visit each grower at least once a week tener.

the warehouses, a two-hand sample was t from each case of every crop, and when rop was completed, the warehouseman for-ed them to the main office in Hartford, her with a record of the crop, showing the l pounds, grade, size, and condition of the co in each case. The samples, upon arrival, to the grading room, where the crop was fied for general value for loan purposes and cted by appraisers representing the lending cate.

ve classifications were used, loan values attached to each of the first four, while ops in the fifth classification no loan value made. After all the operations were com-l a copy of the crop record was sent to the grower of the crop, thus accounting for every pound of the original delivery. After the tobacco is sweated and ready for the market, each case is examined and sampled, given its final grading and pooled with other like tobacco, and when sales are made they are from these pools and the individuality of the tobacco ceases to exist, each member being credited with the percentage of such pools as his tobacco may have fallen into, and the final returns being divided on the basis of the average selling price of all the tobacco from any pool.

To carry on the work of handling the tobacco and to make advances to individual growers, made it necessary to arrange for about $8,000,-000, and this was done by establishing and agreeing upon a fair market price per pound upon each grade, with a loan value not to exceed up to 50 per cent, and a Hartford bank was made Trustee for the lending banks and the Association. All loans are secured by pledge with the Trustee of negotiable warehouse receipts issued by the independent warehouses, which are bonded, and the Association carries full insurance.

The actual selling of the tobacco is in the hands of the general manager. The directors empowered the executive committee to fix prices on all the tobacco.

The final samples of Havana seed tobacco started to come in from the warehouses in February, and in two weeks' time practically the entire holding of the Association of Havana Seed was contracted for, to be delivered as fast as ready. While the prices of the various grades have been higher than for some time, returns to the individual member on the average will only pay expenses, owing to the fact of a poor crop year and small percentages of high grades. The members realize that to make a profit they must produce tobacco of good quality and weight.

The majority of the tobacco thus far sold has gone directly to the cigar manufacturers and the distribution has been wide. The remainder sold to the jobbing trade will reach the manufacturer who has been unable to purchase through the regular established channels.

The grading and pooling methods adopted have already shown that the best growers will get most benefit, and the members fully believe that if fine enough tobacco is produced, the results will be far in excess of past years, and that without price increases to the trade.

Each member is urged to produce a high class of tobacco and the field service department is working on this proposition continuously.

One of the greatest drawbacks to the industry in the past, has been the hail risk and an arrangement has been made whereby hail insurance has been offered at a much lower rate than heretofore. The rate being a trifle less than one-half of last year.

The officers feel that they have made a good start towards putting the New England tobacco growing industry on a firm foundation for future production of higher class goods, and for future expansion of the business.

The demand for shade grown tobacco is fast increasing and there will be an increase in the acreage this year of about 2,000 acres. The Round Tip is becoming popular and the acreage of this will be about double that of last year, while the acreage of Havana Seed and Broadleaf will not materially change. Growers have been delayed in getting the 1923 crop out, due to cold weather. However, despite the shortage of labor, the crop will be set out in good time, although a little late in the early start off, and the growers are all working to make the 1923 crop the best one grown in the Connecticut Valley.

The manufacturers recognize that they cannot get a substitute for Connecticut, and are coming back stronger than ever this season for their stocks.

he Valuable Work of the Connecticut Tobacco Experiment Station

Experiments Conducted at Various Times During Past 30 Years—Much of Work Carried on in Co-operation with Growers or Others—State Established Tobacco Substation in 1921 — Improvement Association Continues to Add to the Funds.

By DR. GEO. H. CHAPMAN

President Director, Connecticut Valley Tobacco Improvement Association. In Charge of Connecticut Tobacco Station.

EXPERIMENTAL work with tobacco has been conducted at various times by the Connecticut Experiment Station during the past thirty years, but much of this work was carried on in co-operation with grow-r other interested parties, and it was not May, 1921, that a state tobacco sub-station stablished in the state.

he General Assembly appropriated money he establishment of a tobacco experiment tn and the land was purchased with funds private sources. Realizing the importance brough investigational work on tobacco the growers and packers in the Valley sup-nted liberally the appropriation of the and in this way sufficient funds were se-to adequately equip and maintain the to-station.

State Increases Appropriation

the last session of the General Assembly, rowers were able to secure for the next al period, $20,000, or double the original o appropriation. The Connecticut Valley cco Improvement Association continues to the funds so procured in order to permit ation to work at maximum efficiency with er staff of investigators than would be le using state funds alone.

921 the work at the station consisted prin-of experiments on wildfire control under rection of Dr. Clinton, and the breeding of ly desirable new varieties under the direc-f Dr. Jones.

Definite Policy Established

In 1922 the lines of investigation were stabilized and long-time experiments on fertilization, breeding, as well as disease and insect pest control work were begun, at least in part. During the year the relations of the substation to the other agricultural interests in the Valley and State were clarified and a definite policy established so that the work at the substation is closely linked with the various agencies in contact with the tobacco growers, such as the Connecticut Agricultural College, the various Farm Bureaus, the various subject-matter departments at the main Experiment Station, the Connecticut Valley Tobacco Improvement Association, and other similar organizations. These close relations make for a harmonious operation of the different agencies and also make for better efficiency in the conduct of the work.

The 1922 Program

The experiment projects approved and begun in 1922 are given below:

1. A long-time study of the nitrogen, potash, and phosphoric acid rations best suited for Connecticut Valley tobacco; also a study of the effects of the different carriers of these plant food elements related to the yield and quality of the tobacco.

2. Co-operatively with the Federal Department of Tobacco Investigations a field plot experiment was started to test the action of magnesium, chlorine, and sulphur as influencing the growth and quality of cigar leaf tobacco. It was demonstrated that a lack of magnesium in a fertilizer or soil will unquestionably produce the mottled condition known as "sand drown" in our cigar leaf tobaccos, just as it does in other types.

Studies Continued

3. Wildfire studies were continued with special reference to the control or the prevention of the occurrence of the disease in the seedbeds by the proper use of copper-lime dusts or sprays. It was found that the conclusions arrived at the previous year were justified and that most any copper-lime dust or spray carrying approximately 6 per cent metallic copper, with or without added arsenical, if used faithfully every two or three days or renewed when washed off, would yield clean seedbeds, and the materials did little or no inury to the growth or development of the tobacco seedlings. While under certain conditions with all the sprays or dusts a certain amount of burning of the foliage was found, it was of little importance and did no permanent injury to the plants.

Field Treatment of Wildfire

In field control of wildfire, the results of the experiments carried on indicate that the spraying or dusting in the field was of doubtful benefit except in the case of shade grown tobacco or very early in the season when the plants were small in the field. Hand picking of the diseased leaves supplemented by spraying saved several crops from rather serious infection in 1922.

Plants beginning to bud. 20. Picked leaves being taken to sheds. 21. Well started.

Black Root Rot

The work on "black" root rot, including ments on possible control by changing lition or soil reaction was not started in rety. It is not planned to take this up ter. Other disease work was also held vance until such time as a pathologist be detailed from the Experiment Station substation.

In co-operation with the Federal Depart- f Tobacco Investigations, Dr. Slagg has onducting experiments by rotation with rown" or "red" root rot infected fields, so devoted considerable time in attempts ate the causal organism. As yet, how- work has not progressed far enough to the Federal Department to make definite cement.

Experimenting on Havana Strains

Several domestic strains of Havana to- were grown under uniform conditions to ine if there existed a definitely marked on of type in our Havana tobacco or if the on noticed in certain fields was due to l differences or to disease. It may be at of six so-called different strains of a, both good and poor yielders, only one experiment plots showed sufficient varia- type and yield to warrant the assertion might be classed as a different strain of a. Two types of broadleaf, the John Wil- nd the Hockanum, were grown, two plots n type being set, one from a good yielding No great differences were noted between o strains of each type, one a specially ielder and the other a good yielder.

ng to Establish "Resistant" Varieties

Under the direction of Dr. Jones, the plant breeder, experiments were conducted with new crosses but as yet these are not sufficiently fixed to warrant a statement regarding the probable value of them. It is expected that some of them will show a resistance to some of our soil parasites, and still be of a sufficiently high quality to compare favorably with the strains now grown. Unless this latter can be accomplished, there is little value in the selection of plants of so-called resistant varieties. It is a fact that many of the resistant strains developed in the past were inferior in quality to the normal types.

Shade-Cuban Experiments

8. Seven strains of Shade-Cuban tobacco were raised from which seed were selected to use for pure line seed work. From the seven strains planted in 1922, three have been selected for future development. Two of these three are original importations from Cuba while the third is a domesticated strain, seed of which has been carefully selected for a number of years.

Round Tip

9. Experiments were conducted with Round Tip tobacco to determine the influence of closeness of planting on yield and quality; experiments were also carried on to determine the effect of time of picking as compared with the picking of other tobaccos.

For the season of 1922, which was not normal, the results obtained indicate that if Round Tip tobacco was set from 13 to 15 inches apart in the row and the leaves picked very early, the yield and quality of the tobacco so handled was much better than if the plants were spaced 17 inches apart in the row and the tobacco allowed to ripen.

Artificial or Control Curing

10. In co-operation with the Carrier Engineering Co., experiments were conducted with an apparatus for artificial or control curing of Shade-Cuban tobacco, and very interesting results were obtained. In these experiments it was conclusively shown that the control of humidity and temperature within certain limits during the curing process yields a much larger percentage of high-grade leaf than ordinary barn curing. These experiments and also experiments with different types of sheds are to be continued, as it is the aim of the station if possible to devise a partial control curing system which may be applied to stalk tobacco as well as to the primed Havana and shade tobacco. The results of the 1922 experiments on curing are given in Bulletin No. 3 of the Tobacco Station.

In addition to the experiments in the field, considerable work has been started on the fermentation of tobacco and also on warehouse troubles, such as "black rot."

Experiments to Be Continued

The experimental work for 1923 is practically a continuation of the projects started in 1922 with some additional problems. More pathological work is to be carried on, particularly with wildfire, angular leaf spot, and black root rot. This is made possible by the assignment of a pathologist to the staff.

The insect problems to be worked on under the supervision of the state entomologist include experiments on wireworm eradication and control.

It is felt that the work of the tobacco station is meeting with the approval of the growers, and established as it is in its relationship to the Massachusetts Station and the Connecticut Station, its work ought to become of great value to the industry.

bacco at the Massachusetts Agricultural Experiment Station

Season of 1922 Given Largely to Studies of Wildfire Control—Experience Emphasized Vital Necessity of Efficient Seed-Bed Treatment — Station Has Laid Out Series of Field Plot Experiments — Much Progress Made in Experimental Work

By SIDNEY B. HASKELL

Director of the Massachusetts Agricultural Experimental Station

MASSACHUSETTS is devoting much time and talent to the improvement of tobacco culture. The season of 1922 at the Massachusetts Agricultural Experiment Station was given up largely to studies of tobacco re control. Experience of the year em- ed again and again the vital necessity of nt seed-bed control. No practical field con- l as developed. Our experience thus far this s shows that methods of seed-bed control, gh well established in an experimental way, ot yet fully popularized. Many cases have to the attention of the Station in which co growers watered their plant beds every day, and dusted or sprayed as a wildfire ntative not oftener than once a week. Nat- l the frequent watering practically vitiated esults of control treatment. It will prob- be several years before seed-beds are d as well as we know how, for it takes for any new farm practice to be thorough- roduced. Meanwhile, of course, every at- will be made to learn the possibilities of control.

sults Set Out in Experiment Bulletin

sults of the Massachusetts work to date be found in Experiment Station Bulletin 213, the same being published also by the ecticut Station under the joint authorship r. Anderson and Dr. Chapman.

addition to these disease control studies, ear was one of progress in experimental with tobacco. Largely through the ef- of the tobacco growers of the Valley, a experimental farm has been purchased, and is being put into operation this present season in a study of cropping systems in tobacco culture, their effect on yield and quality of leaf. All of those familiar with the Massachusetts crop will recognize the necessity of this work. The area of good tobacco land is small, the demand for the product very high. The temptation is to keep the land in tobacco for years without number, once it has demonstrated its ability to grow good crops. All agricultural history indicates that such practice is an invitation to disease and will finally result in decreased yields. Opinions differ as to whether this has actually happened in the upper Connecticut Valley. It is certain, however, that thoroughgoing research work should be undertaken to establish the facts.

To Make Practical Demonstrations

Recognizing this need, the Massachusetts Station has laid out a series of field plot experiments which will measure the quantity and quality of crop produced under the following systems:

1. Continuous tobacco without cover crop, commercial fertilizer used in normal amounts.

2. Continuous tobacco and fertilizer with timothy cover crop sown annually after the tobacco is harvested. This cover crop is expected to serve as a source of organic matter, to keep the soil in condition, and to enable the grower to economize in the use of fertilizer. Whether it will actually attain all of these objectives is still a matter of conjecture. It is for this reason that it is included in the experimental plan.

3. Continuous tobacco with manure and fertilizer, without cover crop. There is little doubt that this system will give good tobacco for a number of years, but nobody knows for how long.

4. Tobacco grown in a "money crop" rotation. The particular rotation selected is possible in the Valley on the medium loam soils, but probably not practicable on the lighter soils which produce the very highest quality of tobacco. It consists of tobacco, onions, potatoes, each one year, with cover crops grown after the tobacco and potatoes. Fertilizer alone will be used on all of these crops. This particular type of rotation is put into the experiment because of the fact that with land at its present value, crops of a high acre value must be raised. It may be that the disease difficulties in growing a tobacco crop can be controlled simply by rotation. Few of us really believe this, but the attempt is worth while.

5. Tobacco grown in an animal husbandry rotation consisting of tobacco, corn, hay, the manure resulting from the feeding of the corn and the hay being applied to the tobacco. This in a way is similar to the famous Lancaster rotation, save that no grain crop is included in the rotation. Probably the fertilizer cost under this system will be less than under any other. Possibly the acre value of tobacco may be higher. On the other hand, there is some question as to whether the money returns from a farm on which tobacco is grown in this way will compare favorably with those from a farm which has a greater acreage of money crops.

Importance of Tobacco Culture in Connecticut and Massachusetts

Production of the "Weed" in the Great Connecticut Valley Section, Born of Economic Value of Crop—Puritanic Austerity Yields to Wealth-Producing Plant — Product Early Discovered to Be "Peculiarly Fitted for the Manufacture of Cigars."

By DAVID D. LONG

Soil Specialist, Soil Improvement, Southern Fertilizer Association, Atlanta, Ga.

IN THE Connecticut Valley, as is well known, is a great tobacco-producing section. It was to be expected. The Virginia colony in the New World found a crop which brought in the supplies. The success of tobacco production in Virginia could not be restrained within the boundaries of those primeval southern forests. Consequently, in a most logical manner the second youthful colony of America began the production of tobacco almost coeval with its first settlement.

The culture of tobacco in the region which has now developed into the great Connecticut Valley tobacco section was, therefore, born out of the economic value of the crop. And it required a comparatively short time for the seed of the economic value of tobacco to germinate and develop into a vigorous plant.

Practically every person remembers the school stories of the Puritans and the austerity and severity of their rules of conduct. Now there was developing the tobacco habit with the development of tobacco culture. The two could not help but meet. What was to happen when they met? On one side was a crop bringing necessities and wealth, and on the other the use of the crop which tinged of "worldly iniquities."

Economic Value Predominates

Again it was to be expected. The economic value of tobacco production was too great to prohibit its culture. They needed the wealth the crop produced. Consequently, the culture of tobacco was encouraged and its use legislated against. The compromise, an artful dodge, was characteristic of the early New England business ingenuity.

In 1801 the Connecticut Valley produced approximately 20,000 pounds of tobacco. Fifty-eight years later (1859) the production in Massachusetts and Connecticut amounted to 9,233,331 pounds, while in 1919, one hundred and eighteen years later, the total production was 56,475,785 pounds for these two states. For this great increase in tobacco production there is evidently some powerful and fundamental reason. Tobacco is not a food necessary for the sustenance of the body. If not a necessity in the sense of maintenance of life, it is then the economic value of the crop which accounts for the great increases in production. Profit and wealth are very powerful in the promotion of the culture of a crop.

Early Recognized as Cigar Material

Contributing largely to the rapid increase of tobacco acreage after 1800 there were two facts of importance. Both are closely identified with the economic value of tobacco production in Massachusetts and Connecticut. In the early days of tobacco culture it was recognized that the tobacco produced in the Connecticut Valley was materially different from Virginia tobacco. It was thought "peculiarly fitted for the manufacture of cigars." In the two preceding sentences there is contained the reason of tobacco production in Massachusetts and Connecticut.

Maker of First Cigars in America

Coincident with this observation, Professor Samuel H. De Vault in Bulletin No. 193 of the Massachusetts Experiment Station, recites the fact that Mrs. Prout of South Windsor, Conn., was the first person in America to make cigars as we know them. It is to Mrs. Prout "that the men of this country are indebted for the first cigars in America." This was in 1801.

Tobacco thought to be good for cigar manufacture and the development of the cigar industry by Mrs. Prout are vital facts back of the economic value of tobacco in Massachusetts and Connecticut. In 1864

were nearly 493,000,000 cigars manu-
red in the United States. In 1917 there
nearly 7,560,000,000. Hence the de-
for Connecticut Valley wrappers.

enont and New Hampshire Produce Small Percentage

e greater part of the Connecticut Valley
co region is found within the states of
achusetts and Connecticut. Vermont
New Hampshire contribute but a small
ntage of acreage. Consequently a dis-
on of the economic value of tobacco for
alley embraces a joint study of the crop
mpared to other crops of the states of
chusetts and Connecticut.

these states 36,039 acres are utilized in
roduction of 56,475,785 pounds of to-
which had a value of $19,902,806. This
ording to the Census of 1920.

nnecticut the New England Leader

st of the tobacco, however, is produced
nnecticut. According to the same au-
ies this state in 1919 had 26,938 acres
production of 42,193,196 pounds, which
orted as having a value of $15,189,551.
figures represent an increase of 67.9
nt in acreage, 50.1 per cent in produce
44.6 per cent increase in value over the
ling Census of 1910.

ssachusetts had an acreage of 9,019
a production of 14,282,589 pounds val-
t $4,713,255. These figures represent an
se over the preceding census of 65 per
acreage, 49.6 per cent increase in produc-
d 286.9 per cent increase in value.

re are 4,484 farms in these two states
ich tobacco is produced. In Connecti-
191 or 14.1 per cent of all farms of the
report tobacco acreage. In Massachu-
farms producing tobacco number 1,293
er cent of the 32,000 farms in the state.

Acreage By Counties

Plate I shows the distribution of the tobacco acreage by counties in these states. Of all counties Hartford in Connecticut exceeds in acreage that of other counties combined. Plate II shows the average yields for these counties.

In the following table there is given the acreage, production and yield per acre for counties having 200 or more acres as reported by the Census of 1920.

Table 1—Acreage, Production and Yield Per Acre of Tobacco in Massachusetts and Connecticut

(Counties with 200 or more acres)

			Yield Per
Massachusetts—	Acreage	Production	Acre
Franklin County ...	2,349	3,410,258	1,450
Hampden County ..	2,137	3,819,864	1,708
Hampshire County .	4,610	7,031,089	1,526
Connecticut—			
Fairfield County ...	298	400,953	1,344
Hartford County ..	22,559	35,479,206	1,574
Litchfield County...	1,640	1,900,964	1,158
Middlesex County..	566	826,586	1,459
Tolland County ...	1,862	3,578,757	1,919

The high quality and value of the tobacco produced in the Connecticut Valley gives this crop a tremendous wealth-producing power per acre. The average value of tobacco per acre exceeds that of rye, oats, wheat, timothy and clover, alfalfa, corn and potatoes all combined. There is then left over and above the combined value of all these crops a value which exceeds an additional acre value of rye.

Crop Value Per Acre

The tobacco crop, which alone can produce such a tremendous value, brings to these two states an average of $553 for each acre devoted to the crop. In Massachusetts the average value of tobacco per acre is $517.50, while in Connecticut it averages $564.

The wealth-producing power as above outlined is graphically presented in Plate III. Table No. 2 presents the data on which the great value of tobacco is based. The statement given above showing the purchasing power of an acre of tobacco as compared to other crops may on the surface appear extravagant, but a study of the figures as obtained from the census is convincing.

Table No. 2—Crop Acreage, Crop Value, and Average Crop Value Per Acre Tobacco Compared to Other Crops—Total for Massachusetts and Connecticut

From U. S. Census, 1920.

Crops	*Acreage*	*Value*	*Value per Acre*
Rye	8,507	$247,457	$29.00
Oats	20,422	612,079	29.85

ncluded with total of Hay & Forage Crops.

Visualizing Wealth-Producing Power

e wealth-producing power of tobacco in sachusetts and Connecticut considered as a y might be more fully appreciated when it erved that it would require 675,500 acres r to produce the total value of the tobacco pn these two states. The rye crop occupies 3.6 per cent of the acreage of tobacco and us only 1.2 per cent of the value of the to- crop. It requires 19 acres of rye to pro- ce value equal to that which one acre of to- produces.

Potatoes Second to Tobacco

The potato crop of these two states is second tobacco in its wealth-producing power. The potato acreage exceeds that of tobacco to a l extent, yet produces only 40 per cent of tal value of the tobacco crop. It would ue two and one-half times the potato acre- , 99,500 acres, to produce a value equal to oduced on the acreage of tobacco. There quired 2.8 acres of potatoes to equal the of one acre of tobacco.

bacco Has Twice the Value of Corn Crop

corn crop in Massachusetts and Connecti- ls a very high acreage value compared to states. The corn acreage of these two e is about twice that of tobacco, yet the eturned for the crop is but a third of that bacco. It requires 6 acres of corn to pro- e qual to that of one acre of tobacco and it l require in these two states 214,150 acres, ctically three times the present acreage of o produce a total value equal to that of o.

One Hundred to One Percentage

h wheat acreage of these two states com- ds 12.9 per cent of that of tobacco, yet it r less than 1 per cent of the tobacco crop e There are required 13.2 acres of wheat ul the value of one acre of tobacco, which n that if it were desired to produce suffi- heat in the states of Massachusetts and ticut to equal the total crop value of to- here would be required 476,000 acres, or hndred and three times as many acres as rted by the 1920 Census.

Compared With Oats

ould require 66 per cent of the land de- o crops, exclusive of fruits and nuts, in wo states to produce oats to equal the f the tobacco crop as reported for 1919. n fact, are grown on 57 per cent as much tobacco but return only 3.1 per cent of ue of the tobacco crop. According to the alue of oats per acre for Massachusetts Connecticut, there would be required 18.5 produce the value which one acre of produced for the same year.

pared in Value to Forage Crops

great hay crop for the states, as repre- by timothy and clover, has an acreage almost seven times as great as that which tobacco had, yet the timothy and clover returned to the states only 54.5 per cent of the value which tobacco returned. According to the Census of 1920, 12.7 acres of timothy and clover are necessary to equal the value of an acre of tobacco, and it would require 458,000 acres, or nearly double the acreage reported by the census, to produce a value as great as that produced by tobacco.

Alfalfa, a forage crop of merit, would require 239,200 acres to produce a value equal to that produced on 36,000 acres of tobacco. This acreage of alfalfa required is practically one hundred and ten times the present acreage of alfalfa found in these two states. It requires 6.6 acres of alfalfa to produce a value of one acre of tobacco, according to the Census of 1920.

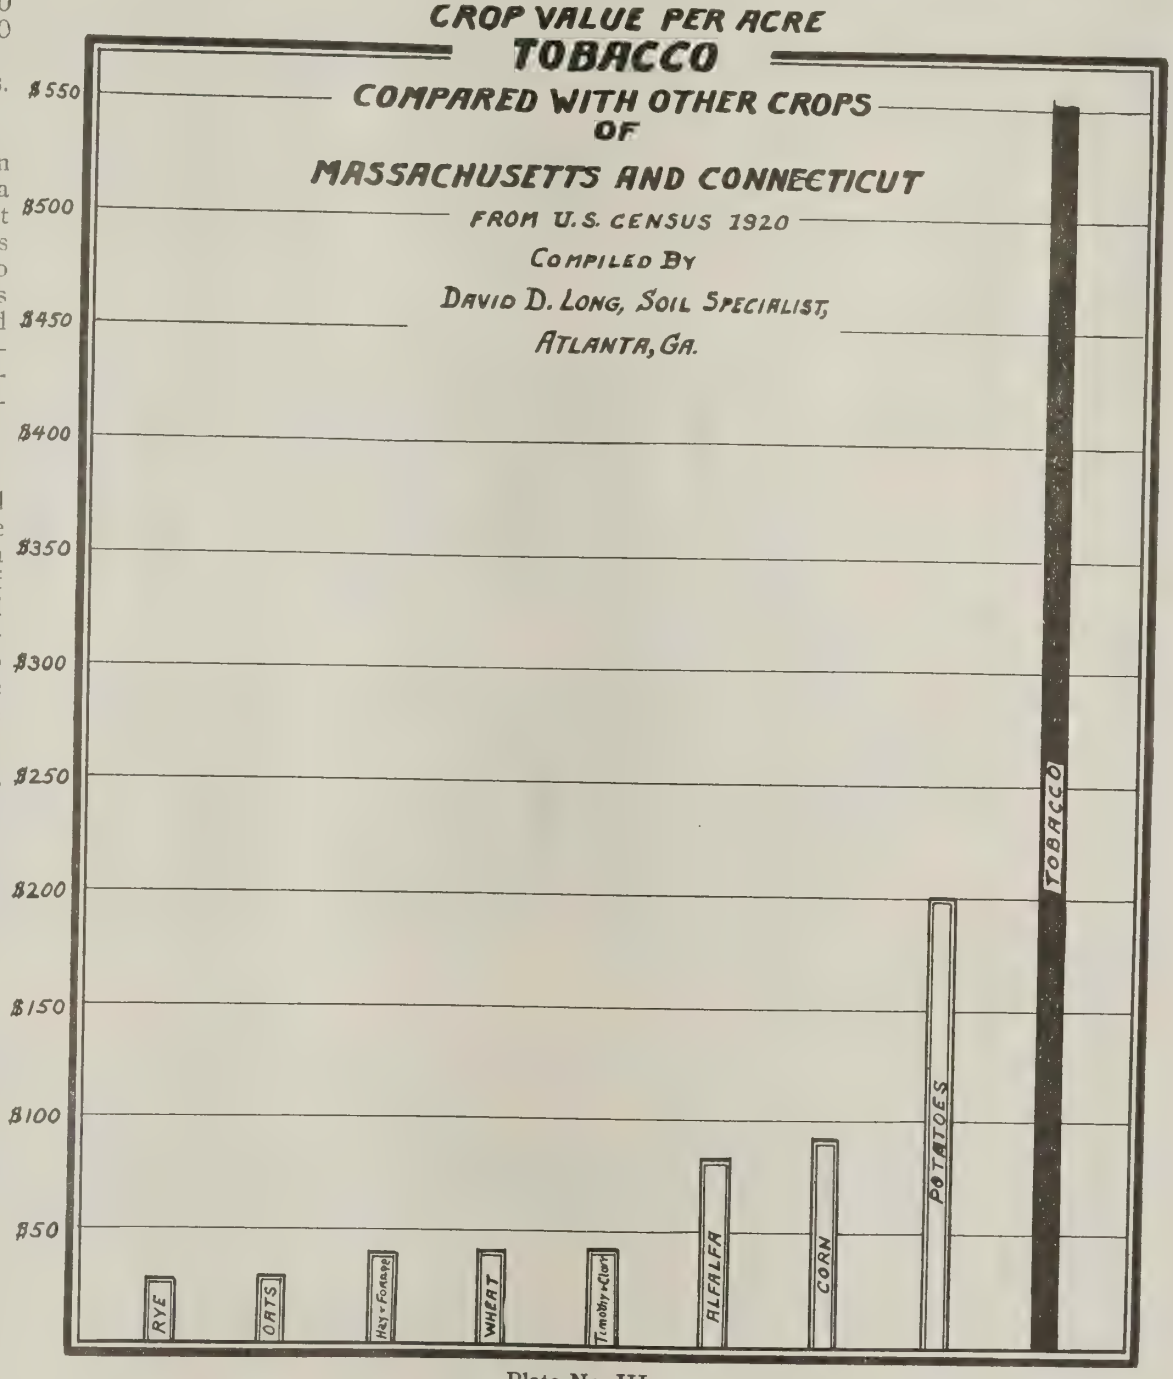

Plate No. III

Production Involves Large Expenditures

A crop with a great wealth-producing power, or a high average acreage value return, will also be found to bear a possible high acreage profit. This should naturally follow, particularly in respect to tobacco production in Massachusetts and Connecticut, because of the high degree of specialization which the tobacco in these two states demand. The cost of production per acre involves a large expenditure and with a large expenditure the hazards experienced by growers also becomes greater. This is especially true since the acreage of shade-grown tobacco has been greatly increased. It is only, therefore, reasonable to expect of the tobacco crop to return a large profit per acre. In the profit per acre there is found the real economic value of this crop to the farmers and the states as a whole.

Cost of Sun-Grown Tobacco

According to Bulletin No. 193 of the Massachusetts Experiment Station, average cost accounts for the production of sun-grown tobacco in the Connecticut Valley show that the cost per pound in 1917 was 24 cents for the landowner and 26 cents for a tenant farmer. These accounts were given as they represented the average. The cost per pound for production is the net cost, as all labor, land rent, interest, taxes and depreciation were included in the total cost.

Taking these cost prices as an average and assuming an average yield of 1,570 pounds per acre, which is the average for the two states, it would only require an average price of 30 cents to the land owner, and 32 cents to the tenant farmer, to produce a net profit which would exceed the gross value of an acre of corn, or 2.2 acres of wheat.

Tobacco Acreage Small, Compared to Other Crops

The tobacco acreage of Massachusetts and Connecticut is but 3.6 per cent of the total crop acreage of these two states, excluding the acreage of fruits and nuts. However, on this small per cent of acreage there is produced 25.5 per cent of the crop value of these two states. In computing the percentage of the value returned

E. Rosenwald & Bro.

F. R. and R. M. Goodrich's Plantations of Primed Connecticut Tobacco

obacco, the value of all crops reported with- acreage, fruits and nuts are excluded. There us returned for each per cent of acreage ted to tobacco 7 per cent of value.

ll hay and forage crops occupy 78.7 per r of the acreage of these states, but in com- ison to tobacco these crops return only 41.8 cent of the value of all crops. Plate IV esents graphically how the crop acreage for e otal of the two states is divided and in con- a to the division of the acreage there is also n the division of the value which these s return. In Table No. 4 there is given the on which Plate IV was graphed. A study is table will reveal to a greater extent than ls can tell the economic crop value of to- o in the agricultural system in these two s.

Table No. 4—Relative Percentage Crop Acreage, and Crop Value—Tobacco Compared With Other Crops in Massachusetts and Connecticut

Crop	*Acreage*	*Value*	*For 1% of Acreage*
Tobacco	3.6%	25.5%	7.08%
Corn	7.1%	8.6%	1.21%
Oats	2.0%	.8%	.4 %
Wheat	.4%	.2%	.50%
Rye	.8%	.3%	.37%
Hay & Forage Crop	78.7%	41.8%	52%
Potatoes	3.9%	10.1%	2.59%
Other Crops	3.5%	12.7%	....

According to the Census of 1920, the value of all crops, excluding fruits and nuts, for Massachusetts and Connecticut, totaled 78,100,540. How much of that wealth was brought into these states by the 36,039 acres of tobacco might be realized to a fuller extent if tobacco were omitted and the acreage utilized for corn. Allowing the average value of corn per acre, the combined value of all crops of the two states would then be only $61,542,063, or 78.8 per cent of the actual value reported.

But the greater part of the tobacco acreage is in Connecticut. Converting the tobacco acreage in this state to corn and omitting the tobacco crop altogether the value of all the crops would then be only 66.6 per cent of the actual reported value. The average value of all crops per acre would decrease from $83.50 to $55.70 per acre. Thus can the economic value of tobacco in the Connecticut Valley be realized.

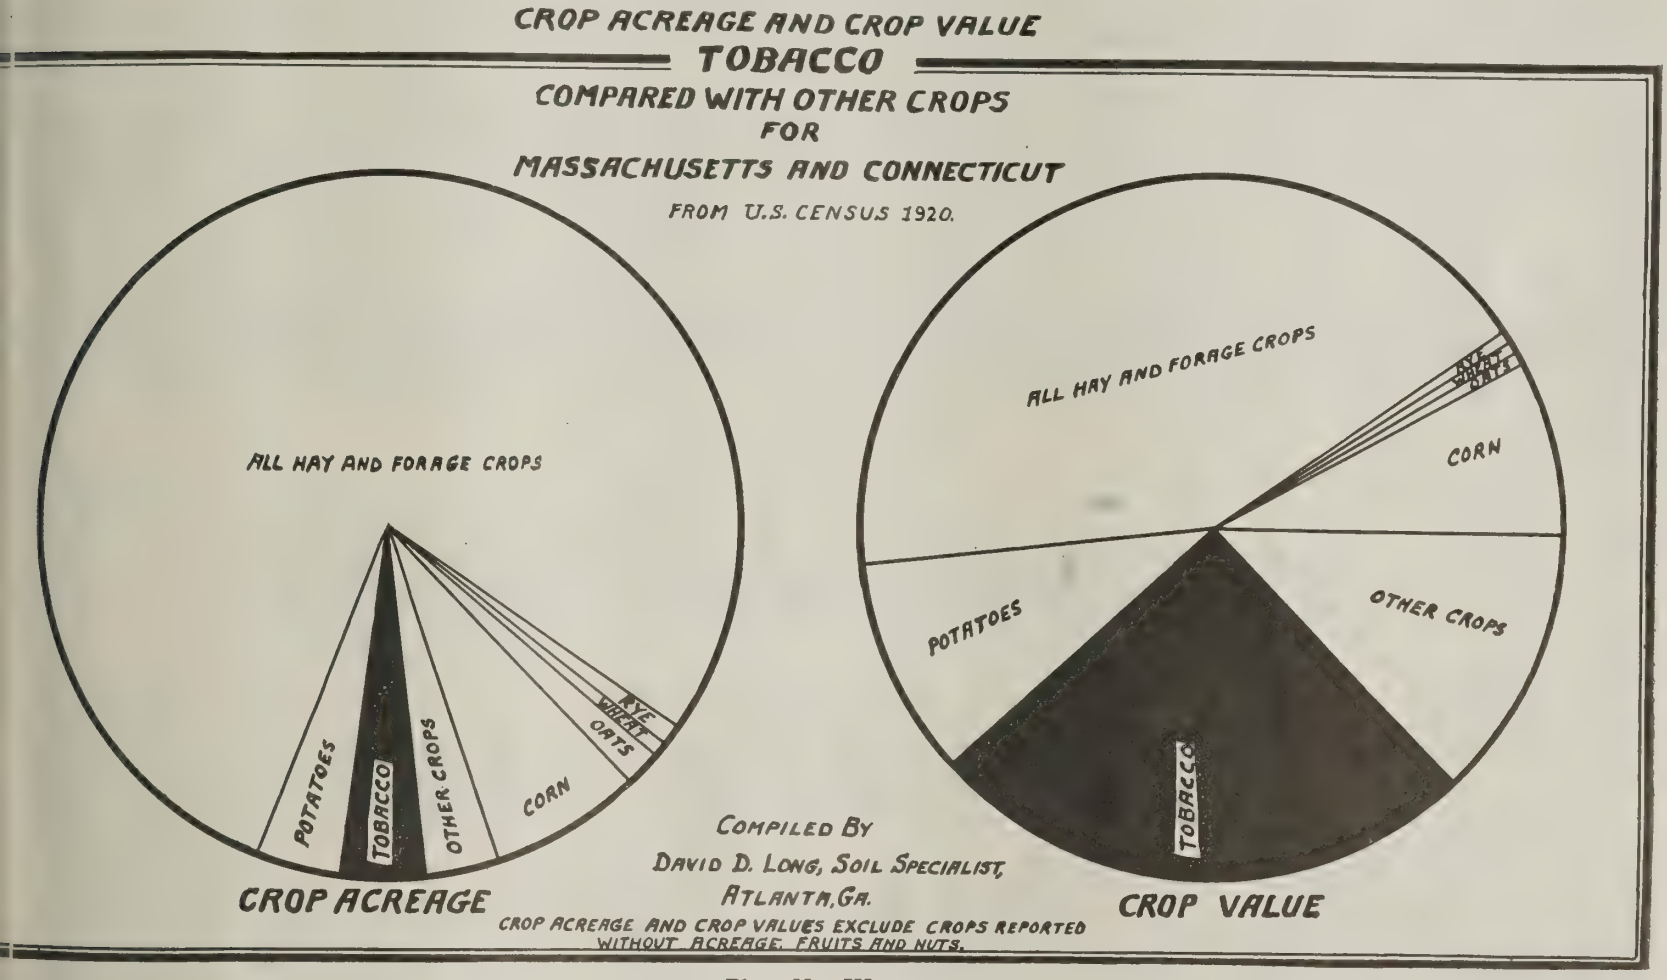

Plate No. IV

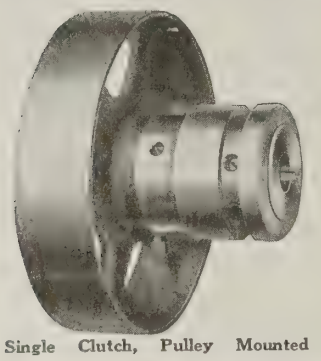
mportance of Fertilizers in Growing Connecticut Shade Tobacco

Rotation of Crops Not Sufficient to Maintain Fertility of Soil — Impracticable to Carry Out—Fertilizers Must Be Applied to Promote Productivity — Underfeeding of Plants Is Unprofitable—The Mixtures for Securing Best Results.

By EVERETT P. BREWER
Associated with Olds & Whipple

RICH tobacco lands in the Connecticut river valley have been regularly tilled since 1640. During the last half-century extensive and valuable crops of tobacco have been taken off of them. Naturally the feeding of crops takes the nutriment out of the soils unless the soils are quickly replenished it ll be impossible to keep the high standard ntained for Connecticut tobacco. Rotation ops might help in restoring soil fertility; his cannot be extensively nor generally prac- owing to the comparatively limited extent e good tobacco lands, the densely settled ng population, the smallness of the farms, ther restrictions. The farmers understand cognize the importance of rotating crops to keep the land in good working condition o free fertilizing materials for the use of quent crops. But they find it impracticable to carry out. They must, therefore, promote the productivity of the soil by the application of artificial and commercial fertilizers.



Stable manure always has been and is still used quite extensively on our fields, but as the horse is being rapidly displaced by the automobile truck, this material is getting scarce and correspondingly high in price, and we have been forced in later years to turn more and more to commercial fertilizers to feed the crop. That the weight we now produce per acre is less than it was in earlier years, we believe to be true, but it is also true that our growers are aiming to produce an entirely different type of leaf than that of fifty years ago.

Early Experiences

According to an account of five crops of tobacco raised on one Connecticut valley farm between 1866 and 1873 show that they total 83,031 pounds raised on 32 acres and 148 square rods. This is equivalent to an average of more than 2,500 pounds per acre. A crop of from 1,500 to 1,600 pounds per acre would be considered good weight today. The five crops referred to were not consecutive crops. The intervening crops averaged about the present crop weights.

Peruvian guano was introduced as a commercial fertilizer in 1843. The tobacco growers of Cuba were the first to experiment with it. Their results being satisfactory in a general way caused American planters to try the new fertilizer. The Cuban growers, however, attempted to force the growth and increase the size of their tobacco plant by using an abundance of guano. It had the desired effect but the fine burning quality and flavor were sacrificed. This gave Connecticut growers their opportunity. The wrappers grown in the Valley proved competent

THE JOHNSON FRICTION CLUTCH

Single Clutch, Pulley Mounted

For Use as a Part of Tobacco and Cigarette Machinery

There are no protruding parts to catch and cause accidents.
All working parts are enclosed in a Cylindrical Dirt and Dust Proof Case.
Hubs made to fit Standard Steel Pulley Bores.
Cast iron pulleys can be used where des red.
No shifting or throwing off of belts. No countershafts necessary.
The Johnson Friction Clutch drives groups of machines direct from line shaft.
Johnson Clutches will operate at any speed thru the use of Self-Lubricating Bushings in the clutch hubs.
They are nicely balanced and *do* run true and without vibration.

ompetition with the guano-forced Cuban rpers.

Introduction of Guano

Guano was introduced into the Connecticut elds shortly after the value was proved in Cuba. ut it was used more judiciously. At that time sor pomace, fish scrop and guano were about eonly commercial fertilizers used by the to-co farmer. A heavy dark leaf was consid-e desirable by the smoker, and the above ma-rials used in liberal quantities, tended to pro-ce that sort of leaf; dark in color and heavy xture. The demand was so persistent for t tobacco that the leaf was often colored by t cial means, after it had left the farmer's ds. This artificial coloring of the leaf had raps considerable to do with the gradual ge in taste, that began to be apparent after me among the smokers, and for at least ty-five years the demand has been for light still more light tobacco, both in color and ire.

o one familiar with the growing and curing bacco, this demand for extreme lights seems sistent, as at least every tobacco farmer rs that the tobacco plant properly fed which s healthy and thrifty and when cured shows city and grain, is not of the lightest color, this same leaf, when properly fermented and , certainly makes a most wholesome and ant smoke.

rly recognized, this changing of taste ng smokers as evidenced by the demand of uyers of leaf, Olds & Whipple, Inc., began making experiments on their own farm; carefully watching the effects of the different fertilizer materials on the growth of the plant, also in the curing shed and finally in their own warehouses on the finished and fermented leaf.

About this time, 1892 to 1896, the Connecticut Agricultural Experiment Station conducted a very exhaustive five-year test of the effect of different fertilizer materials on the tobacco crop. Their findings and conclusions were published in detail in their report for the year 1896.

It was demonstrated that excessive amounts of potash do not increase the yield or the quality of the leaf, and when the proper amount of potash has been applied (as indicated by these experiments about 150 pounds actual per acre) greater amounts produce no larger or better crops. In these tests the potash was applied in the form of cotton hull ash, a popular form of potash and phosphoric acid at that time, and deservedly so. This material has since almost entirely passed out of the market. It was also brought out that the leaf containing comparatively large percentages of magnesia, as shown by the analysis of the ash, was among the best tobaccos as regards quality. It was further shown that the plot fertilized with stable manure at the rate of ten or twelve cords per acre and a small amount of fertilizer, produced considerably less weight and a very much smaller percentage of wrappers as compared with crops grown on fertilizers or tobacco stems.

Rapid and Continuous Growth the Best

The tobacco plant grows very rapidly under favorable conditions and is ready to harvest in seventy to eighty days after transplanting, and it has been found that the crop that makes continuous and rapid growth produces the largest percentage of high-grade leaf. To insure this rapid growth, large applications of a balanced fertilizer are necessary. When commercial fertilizer only is used, the amount applied is usually one and one-half to two tons per acre, of a formula carrying five to six per cent of ammonia, a like amount of potash, with phosphoric acid content somewhat less. Underfeeding is poor business; it always results in light weight and poor quality.

The experiments showed the amount of nitrogen or ammonia, available phosphoric acid and potash, necessary under favorable weather conditions, to bring the tobacco crop to full maturity, and that certain materials, when used in their proper proportions, tend to produce a larger percentage of light colored, open grained and free burning leaf, while other materials are distinctively detrimental in this respect.

Connecticut tobacco farmers as a class are discriminating buyers of fertilizer and close observers of results obtained from its use. Our Connecticut Agricultural Experiment Station has done and is doing much to educate them along this line, as well as in the treatment of diseases that affect tobacco, and we are confident that our Agricultural College and Experiment Station, the fertilizer manufacturers and the farmers, working together in the future as they have in the past, will be able to solve the problems that arise in the culture of this crop.

he Connecticut Valley's Tobacco Industry from Seed-Bed to Market

New England Tobacco Growers Recognized as Most Up-to-Date in World—Cultural Methods Closely Followed by Growers in Other States and Countries—Utility and Beauty of Connecticut Shade Grown Wrappers—Results of Daring Enterprise

By Dr. ARTHUR SELWYN BROWN

TOBACCO cultural methods in raising crops of the various cigar-leaf types grown in the principal tobacco producing countries, follow the same general principles. They are modified in a few details in each ty on account of factors controlled by ntic, soil or other influences. The tobacco owers in the Connecticut Valley are recog-ed as the most up-to-date in the world, and ei cultural methods are closely followed by owers in the other states and in many foreign ntries. They are scientific, progressive and rful, as the wonderful successes of their ations have demonstrated. Starting in a a way, they have developed an active, ex-sive and profitable tobacco-growing industry ducated the taste of America cigar smokers the excellence, utility and beauty of Connecti-hade-grown wrappers, and taught them that wrapper gives the cigar a unique and pleas-roma, a suavity of flavor and other likable ties which rapidly win friends.

Cigar Leaf Tobacco Groups

The cigar-leaf tobaccos grown in the United ts are divided into three broad groups, wn as Broadleaf, or seedleaf; the Havana ed and the Cuban Seed groups. The Con-ctut seedleaf, grown extensively in the lly, is a typical Broadleaf. Strains of this ty have been found so hardy that they are ly grown in all the northern cigar-leaf states Canada for the production of filler leaf and rs. The Pennsylvania and Ohio Broadleaf os are closely akin to the Connecticut dleaf.

The Connecticut-Havana leaf is also largely wn in the Valley for wrapper and binder ses.

There are usually six or seven varieties of n raised from seeds imported from Cuba. A considerable acreage of selected Cuban seed-tobacco is raised under shade cloths in the Connecticut Valley for the production of the highest type of cigar wrapper.

The Connecticut Valley and areas around Decatur County, Ga., and Gadsden County, Fla., are the leading American wrapper leaf sections, just as Wisconsin is the great binder-leaf state.

Wrapper-Growing Soil

The principal wrapper-growing soils in Connecticut and Florida are sandy, sandy loams and fine clay-sand gravels with low clay contents. The subsoils are variable and carry small quantities of clay. The drainage of both the soil and subsoil is rendered good by reason of the absence of low percentage of clay in them.

The Connecticut-Havana seed is sown in a cold-frame or hot bed until it is strong enough to be planted out. These seed-beds are usually about 6 feet in width and of a length suited to the supply of the required number of plants. About 180 square feet of seed-bed will produce plants sufficient for an acre of field land. A cold-frame with a southerly exposure gives the best results; but when the weather is damp and the seedlings require forcing it is advisable to sow the seed in a hot-bed.

Preparing Seed-Beds

The seed-bed material is carefully prepared in the Fall months. A loose loam of high fertility is chosen. It is well drained and treated with 40 pounds of lime and 200 pounds of stable manure for each 100 square feet of bed area plowed under. Then in the Spring, about two or three weeks before seed-sowing begins, additional fertilizers are scattered over the seed areas. A common practice is to make up a mixture of 20 pounds of cottonseed meal or castor pomace, one pound of acid phosphate and half a pound of carbonate or sulphate of potassium. This is scattered over 100 square feet of the seed area. The ground is then carefully turned over and broken up by a spade. The leading growers sterilize the land by treating it to a good steaming, with the object of destroying the spores of fungi and the seeds of weeds and other noxious plants.

Sowing-time is between the middle of March and the middle of April. Weather conditions may modify it a little so as to make it a little earlier or later—usually later.

Experience has shown that it is rarely advisable to transplant the seedlings from the seed-beds to the open field before the middle of May. Hot-beds produce transplantable plants in from a month to six weeks, while cold-frames take from 6 to 8 weeks to yield similar plants. When the seed-beds are covered with cloth, instead of glass, a longer germinating and growing period is required which may extend to three months in some cases.

Controlling Growth of Seedlings

The rate of seedling growth must be controlled. A rapid growth is liable to result in weak or diseased plants. The same conditions are likely to occur when the seed has been sown too close together in the bed. The best practice is sowing at the rate of a teaspoonful of dry seed to each 100 square feet of bed. When the seed is mixed with some land plaster, finely sifted wood ashes or bone meal, an effective spacing of the seedlings will be easily attained. The fine seeds require a very light covering. The covering should be distributed through a sieve. When the seed mixture has been scattered over the bed, this is usually done twice or thrice, to ensure a good distribution, and the covering has been thrown over the bed, the surface is packed with a plank or rolled.

There is a good deal of attention required in the care of the seed frame. It has to be watched

136 Water St., New York

everal times a day. The bed must be moist, ut not too moist. The temperature must be ept at a moderate height but a high temperaure would either burn the plants or make them in and wirelike. There must be ample light nd ventilation to promote chemical reactions n the growing plants. It is a good plan to over the glass seed-frames at night with cheeseloth to check radiation and maintain an even emperature in the bed. Weeds must not be alowed to feed upon the tobacco seedling food nd great care must be exercised that no inects are allowed within the seed-frame. Some aterpillars and bugs are capable of playing reat havoc in a seed-frame in a short time if ney are permitted to banquet upon the rich ubstance of the carefully nurtured tobacco lants.

When Ready for Transplanting

When the plants attain a height of about 6 ches and have developed between four and six aves, they are ready for transplanting. The lass cover of the seed-bed frame should be reoved to harden the plants and enable them face the wind and the suns rays. This hardning process takes about a week and when it completed the plants are ready for transrence to the field.

The preparation of the field is as important as e development of the seed-bed. The best tilge methods are employed in breaking up the il, in levelling it, working in the humus, anure and other fertilizing materials. Carel growers aim to foster a rapid, uninterpted plant growth so as to obtain the best xture of leaf and largest weight of crop. The uss of fertilizer used, the state of division and rdness and the method used in applying it are oblems to be handled in the light of chemical howledge and agricultural skill. A soil analysis required to tell the farmer what substances are esent and what are needed to be added to ve the right amount of food in an easily assimilable manner to the tobacco plants. Stable dairy manure is worked into the land in the ll, and before the seedlings are transplanted a ecial mixture of chemical fertilizers is devised r each particular class of soil. This mixture n be prepared only when a careful analysis of e soil has been made.

Fertilizer Mixtures

A common practice in the Connecticut Val- is to mix materials yielding about 5 per cent phosphoric acid, 5 per cent of nitrogen and per cent of potassium with other materials as rriers. Cotton-seed, or similar matter, will pply the nitrogen. Crushed bone or superosphates will give the necessary phosphoric d in the proper way and correct proportions. ood ashes, dried sea-weed or carbonate of tash supply sources of potassium.

The soil generally requires a good deal of lim-. Lime not only counteracts the acidity of e soil, but it destroys weeds and other para-c plants and supplies salts to the plant stems.

Important Functions of Fertilizers

An important function of manures and fertizers is the physical condition into which they ng the soil. In order that the tobacco plant, ich is as delicate and nervous as a young imal, can be properly fed each day, its roots st be enabled to ramble about within their stricted areas as freely as possible. They st be in contact with soils moisture which s extracted the various elements of the plant's od from the soil, the manure, the lime and the rious fertilizers which have been used. The od materials carried by the moisture in the il are drawn into the roots and up into the ant stems by the heat and sunlight acting on leaves. Then the internal mechanism of the ant juices and cells convert the food into plant bstances and then promote plant growth. hen the food materials are in ample supply, soil conditions are good and the surface facs of light, heat and moisture are satisfactory, healthy plant growth will be assured and a heavy crop-yield may be expected. But anything which retards the proper functioning of one of the above-described factors will have a bad effect upon the crops harvested.

Transplanting

The plants are set in rows about 3 feet 6 inches apart. The distance between the plants in the rows is about 17 inches. A little wider distance often leads to hardier growths than can be obtained by setting the plants on the rows closer together.

The seed-bed must be dampened before the seedlings are lifted for transplanting and the field must likewise be watered so that the soil may be puddled and pressed tightly around the fine and delicate roots of the transplanted seedlings, keeping them moist and well fed until they become adjusted to their new environment.

Cloudy and rainy days are the best to select for transplanting operations. There is likely to be far less wilting of the transplanted seedlings then as compared with a bright warm day. No matter how carefully transplanting has been done, the plants all receive shocks which affect them more or less. It takes a week or ten days for them to recover their health again. In the meanwhile, constant care must be given to them. They must be kept moist and the frailer plants must be nursed back to strength. It is an excellent plan to treat the plants to a good dose of fertilizer solution or liquid manure just as they have recovered from the transplanting shocks. This treatment has it's rewards in far hardier plants and in a better grade of leaves than plants which are not so treated are liable to have. At this time, the cut-worm, another enemy, may be expected to announce himself on the farm. Should he start banqueting on the plants within three weeks or a month of transplanting, new seedlings must be set out in the places of all the plants damaged by the pests. A sufficient number of plants are usually held back for this purpose.

Erecting Shade Tents

When transplanting is accomplished, the busy grower begins thinking about his tent frames, wires and stays. The tents must be ready for erection as soon as as the plants begin shooting upwards. The tents improve the plant in many respects and play many important roles in cultural practice. Therefore, considerable attention is given to them. When a model farm, like one of the many owned and operated by the American Sumatra Tobacco Co., the Griffin Co., the Granby Tobacco Corporation, W. S. Pinney & Co., and other leading growers, is visited, we are impressed with the enormous sizes of the tents, the large acreage covered, the fine workmanship that is employed in tent erecting and the effective practical work done by the tents. The making of tents is so well understood, as the result of the overcoming of many difficulties in the early days of tobacco growing in the Connecticut Valley, that weather conditions are not so much feared by the tobacco grower today. The tents are built to stand up well in the worst storms that may be expected to sweep down the Valley in the growing months. Experience and the wisdom based upon it have fortified the modern expert farmer against the fears and dangers which caused the pioneer farmers so much trouble.

Topping the Plants

Topping begins when about half the field plants have developed seed heads. It is done by breaking off the top or crown of the plants at about the third branch below the seed-head. This forces the plant to develop the lower leaves. The vitality of each plant is checked in upward extension and is directed into lateral expansion. Topping causes suckers to develop in the axils of the leaves. These must be quickly removed because they are liable to destroy the vitality of the leaves. The field has to be worked over several times when topping and suckering operations are undertaken. This work must be systematically done to assure the maturing of the whole field crop at one time.

The vigilant tobacco grower has had little rest since he began preparing his seed-beds. Night and day, he has been called upon to give more or less careful attention to his planting work. As this work proceeds, his cares increase, and then harvesting time draws near. This is always an important period of the year looked forward to by all farmers with mingled sentiments of fear and hopefulness. The weather should be clear and warm at harvesting time, because rain would cause a rapid deterioration of the leaves in the curing barns.

Harvesting

Two harvesting methods are followed. In one, the practice is to cut the whole plant when the middle leaves become ripe and the middle leaves have thickened and turned to a lighter shade of green. The plant stalks are cut close to the ground with a hatchet or long handled shears. The cut plant is carefully laid out on the ground until it has wilted and become pliant so that it may be handled without being cracked or damaged. Then each plant is hung on a hurdle or lath 4 or 5 feet in length by piercing the stalk and sliding the stalk along the hurdle. About six plants can be slung at equidistant points along each hurdle. A less effective method is to hang the stalk on nails driven into a lath. The hurdles or laths carrying plants are suspended between racks and placed in the curing barn. The tiers are spaced about a foot apart so that the circulation of air within the barn shall not be impeded by the leaves.

Picking the Leaves

The other method of harvesting shade grown leaves is to pick the leaves as rapidly as they ripen. This is the older method and, probably, the most effective. About half-a-dozen pickings are required because care must be given to see that picking is done only when the leaves have attained the correct degree of ripeness determined by local experience. The leaves taken from the plant in this picking process, usually the bottom leaves are the first picked, they are packed in baskets and carried to the curing barn. A wooden spike or needle pierces each leaf and a string is fed through the hole. One end of the string is tied to the end of a 4-foot lath and other leaves are threaded on. When the requisite number, properly spaced, have been put on, the laths are hung precisely as the sticks were hung in practicing the first-described method.

Growing and Handling of Broadleaf

Connecticut broad-leaf varieties of leaf are treated in the same way as the Havana seed-grown leaf. The seedling and the leaves for curing, on account of the great size of plants and leaves, have to be more spacious. But the same seeding, sowing, tillage, fertilizing, transplanting, harvesting and curing methods are followed. Special details occasionally call for modifications. For example: the greater growth and vigor of the broad-leaf plants call for the application of about 20 to 25 per cent increase in the fertilizers used and deeper planting and machine cultivation.

Harvesting Difficulties

When the leaves are too green at harvesting, difficulties are met with in curing. They are hard to sweat. If they are permitted to become overripe, the tobacco will become spotted and the texture will deteriorate. Many harvesting courses are preferred to a few; because frequent leaf pickings are likely to result in the tobacco being "just right" for curing rather than green and damp. The curer can quickly tell whether the leaves have been harvested properly or not. He has little trouble with properly harvested leaves, but bad harvesting causes him to at least fret and fume. It must be remembered, however, that each picking adds to the production costs and the increased handling causes greater

losses from breakage of the largest and finest leaves.

Leaf-curing is a chemical process promoted by heating and moisture and fermentation. It, consequently, calls for the exercise of knowledge and skill. Color, body, texture, aroma, grain conglomeration, burning ability, luster and other desirable qualities are determined by the skill shown in conducting the curing operations. There must be a constant, careful adjustment of humidity and temperature conditions all the time the leaf is undergoing the curing treatment which occupies between 20 and 40 days for primed tobacco and from 30 to 45 days for tobacco which was stalk cut.

The Fermentation

The fermentation is carried out by piling the leaves in layers, shingle-wise, up to a bulk of about 6,000 pounds. This causes the temperature to rise from 100 to over 140 degrees Fahrenheit. Fermentation gives finish to the leaf, sets the color and gives the tobacco its keeping qualities. Frequent turning of the bulked heap, and shaking of the leaves, must be done during fermentation so that a copious supply of oxygen can be furnished. The mounds are relaid, shingle-wise after every turning.

The bulk-room air must be kept humid when fermentation is proceeding. A high humidity favors good curing and evaporation retards and weakens it.

When curing has proceeded far enough, the leaf is re-moistened and warmed for about 45 or 50 hours to make it pliable and give it a good luster and appearance. Then the leaves are sorted for length and character and packed for a light finish sweatening during a fortnight or more. Then they are finished and ready for the markets. They are then usually packed into bales weighing about 176 pounds and marked with the growers initials or brand.

All these tender operations, calling for such constant vigilance and agricultural skill occupy about a year and keep the tobacco-grower busy every day on the calendar.

Dr. Loew Fermentation System

The theory of fermentation which is now generally accepted by tobacco growers and curers has been clearly described by Dr. Oscar Loew.

His observations indicate that fermenting tobacco containing from 18 to 25 per cent of moisture is germicidal in its action and few if any bacteria are found on freshly fermented leaves. Contrary therefore to previously accepted views of the agency of the bacteria in the process, he attributes fermentation to the action of the soluble ferments or enzymes formed in the growing plant and perhaps also while wilting after harvest. The enzymes are not living organisms like microbes, but chemical bodies which under proper conditions cause extensive chemical changes. A familiar example is the diastase of barley which converts many hundred times its weight of starch into sugar.

In tobacco fermentation the main changes are caused by two oxidizing enzymes, by the action of which the oxygen of the air is made to unite with various compounds in the leaf. To this action chiefly is due the color and aroma of fermented tobacco.

By the method of fermentation or "sweating" formerly universal in Connecticut, 300 pounds or more of the sorted leaf tied in "hands" of 13 to 18 leaves was tightly and smoothly packed into a case or box which is fairly tight on the sides but with one-half inch spaces between the end boards. The leaf was packed with the tops toward the center and butts at the ends of the case. The cases were piled in an unheated storehouse as they were packed, turned once or twice, and after lying over one summer were sampled and ready for sale to manufacturers. Sorting and packing was begun in January, or as soon as the cured leaf can be taken from the barn, and finished in three or four months.

In 1899 four cases were packed in February and almost daily readings of the temperature in the center of each case were made by a telephone thermometer. One case lay for nine weeks before the temperature of the tobacco rose even to temperate heat, 70 degrees Fahr. Another full month passed before it rose to 80 degrees. In no one of the four cases did the temperature go above 83 degrees.

Tobacco often damages (mold, "canker") in the cases between the time of packing and the first of May. The greatest danger to cased tobacco from mold and mustiness is when it lies cold, damp and unfermented, waiting for the turning of the seasons to warm it and start the fermentation.

Fermentation is slow, slower than desirable because of the tight packing which nearly excludes air. Fermentation being in part a process of oxidation, requires air and the leaf can be so tightly packed as almost to prevent fermentation.

"Forced Sweating" has been tried in order to get tobacco into market quickly or to "finish" tobacco which has not fermented enough. By this method the tobacco, packed in cases, is left for about six weeks in a room kept at 100 degrees to 130 degrees with moist air. As a method of handling a large quantity of normally cured leaf it is not recommended. It is an emergency method for treating sick tobacco, a "get cured quick" affair.

A third method of fermenting wrapper leaf is known as fermenting in "bulk." In principle, it consists in carefully laying the leaf loose or tied in hands in rectangular piles which contain a ton or more of leaf. Each pile is covered with blankets to check cooling and to control but not prevent evaporation.

A sweat room should be maintained at a temperature of 80 degrees to 90 degrees Fahr., and the humidity should be high enough to keep the leaf soft at all times. Under these conditions the "bulk" immediately heats and fermentation proceeds rapidly. As soon as the thermometer inside the bulk shows a temperature of 110 degrees to 130 degrees the bulk is pulled down, the leaf lightly shaken out and immediately bulked again putting that leaf which was on the outside of the former bulk on the inside of the new one. In the new bulk the rise of temperature is slower. This operation of rebulking is continued until the leaf is finished.

In Connecticut, the first tobacco to be fermented by the bulk method was that used in tests made by the Connecticut Agricultural Experiment Station in co-operation with the United States Department of Agriculture in 1898. The tobacco utilized was Connecticut Havana and the results of the experiments were "perfectly satisfactory." In 1899, the experiments were repeated and developed on a larger scale with the assistance of Marcus L. Floyd, then in the employ of the Division of Soils, U. S. Department of Agriculture. Again the results were satisfactory, and general attention was called to the method. Ere long it was "universally" used for fermenting shade-grown tobacco. It is used to a considerable extent on Connecticut Havana.

Eternal Vigilance

Thus, in brief, is the Connecticut Valley's great tobacco crop sown, cultured, harvested, cured and sent to the world's markets to supply the leading cigar makers with one of the most pleasing wrappers obtainable. The reader will be surprised with the extraordinary skill, patience, unremitted attention and devotion required of every grower every day in the year. Eternal vigilance is the growers only means of success. It pays to be vigilant and highly organized. The growers in the Connecticut Valley learned this long ago and none excel them in these virtues. They have magnificent farms which are tilled in the most effective ways and yield results which astonish the world's tobacco experts. Well may American smokers bestow praise on the men who have developed this magnificent industry for the United States against many discouraging obstacles and placed in the hands of our smokers a delightful leaf suited to the manufacture of our finest cigars.

American Sumatra Tobacco Co., Inc.

First and foremost in the production of choice Connecticut shade-grown tobacco comes the American Sumatra Tobacco Co., Inc., of 131 Water street, New York, the largest growers of shade-grown in the world.

The corporation has plantations at South Windsor, Silver Lane, East Granby, Tariffville, Windsor Locks, Simsbury, West Suffield, Pequonock and Granby, Connecticut, and Westfield, Mass., and at the present time has more than 25,000 acres of tobacco under shade, and also an enormous acreage devoted to Havana Seed and Broadleaf.

The officers of the American Sumatra Tobacco Co., Inc., are: William A. Tucker, Senior Vice-President and Acting President; F. M. Arguimbau and Louis Leopold, Vice-Presidents; A. Hardenbergh, Secretary and Treasurer; P. Polumbaum, Assistant Secretary, and E. Traub, Assistant Treasurer.

The Connecticut offices of the American Sumatra Tobacco Co., Inc., are at East Hartford, while numerous warehouses are located in many sections of Connecticut and Massachusetts.

E. Rosenwald & Bro.

The world-renowned firm of E. Rosenwald & Bro., leaf dealers, packers and importers, of 145 Water street, New York, specialize in South Windsor Connecticut Broadleaf, and are exclusive handlers of F. R. & R. M. Goodrich's plantations of primed Connecticut tobacco.

At one time, E. Rosenwald & Bro. were also among the leading packers of Connecticut tobacco, but this branch of their activities was discontinued temporarily. However, whenever favorable conditions arise, E. Rosenwald & Bro. will doubtless resume their packing business.

As is widely known, the members of the firm of E. Rosenwald & Bro. are Beno Rosenwald, Sam Bijur, and Nathan Bijur.

E. L. Kohlberg & Son

Early records of the tobacco industry show that Jacob Kohlberg established his leaf tobacco business in 1864, and was a packer of Connecticut Broadleaf tobacco in East Hartford, Conn. One of his sons, Eugene L. Kohlberg, in 1885 associated himself with his brother in the general leaf tobacco business in San Francisco, Cal., with a branch in Portland, Oregon, continuing in this business until 1910, when he returned East to make his home in New York.

In 1915 he again entered the leaf tobacco business (associated with his oldest son, Jerome) in the exclusive packing of Connecticut tobaccos, comprising Shadegrown, Broadleaf, Havana Seed and Primed. Meredith Kohlberg, who served his apprenticeship on a celebrated Shadegrown tobacco plantation, was later taken into the firm.

Packing only the finest types of Connecticut tobacco, as they do, they count among their customers many of the finest and largest cigar concerns in the country. Their business extends all over the United States and into Canada and they are considered one of the representative Connecticut leaf firms.

Their sales staff includes two salesmen besides the younger members of the firm and their offices are located at 144 Water street, in the building which they own, while their warehouses are situated in the tobacco growing sections of Connecticut, where the members of the firm spend a great deal of their time.

Quality Tobacco helpful service and straightforward dealing are our guiding principles

A. N. SHEPARD & SON

Growers and Packers of

CONNECTICUT SHADE AND ROUND TIP

Packers of Connecticut Tobacco

53 Mechanic St. Hartford, Conn.

Plantations: Poquonock, Conn. Windsor, Conn. West Suffield, Conn. Ellington, Conn.

Warehouses: Hartford, Conn. Portland, Conn.

Meyer & Mendelsohn

Known most favorably throughout the United States on account of the excellent shadegrown tobacco they produce, Meyer & Mendelsohn have built up a high reputation. Under shade this year they have upwards of 103 acres of tobacco that promises to be unusually good. Of sun grown tobacco, they will harvest a crop of 1,000 acres, and 50 acres of Round Tip. Their farms comprise some of the most desirable tobacco land in the Connecticut Valley.

On the Meyer & Mendelsohn plantations are shown, unmistakably, what can be accomplished by scientific farming. The M. & M. farms all show expert management and they produce results in the form of tobacco that cigar manufacturers are most eager to get.

The Meyer & Mendelsohn packing house at 61 Windsor street, Hartford, is unsurpassed. For completeness of facilities and in correctness of methods, no tobacco warehouse in Connecticut can make a better showing. Special care, scrupulous cleanliness, up-to-dateness in equipment and procedure, unstinted expenditure to make sure that the tobacco will be exactly "right," every aid that experience can suggest—that science provide, beyond question, is there. Meyer growers and packers uphold their reputation more proudly.

When Samuel Mendelsohn, who started this great business, landed in Hartford in 1876, his worldly wealth was represented by $300 and a revolver. What became of the firearm, history does not say. But it is in evidence that the $300 financed the beginning of an enterprise that was incorporated for $1,250,000.

The Meyer & Mendelsohn company gives employment to 2,000 people eight months in the year.

Of the company, A. I. Mendelsohn is president and secretary. He is one of the most particular men in the leaf tobacco business. I. M. Koby, vice-president and treasurer, is another dependable tobacco expert. Carl Green, who has been a buyer for Meyer & Mendelsohn for 25 years, needs no introduction anywhere in the Connecticut Valley.

Sol Kohn & Co.

An enterprising firm that is becoming widely known is that of Sol Kohn & Co., of 241 State street, Hartford. Sol and Jerome Kohn formed the firm, which has been in existence since 1916. Being alert, energetic, resourceful and possessed of good judgment, they don't overlook any opportunities to increase and make stronger the good will of their customers.

Case Manufacturing Co.

Selection of material and the manufacturing processes necessary to produce a desired quality of paper requires no less skill than the selection of leaf and the operations needed to make a fine cigar. Haphazard buying and slipshod workmanship will produce neither a high grade cigar nor a high grade paper for the tobacco packer. Careful choice of material and skilled workmanship assure a finished article that is a credit to its maker. The Case Manufacturing Co., of Unionville, Conn., offers to the discriminating packer a tobacco paper, sold either sheets or rolls, that is designed to meet his needs, to have the strength and toughness to withstand wear and tear, and to be sold at a moderate price.

Louis King Cigar Co.

Among tobacco men who are good judges of cigars, the King Perfecto has long been popular, especially in Hartford, and the Connecticut Valley. It was, and is, a cigar that bespeaks quality. It is made in two styles, either Broadleaf or Havana wrapper. And, invariably, the filler is the "real stuff." Smokers who know the merit of the brand insist on getting King Perfectos.

The brand is manufactured by the Louis King Cigar Co., of 284 Asylum street, Hartford. The business was reorganized in 1919. G. M. Kahn, J. Margolies and A. M. Davis are the principals in the enterprise.

Though the Louis King Cigar Co. maintains a factory in Philadelphia, a factory that is noted for its scrupulous cleanliness, all deliveries to the trade are made from the Hartford Office of the company.

The following salesmen represent the Louis King Cigar Co., in New England: Joseph J. Levine and D. J. Creamer, Hartford territory, and W. T. Cobey, Springfield district.

Fred B. Griffin

One of the most prominent growers of Connecticut tobacco is Fred B. Griffin. His principal offices and warehouse are at East Windsor Hill and his plantations are at East Windsor, South Windsor and Granby.

Associated with Mr. Griffin are Wm. F. Murray, Marcus F. Floyd and Eric Thompson, all capable tobacco men of long experience.

Mr. Griffin purchased the plantation of the Farnham Tobacco Co., at East Windsor Hill. The tobacco looks fine now, promising a fine crop.

Steane, Hartman & Co., Inc.

Among the best known and largest independent growers of Shadegrown tobacco, engaged in extensive Havana seed, and Broadleaf packing, is Steane, Hartman & Co., Inc., of Hartford, Conn. This corporation specializes in shadegrown tobacco.

Its seven plantations in the select Connecticut Valley tobacco district, are located in Poquonock, Bloomfield, Windsor, East Windsor, Hazardville and Ellington. The managers of these plantations have had years of experience and are well versed in the growing and careful harvesting of Shadegrown.

The main offices and principal packing house are in Hartford, where the warehouse space has been greatly increased and the sorting and packing centralized. The growing, warehousing and selling operations are under the supervision of Gustave Hartman, president and general manager, and E. M. Hartman, treasurer, both of whom were brought up in the tobacco business and are well known to the Connecticut leaf trade.

M. J. Gans

For more than thirty-one years, Moses J. Gans has been to the fore in the tobacco industry. After a long experience in New York, he moved to Hartford in 1915, and specialized in Broadleaf and Havana seed.

The headquarters of M. J. Gans are 219 State street, Hartford, Conn.

B. Rappaport

B. Rappaport, of 253 State street, Hartford, started in the Connecticut tobacco business in a small way in 1908. Commencing with a capital of scarcely more than $100, he began by buying from growers odd lots, small quantities of the cheapest grade of tobacco. Industriously he kept on, devoting strict attention to each little transaction, he paved the way for putting through larger deals.

His trade developed enabling him to purchase the building he now occupies. Popularly known as "Barney," he has become one of the important dealers of tobacco on "Tobacco Row" in Hartford. He is at the present time making an extended trip to Europe.

Although he handles all kinds of Connecticut tobacco, his specialties are Broadleaf and Havana seed. Some of the largest dealers in the country are his customers.

W. S. Pinney & Co., Inc.

The experience of three generations in the tobacco business and twenty-one years in the shadegrown industry are behind W. S. Pinney & Co., Inc., one of the largest growers and packers of shadegrown tobacco in Connecticut.

Until 1899, Mr. Pinney grew tobacco alone. From 1899, until 1820, he grew it in partnership with Olds & Whipple of Hartford, the well known growers and fertilizer manufacturers. In 1920, the business was incorporated under its present name. W. S. Pinney is president and F. B. Pease, treasurer.

W. S. Pinney & Co. has always taken pride in the quality of its tobacco ever since the first year of shadegrown, back in 1901. Grading and handling methods have always been kept high, and the slogan adopted this year: "Up to a standard, not down to a price," typifies the Pinney methods of doing business.

One price to all, honesty in packing, and efficient service have brought results in the continued good purchases by customers, increased demand for the product, and the consequent increased acreage to meet the demands of the trade.

Fassler & Silberman, Inc.

The firm of Fassler & Silberman, Inc., was organized March 1, 1919, the firm consisting of Samuel A. Fassler, who has been connected with the tobacco business dating back almost twenty years, and Alfred M. Silberman, whose connection with the tobacco business has also been over a period of many years.

The first year's operation consisted of the raising of 131 acres of Shade tobacco as well as a quantity of Primed Havana Seed. In addition thereto, they packed considerable of both Havana Seed and Connecticut Broadleaf. In the short life of this firm they have become one of the factors in the Shade industry, having set out this year for the 1923 crop the following acreage:

	Acres
Chicopee, Mass.	201
Southwick, Mass.	91
Tariffville, Conn.	50
East Granby, Conn.	46
Buckland, Conn.	77
Ellington, Conn.	65
Vernon, Conn.	82
Total	612

The plantations are under the entire charge of Alfred M. Silberman, whose experience in that direction covers a period of many years. He is ably assisted by S. A. Fassler.

The methods employed in the packing of tobacco by this firm have met with a great deal of satisfaction from all sources to whom their tobacco has been sold. They are not sparing of moneys in the correct fertilizing and make liberal expenditures of funds in the proper packing of their tobacco for the market.

In addition to their 612 acres of tobacco, which they are raising, they are still continuing to pack both Havana Seed and Broadleaf.

Their warehouses are located at Tariffville and in Hartford, Conn.

L. Gerschel's Son, Inc.

Founded by Leopold Gerschel in 1856, the organization now widely known as L. Gerschel's Son, Inc., has deservedly gained a very high reputation as growers of shade and packers of high-grade Connecticut tobacco.

At present, L. Gerschel's Son, Inc., has approximately 100 acres of tobacco under shade, and also controls about 70 acres of Broadleaf tobacco, all of which is in fine condition.

The Connecticut offices and warehouses of the corporation are located at Silver Lane, East Hartford, and the New York headquarters at 171 Water street.

A. N. Shepard & Son

Andrew N. Shepard, senior partner of A. N. Shepard & Son, has been engaged in the tobacco industry for more than forty years, although the firm of A. N. Shepard & Son was not formed until 1919.

As a young man he grew tobacco on his father's farm and planted what was then considered a very large acreage. At the age of twenty-one he began packing the tobacco he had grown himself and also purchasing the crop of neighbors. Ever since that Summer, well over forty years ago, he has been packing Connecticut tobacco.

Mr. Shepard has always been actively interested in state politics and has held a number of responsible positions in the State government, taking part as well in National politics. At present he is president of the Freestone Savings Bank, of Portland, Conn., and a director of the First National Bank of the same town.

Nelson A. Shepard, son of the founder, on leaving college in 1919, entered the business. He takes an active part in growing and warehousing the crops. The third member of the firm is Gordon W. Stewart, who devotes his attention to warehousing, selling and business management.

The firm's headquarters are at 53 Mechanic street, Hartford, Conn. One warehouse is at this address and another is in Portland, Conn. The plantations are in Ellington, West Suffield and Poquonock.

At present, most of the acreage is devoted to shadegrown. The same painstaking care is given to the handling and assorting of all tobaccos grown and packed by this concern, maintaining a high reputation earned in more than forty years.

L. B. Haas & Co.

Experience and success in the leaf tobacco business for nearly three-quarters of a century is the enviable record of L. B. Haas & Co., of 146-152 State street, Hartford. Of important tobacco packers and leaf merchants, this strong, splendidly reputed concern probably is the oldest in Connecticut.

Originally a cigar manufacturer, Louis B. Haas, the founder of the firm, became the associate of Oswin Welles, a notably dependable packer of Broadleaf, in 1852. Oswin Welles retired in 1865 and the firm of C. Welles & Co. was formed by Cassius Welles and Louis B. Haas.

After Cassius Welles died in 1884, the firm name was changed to Louis B. Haas & Co. Benjamin L. Hass and William P. Haas, nephews of Louis B. Haas, are the present partners in the firm.

The Haas packing house in Hartford is strictly up-to-date and arranged throughout in the most approved manner. In addition to the Hartford warehouse, L. B. Haas & Co. have warehouses in East Hartford and Hazardville.

L. B. Haas & Co. are accounted among the larger producers of shadegrown tobacco. Their plantations in Hazardville and Windsor are included in the list of the best in the Connecticut Valley.

The firm of L. B. Haas & Co. is the possessor of a medal, awarded in 1899 at the Paris Exposition at which place they made an exhibit of Connecticut leaf tobacco. They were given this medal on account of having the finest display of Connecticut leaf tobacco that was exhibited. In Buffalo likewise they were awarded a medal for their exhibit of leaf tobacco of all varieties.

William P. Haas is in charge of the sales department, and Benjamin L. Haas looks after the buying of the tobacco, with the assistance of a number of competent men, some of whom have been with the firm for more than thirty years.

Since the day it was established, the House of Haas has been the possessor of an enviable reputation. In the cigar leaf tobacco trade of the United States, the name of Haas is synonymous with truthworthiness.

Brewer Bros. of Hockanum

Notably known and careful packers of tobacco are Brewer Bros., of Hockanum, Conn. The farms of Brewer Bros. are classed among the best in Connecticut, and in very high repute, as tobacco experts, are V. C. Brewer and N. H. Brewer, who compose the firm.

Each year, tobacco, grown and packed by Brewer Bros., is eagerly demanded by cigar manufacturers who want the higher grades. It has happened, numerous times, that Brewer Bros.' packings have brought more than the top prices usually reported.

Operating their own farms and directing the work in their own packing houses, Brewer Bros. are able to get much better than the average results.

Hatheway & Steane

No firm in the Connecticut Valley is more highly respected than Hatheway & Steane. Year after year the same buyers look to them for their supply, knowing that their tobacco gives the greatest satisfaction.

Some of the standard and most popular cigars in the United States owe considerable of their success to the fine tobacco supplied by the House of Hatheway & Steane. Nothing can be said more favorable of a firm than this—that once supplied by them, the business develops into a continuous chain.

The firm started operations in 1911, and now own plantations at West Suffield, Poquonock, South Windsor and East Windsor. The members of the firm are E. A. Hatheway and J. H. Steane.

This year Hatheway & Steane are growing more than 500 acres of Shade and 100 acres of Round Tip.

Huntting Brothers

Huntting Bros. are reliable and strongly established packers of and dealers in Connecticut tobaccos of all types, with offices and warehouses at 34 Burnside avenue, near Main street, East Hartford, and plantations at East Hartford, South Windsor and Hazardville.

William S. Huntting and Henry J. Huntting, who constitute this firm, which was established in 1878, are the second generation in the management of the business.

They were trained in a rigorous school and have had a broad experience in providing cigar leaf for their customers, and the quality and dependableness of the Huntting packings of Connecticut Shadegrown and Broadleaf, in which types they specialize, are well known to the trade.

John E. Luddy

Some six years ago, John E. Luddy had charge of the Employment Bureau for the tobacco industry, with an office in Hartford. He fulfilled his mission well and made a host of friends during his term of office.

Two years ago, he founded the Windsor Paper & Waste Co., at Windsor, and has since been supplying the tobacco men with most of their requirements.

He is the largest handler of cheese cloth in the world, being agent for the Cannon Mfg. Co. He attributed his success to the tobacco men of the Connecticut Valley.

The Uses of Advertisements

The clever advertiser turns all happenings to good account. For example, take the proprietor of a small book and cigar stand in one of the lower Broadway office buildings. During the heat wave he tacked up over his counter front pages from several newspapers of December, 1917, telling about the cold wave of that time, deaths from freezing, slipping on icy pavements, etc. The unusual—at this time—scare heads attract almost every passer-by to the stand. Incidentally, the stand proprietor may claim to be something of a public benefactor for the cold news has a slightly chilling effect on even the most perspiring reader.—*Wall Street Journal.*

Tobacco at Massachusetts Experiment Station

(*Continued from page 23*)

Years of Persistent Effort Required

In all of this work attempt will be made to measure the prevalence of soil and plant diseases, especially as they seem to be correlated with the cropping system. It will be some years, of course, before the results will become of any great value. On the other hand, most tobacco growers will recognize that had this work been started ten or fifteen years ago, our industry would today have been on a much sounder basis than it is, and information which we sorely need would be available. For this reason we have the courage to start on these long-time experiments.

The work is so laid out that as new conditions develop changes can be made to find answers to a number of questions, as, the influence of lime, the effect of certain fertilizers, economy in the use of fertilizers, the real function of animal manures, and the like.

Insecticides

Prof. E. J. Kinney, of the Kentucky agricultural experiment station, says:

Although Paris green is still the most extensively used insecticide for dusting tobacco, arsenate of lead has come into favor very rapidly in recent years and in some sections is used almost exclusively. Both poisons if properly applied are effective in killing worms. Paris green, however, may cause serious damage to the leaves of tobacco at times, especially if applied unevenly or in too large quantities. Many people dread to apply it, because it is extremely irritating to the skin. Arsenate of lead is practically "fool proof" as far as injury to plants is concerned, as it may be applied in very large quantities with practically no danger of burning tobacco.

Arsenate of lead is not irritating to the skin as is paris green. It sticks tighter to the leaves of plants and is therefore effective longer than paris green and it also will continue to kill worms on plants after rains have washed off practically all paris green and it also will continue to kill worms on plants more than paris green, but most men who have given it a thorough trial are convinced that its greater safety more than compensates for the additional cost. As a great many people will continue to use paris green for many years yet, however, some suggestions for the application are given for it as well as for arsenate of lead.

There are two important considerations in applying either paris green or arsenate of lead to tobacco. The first is to secure an even distribution of the poison all over the plants and the second is to use the proper quantities. An even distribution is necessary in order that all the worms will be killed promptly, and in the case of paris green, to avoid danger of burning the leaves. Only a limited quantity of paris green can be used with safety on tobacco, but arsenate of lead can be safely used in large quantities and enough should be used to kill all worms.

The amount of paris green that can be applied safely varies from one to three pounds an acre, depending, of course, upon the size of the plants and the number of plants an acre. Burley tobacco, because set closely, requires more than dark tobacco. It is rather difficult to distribute paris green regularly and in the right amounts because the dust cannot be seen on the leaves.

nnecticut Tobacco Sheds Destroyed by Storm

aehouse Point Seriously Injured—Sheds Swept Away and Crops Damaged by Wind and Hail—Windsor Locks and Suffield Hit—Shade Tents Suffer—No Rain in Some Sections.

TFORD, Conn., June 25.—Through s parts of the state yesterday af- n there swept one of the most se- electrical storms seen in many Accompanying the rain and the ng was a powerful gale, which aside everything in its path. And added to these elements, there nuge hail stones, which did con- le damage to the tents covering grown tobacco, and also no little e to the tobacco itself.

storm seemed to reach its height arehouse Point, where seven to- sheds were blown to the ground, ne and electric light wires were own and trees uprooted.

storm was of a somewhat freak- ture, visiting with severe force towns and avoiding almost en- other towns in the immediate y. It was practically impossible ure telephone communication with towns of the state last night. damage done, it was said, will thousands of dollars.

storm did not strike Hartford hile the rain fell in torrents in nding towns, the city sweltered mperature of 90 degrees.

Severe at Warehouse Point

report from Warehouse Point day to the Hartford *Courant,*

of the most disastrous wind, hail ain storms that has visited this in the memory of any of the resi- hit here about 6 o'clock tonight, ng in the destruction of several o sheds, all of five acres capacity, holding six and one-half acres. stones as big as eggs fell, cutting ies and limbs off trees and in places cutting electric and tele- wires. At the farm of Robert J. pley, three sheds were lifted from foundations and practically to kindling wood by the force of ind, each of the sheds at this place g six and one-half acres, and in ied was a large quantity of milk used in the milk business by Trombley, most of which were ed. The concussion from the fall- ied near the milk bottling depart- can be judged when a large case to-inch planking was ripped apart wept a distance of fifty feet out of ied.

the farm of Isaac Trombley, r of Robert J., a shed of five capacity was blown over, being from its moorings and hurled the roadway leading from this to Scantic, completely blocking affic. A large tree nearby was up- and also crashed across the road. d owned by John Moon near R. J. bley's place was leveled to the d, this being a 5 acre shed. At arm of T. J. Coleman, a five shed was demolished, while er similar capacity shed at the of John Titus was also swept A peculiar thing about the de- ion of the sheds was the fact that one blown over faced east and while other sheds in the vicinity north and south were not d. At each of the places tobacco lready been set and and is under and it will require an outlay of 0 or more to replace the destroyed Electric light service had not restored in the village at a late this evening.

Damage at Windsor Locks

report from Windsor Locks last says:

disastrous hail and rain storm this section shortly after 6 this g, during which hail stones larger good sized eggs fell in abundance ally all over the town, lasting early five minutes and covering round with the stones. One stone which was picked up after the storm weighed three-quarters of a pound, and the stones in many cases were not melted an hour after the storm. Trees were blown over, streets gutted with the rain and telephone and electric light service put out of commission.

Tobacco Damaged at Suffield

The report from Suffield yesterday evening to the *Courant,* says:

Hail stones as large as hen's eggs fell here late this afternoon, during a heavy electric storm, damaging the tobacco crop and gardens. Limbs were torn from trees and windows were demolished. The tobacco plants are small but the damage was considerable. Several persons who had not found shelter when the storm came were cut and bruised by the large hail stones.

Connecticut Association Elects Officers

HARTFORD, Conn., June 23.—The recently elected Board of Directors of the Connecticut Valley Tobacco Association, Inc., held its first annual meeting Tuesday.

Reports covering the first fractional year's business showed that during the ten months of the existence of the association important work had been done in organizing the association, getting it on a working basis, negotiating loans for advances to growers, selling and billing over $5,000,000 worth of the 1922 New England crop.

Fred B. Griffin

Resolutions of thanks and commendation were adopted as follows:

General Manager Griffin's Work Appreciated

The resolution of appreciation of Mr. Griffin's work was:

"RESOLVED, That the members of this board hereby express their hearty appreciation of the services rendered by General Manager Fred B. Griffin during the past year. We feel that he showed great ability in the organization of about 100 warehouses for handling and packing the crops, and the excellent judgment in establishing cordial relations with the tobacco trade, and the sale of the Havana Seed tobacco."

President Alsop Receives Thanks and Praise

"Believing, That the formation of the Connecticut Valley Tobacco Association, Inc., was largely due to the hard work and personal popularity of our president, and appreciating the very important work done by him in financing the Association, and his other accomplishments of the past year, Be it,

"RESOLVED, That the Directors of the Connecticut Valley Tobacco Association, Inc., in its first annual meeting assembled, do hereby extend a vote of thanks to our president, Joseph W. Alsop, for his untiring efforts and the valuable service rendered during the past year."

Judge Hickey Highly Commended

The resolution adopted relating to Mr. Hickey was:

"RESOLVED, That the members of the board hereby express their appreciation of the valuable services rendered the Association by Vice-President Judge L. P. M. Hickey during the past year. His untiring efforts in the field and office have had important influence in maintaining a good morale among our members."

All the Directors with one exception were re-elected.

Officers Chosen

The following officers were elected for the ensuing year:

Joseph W. Alsop of Avon, Conn., re-elected as president;

S. F. Brown of Windsor, Conn., vice-president for Connecticut;

T. L. Warner of Sunderland, Mass., vice-president for Massachusetts;

W. F. Whitmore of Hartford, re-elected as secretary;

E. E. King of East Hartford, re-elected as treasurer.

A. E. Nelson of Hartford, as assistant treasurer;

W. S. Fuller of Suffield, as assistant secretary

The executive committee is composed of Alsop, Brown, Warner, Bidwell, of Glastenbury; L. W. Newberry of South Windsor, and N. D Prince of Hartford.

The directors at large elected were: N. D. Prince, H. M. Alcorn of Suffield, and E. C. Hills of Southwick, Mass.

Fred B. Griffin will undoubtedly continue as general manager, a position which he has so ably and efficiently filled

Judge Hickey, the prime mover in the formation of the association, is to have charge of the Field department of the association, was relieved of the duties of vice-president.

By the re-election of the old board of directors by the growers, and the re-election of the officers following it, clearly indicates that the growers are well satisfied with the work of all during the past year, and feel satisfied that the formation of the association had been worked out by able people. They seem to believe that there are "brighter days" ahead for the tobacco growers of New England.

The association will have a field day at Riverside Park, Agawam, Mass., July 25. A business meeting is to take place at 10 a. m. An address will be made by President Alsop at 11:30 a. m., after which a basket lunch will be indulged in.

Co-operative Members Sue for Annulment

(*Special Telegram to* TOBACCO)

WILSON, N. C., June 26.— Charging that the membership contracts secured by the Tobacco Growers' Co-operative Association were secured under false pretense and fraud, sixty-seven Pitt County farmers have each individually commenced an action against the association to have their contracts annulled. The actions are brought under five counts.

The summonses are returnable before the next court sitting in Pitt County, thereby giving the farmers the opportunity of having the cases tried in their own county, and before jury composed of their own county men.

Indications point to a number of suits being immediately brought by other individual farmers in other counties of North Carolina.

Skiner and Whedbee, Senator F. C. Harding, and F. G. Jones and Son, attorneys at law, have been retained to represent the complaining tobacco growers.—MCFARLAND.

Offer to Sell Warehouse Withdrawn

GREENEVILLE, Tenn., June 23.—W. W. Bernard has wired to the Burley Tobacco Growers' Co-operative Association at Lexington, Ky., that the offer to sell them the Bernard Warehouse in this city had automatically become null and void, and that no further consideration need be given the proposition.

Mr. Bernard was anxious to withdraw his offer made to the pool a year ago, in order to get them to stay away from Greene County for a year, and when he saw the first opportunity to get out without breaking his word, he immediately took advantage of it.

This news was received with enthusiasm throughout Greene County, as it is generally conceded that without this property the pool will make no attempt to sign up this territory this year, and the fight between the pool and anti-pool interests, which would have been waged in the event that they came here, will not take place, and Greene County can go peacefully on, and market the most tremendous crop ever raised in this locality without interference.

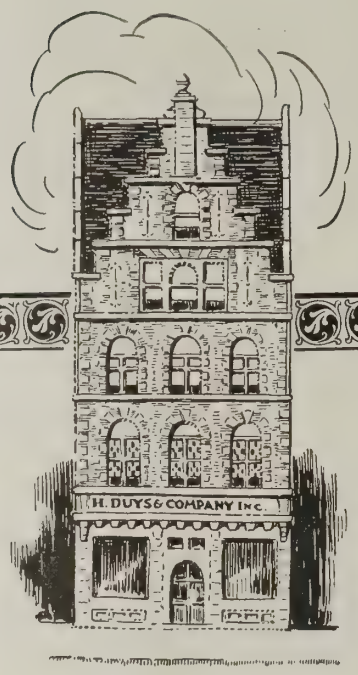
Objected to Proposition

Col. Bernard and J. S. Bernard, Jr., were bitterly opposed to the idea of selling the warehouse from the first, W. W. Bernard being the only one who believed in the alleged benefits of pooling the crop. Col. Bernard made a statement concerning the outcome, in which he says:

"Good tidings to the Tobacco Growers of East Tenn:

"Richard is himself again. The agony that has been hovering over the Bernard family regarding the entry of the pool into our prosperous community, we feel has passed. One year ago the co-ops tried to get in our territory, and in inducing them to let us alone and go home, W. W. Bernard agreed to make a price on our warehouse property to hold good until this June, which he was in honor bound to stand by. When the committee came back, it looked as if the property was gone. But the co-ops having deferred action until now, W. W. Bernard found an honorable way out, so he wired that as their finance committee deferred action and insisted that he bring a committee of good farmers to Lexington, he declined to wait further on the matter, and wired that he considered the deal off, which brings great relief to us all.

"We now, after years of labor and sacrifice, have one of the best markets in the United States and are getting higher prices, which we confidently expect to maintain.



"Your friend,
"J. S. BERNARD."

No Bids for the Upmann Cigar Factories

HAVANA, Cuba, June 16.—The liquidating board of the Upmann Bank had advertised for bids for purchase of the Upmann & Co. cigar factories but up to the present time it is said no bids have been received. It is not decided whether or not to advertise for bids again or to depend on the chance of making a private sale which might be carried out with better results. The value of these factories amount to a considerable sum, but without the right to use the Upmann trade mark bidders are said to be holdin off.

Denmark Stops Production

WASHINGTON, D. C., June 27.—The production of tobacco in Denmark has been discontinued, according to a report received by the Department of Commerce from Assistant Trade Commissioner H. Soranson, at Copenhagen. It was only during the war that it did amount to much. It is reported that the considerable stocks of tobacco which, owing to the lack of demand, have remained unsold for several years, have now been disposed of to Germany, Holland and Finland, at an average price of 19 to 20 ore per kilogram, which at the rate of current exchange is 1½ cents per pound.—LAMM.

Manufacturers buying

Sumatra or Java Tobacco

without looking over our line, do themselves an injustice.

Our stock comprises such enormous quantities and of such varied selections, that we are bound to suit the most fastidious buyer.

Our purchases of the 1922 crop of Sumatra are upward of 10,000 bales.

sconsin Tobacco Is Held Back by Dry Weather

h Heat Is Daily Breaking Records—Landscape Only Streaked With Straggling Thunder Showers—"Infant Mortality" Among Recently Set Plants May Become Serious.

ERTON, Wis., June 23.—The weather ily breaking records in hot tem- ures. The heat wave is one of the protracted and serious ones ever n in Wisconsin. A few straggling er showers have streaked across ed sections of the landscape, but eater section, by far, of the tobacco is dangerously dry for the new

Much Resetting Anticipated

ne growers estimate that ninety per of all planting in their neighbor- will have to be reset. And if a oes not come while reserve plants beds are still suitable for trans- ng, it will not be planted. There is ubt that the parched young plants a very serious situation, and the er man predicts continued dry and eather.

No Signs of Robust Life

h almost seventy-five per cent of op in the field, and the rest being y transplanted by the dogged grow- e next ten days will determine the mortality of the '23 crop. In sev- f the fields of the first plantings inspected, it was only a meager, thin streak of life on each plant that had a hold in the soil, and the outer leaves were withered. But the weed is a tough plant, and can be relied on to battle the drouth for ten days more, anyway.

The pool reports twelve good sized crews of assorters now in full blast for them, and are now satisfied with the progress of their packing, says the *Wisconsin Tobacco Reporter.*

The General announces the shut down for the season of their Edgerton and Portage warehouses.

Elevator Burned

The Eckart Elevator in Viroqua burned to the ground. It was a whopping big blaze, and the fire department was unable to cope with it. Bekkedal is understood to have had a few hundred cases stored there. Two of Bekkedal's warehouses would have gone up in smoke, too, if a strong wind had not been blowing in the right direction. Even as it was, the facades of each were badly blistered and caught afire, in spite of the wind, but constant streams of water saved them.—BADGER.

Manila Cigar Trade Seriously Menaced

By VINCENTE VILLAMIN

In Daily Financial America

avy machinery has been set in mo- engineered by certain tobacco inter- ed by the National Cigar Leaf To- Association, to destroy the Manila trade in America. As a starter a tion was approved importuning ress to put a limit on the number gars that could be imported from Philippines. A decision was reached age a nation-wide campaign upon asis of no let-up and no giving-in. representative of the association in ington has *carte blanche* instruc- to agitate the question all he can son and out of it.

e supporting bill of particulars are Manila cigars are of so excellent y that they are crowding the five- field, that the Filipino cigar-makers nfortunately industrious and skill- hat they foolishly accept low wages that Manila factories can get raw ials at less prices.

w, that Manila cigars are what they ibe them to be is conceded with be- ng modesty, but as to their being ders let figures speak for themselves. major part of the Manila cigars in market is found in class "A", com- g the lowest grade. While the im- tion of Manila cigars increased from 0,000 in 1921 to 172,000,000 in 1922 roduction in America of class "A" s increased 29 per cent during the l, being 2,285,333,690 in the fiscal 1922. In this particular class Ma- cigars represent only 7½ per cent. 21, judged by comparative internal ue collections in America, 1 per cent ll the amount contributed by Manila e total consumption of all classes. re is the "menace" that the unselfish co association is fighting beak and

at cigar-makers in Manila are pro- t should not be against humanity here even if humanity includes also embers of the National Cigar Leaf cco Association. That little thought- of penalizing skill and intelligence be away somewhere as it always ns when its services are needed by y-worshipping men. Manila cigar- ng has more than a century of his- back of it. In 1812 Filipinos who t in the United States Navy against nd were handing out finely-elab- d, aroma-scent Manila cigars to fellow gobs. The acquisition of iency cannot therefore be helped if that benediction is resisted to the moguls of the unselfish Na- l Cigar Leaf Tobacco Association.

to the low wages, here is a signal nce where the association and the la cigar-makers can combine in an ly alliance. But the Manila factory- r can read the riot act to the asso- n here advising them to meet the nds of their employes first. The is, Manila cigar factories are not ng as high dividends as the fac- s in this country. There were strikes borers for more pay which em- rs wanted to concede but couldn't se the balance sheet did not warrant Perhaps the reasons for this condi- are: The higher efficiency in Ameri- factories in all departments, better bution facilities, mass production reduces the unit cost, closer coordi- n in merchandising and advertising stronger and more determined finan- support.

th respect to the comparative price w materials, taken all in all, Manila ries are not a whit better off. It t generally known outside of the that the United States export leaf co to the Philippines which are used e cigars imported to this country. 21 of the $544,972 worth of leaf to- imported $285,440, in 1920 of the 66 worth the United Stats contrib- $663,618 worth of tobacco. There- the proportion of the tobacco im- on which duty was paid is not big.

this connection, it is not amiss to that the correction of the apparent ight of Congress to let the duty on mmed wrapper tobacco in the Philippines remain at $1.85 a pound while it was increased to $2.10 in the United States—which gave that much of manufacturing advantage to Manila cigars—will not meet with any opposition lest special reasons not now obvious are adduced. That advantage which is being unduly played up by the association amounted only to some $25,000 in 1921, or less than the total expenses of its members in attending the convention in New York which produced the now famous resolution.

Transport Charges High

Going back to the raw material prices, it may surprise the tobacco association to know that in many instances the cost of transporting the filler tobacco from the northern part of Luzon to Manila is as much as the freight on it if shipped from Manila to the United States. And of course it is obvious that the transportation cost of cigars in boxes lodged in especially prepared compartments in the hold of the ship is higher than if the leaf and not the cigar is sent.

Besides all these, interest or capital in Manila is higher than it is here, the banks are not "cashy" and the conditions of trading, transportation and general economic matters are such that there is a necessary surplusage of intermediaries. These things are enumerated here to combat the allegations of the tobacco association. They should not discourage the prospective tobacco merchant in the Philippines, for if he has sufficient capital, American methods and an efficient organization in America he will have a bright future before him, which no one can begrudge him.

The foregoing dissolves the association's bill of particulars supporting the complaint. Now for the rebuttal upon the argument in chief. There is free trade between this country and the Philippines. If the arrangement is altered as to America as proposed by the association, a reciprocal alteration as to the Philippines is in order as a matter of fairness. Which of the American products imported into that country free should make up for the tobacco concession? Let the association answer that question if they please. Will it be the cigar's half-brother, the cigarette, or its first cousin, the plug tobacco, or its servant, the smoking tobacco? In 1921 the value of Manila cigars imported into the United States was $1,980,256 (this is, by the way, the "menace" to the fifth industry in the United States in importance—shades of the Sword of old Damocles!!) The total import during that year of all kinds of tobacco from the United States was valued at $1,852,223, which shows give and take even right there. The question of maintaining the reciprocity *status quo* should be sufficient to act as a soporific to the designs of the association.

But if that question is a soporific the following is bucolic. Porto Rican cigars are imported here under the same terms as the Manila cigars. The value of the former is over $3,000,000 yearly more than that of the latter. That self-same bill of particulars can be served on Porto Rico with one amendment—that the freight cost on Porto Rican cigars is less because the Philippines is 10,000 miles further away. Now why don't the association place the strictures they want placed on Manila on Porto Rico? The answer is, many of them either are interested in Porto Rican tobacco plantations or cigar factories or are representatives of Porto Rican houses. So like the suitor who enters a court of equity, they must come with clean hands.

After all these, can we still offer the hand of co-operation? America imports $75,000,000 worth of leaf tobacco of all kinds from abroad, paying $2.10 a pound for the unstemmed and $2.75 for the stemmed. The Philippines have vast idle acreage suitable to tobacco growing inundated by a mighty stream periodically which leaves fresh rich sediment. Why not look into that field, produce to-

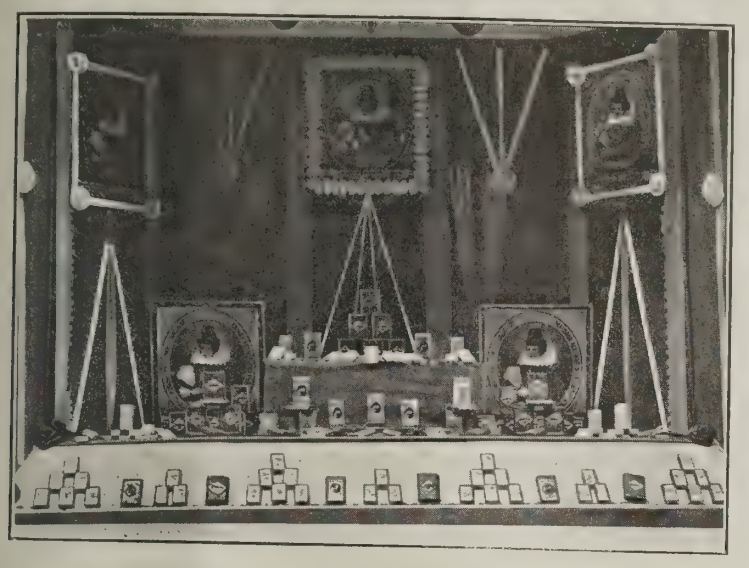
bacco there and liberate America from expensive dependence on foreign countries? For many good reasons America and the Philippines should stand together.

How to Pronounce "Matoaka"

The reports of Patterson Bros. Tobacco Corporation show that Matoaka Blue Ribbon Smoking Tobacco and Matoaka cigarettes have been used for the past eight weeks in all of the Schulte, Liggett's Drug Stores, the Union News Stands, the Exchange Buffets, and many of the United Cigar Stores and the Metropolitan Tobacco Co. dealers. The list of independent dealers in New York jumped, during the period of four weeks, from 1,500 to over 5,000 stores, according to the report.

It is generally admitted that the Matoaka smoking tobacco has become one of the most popular brands, and is rapidly increasing in sales. It is further admitted that Patterson Bros. did not do anything to create an artificial demand. All calls have been due to the advertising campaign of the company, and in this connection something should be said about the dealers and the attitude toward new brands.



After the many disappointments with new brands, it became so unapproachable that there was a belief that it is impossible to address the customer in anything new, but if this theory proved wrong, it was certainly the case with Matoaka. The company was fortunate enough to come out with the advertising campaign at the same time when E. P. Gaston started his search for the bones of Matoaka Pocahontas in England, so that not only the public in America but all over Europe and in English-speaking countries have been continually kept interested in some news about the Virginia heroine.

One of the tobacco trade papers, and all the advertising papers admit that probably never before in the history of the tobacco industry has a brand been so widely advertised as Matoaka.

It is not the public, but the retail tobacconist, and the dealer, and the clerk in the retail stores who make introduction of anything new hard, and one of the arguments spread about in the case of Matoaka is the statement that the name is difficult to pronounce, or at least some dealers don't know how to pronounce it.

There are many Indian names known in America, and one of them is the nickname of Matoaka, *Pocahontas*. There is no logical argument in favor of the theory that Pocahontas should be easier to pronounce than Matoaka, but to satisfy the curious ones, and to remove the obstacle the company decided to start a campaign to educate the people how to pronounce the name so there will be no more question about it.

The name Matoaka should be pronounced Ma-tow-ka, and as in the case of many other brands, there is a preference for shortening, as Sweet Caporals are

called "Sweet Caps" for short. If the dealers believe that it is so difficult to pronounce Matoaka, they can call the cigarette and smoking tobacco "Mat" for short, but certainly everybody will know how to find Patterson's Matoaka Blue Ribbon Smoking Tobacco.

Mr. Hoover Urges Full Co-operation

Charles Dushkind, counsel and managing director of the Tobacco Merchants' Association, is sending to the trade the following announcement:

"We have been requested by the Hon. Herbert Hoover, Secretary of the Department of Commerce, to secure the co-operation of our members with the railroads of the United States to reduce as much as possible the traffic congestion and the resulting poor service that might come in the fall and winter months due to lack of railroad equipment.

"These congestions always occur during this season of the year because of the unusually heavy demands on the carriers for the movement of coal, grain and farm products and the Secretary feels that we will be furnishing this co-operation and in this way help ourselves individually by the following means:

"1. The advance storage of your winter coal during the light consuming season—that is, from now until September 1, including the early movement of lake traffic.

"2. The loading of all cars to full capacity, their prompt loading and discharge.

"3. Reduction of reconsignment shipments and restriction of to-order bills of lading.

"4. Demands for no more cars from the railways than can be promptly used.

"Our rail carriers have been successfully meeting the greatest traffic demands ever made upon them during recent months, and have been greatly increasing their equipment by the addition of an unusually large number of cars and locomotives and by expediting the repairs of all other cars and locomotives.

"Let us hope that our members will aid in this situation."

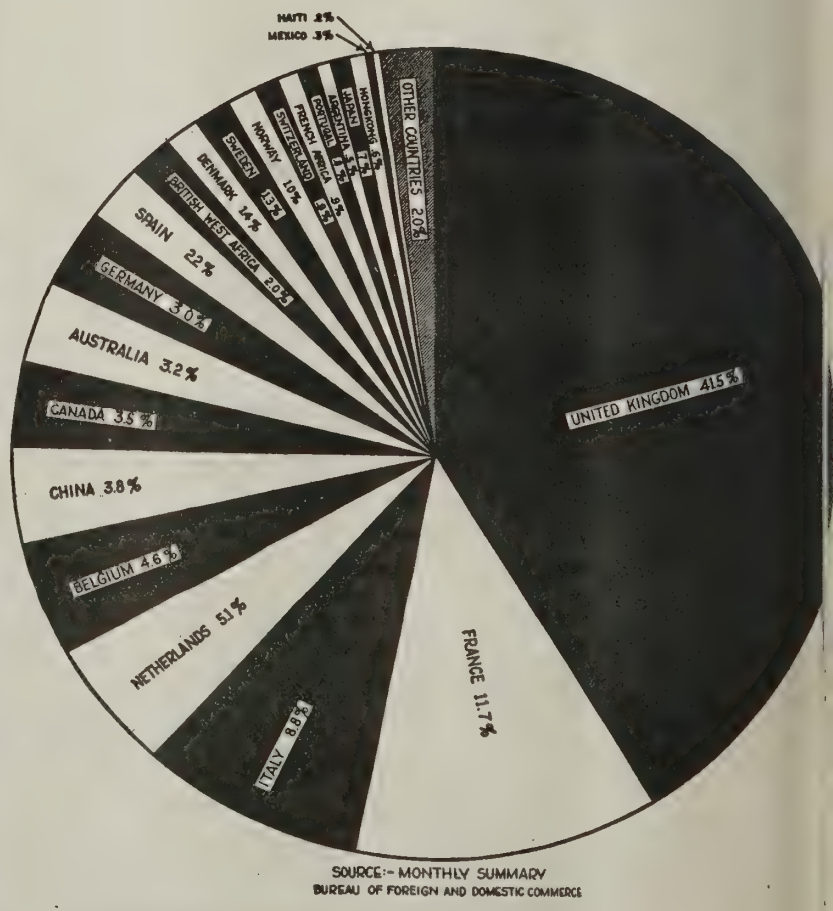
May Employment Statistics

WASHINGTON, D. C., June 26.—The Bureau of Labor Statistics of the Department of Labor, has just compiled its employment figures for May.

The Bureau received 29 replies from smoking and chewing tobacco plants comparing the employment in April and May. In these 29 plants, the employment in April was 3,530, increasing in May to 3,741 or an increase of 6 per cent. The payrolls in these plants increased from $53,217 in April to $56,041 in May or an increase of 5.3 per cent.

The Bureau also received replies from 180 cigar, cigarette and tobacco factories showing their employment in April to have been 31,368 decreasing in May to 31,108, or a decrease of .8 per cent. The payrolls in these establishments decreased from $553,675 in April to $542,494 in May or a decrease of 2 per cent.

The Bureau also received replies from 70 cigar, cigarette and tobacco factories comparing the employment in May of this year with the same month of last year. In May, 1922, the 70 factories employed 14,794 persons, decreasing slightly in May of this year to 14,629, or a decrease of 1.1 per cent. The payrolls also in these plants decreased from $265,575 in May of last year to $263,580 in May of this year a decrease of .8 per cent.—LAMM.

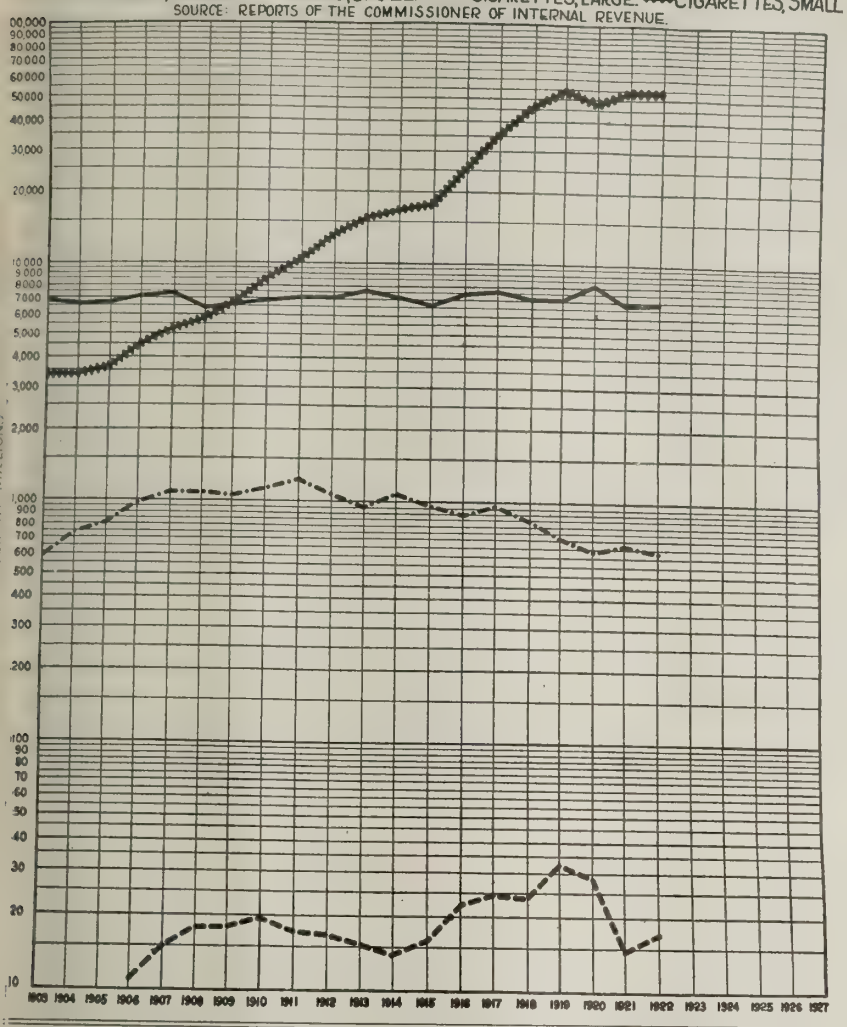


Visiting Connecticut

Louis Leopold, vice-president of the American Sumatra Tobacco Co., Inc., is visiting Hartford, Conn., this week, in the interests of his organization.

Three Interesting Chart

Through the courtesy of the Tobacco Merchants' Association, we publish on this and the following page three unusually interesting charts, which were reproduced from graphs originally prepared by the Tobacco Division of the Bureau of Foreign and Domestic Commerce of the Department of Commerce containing statistical information in respect to exports of leaf tobacco and the countries exported to, as well as production of tobacco products from 1903 to 1922.



AVERAGE ANNUAL DOMESTIC EXPORTS OF LEAF TOBACCO FOR 5 YEARS FROM THE U 1918-1922

SOURCE:- MONTHLY SUMMARY
BUREAU OF FOREIGN AND DOMESTIC COMMERCE

Total Average (5 years) Domestic Exports 516,741,441 Pounds

PRODUCTION OF CIGARS AND CIGARETTES IN THE UNITED STATES.

Drive Against Selling "Fags" to Children

JACKSONVILLE, Fla., June 23.—Two hundred and eighteen dealers in cigarettes will be arrested and tried, and have been tried and bound over to criminal court of record as a result of the first days of Probation Officer J. C. Lanier's campaign to wipe out the sale of cigarettes to children in Duval county. The cases in which evidence has been obtained and warrants for arrest issued are divided as follows:

Judge J. C. Madison's district, 87.
Judge J. S. Geiger's district, 28.
Judge M. B. Craig's district, 40.
Judge R. E. McDowell's district, 33.
Judge J. A. Gavagan's district, 30.

Several of those arrested and bound over to criminal court of record are women.

Bound Over

The list of those already tried and bound over is as follows:

By Judge Madison—L. E. Joy, 147 E. Eighth street; Paul Curson, barber shop, Eighth street; K. Poulos, E. Forsyth street, cold drink stand; W. L. Hinton, Main and Duval; O. L. Durrell, Main and Church; Robert Toombs, Main and Ashley, and A. T. Brown, Main and Laurth, drug stores; T. E. Edwards, Union store, Main and Forsyth.

By Judge Geiger—J. D. Barlow, Lancer's store, Lackawanna; Lloyd Austin, Scarorough's store, Lackawanna; M. Pennington, Ortega; Ethel Evans, Ly and Reynolds; W. F. Grand, S. A. L. shops; E. L. Coleman, 500 McDuff; Dr. Lathrum, Lackawanna and McDuff; J. W. Kellum, 1902 Lackawanna; R. V. Saucer, Seaboard shops; Grace Dent, Warrington avenue, Seaboard shops; W. S. Bates, Ortega; D. S. Watson, Ortega, Morgan's Curve; Mrs. Della Dodge, end of bridge, Ortega, and E. T. Moore, Moore Bros., Fishweir bridge.

Fifteen others have been tried in Pablo Beach and bound over.

"Just how widespread the practice of selling to minors has been," said Mr. Lanier, "is seen in the fact that there is hardly a single store of any importance in the city against which we have not obtained evidence."

Use Boys to Buy

Working with two assistants, Deputy Sheriffs H. M. Halsell and H. L. Lindsey, and with about 30 boys between the ages of 10 and 14 to make the actual purchases of cigarettes, Mr. Lanier has accomplished these results since Thursday.

"Already," he reported, "I am receiving word that the campaign is having its effect, and parents all over the city are telling me that their children can't get cigarettes any more.

"We have had boys up here in court with packs of 'smokes' on them. When we took them away, they would laugh and say they could get them anywhere. In this way we got much of our evidence. Mr. Halsell made the arrests and carried on the campaign in much of the city and in Pablo Beach, and I have been working on the 'big fellows' down town.

"A good many of these defendants are reputable merchants," said Mr. Lanier, "and some are kicking up quite a row over their arrest and trial. There is no other way I can see to end the practice of selling cigarettes to children, and the campaign will continue until these men stop selling them."

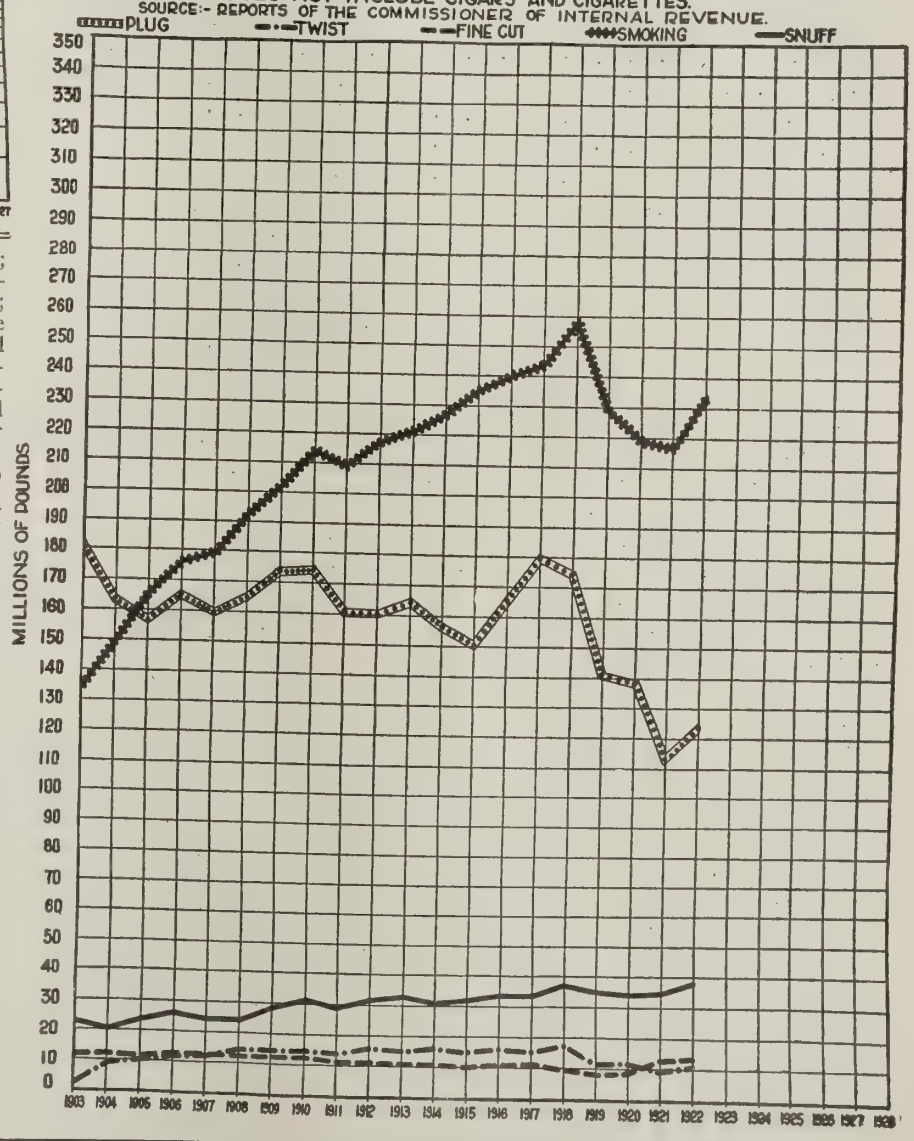
Eli Witt Co. in New Quarters

MIAMI, Fla., June 23.—The Eli Witt Cigar & Tobacco Co., formerly at 53 S. W. First St., has moved into its new quarters at 37-39 S. W. First St., which comprise a modern storeroom and office covering more than 7,500 square feet of floor space. The Witt Company has leased this property for 10 years, and expended $1,800 in improving it.

Its enormous increase in business during the last year caused the Witt company to seek larger quarters. It handles practically every brand of cigars, cigarettes and tobaccos. It employs four city and one county salesman. J. M. Carlisle, general manager, recently returned home from the Shriners' convention at Washington.

One of the features of the new location is an inside driveway for trucks which load at the front of the storeroom floor instead of alongside. The remodeled front of the building is of brown stucco.

Federal Crop Report



WASHINGTON, D. C., June 26.—Transplanting of tobacco is nearing a close, according to reports received by the Department of Agriculture from its field agents. Shortage and poor quality of plants is complained of in many sections, their reports state. The department's reports continue:

"In New England, New York and Pennsylvania the setting of tobacco plants is in full swing with conditions favorable, though more moisture would help. Transplanting has been hindered by dry weather in Maryland. It has made good progress of late in Virginia where the greater part of the crop is out. It is drawing to a close in Tennessee. A shortage of plants is said to exist in Virginia and North Carolina where dry weather killed them. The growth of the plant has been normal in South Carolina and Georgia although there has been too much rain to produce tobacco of the best quality. Clear weather for harvesting the crop is needed in Florida."—LAMM.

Returns from Porto Rico

Joseph Mendelsohn, of the Stern-Mendelsohn Co., has returned from Porto Rico, where he has been purchasing tobacco for his organization. While on the island, Mr. Mendelsohn had every opportunity of inspecting the record new crop.

NEW YORK, THURSDAY, JUNE 28, 1923

TENTING IN CONNECTICUT

Cheesecloth stretched across a quarter of a century covers the rise and development of the shade-grown tobacco industry of the Connecticut Valley.

Historically, a little more than a score of years may be regarded as a brief period of time. To those who have progressed beyond middle life, 1900 doesn't seem to be so very far back. The beginning of shade-grown tobacco culture in Connecticut is not forgotten. The first experiments have not departed from memory. The difficulties, the disparagement and discouragement that beset the earlier growers frequently are recollected. Patience and courage, persistence and knowledge paved the way from failure to success. Diligent application and painstaking research accomplished much. Erstwhile ridicule was transmuted into honor. Faith was justified. Prestige came and wealth accumulated. Opposition was metamorphosed into approval. Those who, aforetime, mocked and derided, eventually became convinced. That Connecticut shade-grown tobacco makes the most beautiful cigar wrappers is a fact acknowledged by many manufacturers. Scientific farming goes on. Growers and packers acquire a better understanding of tobacco problems. Improvements take place all the while. The industry increases and asserts supremacy; however, the achievements of previous years are accounted as the things of yesterday.

Production of shade-grown tobacco of approved quality is not restricted to a single soil. Excellent shade-grown is obtainable in various places in the Connecticut Valley. From Hartford, Conn., to Deerfield, Mass., here and there may be found favorable land capable of yielding superior leaf. Included in the lands well adapted to shade-grown tobacco culture are sandy soils, silt, sand and gravel loams. Wrappers produced on these differing soils show no radical diversity. The differences are minor and known to the trade. Wrappers grown on the sandy soil of Massachusetts equal in color, texture, burn, appearance and all that pertains to quality, the wrappers produced on similar land are not quite the same in Connecticut. The sandy loam of East Windsor, long famous for Broadleaf, and the appreciated soils of Suffield and Windsor, noted for Havana seed, can and do produce shade-grown tobacco of equal merit.

Though the shade-grown acreage may be enlarged somewhat, the tobacco producing area of the Connecticut Valley is unlikely to be much increased.

Nature has limited the size of the Connecticut tobacco district. Man, as yet, is incapable of regulating the weather. But, allowing for seasons, it is possible to produce in the Valley, a higher percentage, a larger quantity of quality tobacco both shade-grown and sun-grown.

For the better grades there is an enduring demand at correspondingly high prices.

Grading of shade-grown tobacco is based on that almost indefinable something known as "quality." What constitutes quality?

Quality is affected by many things, undoubtedly. In the make-up of quality, each item is important. yet all are so interrelated that it is difficult indeed to obtain an actual balancing of values. Crop differences are one factor but more important is seasonal influence.

The type of plant generally grown throughout the Valley is notably uniform. The proportion of width to length varies but slightly and one can usually judge of the leafiness of a particular grade by its quoted length. Again, the harvesting of the leaves in several pickings automatically classifies the grades within certain limits. Where four pickings are made, the character of the first picking is always typical—being of open grain, porous texture, medium body and light color. The second picking, which yields the largest percentage of wrapper tobacco, is of smooth texture, thin body, light in color with the favored olive overcast. The third picking is similar to the second but of thicker body and heavier texture. And usually the colors have more red. The fourth picking, which includes the tops, is of heavy body, although frequently thin, brown colored leaves of red shades are secured which make acceptable wrappers. When not too thick good binders are obtained in this picking. The rest of the leaves, when properly handled, make a filler having a fullness and aroma unexcelled by any domestic filler. Such filler compares favorably with certain grades of Cuban and Porto Rican fillers.

In sorting, as many as 18 grades are sometimes made of one picking. However, these are made because of minor differences, and the following four color grades are basic: Light Yellowish Brown, Light Greenish Cast, Greenish Brown, Brown. They are subdivided into thin and heavier texture. Second grades of good quality are made of thin leaves, the colors of which are not complete. The leaves that are marked by spots or lack of desired texture, are put into the third or binder grades. The heavier leaves usually are classified with the tops.

There are important minor differences in the same grades secured from different pickings; for instance, a light wrapper from the first picking would be more porous and open grained, it would have less luster and smaller table yield than the same grade in the third picking.

Shade-grown tobacco is also graded by length of leaf. Beginning at ten inches there is a grade for each inch up to 20 inches, then a twelfth grade for 22 inches. This sizing automatically unifies the grades.

Though tastes differ and each cigar manufacturer can buy wrappers to his liking, provided he is able to pay the price, it is the cigar smokers of the country who really dictate to manufacturer and packer, dealer and grower. He who produces that which pleases the public is in a fair way to important success.

Whether their leaf is shade- or sun-grown, the most successful Connecticut tobacco growers are those who put stress on quality.

Farmers of proven ability to grow tobacco of superior quality are important men in their respective communities.

It has been said again and again that certain tobacco fields in the Connecticut Valley exemplify scientific farming par excellence.

Per acre, Connecticut shade-grown tobacco crops represent more toil, care and expenditure than any other agricultural product in the world. But no farm crop is more profitable. No other land, per acre, brings so much money to the farmer.

Success obtained by leading tobacco growers in the Connecticut Valley is a standing invitation, an exhortation, a compelling inducement for others to go and do likewise.

Producing shade-grown tobacco is not a poor man's game. In addition to the desired land, the grower must have adequate capital. He must invest extensively in fertilizers. He has to be able to hire all the help he wants when he wants it. He must be a capitalist of sorts as well as a painstaking and indefatigable worker.

Throughout the Valley the great white tents covering and inclosing carefully tended fields of growing tobacco are more than added ornaments to the landscape. Shading the field diminishes the sunlight, increases the soil moisture content decreases the velocity of the winds and maintains a slightly higher humidity and air temperature. The distinguishing characteristics of the shade grown leaf are due to this environment. The direct effect of shading, as compared with the same tobacco grown in the open (sun-grown), is a lighter body, a thinner texture, finer venation, grain and finish and more desirable colors, with higher table yield.

Wind is an enemy of the shade grower. In a heavy wind the tobacco is frequently blown over although the cloth may not be torn. A tall quick growing plant, in the shade, lacks the sturdiness of the sun-grown tobacco and is unable to withstand the high winds occurring in July and August. Leaves may be broken or stalks so badly bent that they can not be set upright. This may result, at picking time, in great destruction of the brittle green leaves. Should the cloth be torn greater damage may occur. In restretching the tent the tobacco is likely to be trampled down. The use of the better grades of heavier corded cloth and careful sewing are the main insurance against such tearing. If the tent is sewed with stout string in short stitches and the string is frequently tied around the wires the danger of torn cloth is minimized.

BOOTLEGGING IN UTAH

Utah is in the throes of a bootlegging orgy. Outlaws are doing dastardly deeds against the peace, dignity and good name of the state. The situation is one which calls for strong repressive measures. Officers of the law must perform stern duty or Utah will go to the bowwows!

In 1921 Utah made it a crime to smoke cigarettes. Severe penalties were provided for those who violated the law intended to put an eternal kibosh on this form of wickedness. And then it developed that the majority of people in Utah had criminal tendencies! Cigarette smoking became a popular crime.

For a long time the crime wave went unchecked. Nobody paid any particular attention to it. Finally, a sheriff elected on a reform platform appeared on the scene, and he began to clean up Sodom. Prominent citizens were caught in his unmerciful net. And the worst part of it was that he did this catching at inopportune moments. Outsiders who intended to invest capital in Utah saw it, and they went away to spend their money in less moral, or immoral lands.

Something had to be done. The law was "amended." Legislators decided that cigarette smoking was not exactly a crime, but it was their opinion that those who engaged in it ought to be taxed. Therefore, they imposed a duty of 1 mill a cigarette, and reputable dealers were licensed to handle them for the unregenerates who chose to pay the price.

But Utah had begun to like crime. The result is that cigarettes are sold throughout the state, and the 1-mill tax is not paid either, unless dealers wish to! There is wholesale bootlegging in cigarettes! Utah citizens, forced into outlawry, have become attached to it.

The situation in Utah teaches a lesson as old as the hills. It is that nobody under the sun can manufacture criminals with finer technique than overzealous reformers. Thousands of years ago Moses, at divine direction, gave the world the ten commandments as a code of conduct. Many "crimes" of our day are not included in the list Moses had. Millions of old-fashioned people still are guided by the ten commandments when it comes to defending crime.—*Richmond (Va.) Times-Dispatch.*

STRONGLY OPPOSES BOYCOTT

Out of Kentucky comes the most disturbing id disheartening piece of news that has come om the tobacco country since the dark period hen night riding flourished.

In two or three counties where the Burley ssociation is strong, members of the associa- on have organized a boycott against farmers ho are not members. These non-cooperating embers are to be put outside the pale of friend- ip and of business relations, and merchants, ankers and others in public business have been arned against doing business with them.

If this idea spreads, if this spirit takes posses- on of the members of the Burley Association, ie association is doomed—all its great prom- es dissipated into thin air, and the whole course rational farmer co-operation set back for any years.

No organization can pursue such a policy and ucceed. The policy of force and intolerance, a blind antagonism towards the men outside it will wreck any organization. It should reck any organization that adopts it. It is the ery antithesis of the principle of co-operation, ie utter denial of the fundamentals of Amer- anism.

We can not conceive that the Burley Tobacco ssociation as a whole will adopt any such olicy or tolerate any such practices. It is edged by its declaration of principles not to ollow such methods; the broad-minded men at ie head know that co-operation can not rest pon forced allegiance, or upon the desire to in- ire one's neighbor. But if even a small portion the membership countenances this boycott, or ven tolerates the spirit that lies back of the oycotter's program, there will be cast upon the sociation a suspicion and odium from which will suffer for years. And if this great and enomenally successful association should be oken down by the action of its own members, would take another generation for the co-op- ative movement to recover from the shock.

We had thought that tobacco growers had arned the futility of force and strife and un- eighborly division among farmers, and that ey had learned the value of the meaning of al co-operation—the willingness to work with ae's fellow farmers, and even to work for them hen they refuse to work for themselves. It ems that some few of them have not, and the ck of understanding on the part of these few en threaten the success of the whole co-opera- ve movement in the South. That is why the ccurrence is so disturbing and so disheartening.

This thing must not be allowed to continue. he officers of the Burley Association and the reat body of its members owe it to themselves nd to the co-operating farmers of the whole outh to register their prompt disapproval of ie policy of intimidation and the whole idea of ntagonism toward the persecution of non-co- perating farmers. By making plain the asso- iation's disapproval of this unfortunate and un- ise movement they can keep its record clean nd preserve for it the public confidence and ap- roval it has so well won.—*Southern Agricul- rist.*

NOT COERCIVE

The directors of the Burley Tobacco Growers' o-operative Association have passed a resolu- on in which unalterable and uncompromising pposition to violence and vandalism is declared tones that are clear enough. The next step to convince the membership that coercion in ny form is out of the line with the policies of ie association. A few misled individuals seem believe that progress can be hastened for the ssociation by the use of boycotting merchants nd others having dealings with "independent" rowers.

James C. Stone properly takes the position, as resident and general manager of the associa- on, that co-operative marketing is founded and ust be maintained on the principles of right and justice. Intimidation, vandalism, boycotting are not right or just. They tend to destroy any cause to which their aid is enlisted. The co-operative marketing plan is a business plan. It has proved to be worth millons to Kentucky farmers. Its success is assured. The great increase in the price of tobacco establishes the efficiency of the organization. The outsiders will come in when they see the obvious advantage which organization gives to the farmers.

The "independents" are within their legal rights and must be protected in their rights under the law. The job of the association is to convert the non-members.

The few who remain outside will not hurt any but themselves.

The boycott is, in effect, violence. It is harmful to any community. It will do great harm if it is permitted to spread. The management of the association sees these facts clearly. The membership for the most part is standing firmly for law and order. The radical tendency is being curbed and the sooner it is choked off, the better for the association and for the farmers in general.—*Louisville Times.*

GEORGIA'S TOBACCO CROP

It is predicted that Georgia's tobacco crop will total more than 12,000,000 pounds the season of 1923, according to the estimate made by the officials of the Atlanta, Birmingham and Atlantic Railroad. The crop will be sold through markets which will begin to operate in July.

G. W. Hutchins, who has a tobacco warehouse at Vidalia, estimates that more than a million pounds of tobacco will be marketed at that point alone this season. Drying and stemming plants have been erected at three points along the Atlanta, Birmingham and Atlantic Railroad involving an expenditure of $500,000.

The Georgia leaf commands a premium over the tobacco raised in any other state in the Union. The tobacco crop of North Carolina constitutes the backbone of the prosperity of the Tar Heel state, which just now is enjoying a period of wonderful prosperity. We would like to see Georgia about equally divided between tobacco and cotton, as is the case in North Carolina, where the farmers seem to be proof against panics and hard times.—*Augusta (Ga.) Herald.*

BROADCASTING BREAD ON WATERS

Considering the costs involved, it is curious that business concerns do not more frequently revise their mailing lists. Notwithstanding announcements were mailed to the houses in question, a Wall Street man who recently closed his New York office continues to receive market letters, quotation sheets and other "handouts" sent to the old address. When changes of address are sent to brokerage houses, the usual result is that matter is sent to both the old and the new addresses. But a hardware house wins the palm; a man who last did business with them in 1903 still receives Christmas cigars from each of them.—*Wall Street Journal.*

Yet, in the face of all this, some old mossbacks will hopelessly cling to the antiquated "mailing list," instead of using the modern and effective method of advertising—display space in the live trade journal.

STUDENT FARMERS

Golden dreams are doubtless cheering that remarkably fortunate schoolboy, in a tobacco growing state, who under the direction of the State Department of Education raised a tobacco crop that returned him $1,190 more cash than was expended.

To gain this he labored 300 hours, and thus received a return of nearly $4 per hour of work. Such an outcome is remarkable; and not less remarkable is the fact that all such students in the district report an average return of 73 cents per hour of work spent in producing and gathering their crops. A noteworthy feature, however, is the wide variation in the results. The best is noted above, and the worst was an actual loss of $24.50 on an acre of potatoes.—*Anderson (Ind.)Bulletin.*

THE WAR ON TOBACCO

It seems that professional agitators and so-called reformers are as inevitable as drouths and frosts and the myriad other evils that perplex and irritate mankind. It means little to them just what they "reform," so long as they reform something. Many of these people, of course, are professionals who draw salaries, some of them very large, for their agitations; others are merely idle people, for the most part women perhaps, who have nothing constructive to which to turn their attention.

The agitations of these reformers since the advent of the 18th amendment and the Volstead act, are being directed largely against tobacco. In all parts of the country, we are told, intensive drives are being launched against tobacco in every form. Jesse A. Bloch, president of the Tobacco Merchants' Association of the United States, told a recent convention of the association that it was the avowed purpose of these reformers to "bury tobacco in the same grave with John Barleycorn."

"Every attack upon tobacco brings forth an additional corps of scientific authority testifying to the harmlessness of tobacco," he said. "But while our victory in the recent anti-tobacco war has been almost complete," he added, "the menace has not yet passed and it is not likely to pass so long as professional agitators are able to pass their hats and collect the coin.

We cannot agree with Mr. Bloch that the agitation really constitutes a menace. We believe that the anti-tobacco war is doomed to an inevitable defeat, but it goes to show to what an extent the infringements upon personal liberty may be extended.

While the tobacco habit is perhaps not altogether harmless, it is now generally looked upon as being much less harmful than it was once considered to be, and it is certain that a great deal of satisfaction and enjoyment is derived from the use of tobacco. A large majority of the men of the United States use tobacco in some form.

Would it be for the minority to tell the majority what they should or should not do in a purely personal matter?

However, this is a matter in which minorities and majorities should play no part. If there were only one man in the United States who used tobacco, the other 110,000,000 men, women and children would have no moral right to tell him to discontinue the habit. It is a matter which concerns him and him alone and any effort to interfere on the part of others constitutes a patent infringement upon personal liberty.—*Kingsport (Tenn.) Times.*

MEN AND CIGARS ALIKE

Because of his solemn garb a cigar salesman was mistaken for a man of the cloth and invited to make a few remarks. He acceded to the request, and ascending the platform said:

"Men are like cigars. Often you cannot tell by the wrapper what the filling is. Sometimes a good old stogie is more popular than an important celebrity. Some men are all right in the showcase on display, but are great disappointments when you get them home. No matter how fine a man is, eventually he meets his match. A two-for often puts on as many airs as a 50-center. Some men never get to the front at all except during the campaigns. Some are selected for presents. Others have a rough exterior, but spread cheer and comfort about themselves because of what is inside. But all men as all cigars. good or bad, two-fors, stogies, rich or poor, come to ashes at last."

Chicago Strongly Features National Pipe Week

Dealers Made Great Preparation for Current Event—Many Went to Considerable Expense to Make Effective Window Displays—Credit Men Have Weekly Conferences.

CHICAGO, June 23.—Today marks the opening of National Pipe Week and to say that the Chicago dealers have outdone all past efforts in the way of window displays is putting it mildly. Beautiful showings of all the well known brands of pipes are made in the windows and special showcards have been made. The big Loop dealers have gone to much expense in getting up clever displays. The sale of pipes has increased on this the first day of National Pipe Week and all are of the same opinion, that from this date on, pipes will play a prominent part in their daily effort for results.

Pay Day, 5-cent cigars, have arrived from the Superior Cigar Co., and Iwan Ries & Co. have placed them with the trade.

Tobacco Division of Credit Men's Association

The members of the Cigar and Tobacco Trade Division of Chicago Credit Men's Association are: Nathan Elson Co., S. Bloom, Faber, Coe & Gregg, Nathan Fox & Co., Ettlinger Bros., General Cigar Co., Inc., Grommes & Elson, Clarence Hirschhorn Co., E. Hoffman Co., Newman Bros., Trans-Pacific Trading Co., J. & B. Moos, Randall-Landfield Co., Iwan Ries & Co., Ruhstrat-Christian Co., W. A. Vorhauer Co., Ryan & Raphall Cigar Co., P. J. Rubey & Co., Wm. J. Seidenberg Corp., Wohl & Comstock, San Alto Cigar Co., Henry J. Zegers, Sanders & Watson Cigar Co., Wengler & Mandell, Crocker-Asher Co., and Julius Fernbach Co. Evening meetings are held every other Thursday at headquarters in the First National Bank Building. At these meetings the credits of many dealers are discussed, and each representative states the business dealings on whoever may be up for discussion. Geo. Silberstorf of the General Cigar Co., Inc., is chairman of this division.

Dave Micheal, a former well-known cigar salesman, is now representing the candy house of Norris, located at Atlanta, Ga. David can be reached any time by addressing him at his Kansas City headquarters, 3525 Broadway.

New "Thin Fellows"

Havana Wafers, a flat 5-center in foil bundles of 5 for 25 cents, made by M. Bustillo & Merriam, of Tampa, are now on sale. Wengler & Mandell in the Hartford Building report a heavy call for this cigar brand.

Among the Leading Sellers

Walter Fleckles, the Deisel-Wemmer Co.'s sales star, writes in a few words that tell us a lot. Walter says the sales on San Felice and El Verso right here in Chicago show wonderful increases and that Steele-Wedeles Co. are using more of both brands than ever before. The billboard and window display campaign, and El Verso itself, have surely put this cigar up along with the leading sellers.

In New Location

The Recado Cigar Co. has moved into new headquarters at 4019 West North avenue. General Manager Alex. Gurow reports a steady demand for Recado and Franz Liszt cigars. Carlson Bros., north side jobbers, distribute Recado, El Verdona and Franz Liszt, with much success.

Business Expanding

E. P. Oakes has returned from a visit to the New York offices of the E. H. Gato Cigar Co. "Fred" says his business is bigger than ever.

A New Chain-Maker

J. P. Brill, who last Saturday opened the Blackwood Sweet Shop in the Blackwood Hotel, has just closed a 10-year lease for a cigar and drug store in the Sheridan-Plaza Hotel, which he will open shortly. Jack is starting in fast and says he will have a chain of stores here before the year is out. He is also connected with the Wm. J. Seidenberg Corp. as middle west road representative.

Running on High

Quarter page Clown cigarette ads. appear in the daily newspapers. Clown is "hittin' on all cylinders" and the fact that it bears the union label is making it a steady seller.

Featuring Special Brand

All the United Cigar Stores are showing big window displays of Ricoro, the vintage cigar. Ricoro is sold only in the United stores and is made in 10 sizes from 2 for 15 cents to 15 cents straight.

Dorothy Connor, who is connected with the Kimball Segar Shop, has gone to California for a two months' vacation.

Likely to Feature Gans Brands

Ralph Gans has sent an announcement to the Chicago trade that he has, as Gans Cigar Co., Inc., secured all the rights and titles to the old firm of Gans Bros. La Muna was sold out here by many dealers, who, no doubt, will again feature the brand.

Webster Filling Public Eye

The billboard campaign on Webster cigars has been started by the Webster Cigar Co. of Detroit, which has hundreds of 24-sheet posters showing all over the city. Steele Wedeles Co. is the local distributor and it has placed Webster cigars in thousands of stores.

New Cigarette Packing

A new packing of 100 Rameses cigarettes is now on sale. The tin is highly decorated in attractive colors and is bound to prove a good seller.

The Canton Drug Co., at 27 East Van Buren street, has gone into bankruptcy and many of the local cigar houses are "interested." S. S. Schlossberg was the owner.

El Verso Window

The Medinah Drug Store at Jackson and Wells streets shows one of the new El Verso window displays.

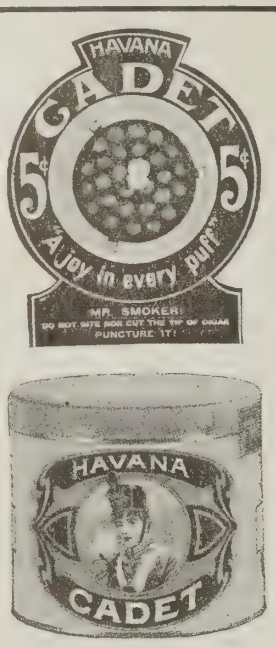
Max Bergman, a former North Side jobber, is now working this section of the city for the Ryan & Raphael Cigar Co.

In 41 Sizes

The Schermerhorn, Inc., stores find many repeat orders for La Esperanza made in bond cigars from the Havana American Co. They carry and feature this brand in 41 sizes.

A Sprightly Youth

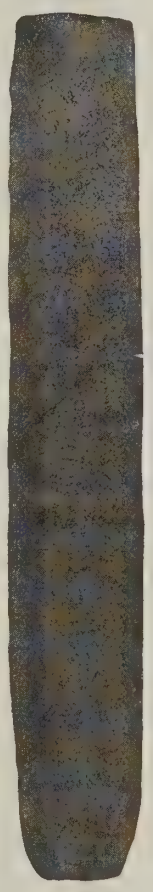
Blackstone Juniors, in neat packages of 5 that sell for 25 cents, are displayed on the counters. This Five-Pack is, of course, made by Waitt Bond and is distributed here by Ettlinger Bros.



Absorbs Hoffman Name

The Congress Cigar Co. announces that it has purchased the E. Hoffman Co., wholesale house, located at 30 South Wells street, and that it will continue to distribute La Palina and Cinco cigars. The E. Hoffman Co. was the Chicago branch of the Congress Cigar Co. of Philadelphia and the change in name to the Congress Cigar Co. of Chicago took place a few days ago. The old sales staff and office force will be retained and Otto Schaeffer, who has been manager of E. Hoffman Co., remains in the same capacity.

L. & M. Gratis Offer



Liggett & Myers Tobacco Co. now offers a gratis of 5 packages of 12 Chesterfield or Piedmont cigarettes with each 200 Fatima, 200 Chesterfield 20's, 200 Piedmont 20's, two dozen Piedmont 12's and two dozen Chesterfield 12's.

Cleveland Business Booms During Grotto Week

Over 60,000 Fezzed Prophets Poured Into the "Convention City" and Did Much Smoking to the Delight of Cigar Dealers—Hot Weather Comes and Wilts Buoyant Spirits.

CLEVELAND, Ohio, June 23.—One of the biggest things ever for the Fifth City trade came through last week when the annual conclave of the many grottos throughout the country was held here. Over 60,000 of the fezzed Prophets enjoyed the delights of a wonderful convention city. The Al Sirat Grotto had its hands full, but every visiting Prophet left the city with nothing but the pleasantest of memories of a fine time. The city was literally and also figuratively theirs to do with as they would—and they did. Meanwhile every available spot in the city that could be used therefor was pressed into use to house the city's guests. Hotels were filled and the hotel cigar stands reported a business that was fairly astounding. Retailers all over the city, too, found themselves quite busy catering to the many wants of the smoking visitors. All in all the week was one of the most fruitful of the season for all concerned. Conventions will always find ready supporters in the local trade contingent. And it looks, from the list of conventions that are still to come into town, that Cleveland's laurels as the "city of conventions" are safe enough for some time to come.

Much Too Hot

It does seem like one is never satisfied. When the weather is cool we are hoping for warm weather. It is true that warm weather helps in more than one way to speed things up for the business. Still nobody, I am sure, ever hoped or desired the terribly hot weather our friend the weatherman wished on us the past week. It seems it is almost too hot to even stir out of the house and dealers are now changing their wishes. They wish now for some cooler weather, just as if wishing would do any good. The hot weather has done a lot to erase the good effects of the big convention last week and the sooner things, "atmospherically" speaking, cool off a bit, the better dealers will like it.

Claim Ban On Union Cigars

The Cigarmakers' Union had a protest on file Saturday with the City Park Department against alleged discrimination against union-made cigars at concessions in city parks. Only one union-made cigar is being sold at the privately owned concessions at the city parks. Under the city's contract with J. V. Weiss, city concessionaire, the city cannot dictate what brands of cigars should be handled at the city park stands. Weiss says that as popular brands are being carried regardless of any other consideration and the issue still remains unsettled.

Harvey Vreeland Comes Through

Harvey Vreeland, Benson & Hedges star performer, came through the Fifth City way this week and stayed over long enough to corral lots of fine orders for the high-grade line. Harvey makes his stopovers quite frequently, always with the same unvarying good success.

A Visitor

Robert M. Flesher, representing the firm of Fernandez, La Rosa & Co., signed his name across the register of a local hotel this week. Bob called on the local trade and succeeded in landing many new accounts for the La Campanita, Manuel Fernandez, Matias La Rosa and others of the high-grade clear Havana line that this firm makes.

For Websters

Samuel Gates of the Webster Cigar Co., was one of the many prominent visitors to town this week. This fine selling cigar is keeping up the hot pace that it set for itself some time ago and the A. D. Goodman Co., local distributors, have their hands and both arms full keeping the Webster-hungry retailers fairly well supplied.

An Old Friend

An old friend showed himself in town this week in the person of good old Steve Hertz. Steve and the D. Emil Klein Co. are always proud of the local showing when it comes to Lawrence Barrets.

A Trade Caller

Jesse Powell, well known exponent of Medalist cigars for E. A. Kline & Co., spent a few days in town this week. Every store in town keeps a good supply of Medalists on hand all the time and Jesse never finds it very difficult to land many good orders for his good cigar.—HERB.

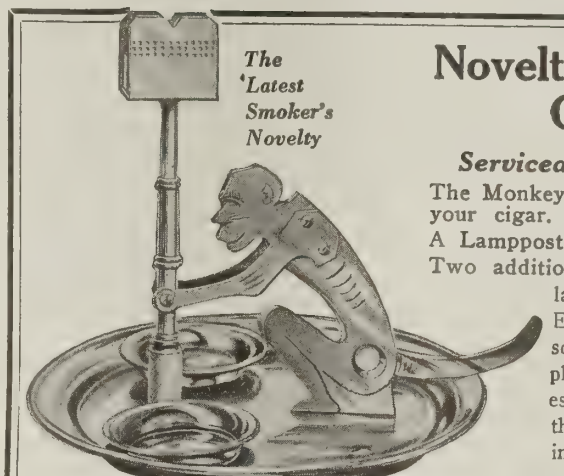
Maryland Growers Hold Open Air Rally

WASHINGTON, D. C., June 25.—Word has just reached here that upward of 800 tobacco growers from the Maryland counties of Ann Arundel, Calvert, Charles, St. Mary's and Prince Georges and a number from Montgomery and other points, attended a big open air rally on the fair grounds at Upper Marlboro on Saturday afternoon to mark the completion of the campaign of the Maryland Tobacco Growers Association to secure sufficient control of the tobacco crop of southern Maryland to insure a substantial price for the product.

The campaign which has been in progress since early in May, was declared to have been a success. Of an estimated total of 5,505 growers about 4,200 have signed membership contracts in the association, it was announced.

Governor Albert C. Ritchie, the principal speaker, stated that the state government as well as the federal government stood ready to help the farmer, provided he first helped himself. Organization is the principal means of securing this support, the governor declared.—LAMM.

Furthers Local Interests



Harley Jefferson, head of the Jefferson Leaf Tobacco Co., Sparta, Wis., and vice-president of the Industrial Leaf Tobacco Co., New York, has arrived in Gotham, and intends to remain here for some time, to take care of his local interests.

To Return from Europe

Joseph Cullman, Sr., of Cullman Bros., who has been attending the inscriptions at Amsterdam and Rotterdam, is returning to New York on the Holland American liner, *Rotterdam,* sailing July 4.

Tobacco Co. Stocks As Investments

25,817.—I beg to acknowledge with thanks your answer regarding tobacco stocks. In my inquiry I referred more particularly to the preferred issues of these companies. Do you consider the preferred issues as well as the common as a purely speculative proposition and not to be classed as investments?—H. S. B.

Preferred tobacco stocks may be put in the investment class, as the risk is less than in other classes of industrials, owing to the stability of the industry even in times of depression. All these companies, Lorillard, Liggett & Myers, American Tobacco and Reynolds have substantial surpluses and are in strong financial position and there is no reason, apparently, to question the safety of their dividends.

Net earnings of R. J. Reynolds Tobacco Co. of $20,479,234, after all taxes and charges in year ended December 31, last, equivalent, after preferred dividends, to $5.96 a share on the 3,200,000 shares of common and common "B," were not only the largest reported by this company, but the largest shown by any company in the history of the American tobacco industry. They compare with $16,258,323 in the preceding year, equivalent to $6.19 a share on 2,400,000 shares of common and common "B," then outstanding.

P. Lorillard Co., for year ended December 31, last, showed net, after taxes, of $8,133,000, which, after charges and preferred dividend, was equivalent to $20.11 a share on the 303,051 common shares, compared with $7,616,000, or $18.15 a share on the common in 1921. After payment of common dividends there remained $2,079,000 to be carried to surplus, which went chiefly to liquid assets.

Liggett & Myers, for year ended December 31, 1922, shows net income of $9,724,293, after taxes and charges, equivalent, after preferred dividends, to $24.38 a share earned on the $33,421,000 combined Class "B" and common stock, as compared with $9,854,157, or $25.23 a share, on $32,674,000 stock in 1921.

American Tobacco Co. report reveals last year as the biggest in its history, net income, after taxes and depreciation, but before interest, reaching new high of $20,380,870, aginst $20,068,774 in 1921, the next best year. Balance, after charges and preferred dividends, was equivalent to $17.49 a share on the $89,586,600 combined common and common "B" shares, compared with $16.84 in the preceding year.—*Wall Street Journal.*

Tobacco Products Expansion

A cablegram from London to the *Wall Street Journal* says:

"Coincident with the publication of information that the amount of common shares of Tobacco Products Corporation held by British investors was showing a steady increase, it developed that negotiations are pending here in connection with expansion plans of the Tobacco Product management. It is understood that the presence here of Harold Stanley, president of the Guaranty Co., and E. R. Tinker, president of the Chase Securities Corp., has a bearing on the situation. It is expected there will be an important conference here next week and will be attended by some of the leading financial interests of Great Britain."

Eisenlohr Dividend

PHILADELPHIA, June 23.—Otto Eisenlohr & Bros., Inc., declared regular quarterly dividend of 1¼ per cent on common stock, payable August 15, to stock of record August 1.

Weaver Cigar Co., Inc.

UHRICHSVILLE, Ohio, June 23.—The L. C. Weaver Cigar Co., of this place has been incorporated by R. H. Scott and L. E. Weaver. Capital stock, $10,000.

Here for Java Week

Harry R. Kinney, western representative of H. Duys & Co., is in town to assist in the Java week sales.

MacAndrews & Forbes Extra

MacAndrews & Forbes Co. has declared an extra dividend of 1 per cent on the common in addition to regular quarterly 2½ per cent on the common and regular quarterly 1½ per cent on the preferred stock, all payable July 14 to stock of record June 30.

The Premier's Pipe

LONDON, June 23.—Stanley Baldwin, the British Prime Minister, has an idiosyncrasy—he smokes a big briar pipe, not only in the privacy of his Downing street home but at public dinners as well.

Hitherto reporters and cartoonists have been able to paint word-pictures and make drawings of the new Premier only as an honest man, who on the day of his selection for the most important post in the Government asked the newspaper men for their prayers rather than their congratulations, and also as a politician who loves country life better than London, and would rather scratch a pig's back with a stick than harangue Commons.

All this is interesting and makes a wide appeal to Mr. Baldwin's countrymen, but it cannot be used in the papers every day.

Last Saturday night another touch of the Premier's manly humanness developed at the annual Rhodes scholars' dinner at Oxford, which was largely attended by the American students there.

After the usual toast, "Gentlemen, the King," there was the customary flashing of gold and silver cigarette cases and reaching for the long green cigars which are the abomination of Americans. The Premier, however, dived into the pocket of his evening clothes and brought out a big, well-worn briar pipe, which he kept glowing the rest of the evening.

Fish Swim Around Hook Up-State, But Won't Bi

So Some Jobbers Buyin' Nets to Land 'Em!—Retailers Use L Bait—Eddie Quebec Throws Line!—Swallow Bla stone Hook in Schenectady!—Fish Hearse? No!—I Penn and Paul Try Luck!—Upstreamers Swim, Oth Float—Ever Fish for Camels?—Put Peter-Pack in Fi Kit, Sure!

NEW YORK STATE CAPITOL DISTRICT, Fishin' Week, 1923.

"What's this here stuff in the bundle?" sniffed Sam Ash, walking around a bundle which might have been more Manila cigars, consigned to the wholesale and retail house of Stubb & Ash, Inc., tobacconists to fisherman. "Yuh ain't goin' fishin' also, are yuh?"

"Fishin', Sam, fishin'?" palavered Jim Stubb, kicking the package under the pipe counter. "Well, you see, Sam, I did think I might run over to Crooked Lake for a few days over the Fourth—providing you can get along here in the store alright, eh?"

"Sure, sure, that's right, run off at the busiest time o' year, y' unnerstan," yelled Sam Ash, putting some Fourth o' July bait in the window in the way of a corking good nickel cigar for eight cents. "An' mebbe I should also lock up the store, an' go home to dig it some worms in my own back yard, unnerstan me!"

Vermont Fishin' Looks Good!

"Well, I've been up in Vermont this week fishing—for business," mentioned Cap'n P. V. Doyle, first mate o' the Fatima crew in the Capitol District, as he rested his oars on the nearest case. "And it does look as though the northern New York and Vermont dealers are going to have more vacation fish in their nets this year than they have had before in some time.

"So that is well for the cigaret outlook. For it's a visible fact that city folks on outing simply transfer cigaret smoking from town to cou And one of the retailers who's goin get considerable business this seas W. G. Slingsby, o' Rouses Point. has a fine store, with an excellent s And he's right on the trail of the mer tourist."

And Eddie Casts His Line!

"So am I," admitted Eddie Qu operating Advance Car Number On the greatest cigar house on earth—I Quebec Cigar Co., Rutland, Vt. "I ists are my meat, this trip. Of co this is a regular date for my call but I really am giving a whole lot attention just now to the vacation p

"Both my leading brands, San I and El Verso, are in much better demand since we commenced to a tise hereabouts. Dealers now stock tically all my El Verso sizes in the here, besides handling the San Feli an increasingly larger scale with help of our Albany billboard or pa bulletin space."

Nibbling the Hook in Schenec

"Same thing with our brands, nodded Earl Goodrich, salesboss Dearstyne Brothers Tobacco Co., entered the Hot Chair Club's ic "They're selling extremely well whe our advertising goes.

"Why, over in Schenectady this —in fact, for two weeks—I've sold Blackstone cigars than I really th possible! And the Totem, also, is markable feature in Schenectady.

GREATER PRODUCTION AT LESS COST

des these two cigars, we likewise have me fine business in this section on Otnas. So it seems to me we have exllent distribution throughout the chenectady area on our goods."

No Fish Hearse, This!

"In Schenectady we are, naturally, ell set," remarked M. A. Schufeldt, La alina specialist for the firm of L. W. illeen, Schenectady, as he, too, got a diator seat in the now crowded Hot hair Club. "And here in Albany we e obtaining some very fair results on e La Palina.

"That new wagon out there is an incation, I think, of the way we look at ir La Palina business. For you'll noe that this new Star car has rather a nservative tone and dignity seldom und on cigar buses.

"It being the usual thing, you know, splurge the name of the brand and use in Barnum-Bailey type all over e car. But our idea, in catering to e better class trade which sells La dina, is to retain a quiet tone. So our tering is small, you'll observe, and the r might pass anywhere for a semiivate rig."

Fishing with William Penn!

"Mine might, too, if it wasn't so ge," Paul Wessell hinted, walking o the Hot Chair Club with a new mber, Bill Penn, o' the General Cigar mpany. "But what difference does car make, so long as we all get the siness?

"Now that we have discontinued the ples or ten cent size o' the Robert rns, we are concentrating upon White vls and this William Penn brand for cheaper merchandise. Perfecto rns, and the foil wrapped, still go to trade at the same price, and this nge in staples simply means that we not produce such goods at a reasonae profit to manufacturer and retailer this time."

ive Ones Always Swim Upstream!

That's our idea exactly in market- the Jose Hermanos," claimed D. J. ith, general representative and so on the Josephson Brothers, N'Yawk, as edged into the throng around the nmittee on Iced Drinks. "We want ryone pleased, so we allow for an ent margin on all our popular sizes this brand.

And the jobber and retailer distribuin this section being comparatively cquainted with our Hermanos, we now offering some very attractive ns to those dealers who want to m upstream with us to the better ling grounds."

Some Fishermen Fish for Fish!

Just come back from such a place," hed Sam Fulder, he of the Beaver et House o' Fulder, Albany, which n New York, around the corner from Hot Chair Club, and the Commit- on Trout. "Buffalo is the town, and e business isn't so bad, after all!

Yes, Irving, my son, has gone out week, too. So Jake is operating quarters almost alone. But we'll all be in town next week, over the Fourth, and I guess we'd better take a few more days off until this rotten hot weather blows over."

Hot Weather Makes 'Em Bite!

"'Tis hot, you bet," smiled Cecil Jordan, big boss o' the R. J. Reynolds Tobacco Company's Capitol District Camel, as he led it into the zoo o' the Hot Chair Club. "But business is good, just the same! In fact, it's better!

"But there seems to be some disappointment about the withdrawal of our drop shipments here in the local territory. Many jobbers and retailers almost depended entirely on these orders for their Camel and Prince Albert supplies, and I'm sorry they are now impossible of shipment. Though perhaps a way will be found for the jobbers to supply most of this material from their own stocks at prices satisfactory to all."

Put a Pack in the Fish Kit!

"Uh-huh, it's the price, not the goods," grouched Sam Ash, making a memo to give his kid a Fourth o' July gift of a piece o' punk—from the resage box. "Although this here firm o' G. W. Van Slyke & Horton now advertise in the newspapers, for the first time in years, unnerstan me, that it's the Peter Schuyler pocket-pack, not the price, that the vacationist needs in his outfit!"—THE SMOKER.

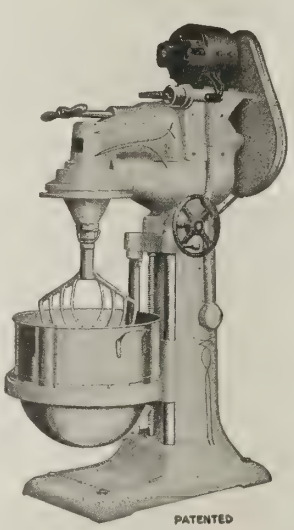
Duys "Java Week"

Most of the important manufacturers of Java wrapped cigars are in New York this week, to attend a special inspection and sale of Java tobacco, at the offices of H. Duys & Co.

The tobacco being offered by this famous house was personally selected by J. H. and H. M. Duys at Amsterdam and includes the finest leaf of the Java plantations, as H. Duys & Co. contracted last year with the leading growers for the first choice of their crops.

The tobacco was selected before the lots were placed for sale at the inscriptions. In addition to the new crop, about 1,000 bales of 1921 and earlier crops are to be offered.

Among the cigar manufacturers expected at the sale are: The Congress Cigar Co., represented by Sam Paley; H. Fendrich, Inc., represented by D. H. McCarthy and William Quanjer; The Webster Cigar Co., represented by Sam T. Gilbert; The Mi Lola Factory, represented by Cyrus Phillips, and many others.



Off to the West

C. S. Sarluy, of Herzog & Sarluy, has departed from New York on an extended tour of the middle west territory.

Back from New England

George N. Beyea, of S. Ruppin, Inc., has returned from a successful New England trip.

San Francisco Trade Good as May Be Expecte

More Life Manifested Now Than at Same Period Last Year— Retail Dealers Feeling More or Less the Effect of Vacatic Period—Jobbers Getting Usual Average of Orders.

San Francisco, Cal., June 19.—It is always agreeable to find that trade is as good as might be expected. And as a matter of fact there is an almost universal recognition of the fact that there is more life now than at the same time last year. Vacation time is on, so, naturally, there is more or less of quiet, especially in the office buildings. Some of the smaller stands are also suffering a little from the fact that their line of customers, the class that go to the country each summer to work, are now out on the job. The jobbers have the best of the situation, especially those doing a general business over the state; for while they lose customers in one place they catch them in another; and as a rule catch more or less of the tourist trade from all over the world, now that increasing numbers are visiting the mountain resorts and the beaches.

But jobbing in the city is not so bad. The Joseph Rinaldo Co., which recently took on a general jobbing line, reports that trade has been growing by leaps and bounds. This house has put on another city man, and Mr. Rinaldo himself will make the rounds of customers to see that all are satisfied, and develop a liking for the Rinaldo brands.

The Bachman Co. reports that trade is sailing along very smoothly; the demand for more cigars is running very steady.

The Boquet Cohn stores are having a steady and even a rather rapid growth of trade. They handle only the Morgan Co. cigars, and have built up a splendid trade. They are an exceptional example of what can be done by making an exclusive specialty. Jack Herberts, who has been with Boquet Cohn for some seven months, says he did not dream that so many clear Havana cigars could be sold until he joined the Boquet Cohn forces. Besides the clear Havana, the Juan de Fuca, also has excellent sales of the Independente, the two-for-25-cents. the Nentia Blunts, two-for-fifteen, and the Segunda, the five-cent cigar. They are now putting in a new stand at t corner of Market and Sansome stre in front of the grill there. Another n installation will be that at 19th str and Broadway, in Oakland, in the nei borhood of the new opera house, wh will add another fine location to the they now have on Thirteenth street.

Henry Batt, the veteran cigar m in charge of the stand at the Goldb Bowen & Co. store, states that they business maintaining itself very w He expresses the feeling that the mar are being cut too close, especially on s goods.

The San Felice people started o great campaign Monday, and propos make it one of the big popular ci of San Francisco. Rinaldo & Co. doing their best to co-operate, and means much, as they have a spl sales organization.

The Dingman-Van Dyke Co., pu out the Val Leau, El Van, mild vanas, and the Lafayette cigars, their long building from Fifth s down Harrison well decorated these brands, and announcing also MacTavish mixtures and also the D Castle mixture. They report the m tacturing end of the job steadily proving.

Dan B. Dwyer, at the corne Seventh and Market streets, wh pushing the goods of the General Co., reports a little seasonal quiet. association of which he is secretary present marking time.

C. C. Greenman, as usual, is maki most of his display opportunities an a stand that fairly invites purc His fine line of customers are "ste and appreciate the welcome and a modation they are always sure t ceive. When they get ready for mer vacations they do not forge there is no other cigars as good ones they buy at Greenman's, a stock up for the trip. Mr. Gree as president of the association, r

Webster Cigars

STANDARD FOR OVER FIFTY YEARS

SIZES 2 FOR 25c TO 25c STRAIGHT

A rare bit of nature's greatest effort, producing a fine, mild, aromatic cigar. Manufactured and aged by the most scientific methods. Not a secret blend, but a combination of the highest priced tobaccos that the finest plantations grow.

Webster Cigar Co.

5545 GRANDY AVENUE DETROIT, MICH.

that there is no prospect of a change in the cigarette situation for several months to come; in fact there is little for the association to do until the summer vacations are over, for the cigar men themselves are no slouches when it comes to vacation time.

Kyne & Farrell, at the corner of Mason and Turk streets, report an excellent run on the Manila cigars, Fighting Bobs and La Insular taking the lead. Lucky Strike advertising has helped the calls for Lucky Strike cigarettes.

Henry Marx, who has been pushing La Insular, even as far as Spain, has returned to New York and will wind up a three months' trip about the middle of July.

Jack Martin is expected back from the Shriners' Convention via Lake Louise and the Northwest at almost any time, to look after the wants of his patrons in the Pacific Building.

More Leaf Tobacco Held

WASHINGTON, D. C., June 23.—Leaf tobacco held by manufacturers and dealers on April 1 aggregated 1,846,555,000 pounds, compared with 1,491,300,988 on January 1 this year, and 1,784,550,762 on April 1 last year, the Census Bureau announced.

Chewing, smoking, snuff and export types totaled 1,327,731,051 pounds, compared with 1,068,041,784 on January 1 this year, and 1,303,255,303 on April 1 last year.

Cigar types totaled 441,590,228 pounds, compared with 346,603,961 on January 1 this year, and 401,632,676 on April 1 last year.

Imported types totaled 77,233,766 pounds, compared with 76,655,243 on January 1 this year, and 79,662,693 on April 1 last year.

Visits Florida and Cuba

Ira Strouse, of Strouse & Holzman, after enjoying a most successful trip in Tampa and Key West, sailed for Havana last Monday, to inspect the new crop in Cuba and purchase high-grade leaf for his firm.

Trebor Pipe Going Strong

Grosvenor Nicholas & Co. report a steadily increasing demand for the high-grade Trebor pipe.

Elopes With Funds and New Lady President

HAVANA, Cuba, June 21.—A double elopement has been pulled off by the president of the cigar makers' union, for he has not only decamped with all the funds of the union, about $30,000, but with him he has taken Sra. Josefa Orozco, recently elected president of the strippers' union.

There had been charges that the election of Sra. Orozco was illegal and it had been stated that there were to be contests entered against that. On learning that the tobacco workers in the cigarette factories were to go on strike, José Bravo, the president, evidently made up his mind that he might just as well have that money as to see it squandered in supporting a strike, so grabbing the money in one hand and the president of the union in the other, he went away from there.

Havana Cigarette Workers Out on Strike

HAVANA, Cuba, June 21.—There is nothing doing in any of the cigarette factories in Havana today, except one. The Gener factory, which was not a member of the Union of cigarette factories, is not in the strike zone. The workmen of that factory were not in attendance at the strike meeting, and they are not participating in the movement.

It is believed that the disappearance of the treasurer of the tobacco strippers' union with all the funds of the union may have something to do with ending the strike.

Porto Rican Grower Here

Reinaldo Silva, the well-known grower of Porto Rico tobacco, of Rio Canas, Caguas, P. R., has arrived in New York, and will spend the next two months in studying conditions in the New York and Connecticut leaf markets. On his visit to Hartford he will be accompanied by Leo Hirsch.

Returning on Olympia

Sam Bijur, who has been attending the inscriptions for E. Rosenwald & Bro., sails for New York on the *S. S. Olympic*, July 11, and is due to arrive on July 18.

KEY WEST, FLORIDA

La Mas Fermosa—Comal—Magnetica

Key West Key Notes

KEY WEST, Fla., June 23.—Interest centers this week on the report of the contemplated sale of the Park & Tilford business to the Schulte company, because the Mi Favorita cigar factory in this city will be included in the sale, if made. But the contemplated change in the company will make no change in the local factory, is locally predicted, as it is expected under the Schulte company there will be an increased production, for the reason that this company has a greater outlet for its goods, which are carried in the chain of stores now scattered over the country.

At the Mi Favorita factory it was said that nothing definite had been announced in connection with the reported prospective change, but, in the event that the Park & Tilford interests were sold to the Schulte company, the local factory would be included in the deal.

Another reason for interest in connection with the proposed deal is that the founder of the Schulte company was at one time connected with the cigar business in Key West, and many of the best packers in this city were taught the trade under him.

Consolidated Cigar Orders Increase

The Consolidated reports that the orders for cigars from this factory are coming in heavier than at any time this year. That this week the orders received were larger than those received at any time this year.

The other factories here are working along the same lines as at last report. Orders are coming in and the same number of workmen are employed.

Of the recent decrease in the production of cigars in Key West, the *Citizen* of this city has this to say:

"That the cigar manufacturing business has struck a slight slump, which is only to be expected at this time of the year, is admitted, but nevertheless the trade is in much better shape as a whole than at this time a year ago, is the statement of the leading manufacturers of this city.

"In fact, most of them are so optimistic that they will hardly admit that there has been any perceptible slump during what are ordinarily termed the dull summer months.

"Production here is going on apace, with practically all of the older and larger factories expecting to hang up new records during the calendar year. Many of these companies have this year thus far considerably exceeded the production of last year.

"Although there has been a perceptible movement of tobacco workers to Tampa and Havana, this does not necessarily mean that production has decreased in proportion to the departure of workmen. At the height of last season hundreds, yes, probably thousands, of workmen came to Key West from Tampa and Havana. The demand for workmen here was automatically augmented by the illness of numerous local workers from la grippe or influenza. This seminepidemic was soon curbed, however, and throughout the winter there was ample work for the regular forces here as well as for those from other cities.

"With the slight slackening of demand for labor, incident to the summer season some of the surplus labor is drifting back to Tampa and the Cuban capital."

The story of the natural advantages offered by Key West will be broadcasted by radio from the radio station at Houston, Texas, was told by Major Dent Atkinson, of Iowa, who visited this city this week.

Major Atkinson served with distinction in the world war and was en route to Havana when he stopped over in the city to visit. The attractions of the city so pleased Major Atkinson that he announced that the station at Houston would broadcast the attractions and advantages of Key West at an early date. So, "listen in," if you wish to know something of the most southerly city in the U. S.

E. H. Gato and family were passengers leaving Thursday evening, over the Florida East Coast Railway, for points in the north, where they will spend the summer months.

Considering a New Factory Location

TRAVARES, Fla., June 23.—Jos. Hoffman, of Benton Harbor, Mich., is in Lake county seeking a location for a cigar factory. It was in November, 1921, that the Lake county commercial body first got in touch with Mr. Hoffman, and for the past two years have been insisting on him to come to Florida.

Florida's Quality Crop

QUINCY, Fla., June 23.—This week's issue of the *Gadsden County Times* says:

"Under weather conditions that have been perfect for the harvesting of tobacco, the work has progressed at a rapid rate during the past week; with a continuation of such weather it is predicted that within another week practically all the crop except the top leaves will be gathered. With showers almost daily, the leaf has contained sufficient moisture to permit of priming every day and from early morning until late in the evening the work is being carried on swiftly, except in some cases where there is a shortage of labor.

"As the season progresses the exceptionally fine quality of this season's crop becomes more pronounced, some growers saying that the tobacco as a whole is the best crop Gadsden county has ever produced. More conservative men, however, say that it is one of the finest.

MILD—AROMATIC—SWEET

Manufactured by A. SANTAELLA & CO., Tampa, Florida
Main Office: 1181 Broadway, New York

What is said to be the first de-ry of sand leaves to reach a packing se was made Saturday by Fount to the warehouse of the May To-co Co. A number of other small veries have been made during the k, but the movement will not be-e general until about July 1.

The big question now is whether ide buyers will be in the market for ns that growers are not prepared to c, and since it has been announced Lorillard will not come into the ket this season, as has been cus-ary, there is considerable speculation ther other large buyers will appear the scene.

A few of the better crops have been to local buyers during the week at t are said to have been fancy rs."

Tampa Tidings

AMPA, Fla., June 23.—Geo. Shuey returned from Cincinnati, bringing him August F. L. Shuey, his her, who will remain in Tampa as-ng the local office of the Shuey acco Bug Exterminator Service in operations. Salvator V. M. Ybor, Havana, who is manager of the Shuey rice for the Islands of Cuba and o Rico, has returned to Cuba. He ntly opened a local agency in San h, P. R., and placed Jose Martinez a in charge.

Lady Diana Booming

r. Herzog, formerly manager of the r Diana Cigar Co., is "resticating" the Pacific Coast and, incidentally, g missionary work in the interests Lady Diana. Joe Ferina, formerly Arturo Fuentes Co., has been in-ed as the Lady Diana Cigar Co.'s ager. Mr. Ferina reports that their ness is substantially increasing, and H. Y. Vance of the H. Y. Vance r Co., Greenville, S. C., is general agent for the southern states. Mr. e is conducting a vigorous selling paign, and showing flattering results. is now in Atlanta assisting J. N. ch in putting Lady Diana on the

Luis Mistretta of the Big Four Cigar reports a steady increase in sales of Tampa Custom House line in Chi-and throughout the middle west.

L. Cuesta, Jr., and Adolph Wollf, southern representative of Cuesta, Rey & Co., are on a tour of his territory.

Jorge Leon has returned from a business and pleasure trip to Havana. His father, F. Marino Leon, arrived with him, and will make his home in Tampa.

Karl Cuesta, of the Havana Factory, is coming for a business and pleasure visit in Tampa.

Fred Davis, of the New York-Tampa Cigar Co., has returned to New York. They have moved their bonded factory to the West Tampa building, leaving the whole Ybor factory for the Recollection and Personality brands.

Harry Slavinski of the G. & M. Cigar Co., has gone to New York. An incipient strike in their factory lasted but one day

Joe Perez of Marcelino Perez & Co., makers of the famous "Tuval" cigars, has returned from Cuba.

In Full Swing

ORLANDO, Fla., June 23.—The Central Cigar Co., wholesale distributor of cigars, tobaccos and cigarettes, recently opened business at 14 Carolina Court, this city, and reports that business for the first two weeks has been far beyond its highest expectation.

This organization, under the management of A. W. Hinson, has the exclusive agency for the well-known Hav-a-Tampa and Tampa Nugget cigars, together with several other well-known brands.

With the acquisition of a telephone, No. 1378, this company is now under full, smooth operation. Its sales staff, full of pep and hustle, is on the job and never takes "no" for an answer.

Chinese Tobacco Production

WASHINGTON, D. C., June 23.—Estimates of annual production of tobacco in China vary from 200,000,000 pounds to 900,000,000 pounds. Chinese Ministry of Agriculture and Commerce estimates total production in 1915 as 300,000,000 pounds and in 1916 as 900,000,000 pounds. Tobacco is produced in marketable quantities in nearly every province and figures in exports of 40 out of 48 customs stations. Importation of leaf tobacco is approximately balanced by exports, Department of Agriculture report says, but there is a net annual importation of 8,000,000,000 cigarettes and 30,000,000 to 50,000,000 cigars.

MADE IN BOND

IN A FULL LINE of IMPORTED SHAPES

Each size is a perfect value and made of the finest Imported Cuban tobaccos, under climatic conditions and methods similar to Havana.

Production of Tobacco in Canada

OTTAWA, Ont., June 23.—Generally speaking, the season of 1922 was unfavorable to the growth of tobacco in Canada and the production for the year was not up to the average, though this is to be accounted for also by the decreased acreage, which was only about half that of 1920. The acreage was, however, greater than that in the previous year and the production, in spite of unfavorable growing conditions, was about double.

The commercial tobacco crop of Canada in 1922 is estimated at 29,947,571 pounds from 25,762 acres, an average of 1,007 pounds to the acre. Of this 14,915,700 pounds from 16,573 acres is credited to Quebec, an average of 900 pounds per acre; and 11,031,870 pounds from 9,181 acres, an average of 1,201 pounds per acre, to Ontario. The prices paid for Canadian tobacco vary considerably from year to year, depending on type and quality; but the Tobacco Division of the Government assumes for the Ontario crop an average of 25 cents per pound and for Quebec an average of 12 cents per pound. This places the value of the 1922 crop at $4,547,851, compared with $2,393,190 in 1921, and $5,893,275 in 1920.

The 1922 production of 29,947,570 pounds of tobacco, compares with 13,248,962 in 1921 and 48,088,500 pounds in 1920. This latter was the highest figure ever reached in Canadian tobacco production. Before the war the average acreage was between 9,000 and 10,000 acres and the normal production between 10,000,000 and 12,000,000 pounds. Under the stimulated production of the war years, says the Canadian Pacific Railway in a survey of the tobacco industry, the acreage sown to tobacco was much increased and the yield multiplied many times. Since the record production was reached in 1920, acreages and yields have tended to decrease.

"Though the entire commercial tobacco crop is grown in the Provinces of Ontario and Quebec," says the railway, "and production elsewhere is so insignificant in volume as not to be taken into account, it has been proved that tobacco can be successfully grown in other parts of Canada, and the area adaptable to this crop is rapidly being extended to embrace the greater part of the Dominion. Excellent crops of tobacco, for instance, have for years been grown in the Okanagan Valley of British Columbia and also in the irrigation block of the Canadian Pacific Railway in Southern Alberta.

"The Tobacco Division of the Government considers tobacco growing in Western Canada so feasible, apparently, that it has gone to some trouble to teach farmers the best methods of cultivation and the varieties to grow. It is pointed out that on account of the short season, there are only a few varieties adapted to the prairies, but that these, Canalle, Small Havana, and Belgian, can be, and have been, produced successfully in that area.

"Looked at from any point of view, there must be a future for tobacco growing in Canada, having regard to nothing beyond a domestic consumption. Exports of Canadian tobacco are insignificant. Practically the entire Canadian crop is consumed at home, and yet to satisfy domestic demands an import nearly equ volume to the annual production is necessary."

In the last fiscal year Canada's ex of tobacco amounted to 471,991 po with a value of $175,826. Of this the United Kingdom accounted for 784; the United States, $5,216; and countries, $34,826. There was a gratifying increase in the volume o ports in 1922, these being more than ble those of 1920 and 1921, when 2 pounds and 200,153 pounds, respec left the country for foreign market

Against these exports there is a substantial import trade. In the last year Canada imported 21,360,609 p of tobacco, worth $9,947,903, of produce to the value of $664,187 from the United Kingdom; $8,3 from the United States; and $8 from other countries. Imports ma a fairly even trend, being 24,9 pounds worth $14,673,550, in 192 20,604,163 pounds worth $14,356,2 1921.

Demand for Tobacco in I

WASHINGTON, D. C., June 26.—T mand for American tobacco in H discussed in the following report, has just been received by the T Division, U. S. Department of Com from American Consul Woods, at

"The United States is supplying with about 95 per cent of its total t imports. During the fiscal year September 30, 1922, there were im about twenty million cigarettes, of nearly 70 per cent came from the States. In that year cigarettes m one-fifth of the imported tobacco, the only item of tobacco imports has increased consistently during t three years, both in number and centage of the total tobacco impo

"Leaf tobacco constitutes v four-fifths of the entire tobacc ments received. It is sold to indi and small firms, who make chero cigars for the local trade. Th popular of such products among boring people is a cheroot slightly than a cigarette and purchasable cent each.

"Leaf tobacco is shipped to merchants in drums of 1,000 pou half-drums of 550 pounds, the la ing the more convenient for th trade. The import tariff is ba an original duty of $.02 per pound with coefficients and port charges it to $.27 per pound. This specif schedule is applicable to all sort bacco, but obviously bears most upon low-priced bulk tobacco.

"Except for small patches on th there is no tobacco production country, although the soil and cli Haiti have been considered adapted to the culture of tob LAMM.

Packing Porto Rica

Leo Hirsch, leaf dealer of 173 street, is packing about 4,500 ba Porto Rican new crop, all inland and perfect in every way. He is ing regular weekly shipments fro Rico.

Connecticut Tobacco Crop in Much Need of Rain

Plants Recently Set Out in Fields Have Suffered from Hot, Dry Weather—Growers No Longer Complain of "Cold Waves"—Dr. Jenkins to Retire from Experiment Station.

HARTFORD, June 23.—Certainly those who were setting tobacco this week did not complain about cold weather. On the other hand they found the heat almost unbearable for three or four days. The plants that were set during the hot days burned badly and there will have to be considerable re-setting done. The fields at the present writing are "Bone Dry," and there is no need of a guard to keep off the "wets," but all growers would very much welcome "a wet squad" just at the present time, as the surface of the ground is very dry and hot. Tobacco that had gotten started is growing very fast and has changed wonderfully in the last few days, and with a good rain the fields would soon be pretty well covered with the leaves of the 1923 crop.

All that is now needed to make a crop is warm weather, with showers every few days, as the 1923 crop is practically all set. It is not much behind last year, though there are some scattering lots yet to be set, but these will all be in within the next few days. A trip around the tobacco belt shows the crop well started. There was very little trouble from cut worms, and with the exception of the last three or four days the weather has been cool and plants did not burn up on the hot ground. They are making an early start off. The tobacco in Massachusetts got off to an early start. In Hadley at Westfield the plants a week ago were 6 to 8 inches high, and sun grown Havana seed plants were only a little behind in growth.

Some sections are troubled with "wildfire" in the seed beds. These have been abandoned. The growers as a rule have been using every means recommended by the tobacco experts to hold wildfire in check, and have been dusting or spraying their seed beds persistently.

Considerable hoeing has been done, and despite the labor shortage most of the growers have gotten along very well with their crops. There has been some talk of an influx of labor, now that the public schools have closed for the summer vacation. Most of the boys, and many of the girls went right out seeking "jobs" on the tobacco farms.

Around the shade plantations several hundred colored students from southern colleges have been placed and more will come in as the season advances.

The Hartford police have in a sense established a "Street Employment Bureau," as in the morning they round up the "ambitious (?) men on the east side," and give them their choice of either going out on the farms to work or going up before the Judge; many farmers are there with trucks and manage to pick up a few men and get at least a day's work out of them.

The writer has seen many men on the road, some looking for work and others apparently hustling to get out of the city and pass right by a job without asking whether they could get a job or not.

Wages are high and with a few days' work the laborer becomes a "millionaire" and retires from active work, at least temporarily.

A trip around the tobacco belt shows an increase of "shade" this season, which indicates that "Shade" tobacco is particularly adapted to Connecticut Valley soils and that the demand for it is increasing rapidly. Much of the wrapper tobacco formerly produced in Connecticut was the sungrown tobacco. The growers have noticed that Sumatra has been taking its place, and that the demand for sun grown wrappers was fast falling off, but now much of the wrapper business is coming back to Connecticut. Shade and primed are in great demand and it is believed that the "Round Tip" type will be much used for wrappers; consequently, the acreage of Round Tip will be materially increased this year.

Representatives of all the leading cigar manufacturers now recognize that there is no substitute for Connecticut tobacco and send their representatives to make heavy purchases. Hartford has become a genuine tobacco center and every week prominent men in the cigar leaf business are here making purchases, and driving through the country at this time of the year to see the new crop developing.

Dr. Jenkins to Retire

Dr. E. H. Jenkins, director and treasurer of the Connecticut Agricultural Experiment Station at New Haven, is to retire July 1, after forty-seven years of service with the State. He is to have a pension of $4,500 a year and an extra allowance for rent. Dr. Jenkins has been actively connected with the various experiments with tobacco and has done much in developing of growing tobacco under shade in New England, he having grown the first shade in Connecticut at the experimental station plot in Poquonock, which was about 1/3 of an acre. He has also followed up the different fertilizers used for tobacco, and with his insight in the work has compelled the fertilizer manufacturers to "go straight" on their mixtures. Wm. L. Slate, Jr., has been appointed to succeed Dr. Jen-

Fear Shortage of Tobacco Crop

REIDSVILLE, N. C., June 23.—While it is not known just how favorably the present crop of tobacco compares in size with that grown in the county last year, it is certain that Rockingham's crop this year will be much smaller than was at first anticipated says the *Review*. Up until Monday night's rain there were communities in the county in which not more than half of the projected crop had been set. Since the rain, of course, a great deal more has been set out.

It is said, however, that insects and cutworms have been the worst ever known, and that weather conditions have been unfavorable. Together these have necessitated replanting to an unusual degree and taken in connection with a scarcity of plants to begin with will, it is said, make the planting of a full crop impossible.

Back from Europe

RICHMOND, Va., June 23.—George L. Corbin, manager of the Richmond Department of the Export Leaf Tobacco Co., E. M. Stokes, manager Richmond branch, British American Tobacco Co., and A. B. Bradshaw, traveling supervisor of buyers, Export Leaf Tobacco Co., have returned from an extended trip through England, Germany, France and Holland.

Big Planter in Court

RALEIGH, N. C., June 25.—The Tobacco Growers' Co-operative Association hit hard and high in its first legal action to protect the tobacco of the 1923 crop, which is pledged to the association by contract, when it gained a temporary restraining order against F. A. Elks, of Pitt County, last week. Elks, who is called the largest tobacco grower in North Carolina's largest tobacco growing county is required to appear in court this week to show cause why he should not be restrained from delivering his tobacco outside of the association of which he is a member.

Elks is also being sued in the amount of $6,000 for liquidated damages for alleged deliveries of 120,000 pounds of tobacco outside of the association. The restraining order which calls him to appear before Judge Cranmer, of the Wake County Superior Court, on June 29, is due to alleged threats to deliver his 1923 crop outside the association. R. M. Elks, a kinsman, is also required to appear in court on the same day for similar reasons.

Growing enthusiasm among the organized tobacco farmers of Eastern Carolina was evidenced by a series of rousing meetings last week among the farmers of Pitt, Johnston and Beaufort counties. In Pitt County members of the association endorsed their directors and denounced the methods of propaganda and intimidation by which those opposi operative marketing are reported deavoring to cause still further co breaking in the Eastern Belt. T farmers from thirty Johnston Cour cals, who held a meeting at Smit expressed their resentment over t ported attempts of outsiders to down the morale of weak-kneed me in a strong resolution which comm the merchants of Johnston County have aided the farmers in their eff establish better methods of marketi

Congressman H. S. Ward add hundreds of co-op farmers at a gre becue given by members of the cott tobacco associations near Washingt week, when they met for an all-da bration of the success of their associ

The tobacco co-operative will be second important step in commodity keting in South Carolina early in with visits by an expert corps of g to 150 local units of the association Palmetto State, where demonstrati sorting and bundling tobacco an form grading will be given to tho of growers. W. E. Lea, field servi resentative of the association in Carolina, and C. O. Dixon, its m of warehouses for that State, an that these meetings will be open to bers and non-members alike. The mate that the visits of the associ most successful graders to every of the South Carolina Belt will i the value of the crop in that sect many thousands of dollars.—S. D. SELL.

Answers Trade Compla

WASHINGTON, D. C., June 27.— swer has been filed with the F Trade Commission by the Colbra gar Co. in the case of the Wh Tobacco Dealers' Association, of Nev.

The firm states that it is not n ever has been a member "associate or combined in any manner wi Wholesale Tobacco Dealers of Nev." The cigar company also em ally denies "that it unlawfully or entered into an agreement, underst and conspiracy with any responden tioned in the case, for the purpo leged in said complaint or in co-op with any respondent or respondents mentioned, to fix uniform discou prices at which cigars, cigarett other tobacco products handled t said respondent individuals, resp members or corporations that thereafter be sold to them." Othe gations of the Commission's compla also denied.—LAMM.

Revenue Tax Receipts in Month of May

WASHINGTON, D. C., June 26.—The Bureau of Internal Revenue announced today that in May it collected $27,224,-008.23 taxes on tobacco products as compared with $24,179,970.55 collected in May of last year.

Of this amount $3,854,520.78 was collected on large cigars in May as compared with $3,751,925.92 collected in May of last year. Also $68,325.04 was collected on small cigars this year in May as against $84,754.80 in May of last year.

The bureau states that in May it collected $10,830.55 on large cigarettes as against $10,034.81 in the same month of last year and $16,665,169.74 on small cigarettes in May as against $13,804,219.-21 in May of last year.

The bureau also collected taxes in May of this year on snuff of all descriptions totaling $605,570.61 as compared with $600,414.48 for the same month of last year. Taxes totaling $5,939,404.23 were collected on chewing and smoking tobacco as compared with $5,851,974.42 collected in May of last year.

Also in May, $76,907.56 was collected on cigarette papers and tubes as compared with $72,986.71 collected in May, 1922. The bureau collected also in May $1,171.93 on special taxes of manufactures of cigars, etc., as against $2,085.19 collected in the same month of last year and $2,108.39 was collected under repealed laws relating to tobacco in May of this year as compared with $1,575.01 collected in the same months of last year.—LAMM.

Cigarette Competition in Belgium

WASHINGTON, D. C., June 26—The competition in cigarettes in Belgium at present is extraordinarily keen, according to a report to the Department of Commerce from Consul G. S. Messersmith, Antwerp, and it is said that only a few of the larger companies are making money. Since the war the consumption has increased enormously and the Belgian manufacture has likewise expanded, so that the local production of low price and medium price cigarettes is sufficient to meet the local trade demands.

The average Belgian smoker wants a mild cigarette with the taste of Oriental tobacco. The largst sellers are made of tobacco from the Near East and some Chinese tobacco is also used. The taste for American cigarettes made of Virginia tobacco has steadily decreased, for it appears that they are too strong for the average Belgian smoker.

A small amount of expensive English and Egyptian cigarettes are sold in Belgium to a restricted class who can afford to pay the high prices. It does not seem possible for American cigarettes to compete at this time with cigarettes manufactured in the country, as the former have to pay not only the 12 francs per kilo import duty for manufactured tobacco, but before the cigarettes are taken out of the customs the internal revenue stamp has to be placed on each package by hand, while this is done by machinery in the Belgian factories. As the most popular cigarettes now sold in Belgium retail for one franc for a package of twenty (6 or 7 cents at present) the difficulty of introducing an American cigarette is apparent. —LAMM.

From Russian Black Sea Ports

WASHINGTON, D. C., June 27.—There have been several arrivals at Constantinople of tobacco shipments from Russian Black Sea ports since the beginning of this year, the most recent being one lot of about 660,000 pounds from Soukhous, according to a report received by the Department of Commerce, from American Consul Yoder, at Constantinople. These shipments are all from old stocks which have been stored for several years, and are not an indication that normal production has been resumed. Some of this tobacco is of the crop of 1918, and a good deal of it is of poor quality. The particular lot mentioned above is being shipped to Trieste for grading and storage, pending disposal. This tobacco was estimated by competent authority as being worth 70 piastres per kilogram, or about 20 cents per pound.—LAMM.

Purchases Leaf Tobacco

George Garve, manufacturer of the Punch cigar, of Toronto, Canada, was in New York early this week, making purchases in the local leaf market.

To Handle Georgia Crop

ATLANTA, Ga., June 23. — Three tobacco drying and steaming plants and six sales houses have been erected at a cost of approximately $600,000 along the Atlanta, Birmingham & Alabama railroad to handle tobacco this year, which, it is estimated, will be the largest in the history of the state. Early estimates place the production at 12,000,000 pounds. Nine markets will be operated to dispose of the crop.

Cigarette Production Gains

WASHINGTON, D. C., June 23.—Cigarette production in May was 5,556,494,-393, against 4,602,766,009 for May, 1922. Cigar output was 575,915,851 compared with 596,208,724 in May, year ago. Output of snuff was 3,264,281 pounds, against 3,235,636 and 32,996,629 pounds of smoking tobacco was manufactured, against 32,510,797 year ago.

Paducah Prospects

PADUCAH, Ky., June 23.—The movement of loose tobacco has been the lightest we have had since the season opened. The association receiving stations did very little receiving, in fact much less than they had expected. This is due largely to the favorable dry weather conditions and farmers are busy working in their crops. Another reason is that stocks are very low an greater part of the crop has be livered. Still we estimate that the several million pounds left in fa hands that will be delivered to t ceiving stations when they get tim their crops to do so. The quality week's receipts were generally common and low grades.

Most of the dealers through the try are winding up this year's and most of them will be throu

Cable Address: "SPENCER" ARNOLD'S CODES 5 and

uly 1, which is about the regular time or getting through.

The past week has been fair and hot, nd farmers have had the best opportuity that they have had at all for doing eneral farm work. The tobacco crop as generally been worked out and is in ood shape. I don't think I ever saw better stand or plants start off to grow- ig and looking any better than they do ow. The greater part of the crop has s much growth at this time as it has y the middle of July ordinarily. This eans with favorable weather conditions e will have an early crop and we hope good one.

As regards the acreage we think it is illy as large in this district as it was st year, and last year's was the largest at we have ever had, but the drouth of st summer cut the yield to where it as nothing like what we expected. Of ourse we can't tell what this year's ield may be or what the quality may be, ut with the favorable start the crop is etting, we should have one of the rgest crops that we have ever had.— V. B. KENNEDY.

Chapman Champions Cause of Burley Pool

NEW CASTLE, Ky., June 23.—Virgil hapman, of Paris, member of the Lexgton law firm of Franklin, Talbott & hapman, delivered a strong address to picnic crowd of several hundred enusiastic tobacco growers of Henry ounty at Port Royal today. In Henry ounty the Burley pool has a nearly 100 er cent sign-up. He was loudly aplauded when he congratulated the grows of Henry County on their loyalty to e association and the fact that they have anifested such a splendid spirit in sign- g the pooling contract. Being a toacco grower himself, Mr. Chapman oke principally from the standpoint of e grower.

The speaker began by recounting the cidents that led to the formation of the urley pool and gave his hearers a vivid ortrayal of the pathetic conditions which xisted throughout the Burley district at e time the 1920 tobacco crop was marted. He declared that the pool was orn of necessity because the 1920 crop as sold for little more than half of the ctual cost of production, and stated that is was due to the economic unsoundess of the old speculative auction sysm, under which every person who came contact directly or indirectly with the lant of tobacco, from the time the seed as put in the plant bed clear through e whole process of manufacturing, holesaling and retailing that tobacco, ade an adequate profit out of it except e farmer, who gave more than twelve onths of brawn and sweat to the prouction of his tobacco crop.

Mr. Chapman declared that many times e farmers of Kentucky, instead of enoying prosperity which was rightfully eirs, suffered want and woe, penury and overty, desperation and despair; that ey were face to face with a crisis and at the whole business fabric of the Burgy section staggered on the brink of fiancial ruin.

In this crisis forward-looking men and omen of Kentucky sought a new marting system, a plan which would be ound legally and sound economically, nd which would substitute intelligent, rderly merchandising for unintelligent peculative marketing.

He declared that the new system has urpassed the expectations of many of its ost sanguine and optimistic advocates ecause it has brought to the tobacco rowers of the Burley district the only wo successive years, except abnormal ar years, in the history of Burley toacco that the grower has received an verage of not less than 20 cents a pound r his tobacco, and the farmers of Kenucky are millions of dollars better off an they would have been but for the rganization of the pool.

He analyzed for his hearers the pooling ystem, showing that the contract has all f the features necessary to make a successful pooling enterprise. He declared at some of these features are the fact at it is a pool by commodity and not by ocality; that none but a bona-fide grower an become a member; that the contract is for a long term of five years and that there is a sufficient sign- up of growers to give the association control of enough tobacco to enable it to fix a satisfactory price to the grower. He stated that the internal pooling system by which the tobacco is divided into minor pools, according to grade and type, is the heart of successful co-operative marketing and that the system guarantees that every grower will receive the same price for the same grade and quality of tobacco.

Mr. Chapman lauded the social service idea which is now being carried out in various parts of the Burley district, declaring that the farmers need the co-operation of the women and children in making the pool a success, and added that there is something in the movement bigger and better and greater than the mere matter of dollars and cents, "because," he said, "this movement means stabilized markets and land value. It means a stable, general prosperity among the masses of our people who produce the wealth and pay the taxes. With great prosperity will come better living conditions among Kentucky people. It is a crusade for homes and firesides, for the women and children of Kentucky. We will have more comfortable homes and happier families, and that will mean law-abiding, peaceful, contented, God-fearing citizenry that will make old Kentucky stand where she rightfully belongs, in the forefront of American commonwealths."

Mr. Chapman closed by declaring that the key to success is united effort, declaring that we are living in an age of co-operation; that everything the farmer buys, from the cradle in which the baby is rocked to the coffin in which the grandfather is buried, is the product of co-operative, organized effort, and that if the farmers are to receive their fair proportion out of every dollar paid by the consumers for manufactured tobacco products they must organize and stand together in this great legal organization for their mutual interest and the welfare of their families.

Green River District Crop Shows Increase

OWENSBORO, Ky., June 23.—The new tobacco crop, estimated to be 110 per cent as compared to last year, is now about all planted in the Green River District. Excessive rains past week doubtless caused some damage to the young plants and in many instances weeds have gotten a good start and ground badly in need of cultivation. However, this has been largely offset by the good stand possible on account of continued raids, and a few clear days now promised will permit farmers to get fields in good shape.

While it is possible that estimates of acreage may vary when a more definite knowledge of the planting becomes apparent, yet we feel estimates of acreage planted in this district, as well as other districts named below, after a personal canvass and reports from dependable sources, will prove fairly correct.

As compared to last year we estimate the acreage planted in following additional districts to be a percentage as follows:

Henderson Stemming District, 90 per cent; Clarksville-Hopkinsville District, 100 per cent; Paducah or Western District, 100 per cent; Upper Cumberland District, 110 per cent; Indiana, 110 per cent.

The One Sucker District will have a somewhat increased acreage over last year, but this increase will be in Burley with the Dark acreage about the same as last year.

We now have packed a limited quantity of various grades of the 1922 Green River crop.—KENTUCKY & VIRGINIA LEAF TOB. CO.

Owensboro Outlook

OWENSBORO, Ky., June 23.—Fair, warm weather during the week has given an opportunity for much needed cultivation of the tobacco crop and this work has been pushed. Thus, I can report general conditions somewhat improved over previous report.—J. S. PHELON, Tobacco Broker.

To Build New Receiving Stations

HOPKINSVILLE, Ky., June 25.—The Dark Tobacco Growers Cooperative Association, through the Building Committee will open bids on July 2 for the construction of three new receiving stations.

The three houses will be erected at Auburn, Smith's Grove and Clarksville, Tennessee. At the first two places the houses will be approximately 150 x 200 feet in size.

The structure at Clarksville however will be larger, measuring 270 x 212 feet and covering an entire city block. Plans and specifications for the three buildings are on file at the offices of the Association at Hopkinsville.

All the houses will be in strict accordance with the latest and most approved ideas of tobacco warehouse construction. They will be amply lighted so that even on dark days the graders can examine the tobacco intelligently. The matter of convenience in arrangement will also be given particular attention, with driveways for the wagons to enter and stand while being unloaded and everything designed to handle the tobacco in the shortest possible time and to the best advantage. The equipment of each house will be complete for the purpose of handling the tobacco, and having it graded, as speedily as possible.

Some of the houses will have prizing plants, or space therefore, in connection and will serve the triple purpose of receiving house, prizing house, and storage house.

In the season just closed the Association work was considerably handicapped in several places by the inadequacy, faulty arrangement, poor location or lack of equipment, and this added to the cost of handling the tobacco. Next season the Association will be in much better position in this respect.

All of the construction work will be under the supervision of Fred Manley, of Knoxville, Tennessee, who has been employed as permanent architect and who has opened his office in the headquarters building here. Mr. Manley has had much experience in erecting tobacco warehouses.

The Association will announce plans for other construction work later. The building schedule is in the hands of the Committee which, in turn, receives its instructions from the Board of Directors. At all points where houses are to be erected a certain amount of warehouse stock has been subscribed to by the community. At the end of five years this stock will be retired and the farmers will own the property.—PRESS SERVICE INFORMATION BUREAU.

Ohio Cigar Leaf Growers Seek Co-op Pointers

LEXINGTON, Ky., June 23.—R. H. Elsworth, of the national department of agriculture, and O. L. Cunningham, county agent at Dayton, Ohio, were visitors to the offices of the burley co-operative this week. Mr. Elsworth came from the division of agricultural co-operation to look into the operations of the big burley association and Mr. Cunningham to obtain information that will be of use to the growers of Montgomery and surrounding counties in Ohio in the organization of the co-operatives they are forming to handle the cigar types of tobacco produced in that section of Ohio.

Burley Association Sells Warehouse

The Farmers' Union of the Pendleton county purchased a warehouse of the Burley Tobacco Growers' Co-operative Association, sold at auction at Falmouth Tuesday for $5,000. Four lots, from which one of the warehouses not needed by the association had been removed to another location, brought $4,000.

Ralph M. Barker, director of warehouses of the association, said the property brought a good price. The s was the first of a series which wil held through the summer until all surplus real estate of the associa estimated to be worth between three four hundred thousand dollars, has disposed of.

French Tobacco Held Be Tax-Free

FRANKFORT, Ky., June 22.—Tob owned by the French Republic and sessed in Jefferson County was not ject to taxation, the Court of Ap ruled today in an opinion by Judge ers Clay, reversing the judgment o Jefferson Circuit Court.

In 1918 the French Republic had $ 707 worth of tobacco stored in w houses in Jefferson County. None o tobacco was purchased for sale in country, and subsequently it was se France. The Board of Supervi which brought the action, claimed th bacco was not held for public purp but that it was the property of Franch Republic "in its private cap as a trading corporation."

The opinion held that the assessir such property "is clearly opposed t spirit of international amity, w should prompt every nation to guard protect the property of all other na that happens to be temporarily withi jurisdiction, without levying a tribut that purpose."

May Productions

WASHINGTON, D. C., June 26.—T were 575,915,851 large cigars man tured in May as compared with 569 724 manufactured in the same mont last year, according to a statement made public by the Bureau of Int Revenue.

The bureau's figures also show th May of this year 45,550,027 small c were manufactured, as compared 56,503,200 for the same month of year.

In May of this year there were 1 243 large cigarettes manufacture against 1,393,124 for May of last and in the same month of this year were 5,554,990,050 small cigarettes m factured, as compared with 4,601,37 manufactured in the same month o year.

The bureau's figures also show th May of this year there were 3,3 pounds of snuff manufactured, as a 3,335,636 pounds manufactured in M last year. Also in the same mon this year there were 32,996,629 poun tobacco manufactured, as compared 32,510,797 pounds manufactured i same month of last year.

The bureau has also issued fi showing the manufacture of tax pa bacco products in Porto Rico for In May of this year 16,421,140 lar gars were manufactured in Porto as compared with 10,040,785 man tured in the same month of last The figures show that 2,000,000 cigars were manufactured in May o year, as against 800,000 for the month of last year. Also 49,500 cigarettes were manufactured in M this year, as compared with none year and 83,500 small cigarettes manufactured as against 40,000 for of last year.

Production of Philippine tax pa bacco products for May have also made public by the bureau.

In May 16,059,462 large cigars manufactured in the Philippines, as pared with 14,088,344 for May o year. No large cigarettes were m factured this year, while 600 were m factured in May of last year. Th reau's figures show that in May small cigarettes were manufacture compared with 33,520 for May o year, and 62 pounds of tobacco were ufactured as compared with 172 p for the same month of last year.—L

urley Co-operative Men Speak in Indiana

URORA, Ind., June 24.—President and eral Manager James C. Stone last t answered satisfactorily to the rers who attended a meeting at the ic library every question asked of by a number of members who de- l information as to the affairs of the ciation. Mr. Stone spoke for an and a half and then discussed with growers plans and policies for an- r hour and a half, and it was not after 11 o'clock that he left ora for Cincinnati on his way back exington.

sides Mr. Stone, the speakers at ora were former Director Everett lure, who himself asked a number uestions relating to the association's rs; Charles Boyd, a grower for y years, who declared the "associa- is the thing for us," and that the -up ought to be 100 per cent; Fred ins, a grower, who told of an offer a speculator for his crop much er than what he probably would ve when he has all his money on 1922 crop, and J. Sherman Porter, r of the *Burley Tobacco Grower,* declared that many of these offers speculators in Indiana, as in other s of the Burley district, were not -fide offers for the crop at all, but osely pitched higher than the prob- market, so as to dissatisfy the as- ution member after the delivery of crop.

was brought out in the discussion statements that outside growers re- d more for their 1921 crop than e in the association were not true, that no one could tell which re- d the most money for the 1922 crop it is all sold and the money paid he growers. This they were ad- l to wait for before jumping at the lusion that the outsiders would get e than they for their 1922 crop.

Spoke to Crowd at Brookville

Brookville, in the afternoon, Mr. e addressed a large crowd in the nklin county courthouse, assuring n that action against contract break- in Indiana would be taken soon and he had the opinion of reputable at- eys that proceedings could be taken r the law of contract in Indiana, rdless of the failure of the co-opera- marketing act, which Governor Mc- r vetoed.

H. Senour, president of the Frank- County National Bank and a director he Farm Bureau Federation of In- a, presided at the Brookville meet- and R. L. Tilton, for many years a houseman and buyer of tobacco in section and a member of the asso- on himself, presided at Aurora.

It was the general opinion of growers that Mr. Stone had helped conditions considerably in Indiana by his very frank statement of facts and his reasons for certain actions by the association in regard to its finances, which had been the subject of discussion in Indiana. His explanations of these matters were conclusive and convincing and one enthusiastic member voiced what was regarded as the sentiment of the growers generally, when he declared: "We've got the right man in the right place in that man Stone."

Mr. Stone will return to Indiana next Saturday for two meetings, one at Madison in the afternoon and one at Vevay at night. He will return to Lexington Saturday night.

To Meet July 1

The regular meeting of the board of directors, scheduled for Wednesday, July 4, has been set forward three days and will be held on July 1, so as to avoid the holiday. All the members of the board have been notified to be in Lexington on the first instead of the fourth.

Says Burley Plans Apply to Ohio Cigar Leaf Clause

DAYTON, Ohio, June 23.—Operations of the big tobacco growers' association centering at Lexington, Ky., was described for the benefit of Madison township growers and farm bureau members Wednesday night by O. L. Cunningham.

Mr. Cunningham returned to Dayton late Wednesday afternoon after two days inspection of the large warehouses at Lexington and other tobacco centers in nearby counties. The warehouse situation and burley tobacco outlook in Kentucky were given special attention by the Montgomery county farm agent.

At the meeting of the Madison township bureau, which was held in the high school building at Trotwood, Mr. Cunningham set out in detail the accomplishments of the Kentucky growers, who have one of the best tobacco marketing organizations in the country. The methods he outlined as a result of his trip, made in the interests of the Miami Valley Tobacco Growers' Association, are all applicable to the Miami Valley organization, he said.

Mr. Cunningham will present results of his investigation before the other township bureaus at meetings in the next few weeks.

Reports of project leaders were offered at the Madison township meeting, which was the regular monthly session.

In Nutmeg State

Sidney Oelbaum, of Isaac Meyer & Co., is spending the week in Connecticut, in the interest of his company.

Tobacco Raising in Ozarks Getting More Attention

MONETT, Mo., June 23.—Tobacco growing as a permanent industry is now definitely established in the Ozarks, according to W. L. English, supervisor of agriculture of the Frisco lines, who calls attention to the fact that several demonstration farms have been established in this territory and that the value of Ozark grown tobacco has been so well established that there can be no question of its prominence as a crop of real worth.

Tobacco growing demonstration fields have now been established at Monett, Springfield, West Plains, Republic, Cassville and Aurora, and next year others will be established; among these, a large one at Joplin.

Ozarks Well Suited

At a number of these points, the business men have financed the demonstration fields and have so arranged affairs that the growers may obtain plants at a nominal price. White Burley has been proven the most hardy and best flavored of tobacco grown in this territory, and it is this variety that is being planted. The six-acre demonstration farm at Monett is proving very successful. The tobacco is planted in rows, three feet and six inches apart, while the plants are set eighteen inches apart. About 11,000 plants to the acre are being grown in this way.

The tobacco plants grown in Monett district are of an especially fine grade and the fields are all set. The business men of Monett have employed an expert from the tobacco district at Weston, Mo., and this man has entire supervision of the demonstration and also assists growers in getting the right start. Dr. E. E. Corlis, of the Weston Tobacco Co., is also representing a number of large tobacco factories of the east and is of the opinion that the Ozark territory offers better opportunity for growing good tobacco than any other section in the United States.

Joplin District Favorable

It is expected that warehouses will be erected next season at some point in the Ozarks where tobacco will be graded, displayed and sold at auction. "The industry is a permanent one," said Mr. English, "and there will be thousands of acres planted next season. Ozark tobacco last season topped the market. There is an unlimited amount of territory around Joplin well adapted to the growing of tobacco and an effort for commercial acreage should at once be commenced in that section. It has been shown that the Ozark lands will produce from 800 to 1,200 pounds of tobacco an acre and some of the Ozark tobacco last season brought as high as 42 cents a pound, while the average price was 26 and 9-10 cents a pound, a price which can be raised with constant cultivation and care of the plants such as should be given."

Pennsylvania Tobacco Market Holding Interest

Activity Following in Wake of One of Most Lively Early Seasons Ever Known Among Local Buyers—Cigar Leaf Has Shown Decided Upward Trend—Standard Grades Desired

LANCASTER, Pa., June 25.—Continued activity in the Lancaster tobacco market is following in the wake of one of the most lively early seasons that has ever prevailed among local buyers. Interest in Pennsylvania cigar leaf has shown a decided upward trend within the past several weeks and has given life to what is ordinarily the slowest period of the tobacco year.

Low grades and the small stock of 1921 which is still in the hands of the packers have been the scenes of the buyers' latest operations. Independents report quite an inquiry for fillers and say that some prospective customers also show an interest in binder tobacco. The stock of fillers yet unbought may be discounted as negligible in their effect upon the general market, as most of this type of tobacco was absorbed in the early season rush on the Pennsylvania market.

Demand for Filler Tobacco

The demand for filler tobacco may be met, it was stated, by one of the large packers this morning, by the large amount of leaf damaged by "black rot" which will be on the packers' hands after the summer sorting is completed. Fairly accurate estimates place the amount of damage at from 10 to 15 per cent. All of this damaged tobacco is very good in quality with the exception of that part which has been affected by the rot, and packers are of the opinion that it would serve excellently as fillers.

Not Much 1921 Left

No more than a few thousand cases of 1921 tobacco are on hand and, while this remaining stock of old leaf is not of the highest grade, it is sufficiently good to warrant tentative offers from manufacturers' representatives who have been looking it over within the recently past weeks. Considering the quality of the leaf, the prices, while not on a par with those paid last fall, are fairly satisfactory.

The condition of the oncoming crop is very good; the larger percentage of last year's tobacco has already been contracted for, the remaining stock, both old and new, seems to have plenty of bidders who are anxious to buy and the market at the present time, normally slow, shows every sign of a good, healthy condition. Altogether, the entire Pennsylvania tobacco industry, from the "share farmer" to the large packer and manufacturer, is in as flourishing a state as the most optimistic might desire.

Standardization Agitation

In recent years there has been considerable agitation among the progressive packing element for a standardization of tobacco grades. Under the U. S. Warehouse Act the standardization of the form, grade or condition of tobacco is left to local authorities with the following regulations:

"Until such time as official standards of the United States are in effect, the form, grade or condition of tobacco shall be stated as far as applicable either in accordance with standards adopted by any tobacco organization or by the tobacco trade generally, or in accordance with any standards approved for the purpose."

Under the provisions of this Act the Bureau of Agricultural Economics, the U. S. Department of Agriculture, the Pennsylvania Bureau of Markets and the Pennsylvania Department of Agriculture have been co-operating to carry on the work in this state. Tentative grad lengths have been established and th tobacco trade, working in conjunctio with these bodies, are considering tenta tive constructive plans for formulatin grades.

Exhaustive Study Required

The undertaking requires, particularl in the case of cigar leaf tobacco, th most painstaking and exhaustive stud of conditions affecting the tobacco in dustry, and government officials workin on the task are emphatic in declaring tha the local tobacco trade as a whole ha not only endorsed the work but is als actively co-operating in it. The Lar caster Leaf Tobacco Board of Trade ha gone on record as being strongly i favor of any move to formulate grade for Pennsylvania tobacco and signifie their willingness to lend assistance i the work. Several of the larger Lar caster packers have gone ahead on the own initiative and are using the grac lengths recommended by the governmen

"Grading Up" Custom

The usual custom in grading tobacc is to "grade up." For instance, all th seedleaf grading over 18 inches will b listed as 20 inch tobacco, all the seedle grading over 20 inches will be listed a 22 inch and so on. Packers who ar working for the standard grades a adopting the government regulatio which call for the use of "down gra ing," and which make their crops a pear shorter than is the case when cor pared with the other system. In "dow grading," all of the seedleaf over inches is included in the 18 inch cla instead of the 20. It is hoped that wi the close co-operation of the tobac trade the federal and state authoriti will, in the near future, be able to p Pennsylvania tobacco on a good stan ardized form, condition and grade bas —KEYSTONE.

York County Activities

Rain Much Needed

YORK, Pa., June 25.—The exceedin warm wave of last week brought drouth throughout Pennsylvania a many crops suffered injury for want moisture. First reports were that da age had been wrought to young toba plants in the tobacco growing sections York county. The truth in the matter that York county tobacco growers not alarmed, as up to this time but lit tobacco has been set out in the fields this county. It may be that the L caster county tobacco has been dama to some extent, as it is usually tra planted three to four weeks earlier th that of York county. The transplant of the York county tobacco follows af haymaking or about the latter part June, according to your corresponde informant. At present the toba plants are still in the beds, where th are carefully tended by the grower a watered and weeded daily.

Worthington 8c 2 for 15c

and Lester H. Reidel, for the right to operate between York and Philadelphia as a common carrier of freight. The demands of the local manufacturers for better service between the two cities, it was stated, are opposed by the Pennsylvania Railroad. R. E. Gephart, secretary of the Manufacturers' Association of York, gave the service proposed by the applicant his endorsement and declared that numerous complaints of the service between the two cities had been received and that they concerned both freight and express shipments. Raymond Goodling, who is connected with the local factory of Otto Eisenlohr & Bros., Philadelphia, also testified, among a number of other shippers, in favor of the proposed motor service. No decision has yet been rendered on the application.

Featuring Havana Cadets

Karl Ort, the York aviator who is flying the airplane for the Manchester Cigar Co., in its advertising campaign of the Havana Cadet, the popular 5-cent smoke which is being turned out by the local cigar manufacturing company, left on June 20 on a 10-day trip, which included Reading, Allentown, Easton, Wilkes-Barre, Williamsport, Altoona and other points in eastern Pennsylvania. He will make flights over all these cities distributing samples and advertising literature of the Havana Cadet. The Manchester Co. reports business excellent and the future outlook particularly bright.

The largest factory building in Red Lion, owned by D. Frank Kaltreider, and occupied until several months ago by Otto Eisenlohr & Bros., of Philadelphia, has been leased to the General Cigar Co. It is a three-story brick structure and has room for 150 to 200 employes.

The cigar factory of C. E. Bair & Co., Wrightsville, which had been operating only three days a week, went on full time last week.

The factory of the General Cigar Co. at Spring Grove now employs 80 or more cigarmakers and other workmen. The company is reported to have sufficient orders booked to have the plant operating full time for many months.

Ground has been staked off in Red Lion by Chauncey F. Deller, the Dallastown contractor, for a modern dwelling for Charles A. Rost, tobacco manufacturer of Red Lion. The house will be of large dimensions and will include a garage as part of the dwelling. It will be the most modern in construction of any dwellings in Red Lion and will cost approximately $40,000.

In celebration of the 42nd birthday anniversary of Mrs. John F. Reichard, wife of the proprietor of the Manchester Cigar Co., this city, a pleasant social was held at the Reichard home, 1401 East Market street. Mrs. Reichard was the recipient of many useful and valuable presents, consisting of silverware, cut glass, linens and money.

Supervises Packing

Richard Baum, of J. Cohn & Co., is still in Porto Rico, purchasing tobacco for his company, and supervising the packing.

In New Offices

Pedro Costa, leaf dealer and packer of Porto Rican tobacco, is now installed in his new offices at 162 Front street, where he occupies light, convenient quarters on the first floor. He has received word from his brother, Artura Costa, in charge of their Porto Rican interests, that they now have about 3,500 barrels of tobacco on hand. The first shipment of the new crop is due about the middle of July.

Inspecting Local Market

D. H. McCarthy, of H. Fendrich, Inc., is spending the week in New York, inspecting offerings in the local leaf market, and conferring with William Quanjer, of the Fendrich leaf department.

Baltimore Market

Prices Range Higher

BALTIMORE, Md., June 21.—Gieske & Niemann, leaf tobacco merchants, make report as follows:

MARYLAND.—Receipts this week were 481 hogsheads, against sales of 544 hogsheads. Prices were higher on practically all grades.

Since January 1, receipts this year were only 3,471 hogsheads, or about 10 per cent of the crop, and which is a much smaller percentage than usual.

OHIO.—Receipts 20 hogsheads, sales 14 hogsheads.

Association Data

The Leaf Tobacco Association of Baltimore City, issues these statistics for the week ending June 20:

MARSHALL FIELD

NO OTHER CIGAR IN AMERICA LIKE IT
IT IS DIFFERENT
THERE ARE REASONS FOR IT

The manufacturer has devoted his life in the science of tobacco curing, and the art of blending. The objectionable properties which tobacco contains are eliminated, such as Rosin Gum which makes tobacco strong, and the natural Ammonia which makes tobacco sharp and bitey. It is then ripened, mellowed, and blended.

All Marshall Field Cigars are

Philadelphia Sees Continued Cigar Improvement

Increased Imports Confined Mainly to Larger Manufacturers —Gain in Sales During Past Week Was for "Vacation" Goods and for Replenishing Regular Retail Stocks.

PHILADELPHIA, June 26. — Continued improvement in the cigar manufacturing industry, which, however, never was dull for the big producers having national distribution, and which at its quietest times was merely a slight reaction of temporary nature from the unusual activity of the earlier months of the year, was the outstanding feature of the week. Just as the real business of the past half year was concentrated in the plants of the big producers, so, too, the additional impetus of the last week was restricted to them.

The gain noted during the past week is attributed not only to extra buying for special occasion of the vacation period, but as well to general buying by distributors and also by retailers to replenish their shelves. Apparently some of these bought more heavily in January, February and March than conditions then existing really justified. That resulted in the period of pause along in April and May. Now the market seems to have absorbed all of the earlier commitments and is ready for a new supply.

Confidence of the buyers is shown by the fact that despite their earlier experiences in over-buying they are again placing large orders because of the inviting prospect for the future.

Better Conditions in Leaf Trade

Better conditions are reflected in the leaf dealers' experiences. They report buying as having picked up considerably all along the line during the last week or so. High prices continue firm in Pennsylvania, Porto Rico and Sumatra and with no signs of weakening. Offerings are not large yet, but an increase is anticipated shortly. Samples of the new crop of Porto Rico are in the market, and while they are higher in price than a year ago they are regarded by the dealers of better quality. Deliveries will be made the latter part of July or early in August.

Retail trade in the city is not quite as good as the manufacturing is in the big plants. State business is growing and is regarded as generally satisfactory.

Congress Increasing Production

Although the executive offices of the Congress Cigar Co. will not be removed from present headquarters to its mammoth new home at the southwest corner of Third and Spruce streets, production at the rate of 40,000 per day is already being secured from the comparatively small body of hands which has been accommodated in the new building. Artisans are rushing it to completion. Only the finishing touches still remain to be done. The Congress headquarters recently enjoyed visits from Abe Sauber of Clafter & Sauber, Youngstown, Ohio; Walter Sutter of Havana, Cuba, and George Kraus from the New York office. William S. Paley is on a trip to Chicago. Willis A Andruss, sales-manager has returned from a swing through New England. All the members of the firm are now commuting to the shore.

Seeking More Factory Facilities

An additional factory is being sought by Allen R. Cressman's Sons in order to keep production up with orders. In addition to the headquarters factories on Third street, Philadelphia, the firm maintains branch factories in Camden, Allentown and Bethlehem and a warehouse in Lancaster.

El Producto Activities

On the return during the week to the Philadelphia headquarters of Salesmanager Frank T. Will and Benjamin L. Grabosky of the G. H. P. Cigar Co., Third and Brown streets, there was announced the appointment of Harry P. Stamm as manager of the newly opened Detroit distribution branch at 2130 Grand River avenue. The new distribution offices and stock rooms will be directly under the supervision of the G. H. P. Co., its former distributor, J. L. Marcero & Co., having been obliged, through the ill health of Harry Bumps of the Cigar Department, to discontinue the cigar department, a contributing factor being the increase of the firm's candy department. The new offices will take care of the needs for Detroit and environs and will carry a large stock on hand for the speeding up of service in the locality.

Extensive alterations are being made to the property at 24 South Second street, but the retail business of Benjamin Kane, which occupies the first floor, is being continued with little interruption.

Extending Box Factory Equipment

Extreme necessity for increased production is being experienced by Monroe Jarrett Sons, cigar box manufacturers, Randolph and Jefferson streets, and to secure it there is being continued the extensive installation of new equipment.

One of the latest units to be added is the automatic Hooper Wood Printing Press for printing on boxes. A 100 per cent increase of labeling output has been secured through the installation of several automatic and specially constructed machines, each of which works as speedily as five girls. An increase in the printing has been attained, the gain being estimated at 300 per cent. Production is now at 50,000 boxes per week.

Bayuk Visitors

Headquarters visitors of the week to Bayuk Brothers, Third and Spruce streets, included Thad W. Griffin, Virginia and Carolina representative; A. B. Creech, representative in Texas, who ran up from his home in Greensboro, N. C., on a vacation trip, and George A. Memyss, representative in the New England district.

Order for Dryers from China

Shanghai, China, sent a call across the seas to the office of Proctor & Schwartz, Inc., manufacturers of tobacco dryers, Seventh street and Tabor road, for two machines of large capacity. The customer now has in operation six Proctor & Schwartz machines of smaller capacity and desires to supplement these by the addition of the two just ordered. Under the direction of Manager Fred Kershaw there are being installed several machines for the Burley Tobacco Growers Co-operative Association, Kentucky.

Action Against Frishmuth

John C. Whitney Frishmuth, Jr., of Haverford, a member of the bankrupt Frishmuth Bros. Co., tobacco manufacturers, during the week was held under $50,000 bail by Magistrate Arthur at Ardmore, the amount, however, subsequently being reduced to $25,000, for further hearing in Williamsport on the charge of selling stock in the company of which he was treasurer at a time he knew it to be insolvent. The charge was brought by J. H. Reed, a Williamsport, Pa., business man, who alleged that he was induced to invest $51,000 and that a few days afterwards he learned that the company had been adjudged bankrupt. Reed said he had endeavored unsuccessfully to have his money returned. When Frishmuth learned that a further hearing was to be given he made no defense. He stated afterwards, however, that the action was started merely by disgruntled stock holders to force payment for losses sustained on their investments.

After 45 Years

CALAIS, Me., June 23.—A. A. McClaskey, who has been traveling salesman in New Brunswick, for J. Bruce Payne, Ltd., cigar manufacturers, Granby, Quebec, for the past 20 years is retiring from the road at the end of this month. He has been widely known as he has been on the road for the last 45 years, and is now to enjoy a well earned rest. He has always ranked high as a salesman and has a host of friends who will regret his severing a long time connection and who will miss his genial and cheery greetings as well as his highly entertaining anecdotes. He may make his home with his son, Harry (Henry Burr) in New York or with his son Frank in Boston.

Possibly You Did Not Know You Had This Protection

I find it is a good thing, every few months, to explain to business men the extent of the protection which the law gives them for such appurtenances of their business as labels, brands, containers, special designs, special styles and shapes of merchandise which they have neither patented, copyrighted nor trademarked, but merely have continuously used. Every once in a while I get a letter from a reader who says somebody is copying something belonging to his business, but he doesn't suppose there is anything he can do, as he never obtained patent, trade-mark or copyright registration.

I always tell these correspondents that there may be a great deal they can do, even though they have never protected their design or brand, or label, or whatever it may be, by either copyright, patent or trade-mark registration. They still have another form of protection which is called the law of unfair competition (it has nothing to do with the phases of unfair competition covered by the anti-trust acts), the gist of which is that when a man has adopted any device whatever, in connection with his business, which has come to be characteristic of it, and by which the public has come to recognize his business or his goods, nobody else can take it from him, or infringe upon it, or copy it, if the natural tendency of such infringement would be to cause confusion between the two businesses in the public or the trade mind. He doesn't need to have registered protection of any kind; the law gives him the above protection as a natural right, and because allowing somebody to steal the characteristics of his business would be allowing unfair competition.

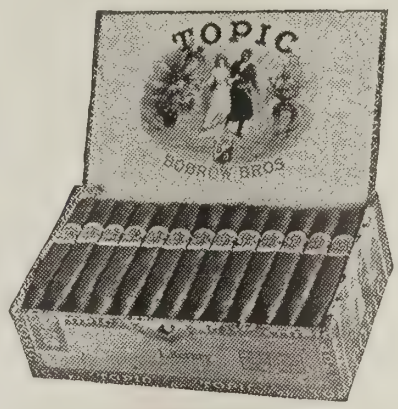
A case which supplies an interesting illustration has just been decided. It concerns the making of brooms, but the principles laid down fit any other line as well. A concern called the Hamburg Broom Works had made brooms for twenty-seven years. In 1917 it went into special brands and made three in particular. One called Puritan had an enamelled natural wood handle, finished with two bands of white velvet, three inches apart, and of certain size and place on the handle. The broom was sewed with white thread, in a certain way, and each broom bore a white silk or satin label bearing the manufacturer's name. Another brand, the Eclipse, resembled the Puritan, except the velvet bands were blue and the sewing was blue instead of white. The third brand, Uncle Tom, had an enamelled black handle, with black velvet, black sewing and black cord.

In 1919 some of the employes of this concern pulled away and went into business for themselves. They also originated three brands, the names of which had no resemblance to the Hamburg Co.'s three brands. But outside of bearing different names, the three new brands were almost identical with the Hamburg Co.'s three. They had the same handles, the same colors and quite similar labels. The copy was so close that anybody would have been deceived. No effort was made to deceive the dealer into believing they were Hamburg brooms, but the infringers were plainly supplying the dealer with the means of deceiving the public.

The Hamburg Co. had never obtained any kind of registered protection.

Suit for injunction was entered, and the injunction was granted, although the Hamburg Co. had to go to the Appeal Court to get it. The lower court said "other broom manufacturers used polished handles, velvet bands, sewing cord of various colors. Only your label is really distinctive. You can protect that, perhaps, but you can't protect all of the characteristics of your brooms, because other people are already using them."

But the Appeal Court said this was wrong and ordered the injunction to issue. This extract from the decision so clearly describes the law of unfair competition that any reader hereof can apply it to his own case:—



"That a number of details of appearance, none of which singly could be exclusively adopted by a manufacturer may be combined or collocated so as specially to identify and distinguish his product from his rivals' and be entitled to protection by courts of equity from unfair competition is settled by a wealth of authority in other jurisdictions. The most universal element may be appropriated as the specific mark of a plaintiff's goods, if it is used and claimed only in connection with a sufficiently complex combination of other things. A court of equity will not allow a man to palm off his goods as those of another whether his misrepresentations are made by word of mouth or more subtly by simulating the collocation of details of appearance by which the consuming public has come to recognize the product of his competitor. While no one can have a trade-mark monopoly in color of paper or shape of label, in color of ink or in one or another detail, a general collocation of such details will be protected against an imitation the natural result of which is to deceive purchasers, and which must, therefore, be presumed to have been

the weather has anything to do with the quality of the cigars you make, if encased in our famous wood package, you will know they are safe from climatic changes.

OTTO EISENLOHR & BROS. INCORPORATED
PHILADELPHIA ESTABLISHED 1850

TOBACCO MERCHANTS' ASSOCIATION OF THE UNITED STATES

OFFICERS AND EXECUTIVE COMMITTEE

Jesse A. Bloch, Wheeling, W. Va., president.
Chas. J. Eisenlohr, Philadelphia, Pa., ex-president.
William Best, New York, chairman executive committee.
Major G. W. Hill, New York, vice-president.
George H. Hummel, New York, vice-president.
Julius Lichtenstein, New York, vice-president.
H. H. Shelton, Winston-Salem, N. C., vice-president.
Wm. T. Reed, Richmond, Va., vice-president.
Harvey L. Hirst, New York, vice-president.
Asa Lemlein, New York, treasurer.
Chas. Dushkind, New York, counsel and managing director.

adopted for that purpose. They (defendants) had the right to use the background used by the complainant, they had the right to use the clipped corners.

"The principle upon which the courts proceed, is that it is unfair trade competition for a manufacturer to adopt a mode of conduct, the natural and probable effect of which is to deceive the public, so as to pass off the goods or business of one person for that of another. A manufacturer has no right so to dress up his product or inclose it in a package so like that of a rival manufacturer as to deceive a purchaser or enable a dealer to do so.

"It is not necessary that it be shown that the public has actually been deceived by the imitation, but only that it has a tendency to deceive. The gist of the action is the intent to get an unfair benefit from another's trade.

"Unfair competition, embracing an infringement of a trade-mark, may be said to be distinguishable in law from the latter in that it does not necessarily involve the question of the exclusive rights of another to the use of a name, symbol or device. he gist Tof the offense seems to be whether the act done tends to pass off the goods of one for those of another, or to deprive such other of his rights; and the basis of the action is fraud or deceit, misleading the public in the purchase of goods. * * * The test, so far as the defendant is concerned, is whether the thing done was calculated to deceive an intending ordinary purchaser, not necessarily an intelligent one, in that the goods sold were not those of the manufacture called for. The true theory is the protection of the public, whose rights are infringed or jeopardized by confusion of the goods produced by unfair methods of trade—as well as the owner's right to be protected from such methods.—*Copyright, May, 1923, by Elton J. Buckley.*

Coming Home Soon

H. M. Duys, of H. Duys & Co., who is attending the Amsterdam and Rotterdam inscriptions, is expected to return to New York about July 16.

Showing Sumatra Wrappers

Harry Lloyd, representing D. Dreux, Inc., is in Ohio this week, displaying samples of his organization's fancy Sumatra wrappers.

Keystone State Business

Ray C. Clark, of D. Dreun, Inc., returned to headquarters this week from Pennsylvania. Mr. Clark reports a decided improvement in business in the Keystone State.

To Return from Porto Rico

Ben Hamburger, of Hamburger Bros. & Co., who has been purchasing tobacco for his organization at Porto Rico, is expected to return to New York about July 2.

To Attend Inscription

Isaac Meyer, the well-known leaf dealer and packer, now enjoying a long vacation in Europe, accompanied by his wife, has cabled to his office, stating that he will attend the June 25th inscription.

Covering Middle West

E. A. Dinnsen, of the Industrial Leaf Tobacco Co., is covering the middle west and expects to be absent from town for several weeks.

Chicago

(*Continued from page 56*)

Business Going Well with Hickey Bros.

Wm. A. Hickey, of Hickey Bros., Davenport, Iowa, writes in to say that business continues fair. Their Moline stores show quite an improvement over the same period of last year, as the factories in Moline are now working 65 per cent and a year ago they were working 15 per cent. Hickey Bros. are distributors for the General Cigar Co.'s brands, Otto Eisenlohr & Bro., Garcia & Vega, F. Lozano, Son & Co., and other brands. They operate 12 retail stores in Davenport, Rock Island, Moline and Des Moines, and are classed as the leading cigar merchants in the Middle West.

Rosobro Arrives

N. W. ("Doc") Rosobro, now general sales agent for the New York-Tampa Cigar Co., has arrived in Chicago. "Doc" will cover the middle west from here and expects to move his home from Detroit to Chicago. On his way west from the New York headquarters of the New York-Tampa Cigar Co. he opened seven new jobbing connections on Jenny Lind and Personality, Tampa made cigars. He will announce Chicago connections shortly. A large sales force will help him to secure a quick distribution for these two pet brands made by Fred Davis.

Wm. J. Seidenberg of the Wm. J. Seidenberg Corp., New York and Tampa, spent several days at the Chicago branch.—H. L. H.

Connecticut

(*Continued from page 67*)

kins as director and treasurer of the station.

The Schulte Cigar Co. is to open a large store on Asylum street early in July.

Remodeling Store

The O-Zim Cigar Co. is remodeling its store, and when alterations are complete will add new lines and have an up to date cigar shop.

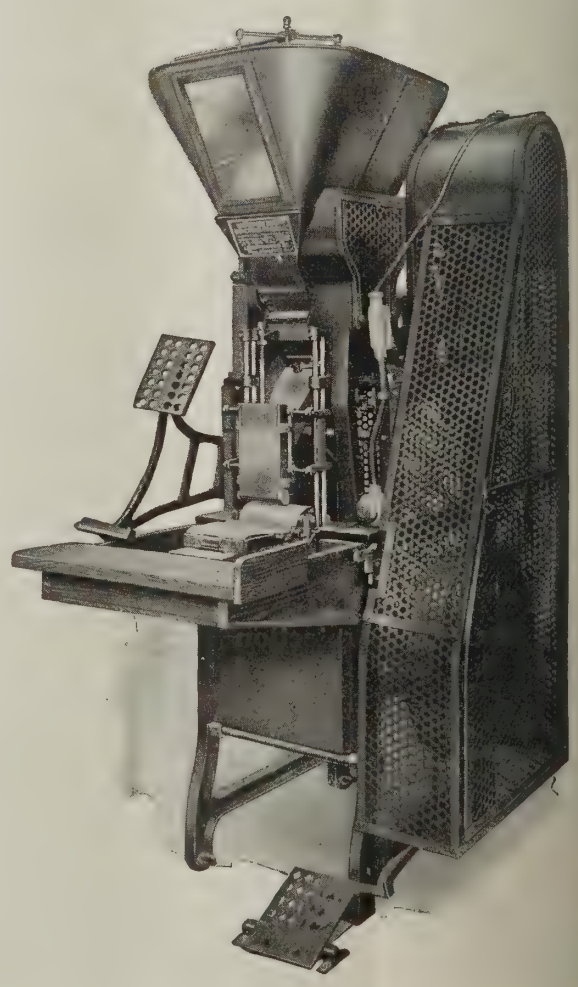
Prices on cigars seemed to have reached their lowest level, and with the advance in prices of all kinds of tobacco there will be a tendency toward advancing prices of cigars.

In New Quarters

The Connecticut Leaf Tobacco Co. is now located in its new quarters on State Street, having moved recently from the Windsor Street location. Mr. Katz bought quite a lot of 1922 tobacco and will soon be ready to show samples to his friends in the trade.

ANNOUNCEMENT

You can now **BUY or RENT** latest improved Liberman Power Scrap Bunch Machines—illustrated at the right.



The work they are now doing in many high grade cigar factories PROVES that they:

1. **Make Perfect Bunches** of any size and shape, out of any size scrap, large and small together, always evenly distributed.

2. **Enormously Increase Production**—4,000 to 7,000 Bunches Daily according to speed of operator.

3. **Save Binder** enough to more than pay for the machines.

4. **Have no complicated mechanism** — requiring no mechanic to adjust and keep in order.

bacco Association of U. S. Holds Big Meeting

enty-ninth Annual Convention a Splendid Success—Various Important Matters Considered — Interesting Addresses Made—Long List of Those in Attendance.

SHEVILLE, N. C., July 1.—The twen-inth annual convention of the To-o Association of the U. S. was held ne Grove Park Inn, in this city, last rsday, Friday and Saturday.

he attendance was large and many he most influential and important of the tobacco industry of the South present.

embers began to arrive on Wednes-by every train and continued coming lay Thursday.

n Thursday the committee on Dues appointed consisting of W. T. Clark, B. Carrington, J. R. Miller, E. G. in, E. J. O'Brien, Jr., J. A. Clark, I. Reed.

Standing Committee to meet with Warehousemen to fix dates for the ing of auction sales was as follows: . Currin, Robert Haskins, O. C. ory, W. T. Clark, A. B. Carring-

ne Warehouse Committee is com-d of: F. D. Foxhall, Greenville, .; W. G. Fenner, Rocky Mount, N. S. H. Anderson, Wilson, N. C.; G. Bowen, Lake City, S. C.; James H. on, Danville, Va.; J. F. Brinkley, nville, N. C.; W. H. Adams, J. H. iams, W. J. Rogers, Warrenton, N. E. P. Wooten, Frank P. Davis. ston-Salem, N. C.

Second Day's Session

esident T. M. Carrington opened the nd day's session of the Tobacco As-tion of the U. S. at 10:55 Friday ing. More than one hundred were nt.

ecretary's Brief But Interesting Report

ecretary Corbell read a short report ing the period from the time he was nted secretary, March 12, 1923, to He reported that 30,000 circulars been printed and distributed, advis-ways and means to combat the to-bug. Also that the first bulletin of the Association had been published and that it would continue to make monthly visits to members. He also stated that 26 Banks had become members of the Association.

This report was well received, and the appointment of Mr. Corbell as permanent secretary means much for the Association. Mr. Corbell is a live, energetic and practical young man.

The treasurer made a satisfactory report, which showed a balance on hand of $2,095.85.

President Carrington's Annual Report

President Carrington then read his annual report, which was as follows:

"At the last meeting of the Board of this Association, it was resolved by the North Carolina members that this convention should be held in June at the Grove Park Inn, Asheville, N. C., and when the members from North Carolina are gathered together they generally, if not always, have resolutions agreed on adopted unanimously; though on this occasion the recollections of our meeting here several years ago were sufficiently pleasant for every member of the Association to feel that he would like to meet again under the roof of this splendid and unique hostelry.

"The magnificent scenery, in the midst of which we are now sojourning, should not only give us the opportunity of enjoying it, but should put every one of us in a frame of mind and physical condition that the very best results for unselfish consideration of the many questions that may come before us for the good of our calling should be obtained.

"We are here in the great Old North State, the state which has not only assumed the fourth place in the ranks in the value of agricultural products, but is making the most marked headway in manufacturing. Not far off is situated the biggest tobacco factory in this country, and at but a little distance there exists a furniture factory second only to one in the United States. The State's progress in knitting goods and the manufacture of cotton of all kinds is now taking the foremost rank of all the states. In fact, many of the northern mills, on account of the climate, labor and cheap power, are looking very seriously to making any extensions that may be necessary in the South rather than in the North, and these northern places held the lead in cotton manufacture so long.

"The why and wherefore of all this is something plus the natural advantages of North Carolina, and without doubt the reason lies in the energetic and unselfish efforts of the citizens of this state in taking a leading part and responsibility in her commercial advancement. A thoughtful writer has said that what counts in government and business is character, and it is the one thing that will stand out in the memories of men when the recollection of those who assumed prominent places by truckling to the expediences of the hour, and when whose brief strut is over, will soon be forgotten.

"The satisfactory condition of labor in the South is particularly interesting. This is illustrated in the most pointed way by one of the big cotton factories at Greensboro, another at Danville, and some other points, and also at the Newport News Drydock & Shipbuilding Co., which are paying the greatest attention to the moral, physical and social welfare of their employes. Several of these places have a Young Men's Christian Association on the broadest lines, affording every opportunity for healthy re-

(*Continued on page* 5)

First Cigars by Wireless

The first box of cigars ever sent by wireless was sent yesterday, July 4, by L. M. Boomer to General T. Coleman DuPont, a passenger on board the *Leviathan* at sea. It inaugurated the wireless smokers service instituted by Faber, Coe & Gregg, operating the cigar department on board the new vessel.

In his wireless Mr. Boomer said: "In ordering the first box of cigars by radio, I am happy to mark the inauguration of wireless service for smokers, an important epoch in cigar history."

Prices Higher Than Ever At Amsterdam

AMSTERDAM, Holland, June 30.—At yesterday's Sumatra inscription, the prices on American grades were higher than ever. Upwards of 2,200 bales were purchased for the United States market. The principal American buyers were:

H. Duys & Co., 852 bales, comprising 353 bales of Deli My/QM, 104 bales of Deli My/C, 99 bales of Deli My/NO, 68 bales of Deli Ba My/TH, 77 bales of OK/Deli, and 151 bales of various fancy marks.

General Cigar Co., 627 bales.

Arthur Bornholdt Co., 300 bales, including two running lots of Senembahs My/Senvah and Senembah My/M, both first footleaf.

American Cigar Co., 212 bales.

C. J. Waxelbaum & Co., 100 bales.

Manus, Muller & Co., 50 bales.

E. Rosenwald & Bro., 50 bales.

L. Schmid & Co., 50 bales.

Herzog & Sarluy, 48 bales.

D. Dreux, Inc., 10 bales of Deli My/Kb/Langkat.

Connecticut Association in Annual Meeting

HARTFORD, June 30.—The Connecticut Valley Tobacco Growers' Association held its annual meeting here Tuesday afternoon. President Joseph W. Alsop made an interesting report.

"We have," he said, "certainly stabilized the market, as after our directors have set prices, these prices have not been deviated from. We have made a good start in co-operatively handling the various problems which beset us as growers, as for instance through the work which has been done to control wildfire, and the group hail insurance policy which has been written, which represents a saving to our members of over $350,000.

"I think we can feel that the grading and pooling system we have set up has come reasonably near assuring to each member returns in accordance with the actual value of his crop as compared to the returns received by other members.

"The big fact for us all to bear in mind is that we have packed the New England

t the smallest overhead in the his- f the business; have graded the tobacco on its merits and have sold rt of it which is ready at the high- ices for the various grades ever . Our customers are satisfied. nembers who produced crops of uality and weight will receive re- heretofore unusual.

Men the membership campaign end- August 1, 1922, the organization ttee found itself in possession of ts signed by 3,312 growers and g 23,079 acres, this being 83 per the acreage of all New England , exclusive of shade.

September 1 Mr. Griffin was elect- eral manager and we commenced k of planning for the handling of 25,000,000 to 35,000,000 pounds of from all parts of the Connecticut usatonic valleys.

June 1 the association had packed cases of Havana seed tobacco; ld practically all of this tobacco, l billed 17,068 cases. Of broadleaf , the association had packed 28,732 and had sold 2,761 cases, this lat- sisting of low grades and a few of . 2 seconds. The remainder of the af will not be ready to market out September 1. At least 80 per the tobacco already disposed of en sold direct to manufacturers, list of customers comprises prac- all the leading firms of this coun- g our types of tobacco."

Alsop gave details of the financing association and said it had been ry to use only $5,250,000 of the $8,000,000 arranged for.

nager Griffin Reviews Work

ral Manager Fred B. Griffin gave w of the work of securing ware- and of the operations of assorting, and sweating the 1922 crop.

factors were against the early g of the crop, both due to the r, said the general manager. vas the absence of good damps for down, when many of the farmers ir tobacco ready for the ware- the snow was too deep to carry

broadleaf tobacco came later than rana seed to the warehouses, said ffin, and the speed of its delivery farmers pretty well satisfied.

is likely to be this fall more of nd tip tobacco and the Havana tobacco than in 1922 and it will be necessary to get larger quarters for handling the two varieties, he said. Nearly all of the Havana seed of the upper grades has been sold.

Mr. Griffin said he believed the market for boradleaf would be good and recommended that outside of the fillers and brokes no sampling of broadleaf be done until September. Then the tobacco will be thoroughly dried out and it will be possible to pool it in the proper pools and grades in the best possible manner. "Too early sampling was not advisable," he said.

"From the inquiries we are getting now, it looks as if the broadleaf crop would move just as easily and as readily as did our Havana seed. Our tobacco is in first-class shape and it will be nearer standard than it has ever been before."

Mr. Griffin said it would be of great benefit to have two storage houses on the east side of the river, one in South Windsor and one in Glastonbury, where the tobacco in the immediate neighborhood could be packed and sweated.

Secretary William F. Whitmore in his report said the crop order service had been of great benefit to the financial credits of members of the association. The orders had aided members to clear up unpaid bills, especially for fertilizer, and the provision for payments of fertilizer bills had frequently forestalled probable legal proceedings by fertilizer manufacturers.

Mr. Whitmore reported that since the membership campaign closed August 1, last year, there had been 102 new membership contracts signed, covering 257 acres Havana seed, 171 acres broadleaf and three acres Havana prime. An active campaign for new members seemed highly desirable, said Mr. Whitmore.

A resume of what the field service department had accomplished since its organization August 28, 1922, was given by Judge Levi P. M. Hickey, chief of field service.

In each of the twenty-one districts a local branch was organized, and a chairman, secretary and advisory committee of five growers elected to serve as local branch officers for a year. In the twelfth district, because of the scattered towns two branches were organized. Monthly meetings have been held at points extending from Portland, this state, on the south, to Hinsdale, N. H., on the north, and from Ellington, on the east, to New Milford, on the west.

creation and giving an atmosphere of consideration that has a tremendous influence on the attitude of employes to employers. In such an atmosphere, radicalism cannot long exist, and the effect on the minds of employes that there is consideration shown them far and beyond what they are simply employed to do has been shown to be a most effective means of establishing and sustaining good will that must exist for effective work.

"In many other factories consideration is shown employes by establishing means of recreation, insurance funds and caring for the sick, along the same lines. All of this tends to keep steady employment, which is a big factor in the success of any manufacturing concern, and it is in the South, where there are comparatively few of the foreign-born and radical element, that this sort of work can be carried on in the best way, and

of Tobacco Governed by Demand

ur particular calling has had to meet
stem many adverse and conflicting
nts in a most pronounced way, but
ng as we will diligently and honest-
t character and capacity in our
ess there is no reason for any one
discouraged. As long as the size
e crop is contingent upon so many
le conditions, good and bad, which
be studied and intelligently inter-
l, and as long as the services of the
ers of the Tobacco Association are
ble, so long will there be a neces-
place for those who furnish tobacco
ontract, commission, or carry a
to meet future demands.
e possible value of tobacco depends
ly on the ultimate demand, and
fore to the greatest degree this
d is contingent upon the quantity
bacco raised. Each species is al-
a trade unto itself, so each has to
died with but little bearing on the
gate of the whole crop, and no one
ell with any degree of accuracy
days before the crop is harvested
the outcome will be.
st year we saw a diminished crop
me species, on account of heavy
just before the cutting and curing
. These conditions had to be
d and acted on with the greatest
leration, and those who have com-
t agents on the ground will be more
compensated for the small amount
out for commissions, charges, etc.,
e intelligent advice that they will
e.
utside of the money gradually ac-
lated by commission merchants, no
sums have been realized except by
unforseen shortage of tobacco,
it can be taken advantage of by
who have bought heavily on a
usly low or moderately priced
The conclusion of the whole mat-
that it will be a long, long time be-
members of this Association will find
selves without an opportunity to
ably pursue their calling, not so
as they continue to act conserva-
, honestly and intelligently.

Association More Active

ur Association, since its acquire-
of an all-time secretary, has been
active in several matters. The
l or bug proposition took up con-
ble time and a tremendous amount
rrespondence, and the co-operation
e many interests called in to help,
considerable headway in eliminat-
is pest, and by continuance of the
ds pursued there is no reason why
uld not be gotten rid of entirely.
e Association took up the matter
rchasing coal for its members in
olesale way, but found that there
so many bad conditions existing
the purchaser's viewpoint that very
could be done on this year's supply
al. There are many hundreds of
mines in operation, and on account
e shortage of cars and bad labor
tions none seemed to be willing to
to any contract at a price that the
's of your Association thought was
nough; $3.75, and in one instance
was the best price we could get,
hortly after these prices were de-
some coal was offered at from
to $3.25. Your attention should
rticularly called to the character of
oal, which, at the present high
t rate and the high cost of coal,
est that can be gotten should be
and what is known as the Navy
ard (Pool No. 1) is the grade of
hat should always be insisted upon,
from the New River or Pocahon-
strict.
e railroads have ordered a great
new cars and are repairing a great
old ones, and before another year
ust to make some agreement by
the Association can purchase the
n a satisfactory basis, thus saving
embers a good many dollars. With
emand for the coal we want com-
rom the Lakes and the Pittsburgh
t, and at times a very large export
nd, the future is very hard to see.
Federal Fuel Distributor, F. R.
eigh, on June 4, advised every one
re coal to their utmost capacity,
to be well fortified against the big
demand which is expected to come on account of anticipated business in September. Whether this big movement will come, no one knows. The very high prices which most all manufactured articles are now bringing may have a tendency, as they already have to some degree, to curtail business. Many of the articles are entirely too high, and as long as it is possible for manufacturers to get big prices very few of them are going to voluntarily reduce them, and many callings seem not to have quite gotten over the war-time 10 per cent plus, and this plus means very frequently 50 per cent.

Not Likely to See 1913 "Normalcy"

"It is the fashion now to speak of coming back to normal times, but if normal times means the prices of 1913 many of us will never see them. Too many people have made money and have gotten into the habit of high living and buying without considering cost, which has had a psychological effect on the whole country. The plethora of riches and money-making and an extravagant spirit which have taken hold of a large number, have had their influence on all with whom they associated; and conditions are such that in many places for any one to ask the price of anything simply announces himself as a piker, and one of these days something is going to break, unless a safe and sound public opinion takes charge and living in all of its extravagant phases of today radically changes.

"We have many governmental agencies, like the Coal Distributing Bureau and the Labor Board, that can only advise, and they really have no power of enforcing any of their suggestions, and this impotence renders their efforts futile. Every representative of the Government should be armed with authority, and the laws enacted for these boards' administration should have teeth in them sufficiently sharp to make their rulings mandatory.

The Leaf Situation

"The leaf situation is in fairly satisfactory condition. In fact, outside of the tobacco held by the Co-operative Associations, which may be small, there is the smallest stock on hand for sale that has possibly been for a great many years.

"The bright crop of last year was about 420,000,000 pounds, sold at an average of about 27½ cents.

"Dark Virginia, about 53,000,000 pounds, sold at an average of about 19c.

"Dark Kentucky, about 300,000,000 pounds, sold at an average of about 14½ cents.

"Burley, of Kentucky, Indiana, Ohio, West Virginia and Tennessee, about 315,000,000 pounds, sold at an average of about 29 cents.

"At all times the price of tobacco has been governed by the supply, and the demand has not varied materially for years, except a gradual increase for American tobacco. Farmers must recognize the immutable law of supply and demand, and an intelligent effort should be made to stop over-production, which has uniformly followed high prices unless the seasons curtailed production. The area of tobacco should not be extended. Tobacco is produced in a comparatively small territory and can be very largely increased by the surrounding communities planting tobacco, and every pronounced enlargement will be fraught with the danger of over-production. The farmer is not prepared either financially or physically to hold his tobacco, and whether it goes on the auction floors or into the Co-operative Association, prompt realization is almost a necessity to him. The farmer should produce his home needs first and then plant what tobacco he can take care of properly. This idea cannot be too much stressed. Small crops spell better selection of land, better cultivation and care in every way, and consequently, better tobacco brings better prices.

Manufacturing

"Manufacturing has steadily increased. The advance statistics from government sources show that 1923 will exceed all other years, provided the balance of the year keeps up, and will result in taxes being paid on 370,000,000 pounds of plug and smoking; 44,000,000 pounds of snuff,

Twentieth
ANNIVERSARY

A Unique Record

Not another cigarette that was popular when Fatima was introduced, over twenty years ago, has a big national sale today.

Fatima has out-distanced them all, maintaining its sales-leadership over all other brands at or above its price. This record marks it as the most skillful blend in cigarette history.

Today Fatima is everywhere recognized as the one cigarette of really exceptional quality at a reasonable price.

FATIMA

Liggett & Myers Tobacco Co.

:d 75,000,000,000 cigarettes. This in-ease has been quite marked, nevertheless has been too gradual to really demand :y larger production than has taken :ce, and reports from crops from most the sections that are used by our :nufacturers indicate that they will be :fficiently large to comfortably take :re of their needs, but not any over-·oduction, and should be taken at re-merative prices to the formers. There very little evidence of any new :nufaceurers starting. The cost of :vertising, which seems to be a :g essential factor in efficiently market-g tobacco, has to be so persistent and expensive, to accomplish its object, :at it is very hard indeed for any new :lands to make headway.

"The large factories are doing well, :t it is believed that their net profits :r pound are not excessive, and what :unts with them is reduction of over-:ad, as well as the expense of financing :d having their raw material properly :·egathered so as not to be penalized, :e of which combined gives every eco-:mical advantage to the factory doing :arge volume of business. New brands :e very hard indeed to establish and :en when established the public cannot :l counted on to consistently take them. :f course, after the large manufacturer :s spent many dollars in establishing :l. brand and advertising same, and :ining the faith of the consuming pub-:l, the utmost care must be exercised :i seeing that the grade and manufacture :i properly kept up to the standard.

Freight Rates on Leaf Tobacco

"Freight rates are a considerable fac-:· in tobacco, and it is particularly im-:rtant that the railroads should give :e subject of freight on leaf tobacco :eir best consideration. It is the one :w material that by carrying a very low :ight rate the manufactured article is :re than doubled. For example, when :hogshead of tobacco comes South or :st, weighing 1,150 pounds gross, and :00 pounds net, at 61 cents, it amounts :t $7.01; and this hogshead of tobacco, :en manufactured and put in paper, :s or boxes or cartons, and then crated, :ll weigh 3,000 pounds, which, to the :. Louis district, at $1.50, will amount :t $45; to the Pacific Coast it is $2.50 :r hundred, or $75. In other words, :re is every incentive for the railroads :o encourage the manufacturer of to-:co as far as possible from the center :f production.

"The South has a great many advan-:es which do not exist elsewhere, such :s skilled and contented labor, climatic :nditions, which is one of the greatest :tors, and an honest, conscientious su-:intendence of all the forces employed, :l this Association should apply its en-:ies to the utmost in getting the rail-:ds to give preferential rates on leaf tobacco. This not only applies to tobacco going to the manufacturer, but also, to some extent, in handling the raw leaf, because local rates are always high, and shipping and redrying adds much volume to the railroads' business.

"The export business has been in a most satisfactory condition. On dark tobacco the European and snuff demand will, or has practically taken, the fair-sized crop of last year.

"A bulletin prepared by the Department of Commerce shows that the average for the last five years of domestic exports amounted to 516,741,000 pounds. Of this,

Great Britain took..41 per cent
France took nearly..12 per cent
Italy took..... 8 per cent
Netherlands took.... 5 per cent

and the other countries a small amount, but recent developments would look as if Central Europe is taking a much larger percentage than heretofore. In this connection I would say that the Department of Commerce, under the able leadership of Secretary Hoover and his accomplished assistant, Dr. Klein, has established what it calls the Bureau of Foreign and Domestic Commerce, the purpose of which is, in a large, unselfish way, to put reputable firms in touch with the various demands of the different countries. This is intended to be done through the consular agents, of which there exist all over the world about 1,000. This bureau has on tap any information that anyone might possibly want, and the matter of exchange, freight rates, tariffs and revenue information can be gotten from it immediately.

"Our effort heretofore to get other countries interested in any particular species of tobacco has been practically through the personal efforts of parties seeking to sell their own goods. This bureau opens up a broader vista and gives the opportunity to their consuls or consular agents to take the question up with the proper authorities in the countries to which they are assigned and suggest that they would look into the question of buying and manufacturing other styles of tobacco from this country than they have been in the habit of using, and especially our bright tobacco for the use of cigarettes and fancy smoking mixtures. It appears a big opportunity exists to get many of the Régie governments, which use but a small quantity of this species of tobacco, to experiment with it.

Improved Shipping Facilities

"The advantages of shipping tobacco from the South are now many. No longer are we dependent on the crowded Northern ports for vessels. Mobile and New Orleans are making tremendous strides in shipments from the South of every kind, and Wilmington, N. C., has a port with every advantage of wharves, warehouses and elevators, that can be used most advantageously, and its progress has been most marked. Hampton Roads port has one of the finest harbors in the world, (certainly the greatest on the Atlantic Coast), and the increase of vessels to and from Hampton Roads has been one of the greatest developments of recent years, and with the continued diversity of demand, both imports and exports, this may be simply the beginning of what these harbors will be.

"The tobacco business is one that promptness of delivery and low freight rates are large factors in the proper prosecution of the business.

"There are several committees to make reports, which are taking up matters of importance to the tobacco trade. This is the largest meeting we have ever had, which indicates that the merits of our Association are being more and more recognized, and a committee should be appointed on every subject that is worthy of consideration, and the members of it should feel a personal obligation rests on them to properly take care of whatever is committed for their consideration.

"We should have every active member of the tobacco trade who is worthy and eligible in the Association. Our records in the past show that we have come pretty near doing everything we have attempted, and we have never approached the authorities at Washington, whether a Republican or a Democratic administration, without getting the very best and almost always favorable consideration. The future is faced with many contingencies, chief among which is the unrest existing in Europe. Great Britain is faced with unemployment, brought about by high wages demanded by the workers, which has prevented Great Britain from competing to the extent she has done in the markets of the world. The chaos that is prevailing in many of the countries of Europe must be settled soon or no one can tell what will happen. The existence of this horrible state of affairs can all be traced back to the selfish and uncompromising attitude of those who have been in power starting with the Kaiser and his crowd and on down to the uncompromising hardheaded opinions of the leaders of the United States and those of many European countries. The man who thinks he knows it all on any one subject and that everybody else is wrong who thinks differently, is headed for a fall, and unless it breaks one of the Ten Commandments every question should be duly considered and is susceptible of discussion.

"It is sincerely hoped that President Harding's idea of a World Court may come about. Any war of any import-

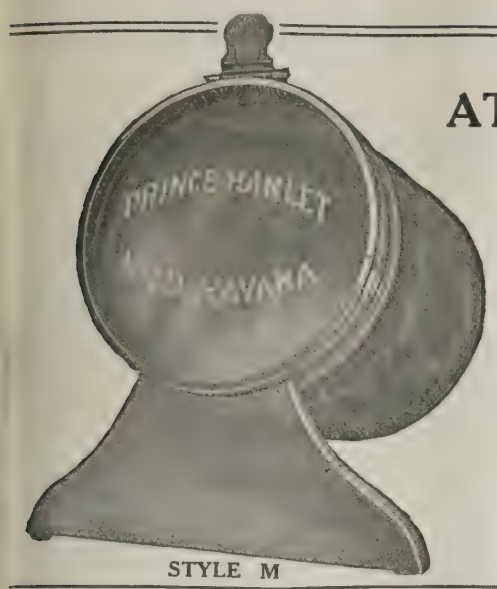
Two ways of Looking at containers

THE men concerned with packing think of cans in terms of price and of behavior in filling and closing operations.

Those concerned with selling think of cans in terms of sales value. They put the merchandising and advertising function of their containers first.

Often enough it really is first in importance.

Our responsibility is to consider both sides and to give you every benefit of our point of view.



When you listen to us don't imagine for a minute that we are only trying to sell you something. We want your good will for a great many years to come. Our success is bound up with yours. We are trying hard to serve you every time we sell you something.

ce that may take place in Europe, is country will certainly be involved, id those who quote George Washing-n, Jefferson and their associates, seem forget entirely that at that time we ere independent of the balance of the orld, but now, with our export trade ing a big factor in our very existence, e cannot be independent; so I think behooves the members of this Asso-ation to do whatever they can to bring out some sort of an organization that ill apply its best efforts to differences opinion to be settled among nations are now settled among individuals. hope when we will have adjourned at we will have adopted measures that ill mean much for our calling, and I ink with what we have seen and ard on this occasion that we can feel sured that it is within our power, and power which will not be denied, to osecute each his business honestly, arlessly and we trust satisfactorily to ir respective constituents.—T. M. ARRINGTON.

Annual Dues

Following the president's address, Col. . T. Reed, reported the result of the ues Committee Conference, which had cided that in future a graduated Scale annual Dues would be in force, com-encing at \$15 as the lowest, and grad-ted up to \$100 as the highest. The xecutive Committee consisting of Col. B. Carrington, John L. Wingo, W. T. ark, W. T. Reed, E. J. O'Brien, Jr., id President T. M. Carrington, as x-officio member of this committee, ould have charge of pro-rating the ssessments.

Col. A. B. Carrington introduced ank Talbott of Danville, Va., presi-nt of the American National Bank, d who is the Danville. He spoke on e subject, of "Capital Credit and haracter" and treated his subject in a ost entertaining manner.

Following Mr. Talbott President Car-ington introduced T. L. Hughes of the ureau of Foreign and Domestic Com-erce who addressed the assemblage, follows:

Urges Co-operation With Department of Commerce

Gentlemen of the Convention:

It has been five years since I have had the pleasure of attending the Annual Convention of this Association, and I want to assure you that I am glad to avail myself of this opportunity to meet with the members of this Association and hear the able suggestions for the solution of the many important problems that are confronting the tobacco industry today, and to tell you something regarding the service that the Department of Commerce has inaugurated and is proffering to the tobacco industry to assist in the promotion of its international trade. It is also my privilege to be the bearer of a message of cordial greetings from Doctor Klein, Director of the Bureau of Foreign and Domestic Commerce, which is that branch of the Department of Commerce more especially devoted to the promotion of our foreign trade.

When I last appeared before your Association at its Annual Convention, I was connected with another government department in the administration of the United Warehouse Act, which provides for a system of federally licensed and bonded warehouses, and the establishment of the system of standards by which tobacco may be graded. I am glad to state that though the administration of this Act has met with some obstacles, its importance as an auxiliary in financing the tobacco crop has not only been recognized by our financial institutions but many factors in the tobacco industry have employed the facilities provided by the Act in financing their operations.

During the past few years, I have had the opportunity to visit most of the important foreign tobacco markets of the world and to realize the conditions with which our exporters are confronted in their effort to retain and increase our volume of exports direct with these countries. Unfortunately, I have seen some of the good will which is probably the most valuable asset in our negotiations with foreign factors dissipated by haphazard, unethical business policies—or utter lack of policies—which had been the most serious handicap to our commercial progress before the war. Furthermore, I have seen financial losses of large proportions which resulted directly from the lack of information regarding certain markets on the part of some of our exporters that the Department of Commerce is in position to furnish. Therefore, the Department of Commerce has undertaken to extend to exporters of tobacco its most generous co-operation to further your exploits in the export field.

I think you gentlemen will agree with me that the crux of the whole situation in the tobacco trade, like every other commercial industry, is the ability of its factors to successfully market their commodity. In view of the fact that about forty-two per cent of our total production of tobacco finds its way into the various foreign markets of the world, and inasmuch as the successful marketing of the entire crop is contingent upon advantageous export sales, I am constrained to believe that with the increasing production the matter of our further developing our export trade must transcend any other single problem in the industry. Consequently, the most diligent efforts should be exerted and the most ingenuous methods must be employed to retain our present markets and create a demand for our product in new fields. The importance of this is especially accentuated by the fact that although our exports of leaf tobacco decreased approximately 85,000,000 pounds during 1922, the imports of our present principal markets during this period were equal to or greater than those of previous years.

Under the administration of Secretary Hoover there has been a constructive development in the activities of the Department that has made the Bureau of Foreign and Domestic Commerce a great liaison between business of the government and by the employment of the same business ethics in its administration as is practiced in successful commercial enterprises we believe we have a Bureau in which American business men may feel that their interests are fully comprehended in their relations with the government.

Soon after he became Secretary of Commerce, Mr. Hoover conceived the idea of establishing in the Bureau of Foreign and Domestic Commerce, divisions devoted to the promotion of trade in their respective commodities. The result of Mr. Hoover's idea was the reorganization of the Bureau of Foreign and Domestic Commerce into commodity divisions, to embrace the many great industrial groups, and such technical divisions as were considered essential to interpret current information regarding tariffs, commercial laws, transportation, etc., for the efficient administration of the commodity divisions.

The men in charge of these divisions have been chosen from the industries themselves, so that they may bring to the department not only specialized knowledge and sympathetic understanding of these industrial groups, but in turn may interpret to our foreign staff the class of information most useful to the trade.

The importance of the tobacco industry in both domestic and foreign trade has been fully recognized by the department in this respect. A division whose activities will be directed towards the promotion of the industry has been established and with the full co-operation of the trade a service will be rendered to tobacco growers, dealers, manufacturers and others comparable to that so efficiently developed for factors in our other major industries.

We want you to realize that the Department wants to continue to co-operate with American Business. You will probably recall the manner in which Mr. Hoover handled the many big problems during the war. When a problem arose he called together some of the best men in the particular industry which it most affected and requested their co-operation in its solution.

Today the same policy is being pursued. The first effort of the Department of Commerce, in treating with one of the great industrial groups, under the reorganization, is to get in touch with the great trade associations and try to solve the commercial problems of the country with their co-operation. As an example

SMOKERS ASSOCIATE GOOD CIGARS WITH WOODEN CIGAR BOXES

It is natural to associate Cigars with Wooden Boxes. Just as a picture of rare beauty is enhanced by an appropriate frame, so the proper container for cigars makes them stronger in their attention-drawing appeal. And the proper container for cigars is the Wooden Box. Wood harmonizes in color and is more pleasing in appearance. It is well to remember that smoking derives its popularity because it appeals to the senses of taste, smell and sight. Wood is always associated with burning and is the logical container for cigars from the psychological as well as the physical viewpoint.

A FEW REASONS WHY LEADING MANUFACTURERS SELECT WOODEN CIGAR BOXES

1. IDEAL DISPLAY: Compact, varied and eye-catching window and counter displays are most easily gotten with Wooden Cigar Boxes. With a little imagination you can show all kinds of effects and combinations with Wooden Cigar Boxes. Wooden Cigar Boxes do not have to be juggled for striking displays; they only need to be arranged.

2. CONVENIENT: Practically all cigar store windows and show cases are particularly designed for the showing of Wooden Cigar Boxes. They permit the use of all the space. No space wasted. No time lost.

3. BETTER PRINTING: There is no comparison between Wooden Cigar Boxes and substitute containers when it comes to beauty of printing and lithography. You can do almost anything with wood, while the possible treatments of other kinds of packages are very limited.

4. PERFECT AGING: Cigars age normally in wood, retaining their natural aroma from factory to smoker.

5. SATISFACTORY SELECTION: A smoker likes to see the whole length of a cigar in the box. He wants to compare the size, shape and color of the various brands and types you show him. Another point where a Wooden Cigar Box always wins the approval of the smoker.

6. NATURALNESS: Cigars are a vegetable product and belong in Wooden Cigar Boxes. Cigars from Wooden Boxes please the smoker most because the wood adds a mellowness and richness to the qualities with which the cigar has already been endowed by Nature.

Investigation in retail stores will prove conclusively that for these and many other reasons Wooden Cigar Boxes are preferred.

THE BEST CIGARS ARE PACKED IN WOODEN BOXES

Importers Relieved From Burdensome Exactions

William L. Crounse, Washington Representative of the National Cigar Leaf Tobacco Association, Secures Reform in Some Warehouse Weighing Practices.

WASHINGTON, D. C., June 27.—As the result of vigorous representations made to the Director of Customs of the Treasury Department by William L. Crounse, Washington representative of the National Cigar Leaf Tobacco Association, importers of leaf tobacco have been relieved from a burdensome exaction made at certain ports of entry by storekeepers of bonded warehouses. The fact was recently brought to Mr. Crounse's attention that certain storekeepers were refusing to permit importers to weigh their own tobacco but were requiring it to be weighed by a public weigher who charged a substantial fee for the service. Inasmuch as importers of leaf tobacco are obliged to guarantee their own weights the service of the public weigher was superfluous. The matter was therefore brought to the attention of the Director of Customs in the following communication:

"Hon. Ernest W. Camp,
"Chief, Division of Customs, Treasury Department, Washington, D. C.

"My Dear Mr. Camp:—I desire to bring to your attention a complaint which reaches me from members of this Association whose places of business are located in Chicago and who advise me that the storekeeper in the bonded warehouse at the port of Chicago will not permit importers to enter the warehouse to weigh their own importations of tobacco. This rule compels the importer to pay a fee of ten or fifteen cents per bale or barrel for having his tobacco weighed by a public weigher which is a superfluous proceeding, in view of the fact that the importer is obliged to guarantee to his customer the weights upon which his sales are made and, therefore, must weigh the tobacco himself before delivering same.

"The practice at all other ports, so far as I am advised—and the practice at Chicago until recently—was to permit importers to weigh, examine and sample their tobaccos without interference.

"I am satisfied that the Government has no interest in compelling the importer to compensate a public weigher for a service which he does not want and which ultimately he must render personally himself, and I would, therefore, respectfully request that you will cause this matter to be investigated and take such steps as are necessary to provide relief in the premises. With kind regards,

"Very truly yours
"W. L. CROUNSE."

Director Camp immediately ordered an investigation; as the result of which the practice complained of has been stopped. Assistant Secretary Moss, in charge of customs, has addressed the following letter to the Collector at Chicago:

"The Collector of Customs,
"Chicago, Ill.

"Sir:—Receipt is acknowledged of your letter of the 6th instant, in regard to the letter of the National Cigar Leaf Tobacco Association, addressed to the Department, relative to importers being allowed to weigh their importations of tobacco in warehouse.

"It appears to be the practice at the port of New York, upon application being made in writing to the Collector, to permit importers to weigh their own tobacco in bonded warehouse under proper supervision. If the quantity which it is desired to weigh is such as to call for the expenditure of a considerable period of time, and the duties of the U. S. Storekeeper in the warehouse are such that he is unable to exercise adequate supervision, the assignment of a customs guard would be required at the expense of the applicant to supervise the weighing to the end that the revenue be properly protected.

"The Department is of the opinion that such practice would properly safeguard the revenue, and you are hereby authorized to permit the weighing of tobacco in warehouse when such weighing is properly supervised and at the expense of the applicant, provided any expense is necessary.

"Respectfully,
(*Signed*) MCKENZIE MOSS,
Assistant Secretary.

Mr. Crounse states that he is informed that under ordinary circumstances the weighing of tobacco by leaf importers would not call for such an expenditure of time as to make necessary the assignment of a customs guard.

Pacific Coast Prospects

J. J. Warner, of Grosvenor, Nicholas & Co., is sending many orders from Seattle. Mr. Warner is optimistic regarding future business on the Pacific Coast.

At Fashionable Resort

I. M. Jacoby, of Meyer & Mendelsohn, spent a few days at Southampton, Long Island, this week.

Bonholdt & Co. Buy Choice Marks

Arthur Bornholdt & Co., Inc., leaf dealers, of 139 Front street, New York, secured 300 bales of extremely light colored Sumatra at last Friday's Amsterdam inscription, consisting of two running lots of Senembah My/Sennah and Senembah My/M, both first footleaf and choicest marks.

Arthur Bornholdt & Co., have also secured in Amsterdam, 100 bales of Vorstenland Java, including two fancy lots of the highest grade quality, viz., A/Tegalgondo/M and B/Tegalgondo/M (1922 crop).

Returns from Holland

Jos. Cullman, Sr., of Cullman Bros., who has been attending the Holland inscriptions, sailed from Europe, July 4, on the Holland-American liner *Rotterdam*, and is expected to arrive in New York about July 15.

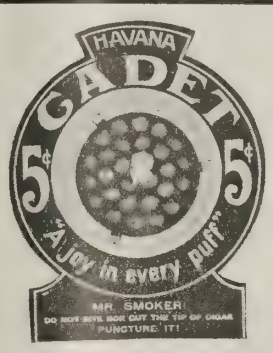
Buys Leaf Tobacco Here

Adolph A. Kuttnaeir, leaf tobacco broker, of Chicago, has made some big purchases of fancy wrappers in the New York leaf market recently.

Shade-Grown in Fine Condition

F. M. Arguimbau and Louis Leopold, vice-presidents of the American Sumatra Tobacco Co., Inc., have just returned from an inspection tour of the organization's vast Connecticut plantations and are highly satisfied with the condition of the crops.

North-Western Trade Good



Max Maier, the Water street leaf dealer, is touring Detroit and Ontario. He reports that business is above normal in the northwestern territory.

A Welcome Visitor

Alonzo Stecha, of the Por Larranaga factory, Havana, is in New York visiting his many friends and business clients.

From Florida

Jerome Regensburg, of E. Regensburg & Sons, cigar manufacturers, of Tampa, Fla., is visiting New York this week, in the interest of his organization.

Chicago Dealers Report Increase in Pipe Sales

Special Displays During National Pipe Week Proved to Be Big Drawing Cards—Predicted That Pipes Will Have More Consideration in Future—Trade News and Notes.

CHICAGO, June 30.—All the dealers reported a large increase in the sale of pipes since the 23rd, due to the displays and signs shown. The United Breitung and Central Cigar Co. stores had large posters on all their windows, besides showing fine pipe displays. Every dealer made extra efforts and it can safely be said that pipes will play a strong part in the retail business hereafter.

G. C. Damon Cigar Co. has succeeded to the business of the Watson Cigar Stores of Detroit, which operates a chain of retail cigar stores. Pancho Arango and Havana cigars will be featured by the new firm.

Personality on Woodhouse List

On his recent visit to Detroit "Doc" Rosobro of the New York-Tampa Cigar Co., placed his Personality, Tampa-made cigar, with John T. Woodhouse & Co. A big advertising campaign will be started August 1. George Stone has been engaged by Rosobro to work the Motor City dealers.

Muriel Publicity Campaign

This week saw the opening of the Muriel publicity campaign for Faber, Coe, and Gregg, Inc. P. Lorillard Co. is running a quarter page ad in the daily newspapers and signs appear on all the windows. "It takes a Muriel to match a Muriel" say the Lorillard ads.

In Harness Again

Frank Cohn of the Nathan Fox Co., after a long siege of sickness is once more out and calling on his trade. Frank features to the large downtown dealers Bozano Cigars and Poppers Eight Inters.

Lands Two Stars

Ruhstrat-Christian Co. has taken on Al Mayer and Wm. Kilroy, both of whom resigned recently from the sales force of Grommes & Elson. These are two of the best known salesmen here. Mayer will work the South Side and Kilroy the North. La Fendrich, Cuesta Rey and Charles Denby will be their leading sellers.

Louis Cohn, head of the El Predomino Cigar Co., Philadelphia, is here on a visit to his Chicago office. Della Casa, their leading brands widely placed in Chicago.

New Girard Distributors

P. J. Rubey & Co., the South Chicago jobbers, have taken over the distribution of Girard cigars for Chicago and the surrounding territory. Girard has been distributed here for years by Iwan Ries & Co., who have just discontinued the line.

Four Cigar Brands and Pipe Line

Iwan Ries & Co., wholesalers, at 104 North Wells street, are hereafter to confine their sales force to Pancho-Arango Clear Havana and Emersoic, Java Wrapped and two 5 cent brands, Pay Day and Ries Tampa Cubans. All other brands they have been distributing have been discontinued and in the future their sales force will devote all their efforts to these four brands and their line of pipes.

Eliner Eppstein of the Frank P. Lewis Cigar Co., Peoria, Ill., makers of the big selling Emerson cigar, was a visitor at his Chicago distributors, Iwan Ries & Co.

Doing Effective Work

W. F. Jones is doing good work here for P. Lorill and Co., with Egyptian Deities cigarettes. Jones is placing the 5 cent ladies' size in gold tips with all the dealers, who display them on their counter tops.

C. H. Garrard is cleaning up on Murad cigarettes with each 1,000 Murad 20's 50 Murad 10's are given gratis.

C. W. Berkley is the sales manager here for P. Lorillard Co., whose Chicago offices are at 414 Rush street. All the Lorillard brands are selling well in this territory.

Wm. Tobias, general manager for Iwan Ries & Co., is away on his annual vacation. Billy left with a box of Pancho-Arango cigars packed away in his grip. When he returns he is going to cover the city trade with their six retail men.

"Light a Harvester"

A larger ad of the Harvester cigar appears in the Chicago newspapers. The 10 cent Record-Breaker, 2 for 25 cents Perfecto, and the 15 cent De Luxe sizes are the big repeaters.

A Busy Place

The Kimball Segar Shop is a busy spot these days, and Adolph and Max Seekback, the owners, are kept on the jump. Here can be purchased the finest brands of Havanas that are to be found any where. Their stock is large and cigars are always in the very best of condition.

José Garcia is very busy at the Chicago office of Perfecto Garcia & Bro., rushing cigars out to their trade. Perfecto Garcia is one of the leading clear Havana sellers here.

Sam Meyer, special Cuesta-Rey representative, stopped in to thank us for the special write up and to say we made an error. To be exact, he opened 355 new accounts on the South Side for Cuesta-Rey cigars through Ruhstrat-Christian

Edgeworth tobacco, in the new decorated tin humidors of one-half pound is now on sale. It retails for 70 cents.

Mrs. L. H. Field, is now the manager for both the Evanston and North Shore Hotels, in Evanston, Ill. Both hotels have a cigar department and do a good business.

Has New Connection

Frank Thurman, one of our former Chicago boys, previously with Melachrino, J. B. Back & Co., of New York and recently located in Indiana, has connected with the cigar department of Mooney-Mueller-Ward Co., of Indianapolis, and will work the city.

Has Large Following

A neat Melachrino cigarette ad appears in the Chicago newspapers, "Melachrino, the one cigarette sold the world over," is very much called for in the Windy City.

The Wm. J. Seidenberg Corp. is introducing a new all Havana Tampa made smoker that sells 2 for 15 cents.

Moving Lively

John Grigsby, is doing great work here on Johnny Walker cigarettes for the Falk Tobacco Co. John is one of those "wide awake" chaps and he has this 20 for 25 cent cigarette, stepping along fast.

Makes Good Report

Ed Stief, of Julius Fernbach Co. is back from his Michigan tour. He states that he booked a large number of orders for Cyrilla and General Forbes cigars, and also opened some fine jobbing connections.—H. L. H.

Dreux Coming Back

D. Dreux, of D. Dreux, Inc., is scheduled to sail from Southampton next Saturday for New York on the Cunard liner *Berengaria*. Mr. Dreux has experienced a strenuous time at the Amsterdam and Rotterdam inscriptions but has succeeded in securing a very fine selection of fancy lots for his customers.

To Raise Matoaka Prices

Patterson Bros. Tobacco Corporation announces that on September 15, 1923, the price of Matoaka Cigarettes will be increased from 20 cents per package to 25 cents per package of twenty.

"Java Week" a Hit

H. Duys & Co. sold no less than 2,500 bales of the 1922 Java crop last week, which represented more than half of their holdings. It is anticipated that the balance will be disposed of very shortly.

NEW YORK, THURSDAY, JULY 5, 1923

ADVERTISING AND ITS COST

A United States Circuit judge not long ago passed down this dictum from the bench:

"Advertising is a method of selling goods which, without increasing their merit, increases their cost."

A part of the process of selling goods is the use of warehouse space for storing in the various stages of distribution. Another part consists of clerical work, for which office space is necessary. For warehouse and office space it is necessary to pay rent. But that in no way increases the merit of the goods.

A part of the process of selling goods is the employment of salesmen. That in no way increases the merit of the goods.

A part of the process of selling goods, which costs money and in no way increases the merit of the goods, is transportation.

It will be admitted that to sell goods it is necessary to employ a salesman or to advertise. Most successful merchants do both, because they consider both necessary, says the Greensboro *News*. Here is an illustration that is presented by Scammon Lockwood in an article in *Collier's* weekly paper. You decide to sell your automobile. You might dispose of it at a reasonable price without salesmanship, but the chances are heavily adverse. Suppose you have enough salesmanship to do the job yourself. You set about finding a prospect; you make inquiries, you ring doorbells, you consume time. Or else, for a price considerably less than you consider your time worth per day, you put an advertisement in a newspaper, which at once attracts the attention of most people of the community who are interested in that sort of trade. You establish contact with them and then it is a question of salesmanship. Your advertisement has not added to the merit of your goods; but instead of increasing the cost of transfer, has reduced it.

It appears that for every can of a certain line of soups there is a seventeen-hundredths of a cent advertising cost, which must be absorbed by the consumer. There is probably a $5 advertising cost in a $1,000 car. Breakfast food, half a cent on a 15 cent package. On a barrel of flour, selling at $11, 25 cents for advertising. Perhaps as much as three cents in the dollar, on a pair of shoes. A certain line of brushes, about one cent each.

Disregard the relationship of quality and advertising, for the time being. The soup man testifies that the first year his concern spent 7½ per cent for salesmen and 14 per cent for advertising, a total distribution expense for these two items of 21½ per cent. Advertising has steadily increased since that year, 1898. Now the expense for salesmanship is two per cent and for advertising three per cent—total distribution cost 5 per cent, which must be absorbed by the customer against an original 21½ per cent.

The salesman who is engaged in the distribution of a product not advertised must be paid for by the consumer. Salesmanship is an individual matter. Think it over, whether advertising increases or decreases the cost of salesmen necessary to dispose of a given volume of goods in a year. To quote Mr. Lockwood:

"A concern is now advertising extensively in an effort to educate us all to the importance of insulation on piping and heaters in domestic heating plants. They claim that by the use of insulation you can save from one-tenth to one-quarter of your coal bill every year. Suppose you put on insulation to the cost of $100 and save $25 worth of coal every year. What portion of this $100 investment represented advertising cost? Less than a dollar was spent for the purpose of telling you what it is, what it will do, and what it costs, and where it may be obtained. Certainly that transaction shows a profit all round.

But there is a vital relationship between quality and advertising. Sometimes a retailer will price two articles to you and account for a wide variation in price by the statement that the cheaper is not advertised; that is the only difference. No doubt this is sometimes true. That would mean, in all probability, that the producer is charging the consumer an immense profit on what the producer pays for advertising, because the actual cost of advertising is seldom more than a trifle on the individual article. But it is a fact of advertising experience, a lesson that has been learned by the expenditure of millions and millions of dollars, that it seldom pays to advertise an inferior article. It is a rule that generally holds true, therefore, that the advertised product has quality. So that while advertising adds nothing to the merit of the goods, it is an assurance of merit that holds good in most instances. Advertised goods, package goods, for instance, which have practically displaced bulk goods, moreover maintain a consistency of quality. It does not pay to advertise a line of goods the standard of which is high unless that standard is maintained with a fair degree of consistency in each parcel of it sold to the public.

The cost of distribution, the spread between producer and consumer, is an immense item. It is far too great. It is not nearly as great as it would be but for the preparation that advertising makes for the salesman's work. Advertising reduces the cost of goods, instead of increasing it. The learned judge did not know what he was talking about.

TOBACCO CULTURE

According to an Associated Press report made a few days ago tobacco is being grown by 450,000 farmers in forty-two states of the country. This does not mean, however, that the nearly half million farmers are devoting their entire time, or even the greater part of it, to raising the weed. In fact, those engaged in planting other crops often have a patch of tobacco and the number of growers giving all of their attention to tobacco is comparatively small. The acreage devoted to tobacco is one-half of one per cent of the total of all crops.

Two-thirds of the crop is produced in the three states of North Carolina, Kentucky and Virginia, with Pennsylvania and Connecticut showing up strong in values and acreage. In the report mentioned it is stated that the tobacco crop of the United States brings into the treasury something over three hundred million dollars annually. Connecticut and Florida, growing shade tobacco, produce a quality used for wrappers that was formerly imported, and this is a very valuable part of the big crop.

Referring to the tobacco crop in Gadsden county, the *Quincy Times* recently said:

"With conditions for priming and curing almost ideal, the work of harvesting Gadsden county's big crop of shade-grown tobacco is progressing at a rapid rate. With favorable weather during the remainder of the week the crop will be half gathered by the end of this week. The sand leaves have all been sav and the first and second middles are now bei taken off The daily showers make conditio for handling the leaf in the field and in the ba so perfect that damage from this source is duced to the lowest minimum. The tobacco curing up in fine condition in the barns, w plenty of moisture to make the colors ri This is one of the cleanest and finest crops Gad den county has produced, but naturally there some isolated crops that have suffered dama from various sources. The crop genera though is an excellent one, with color a burn said to be the best this section has pr duced in years. Results obtained from expe ments have proved so universally satisfacto that there is no anxiety felt whatever regardi the burn. While it is too early in the season predict what the average yield will be, the b ter crops will yield on an average of 1,2 pounds to the acre.

Conditions in Florida are most favorable, appears, for a fine harvest of tobacco, and wh there is always some risk until the crop is in t barns, it would seem that Florida growers wou do well this season. The acreage has not grea increased in the state of recent years, but doubt there will always be considerable attenti given to tobacco—and there certainly is mon to be made in its cultivation in this state. Th Florida can raise shade tobacco successfu means a special market for the product, and t probability of fair returns regardless of the crease of production in the ordinary grades. *Jacksonville Times-Union.*

TOBACCO AS SECURITY

The tobacco industry in several Europe nations outranks that of the United States in relation to the government, although so far quantity is concerned this country assumes place of leadership. The loan of $125,000,0 made to Austria by almost a dozen countri including America, through the agency of t League of Nations, was secured in part by th government's tobacco monopoly. In like ma ner the funding of Jugo-Slavia's debt to t United States will be linked up prominent with the country's tobacco trade.

The revenues from the tobacco industry pr videJugo-Slavia with more than double the to interest obligations on all its loans, includi private loans by American bankers and the wa time debt to the United States of approximate $60,000,000. The tobacco monopoly yields annual return of more than $10,000,000. Ad tional receipts from government monopolies matches, salt, kerosene and cigarette pape based on the 1922 figures, provide a substant sum which could be applied to principal requi ments. The government also derives a reven from its railroads in excess even of tobacco r ceipts.—*Indianapolis Star.*

A POOR TIME TO STRIKE

There could hardly have been selected a mo inopportune time to start a strike than t present, and the prospects are that there will numbers who have been working steady w spend all their savings and perhaps lose the jobs altogether. It is a hard matter to get em ployment at the present time, and any pers who has employment will be doing well to ho on to it.

The cigarette workers may have some rig to object to conditions, and the employers ha reason also to refuse to grant their demand but unless the burdens had been added, we ca hardly seen the wisdom in declaring the stril at the present time. Conditions have not r adjusted themselves. While prosperity is b ginning, it will take some time for the people get back to themselves all that was former theirs, and sacrificing savings, damaging i dustries and enforcing idleness on many wh would rather be working is a poor way to brin that readjustment.—*Havana Evening News.*

New Netherland's Tobacco Culture and Trade Briefly Reviewed

Land of Flowers Has Been Devoted to "Weed" Divine—Holland and Her Colonizers Early Became Interested in the Commercial Possibilities of Tobacco — The Plant That Cheers But Does Not Inebriate Was Successfully Grown on Manhattan Island

By DINGMAN VERSTEEG

In Holland and Her Colonies.

IS THERE another nation besides Holland which can more truthfully say in the words of Mark Twain: "I cultivate my flowers and burn my weeds"? The land of tulips, hyacinths d roses for centuries past has also been, er since Sir Walter Raleigh in 1586 introced the tobacco plant to Europe, an ardent votee of the "weed." To the mind's eye, e phlegmatic, stolid Dutch "burger's" ture is not complete without his "Gouda" pe, even as a Dutch fisherman without ooden shoes and a "nose warmer" would an anomaly.

Between 1586, the date mentioned above, d 1629, three years after Peter Minuit, at e behest of the West India Company, had ught the island of Manhattan from its dian owners, Holland and her colonizers in w Netherland had become so much intered in the commercial possibilities of toco that the Directors of the West India mpany, in a report of November 16, 1629, the States General of Holland, could state at the Dutch traders in New Netherland nported this year a considerable quantity tobacco which is now an important article commerce."

The adaptability of Manhattan's soil for e cultivation of tobacco early invited glishmen to settle on the island and when e Council records begin (1638), English bacco planters immediately figure on their ges.

The first obligation, dated July 3, 1638, tered by the Provincial Secretary, was one eighty pounds of tobacco, made out by elof Hackwaert to ex-Director Wouter n Twiller. Two weeks later, on July 17, homas Hall and George Homs (Holmes) o signed an obligation to Van Twiller for 5 pounds of tobacco. After this, tobacco ds continual mention in the records as a dium of exchange, was considered as cur-

Sumatra East Coast: Sumatra tobacco under cover in the seed beds

cy and frequently put up as security in mmercial transactions, showing that it st have been produced regularly and in at quantities. The absence of metallic ney and especially of paper currency (an invention of more recent times) rendered absolutely necessary the substitution of a generally acceptable commodity of reasonably stable value as a medium of payment, and tobacco, owing to its generally stable value, was much preferred. Even Director Kieft, on February 17, 1639, had offered Isaac Allerton to accept tobacco from him in place of corn or money.

Though tobacco was more generally cultivated on Manhattan, there are also evidences that tobacco plantations were operated in Achter Col (New Jersey), on Long Island and even on the mainland, in what is now the County of the Bronx.

The first mention of a tobacco plantation occurs on July 9, 1638, when Andies Hudde, formerly of Amsterdam, and Hans Hansen Bergen entered into a contract about the cultivation of tobacco "upon the flatland on the Island of the Manhates behind Corlear's land" (on the northernmost part of the island). The agreement was quite simple. Hudde was to go to Holland to engage six or eight tobacco planters, procure the necessary implements and send all over as quickly as possible. Hudde was to pay all travelling expenses and the costs incurred in hiring the

Sumatra East Coast: Transporting the famous Sumatra wrapper tobacco from the drying shed to the fermentation shed

men and procuring the necessaries. The vouchers he was to send over with the men. Bergen on the other hand was "to furnish as many dwellings and tobacco houses as the time may permit." He was to put the men to work without anybody's interference, was to pay half the expenses, while Hudde was to pay the other half. Hudde also agreed to remunerate Bergen for his services as manager. Nor was Bergen required to pay rent, but nothing was said about the profits.

Some hyper-sensitive souls today would be shocked if a minister of the gospel were to engage in the tobacco business, but formerly this was considered quite proper. So we read of a lease with quite a string to it, executed on May 17, 1639, when the Rev. Everardus Bogardus leased "to Richard Brudenell a tobacco house and plantation, with a waterdog, gun and powder, at a certain rent payable in tobacco and one-third of all the game he shall kill, as long as the powder and ball last." This plantation probably was part of the property received by Mr. Bogardus through his wife, the famous Anneke Jans, whom Mr. Bogardus had married in March, 1638.

One of the most extensive cultivators of the soil who did everything on a large scale was Wouter Van Twiller. Had he been the feeble-minded fool De Vries made him out to be, Van Twiller would never have thought of developing the country, either for himself or the Company, as the records show he did. He took up much waste land, of which there were millions upon millions of acres, without any detriment to anybody, greatly benefiting the country, developing most of his holdings, leaving enough for the multitudes who might come after him, of which there was at that

time no great sign. On the contrary, the more land there was taken up and cultivated, the more inhabitable the country became. Van Twiller, and after him Stuyvesant, were most active in developing New Netherland's agricultural resources, both investing much capital and taking large risks through Indian raids and other accidents, owing to their widely scattered investments.

Among the returns dated March 22, 1639, of Van Twiller's extensive holdings all over New Netherland, there was mentioned a tobacco plantation covering two hundred acres, on the Island of Manhattan, close by the Indian village of Sapokanikan, on the North River. The plantation was surrounded by palisades, contained a dwelling house in good condition, where Thomas Hall and George Holmes and their tobacco planters lived, and a serviceable tobacco house. This splendid plantation was situated near what is now Gansevoort street, chiefly in the present Ninth Ward.

On September 7, 1639, Hall and Holmes left Van Twiller's service and started a tobacco plantation on Deutel (Turtle) Bay, on the East River in the neighborhood of 42nd street. A little over one year later, on September 21, 1640, Hall sold his half to Holmes.

About this time Jonas Bronck, who gave his name to the county of the Bronx, is introduced as a tobacco planter at Emaus, the name he had given to his large estate. Bronck died on May 6, 1643, after which an inventory of his estate was taken. This inventory, besides showing that he was a wealthy man for that day, also mentioned a tobacco house on his Emaus estate.

It happened not seldom that merchants in Holland made advances on tobacco crops in the field, expecting to be reimbursed after the harvest. Coenraet Van Cuelen, a prominent Amsterdam merchant, had made such advances to Jochem Pietersen Kuyter who had a large farm and plantation on the northern part of Manhattan. However, the planter was unable to ship the tobacco on which Van Cuelen had made the advances, and on August 1, 1641, Kuyter returned the loan.

Sumatra East Coast: The utmost care is taken in the proper handling and hauling of Sumatra's famous and costly tobacco leaves in the field

Hudde, who possessed land all over Manhattan and on western Long Island, and was half owner and fellow founder of Amersfoort (at present Flatlands), on January 16, 1642, leased a tobacco plantation with a dwelling and tobacco house near Keskaechqueren on Long Island for two years to no less a person than the renowned Captain John Underhill, who cut quite a figure in New Neaherland's history. The rent for this plantation was "two hundred pounds of well cured tobacco" annually.

One of Director Kieft's earliest acts, after assuming the directorship, was the appointment on August 12, 1638, of Claes Van Elsland and Wynand Pietersen, as tobacco inspectors. As these inspectors were appointed only for the tobacco raised in New Netherland, it would appear that even then the production of the New Netherland weed must have reached large proportions. A little less than two years later, on January 5, 1640, Jacob Van Curler and David Provost were invested with this important and responsible office. In 1653, Isaac De Forest and George Holmes, Van Twiller's early tobacco planter, were appointed, while Holmes on April 13, 1655, was succeeded by Peter Van der Linde.

Tobacco plantations, like most other matters, often became causes for court business, and on June 7, 1640, Maryn Adriaensen had Hendrik Pietersen before the bar in regard to the surrender of a tobacco plantation. The court pronounced in favor of Adriaensen and Pietersen De Vries. In his "Korte Histo- for six years." On July 4th of the same year, William Hunt legally attached a parcel of tobacco belonging to Nathaniel Martin, but which was stored with Jacob Van Curler, for whom Corlear's Hook, not far from t South Ferry, has been named. The tobac in question was Virginia tobacco and was remain attached until proof should ha arrived of a debt, claimed to be owing Virginia. Cases like this were far from ra

On June 13, 1640, Thomas Hall proceed in court for slander against not less a pers than the Rev. Everardus Bogardus, becau the latter had accused Hall of having render

Sumatra East Coast: Sumatra tobacco ready for shipment to foreign countries

the minister's tobacco unsalable. As often done, the matter was referred to arbi tion and must have been settled out of co since nothing more is heard about it. (1). more serious case was that of Doctor Councillor Johannes Lamontagne agai John Merris or Merrit. The latter had b for the Councillor a tobacco house which blown down, resulting in great damage Lamontagne's tobacco. On December 1641, he sued for damages. Again the c was referred to arbitrators, and this end in the records.

So important had the cultivation of bacco become that on May 18, 1654, the rectors of the West India Company sta that tobacco was the principal crop in N Netherland. This doubtless was the case and in the immediate neighborhood of M hattan, but grain, peas, beans, maize even fruit and garden produce were extensively cultivated, there being no dence that very much tobacco was grow Rensselaerswyck, on Long Island and e in Achter Col. At about the same time especially a few years later, quite some bacco was also raised in the South R (Delaware) Colony, whose soil and clim near Maryland, appear to have been adapted for a good brand of tobacco.

That there was a considerable toba trade between New Netherland and English colony in Virginia appears from earliest records on hand.

In the absence of other evidence, the h of having been the first trader in Virg tobacco must be conceded to Captain Da Pietersen De Vries. In his "Korte Hi riael", he says, under date of May, 16 "The 17th we came before the harbor of English Virginias, and as there was non the ship except myself, (he had been t in 1634,) the helmsman and boatswain c into the cabin and carried me on deck order to sail the ship in. As it was ou season to trade for tobacco, I let all of cargo lie there and gave directions to t when the crop of tobacco should be ripe, I would return when the unhealthy sea should be over, that is, towards Septemb

le then left for New Netherland on May th and arrived here on the 30th. On the h of September De Vries again set sail for rginia where he arrived on the 10th. He en continues: "The first of October I began sail up and down the river to my customers order to collect my debts, but found that tle tobacco had been grown and that there d been this year great mortality among the ople and large quantities of goods brought to the country by the English. The Eng- h had not paid each other for the tobacco * * * *I consider in regards to this trade at he who wishes to trade here must keep ouse here and continue all the year."

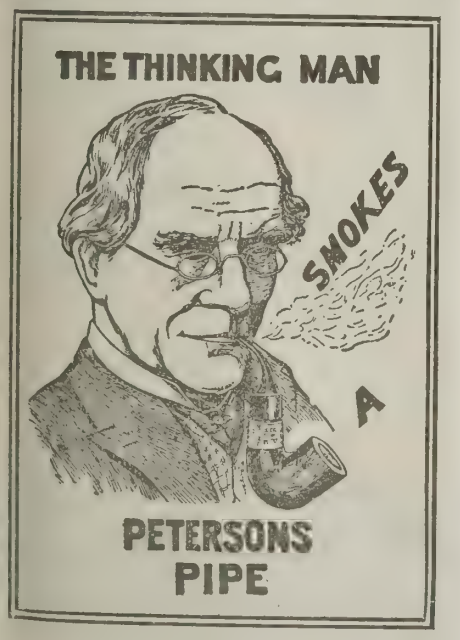
Many other transactions referring to the bacco trade between the English colony Virginia and New Netherland are scat- ed over the early records.

The Dutch, however, were not satisfied th the commerce with the English colonies one, but also desired to extend their rela- ons with Canada. In this they succeeded. rly in July, 1658, the first ship, the Jean ptiste, under Captain Jan Perie, chiefly aded with sugar and tobacco for the Cana- an market, was ready to sail, and as this as the first voyage to New Netherland's rthernmost neighbor, the duties on sugar, bacco, provisions and malt were remitted. nfortunately the ship was wrecked on the land of Anticosti and the entire crew rished. Perie's widow on July 23, 1661, rried Cornelis Andriessen Hoogland of ne Hague. This for the time being put a op to the commercial intercourse between ew Netherland and Canada.

As some complaints had been made about e poor condition of large quantities of bacco shipped to Holland, the Directors at nsterdam on December 19, 1656, not only ve instructions for a more rigid inspection, t also added this advice: "Much depends so on the cultivation of the tobacco plant, for when it is cut and cured at the proper time during the growing period, it is much better and stronger, and may easily fetch a higher price." Their letter dated November 23, 1654, had been much more explicit, containing the following admonition: "The inspectors of tobacco should be directed and strictly held to keep a close watch either by opening the hogsheads at both ends and taking out the tobacco to see whether it is dry and well cured or by some other convenient and safe means. * * * Further the planters must be informed that much depends on the cultivating and curing of the tobacco, for it is considered much stronger and pleasanter when it is pruned in time during its growth; and if after drying it has a good yellow color, it has been found to be valued much higher here, bringing one-half as much more than the Virginia tobacco."

In 1656 the import duties to be paid to the Company in Holland amounted to thirty stivers per 100 pounds for Virginia tobacco and 20 stivers per 100 pounds for New Netherland tobacco, an early instance of the policy of preferential tariffs. That neither New Netherland nor Virginia tobacco were by far worth as much as some West India tobacco is evident from the following complaint to Stuyvesant in regard to the St. Beninio. This ship had been confiscated on February 21, 1648, for violating the conditions of her contract. She was loaded chiefly with hides and West India tobacco and the Directors wrote regarding this under date of January 27, 1649: "You have not sent us a list of the cargo and you say not a word in your various letters about the 2,000 pounds of Maracaibo tobacco shipped in this caravel, nor that you received them and at what price they were sold. This tobacco could be sold here at present for eight guilders the pound, and it is in our opinion not a matter of so little importance, as to be passed over in silence." The probability is that this extremely valuable tobacco was sold to local merchants, because the New Netherland Government was always hard up for money and would not let such a favorable opportunity pass to replenish its yawning treasury.

The loss of New Netherland in 1664 closed to the Dutch not only a profitable trade in furs, but also absolutely ruined its tobacco trade and industry besides curtailing some other sources of great financial benefit to the mother country. It caused the bankruptcy of the old West India Company and marked the beginning of the decline of Amsterdam.



A Progressive Corporation

Cullman Bros., Inc., packers and importers of cigar leaf tobaccos, are raising a quantity of shade tobacco of the 1923 crop on farms at Hoskins Station and East Windsor Hill, Connecticut. The growing of this tobacco is under the supervision of Fred B. Griffin, M. L. Floyd and William J. Hayes.

These plantations have been noted for style and quality of leaf, and early reports on the 1923 crop indicate that so far the elements have been most favorable to this section. The crops are packed under the supervision of Fred B. Griffin and M. L. Floyd, and warehoused in Hartford and East Windsor Hill, Connecticut.

Until 1922 Cullman Bros., Inc., were not large factors in the growing of shade tobacco, but beginning with the 1922 crop, arrangements were effected with Fred B. Griffin, which have proved so successful that this corporation has considerably increased its acreage in the interest of its many friends in its packing of shade.

While the year 1922 practically marked the inauguration of Cullman Bros., Inc., as factors in the shade industry, this concern had originally grown shade on its Tariffville plantations on a modest scale, which crops were more or less pioneer movements.

New British-Am. Director

DANVILLE, Va., June 30.—R. C. Harrison, who twenty-five years ago entered a local tobacco stemmery with a view to learning the tobacco business, has just been elected a director of the British-American Tobacco Co. in London, according to private advices received here. He is a brother of J. D. Harrison, of Baltimore, vice-president of the Citizen's National bank. Mr. Harrison spent several years in India where he represented the British-American Co. returning recently to London. He has been elected to succeed Sir Arthur Churchman, member of parliament, who is retiring.

Interest on Gold Bonds

Notice is given that the transfer books of the registered 4 per cent gold bonds of the American Tobacco Co. will close at twelve o'clock noon July 14, 1923, for the purpose of payment of interest thereon due August 1, 1923, and will re-open at the opening of business August 2, 1923.

Tobacco Stocks Produce Attractive Returns

Old line tobacco stocks at present levels are more attractive to the investor, desiring stability of yield, than to the speculator looking for wide fluctuations in share prices. The tobacco industry has invariably made a favorable showing in contrast to other lines which suffered in periods of business depression.

Decline in tobacco stocks has followed the trend of the market and in no way reflects weakness in the fundamentally sound conditions of the industry or impairs the prospects of increasing returns to the old line companies who report business keeping pace with the high record of 1922 and, in some instances, sales for the first five months of this year exceeding those of year ago.

These big companies are sharing in the increased cigarette production which in May was 27 per cent ahead of 1922 and 34 per cent above 1921, and for five months was 32 per cent more than the corresponding period last year. Cigar output also gained 10 per cent in the first five months over 1922.

Aggregate net of 12 major companies in 1922 was $81,010,473 after taxes and depreciation, compared with $69,612,980 in 1921 and $66,999,533 in 1920.

Old line tobacco companies are strongly entrenched against competition as the result of many years' advertising that has given trade-marked brands wide distribution and stabilized retail sales with large scale production and low manufacturing costs.

Following shows recent lows and highs for 1923 and dividend yields at low prices of five tobacco stocks:

	High	Low	Rate	Yield
American Tobacco	161⅛	141	$12	8.5%
Liggett & Myers	222¾	190¾	12	6.3
Lorillard Co.	178⅝	146	12	8.2

New Orleans News

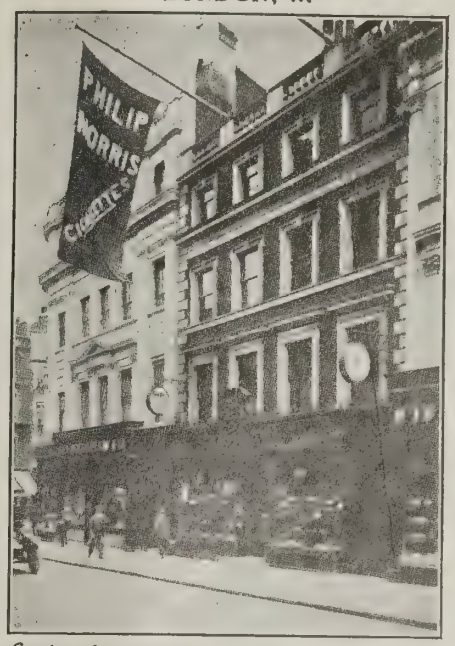
W ORLEANS, La., June 30.—Manuel es, executive head of M. Trelles & in Tchoupitoulas street, and a go man, president of Company has a cigar factory here, exged trade civilities on the recent nged visit of the latter to New ns, which bespeaks harmony and feeling between these two enterg and energetic representatives of igh-class cigar manufacturing establents of this city. The Chicago man ot hesitate to affirm the views re- expressed by Mr. Trelles that the was now opportune for the cigar facturers of this city to put forth every effort to raise the standard of their product, in both workmanship and the quality of the goods, if New Orleans was sincere in its desires and aims to retrieve the reputation it once so completely enjoyed for the excellence of its cigars. Its prestige was now at stake and no reasonable expense should be spared to once more put its cigars in the front rank of American manufacture.

Chas. A. Dreux, of Valloft & Dreux, Inc., distributors, left during the week for Columbus, O., from which point he will journey to French Lick Springs, Ind., where he contemplates spending several weeks. Valloft & Dreux report an exceptionally good business in Ruy Lopez, a Tampa product, selling at 10 cents. They cannot catch up with their orders.

A. F. Babin, of Falk & Babin, has departed for points in Texas on a motoring trip. He will be away a couple of weeks.

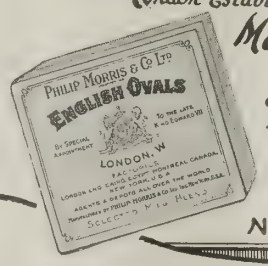
Ought to See the Pipe-Smoking on the Streets of Gotham

One would have to be told that this was "Pipe Week" so far as outward demonstration of the fact conveyed the idea. New Orleans is not a pipe smoking community in any sense of the word, though there is a large element of the population that seek solace from the weed through this medium. It is not in evidence on the street. Our people are wedded to cigarettes. Of the many stores that made an effort to keep abreast with the procession in celebrating the period given over to "pipes," may be mentioned Max Guiraud, whose store had on display a very fine assortment of Brier wood pipes, in handsome plaques, of William Demuth & Co. Leon Godchaux, the big clothing establishment, just taken over by the United Cigar Stores Co., had part of its window space in Canal street, filled with London pipes of the Lasieni make and Dunhill's standard mixture.



Black Fire in Perique Crop

G. W. Edgerton, plant pathologist of the Louisiana State University Experiment Station, is credited with the statement that, in his opinion, the perique crop of tobacco will be reduced from 25 to 50 per cent this season by "black fire," a serious bacteriological tobacco disease. President Sigur Martin, of the Perique Tobacco Growers Co-operative Association, who is regarded as an eminent authority on perique tobacco in this State, while affirming the announcement made by Mr. Edgerton, is not apprehensive of such serious results. The disease has made its appearance in the tract susceptible of the cultivation of Perique, but its presence there is only in spots and does not prevail throughout the area. Some growers are even now cutting the leaves off the plant to arrest the progress of the disease, a remedy of doubtful efficacy, since the tobacco leaf has not yet matured and hence is not up to standard perique.—CRESCENT.



Inspects Connecticut Crops

J. Arens, who recently inspected the Connecticut properties of Henry Oppenheimer & Co., growers and packers, of 182 Water Street, New York, reports that the plants are in fine condition, and are making steady progress.

Local Tobacco Men Have Not Been Stampeded Into Mak Extended Purchases—Seem Satisfied to Let Outsid Take the Profits, to Say Nothing of Possible Losses.

HAVANA, Cuba, June 28.—Notwithstanding the absolutely empty market, quite some shipments of stemmed and unstemmed tobacco were made to foreign countries, tobaccos mostly secured by the importers some time ago. A few stripping plants are still busy stripping old tobacco.

Of new tobacco only a few lots arrived here, as most of the packings will not start before first part of July. It is said, that of the Remedios crop about 60 per cent has been sold and that some farmers will pack for their own account and others are waiting still to sell their tobacco in bundles. Regarding the purchases of bundles made in the country, some houses succeeded in getting a reduction in price and others had to receive goods at the price once agreed. As in every year, there is also this year a big difference in the value of the tobacco and it is almost certain, that a tobacco bought at $10 more, will result in being a better purchase than the cheaper tobacco,, which gives a relatively smaller proportion of upper grades.

Not Much Competition

In Vuelta Abajo, where hardly any foreign houses operated, the old and practical packers bought, considering the general market condition, at reasonable prices, defending themselves as much as possible when receiving the goods. The tobacco in this section is of a heavy and good quality, excellent for mixing purposes. Several houses received during last week and this week their first lots and although they claim, that the cost is rather high, they are very well satisfied with the quality and packing. A few of these houses have already sold their Colas up to $40 and if they get a proportionable price for the upper grades, they will be satisfied. The tobacco, notwithstanding the lack of rain also in this section, is first-class in quality and aroma and pretty fair in development as to size.

Remedios Moving Slowly

Of Remedios tobacco very little has arrived so far. Everybody will remember that enough tobacco was planted to raise a crop of over 300,000 bales in this section. After the continuous dryness the total quantity was calculated by several Vuelta Arriba people, not to pass 110,000 to 120,000 bales, while now the general opinion is, that the crop in this section will amount to from 170,000 to 180,000 bales. Of this quantity, however, people claim, that from 30,000 to 40,000 bales can be calculated as tobacco not to be assorted, but rather loose leaves and Botes. tobacco mostly unfit for stripping, but for export or cigarette purposes, not counting the low grade Botes the packings will contain. The tobacco that has arrived so far shows a pretty heavy quality, but being less developed is shorter in size than in normal crops. Going around the market one finds, that the Cuban and Spanish packers have bought very, very little tobacco, the bulk of the crop being bought up by foreign houses, export and commission houses. There is hardly any packer or almacenista who does not admit, that the tobacco has been overpaid for and that it is nothing but a question of time to find out, whether they are going to make a profit or lose. They say that if we sell at a profit, same will hardly be worth the trouble and money invested, and if we lose, it will not knock us down, as we did not go in much, but noticing the enthusiasm of the "foreign" houses, which undoubtedly ought to know their business, we decided to also pack a little in order to be able to attend to some of our customers. same old story, which in several y has cost some money to our packers almacenistas.

Not in Cheerful Mood

A local tobacco paper goes so fa to publish an article, that, in case coming crop should be a good, abun and an early one, same would sell be this present crop. This, however, w refer only to the tobaccos packed by few local houses for speculation or farmers, as the rest of the crop is t already as good as sold, and in the h of foreign houses, who agreed to pay prices and who picked out this yea pack relatively more than ever, lea less than generally to the local pac Business must undoubtedly be "fine promising" in these foreign countries the demand "strong," when these ho consider it wise to secure and pack quantity they need, instead of buying bacco as formerly in the market, w goods are in condition to be shipped worked. Now, as our packers here not as well posted about the for markets as the interested parties, respect at the same time the good j ment of this foreign trade, whom, e cially our farmers will always remem with great sympathy and satisfaction

In New Quarters

After the death of one of our popular almacenistas, Don José Alva of Alvarez y Alvarez, the owners of firm has given up her warehouse Monte 38, which will hereafter be o pied by the young and promising firm Ruisanchez, Gutierrez y Ca., who left warehouse formerly at Monte 105. the well-known packers and dea Sierra y Diez (Ferreteria) have m from Monte 3 to Industria 166-168. wish both firms good success in their houses.—GALLO.

Some Features That App to the Tobacco Industry

Early plans for the 1923 Chemical position which will be held during week of September 17 to 22 at the Gr Central Palace, New York, show the Exposition this year will be div into specialized groups more than ever fore. Thus far group exhibits have planned for the fertilizer industry, ins cide and fumicide industry, basic raw terials and railroads, container and la ling devices, educational groups by ous Government departments and chemical societies, dyestuff industry, chemical industry generally, and othe

Home from Holland

To Return from Porto Rico

Charles Gans, of Max Gans' Sons, Inc., leaf dealers and packers, is scheduled to return to New York from Porto Rico on July 19. Mr. Gans has been in charge of the interests of his corporation on the island for several months, and has made heavy purchases of the record new Porto Rican crop.

Four Thousand Miles For a Smoke

Because "Eskimo Laura" greatl craved tobacco the Canadian Governmer was put to $600 expense a short time ag in the strangest case in which a devote of "My Lady Nicotine" probably eve figured. Laura is a pure blooded Eskim woman and lives on the delta of th mighty Mackenzie where that river emp ties into the Arctic Ocean. About tw years ago she learned to smoke and be came an adept at rolling her own ciga rettes, though not averse to an occasiona cigar which once in a long time reache the Arctic Circle.

Tobacco is expensive and often hard t get; but when Laura's husband, Mr. In inuk, protested against her inroads upo his supply the woman attacked him wit a dog whip and drove him from the igloo After confiscating his entire supply o tobacco she proceeded to barter away a the family furs for a big supply of th fragrant weed.

Now the "new woman" until the (1922) was not known in the Arctic Till Laura's assertion of equal rights Es kimo women since time immemorial ha been docile subjects to the men. Naturall her so outrageous conduct caused grea astonishment and much comment in th summer settlement on the delta. S much so that even the mounted police a Herschel Island, the farthest north polic post in the world, men well versed i Eskimo ways, were so impressed b Laura's behavior they decided she wa insane. So they took her in charge an sent her under escort 2,000 miles b river steamer and then by train to Ed monton, Alberta, and thence to Ponok Asylum.

But when the board of expert alienist gathered they all firmly agreed that while Laura was an "A No. 1" smoke and a wonder at rolling her own ciga rettes, she was most certainly not insane Indeed, the learned gentlemen pro nounced Laura most decidedly normal.

So back to the Arctic went Laura, a first class passenger by train, and durin the 2,000 miles of wonderful journeyin by steamer over the great inland water way via the Peace, Slave River and Lak and the mighty Mackenzie, all at the expense of the Canadian Government which had dared to make aspersion against Laura's sanity. And all through the 2,000 mile journey Laura smoke steadily. The scenery which brings crie of rapture from the tourists who are now beginning to pour into the land did no move Laura.

She had looked upon it from birth.—*New York Herald.*

Tampa Tidings

Cigar Business Prosperous

Tampa, Fla., June 30.—Today ends the lf year. Consideration of the statisi- reports of various municipal depart- nts as well as those of sundry business ivities for the first half of 1923 shows trend of prosperity and growth along ry line, which augers well for the next f of the year.

During the past six months, Tampa's ar industry, now running smoothly l without any of the labor troubles, is ning out fragrant smokes in an ever reasing volume and has added to its ks several new factories in the past or three months.

Figures of production during the first f year have even eclipsed those for the half of 1922 which included the istmas order, always the heaviest pe- l of the year, and this looks as though finish of this year might show a rec- which will be way ahead of any- g in the history of cigar making. ost 3,000,000 cigars of all grades have n manufactured since January 1, ging to the internal revenue depart- nt, through its sale of stamps the sum $332,044.75.

Custom Receipts Jump

ustom receipts also took to the es- tor and slid upward going way ahead ast year's records, in fact beating it by ly $200,000; with over $1,000,000 for six months.

Sues Insurance Companies

our suits against as many insurance panies, and each for $8,000, were filed Jnited States Court here Tuesday af- oon by Alfonso Fernandez, doing bus- s as the Fernandez Brothers & Co. suits are against the Stuyvesant In- nce Company, New York; the Me- ics Insurance Company, Philadel- ; the National Ben Franklin Insur- Company, Pittsburgh, and the Cam- Fire Insurance Association, Camden, .

e suits are to collect insurance by andez, whose cigar factory here was aged by fire on December 23, 1922.

Making Good Showing

n L. Farmer, vice-president and manager of Arturo Fuentes Co., is making his headquarters in At- , is spending the week in Tampa at factory looking over the production of the business. He reports their gia business going strong. In South da their goods are handled by Davis ekle of Tampa, and they show in- ing sales.

rade and Personal Paragraphs

nuel Garcia of Perfecto Garcia & , and Pancho Gonzales of Garcia & have returned from Cuba.

ncho Arango is back from New , and goes on to Havana on the 5th.

T. Morgan has returned from the st," and goes on to Havana to pur- leaf.

Santaella is visiting his Tampa fac- this week. He and Mariano Alvarez eave on Wednesday for New York.

rry Slavinski of the G. & M. Cigar has returned from New York and go.

estina Vega will go to Havana July 15.

ge Leon has returned from a visit s trade in Memphis, Birmingham, ta, Jacksonville and intermediate . He will go to Havana on the replenish his stock of tobacco.

nuel Corral is back from Havana.

. French of Sanchez & Haya will or or about the 10th for Havana.

Gottsegen, president of Gradiaz, & Co., plans to be in New York the 15th.

"Who's Who Today"

its "Who's Who" Department, the *Times* says:

mas David Fisher, the well-known box manufacturer, is a native of a, having been born here June 27, and he has not only seen the one time straggling village develop into a metropolis, but has contributed substantially to that growth.

A Profitable Business

Mr. Fisher was the first American employed in the first cigar factory established here, the Ybor-Manrara Co. In 1901 he entered the employ of Cuesta, Rey & Co., resigning in 1910 to enter the cigar box making business for himself, being associated with G. F. Weideman and H. H. Sheip. This business has proved profitable from the start and is one of the largest in the state.

Mr. Fisher is a member of the board of trade, and is fraternally identified with the Knights of Pythias, D. O. K. K., and Woodmen of the World. He is affiliated with Palm avenue church.

Mr. Fisher married Miss Minnie Colson, February 6, 1893, and they have five children.

Ordered to Stop Using the Word Tampa

Washington, D. C., July 2.—A Corporation of Baltimore, Md., a manufacturer of cigars, is named as respondent in an order recently issued by the Federal Trade Commission. The concern, the Commission found, manufactured cigars in Baltimore and sold them under labels bearing the word "Tampa" in such a way as to lead the general public to believe that cigars so labeled were manufactured in Tampa, Florida.

A. M. Weeks, of Pittston, Pa., acting as a selling agent for the Baltimore company, is also named as respondent in the Commission's order.

According to the specific terms of the Commission's order, the respondents must discontinue using the word "Tampa" alone, or in combination with other words, in brands, labels or legends on cigars, and the containers thereof, manufactured by or for them, or either of them, in Baltimore, Maryland, or any other place than the City of Tampa, Florida, or the Tampa District, so called, unless if the cigars in fact are not made in Tampa, Florida, or the Tampa District, such word or words in type lettering equally conspicuous with the word "Tampa" which state the true place of manufacture.—Lamm.

Buy Florida Tobacco

Madison, Fla., June 30.—The Cherry Lake Land Co.'s crop of tobacco, consisting of around 35,000 pounds, has been sold to Speight & Cantey of Fowlstown, Ga. Mr. Cantey came here to see after the shipping.

The price realized was not given out, however, it was said that the figure was quite good. One tobacco grower stated that a price of 65 to 75 cents a pound average for a crop would probably prevail this year.

The Fraleigh-Smith Investment Co. is building a packing house this year, size 70x90 feet, on their place near Greenville. They hope to have it completed in a couple of weeks, and will pack their own crop.

Miami Increasing Production

Miami, Fla., June 30.—Reports from the fifteen cigar factories in this city to the effect that the forces are being increased, indicates the rapid expansion of the cigar industry in Miami. About seventy-five men are now employed in making cigars here, a remarkable increase within the past few months.

The local factories claim that the best five cent cigar made anywhere is manufactured here. They are now putting out a long filler cigar at ten cents, this to compete with the scrap cigars being offered.

Making "Clean-Up"

Jacksonville, Fla., June 30.—A general clean-up is being made here and in South Jacksonville of tobacco merchants who sell cigarettes to minors. Headed by Probation Officer Lamier, the crusade here netted more than 200 alleged offenders.

CAUTION

THE LA ROSA DE PARIS CIGARS are not genuine unless our name (Starlight Bros.) is printed on the labels attached to the inside of the box. Every box bears our name in order to protect smokers against unscrupulous sellers who are trying to supplant the well-known LA ROSA DE PARIS CIGARS by inferior goods.

San Francisco Jobbing Trade Doing Fairly Wel

The Summer "Quiet Spell" Not Causing Any Particular Con cern—Dealers Helping to Swell the Number Who Ar Indulging in Vacations—Golden Gate Gossip.

SAN FRANCISCO, Cal., June 26.—It is one of those weeks when there is nothing special in the air, yet the jobbing trade is bumping along in a very satisfactory manner. The summer "quiet spell" counted as one of the incidents of the trade does not seem to be giving any special concern either to jobber or retailer. With regard to going on vacations, the cigar fraternity is not in very good position to complain, for the dealers manage to do their share themselves.

Adolph Judell, of H. L. Judell & Co reports that a steady stream of orders coming in from their up-to-date sellin force. Chancellors and Norwoo Dreams, he says, are both growing stea ily. In fact they have no dead-heads o their list. "We get good service from th factories," he says, "and good repea from the customers. For the steady an substantial nature of our trade, we a tribute much to the fact that we try

(*Continued on page* 44)

Connecticut Tobacco Crop Getting Uneven Start

Seed Beds Have Been Reasonably Prolific—Transplanting Has Been Done in Good Time, But Much Resetting Has Been Necessary—Association Pays Out Large Sum

HARTFORD, July 1.—The present crop has been the hardest one to get started of any for several years, and many fields will start off uneven, due to so much resetting. However, there seems to be one consolation, as the older growers say that always when a crop was hard to get started that a good growth always followed. Certainly the growers have had a hard enough time this season to get their crop started, and it is hoped that the old saying will prove true.

Seed beds have stood up well this season and growers in most instances had plenty of plants to keep going every day. The crop is out in good time, although a few days later than last year. Many growers are better satisfied with it being later, as it will extend the time of harvesting a week or so longer and thus skip the end of Dog Days," which is generally a bad season for the tobacco just hung in the sheds; the danger of pole sweat is greater at that time than a little later.

Rain at East Hartford

Last Tuesday a heavy rain shower covered the section around East Hartford, which did not get any during the big storm Sunday. But the tobacco belt in the vicinity got a good soaking Tuesday, which was much needed following the dry, hot spell.

Setting out the 1923 crop is practically completed now, and ravenous cut worms are busy eating in many sections. These pests, together with the loss of plants caused by burning up of plants the previous week, keep the growers busy resetting. Some fields have been set out clean for the second time, and in some instances for the third time.

The early tobacco, which was set and got root before the extreme hot wave, is shooting along finely and in some fields it is now about one foot high and making great growth. There is plenty of moisture to carry it along for at least a couple of weeks more, even if there should not be any more rain within that time.

Growers Receive Checks

Checks totaling $1,000,000 have just been mailed from the office of the Connecticut Valley Tobacco Growers' Association to nearly 1,700 members, this being the second payment to the growers of Havana seed, on their 1922 tobacco. This news was welcome to not only the growers of Connecticut, Massachusetts, New Hampshire and Vermont, but also to merchants and bankers. This payment was arranged for during the past few weeks, when General Manager Fred B. Griffin sold practically all of the 1922 Havana seed at the fixed prices, which were set by the executive committee on January 23. In order to assort, pack, sweat and process the Havana seed and make the first payments it was necessary to borrow $2,600,000. Warehouse receipts which were issued by the 101 warehouses were used as collateral for these loans, and sufficient deliveries have been made to retire all of the loans and to make the second payment to the growers as the result of the turnover of the tobacco.

Shipments to individual purchasers vary in value from a few hundred dollars to $160,000. Over 90 per cent of the tobacco has gone directly to the manufacturers.

The broadleaf growers have received their first payments thus far, but as yet the prices have not been fixed on all the grades and probably will not be for a few weeks to come, as it is the intention not to sample the better grades until a little later. However, samples of brokes and fillers are being drawn, and the association has sold large blocks of these grades, and still has some to offer.

Pleads Guilty and Is Fined $50

The complaint brought by the people of the State of New York on behalf of the American Fair Trade League against the Phoenix Cigar Corporation for violation of Section 421 of the Penal Law, came on for trial Thursday morning at Special Sessions, Part I. The defendant pleaded guilty and the Court imposed a fine of $50 upon the defendant corporation, through its counsel, in open court stated and promised that it did discontinue, and would remove, all signs and labels which refer to cigars as being Mild Havana cigars, which cigars, however, contain a mixture of Havana and domestic tobaccos.

Explains to Court

The American Fair Trade League, through Edmond A. Whittier, its official representative, very clearly explained to the Court that the League brought this prosecution with the view only of protecting the community so that the smoker may freely go into cigar stores and when inquiry is made for a Havana cigar, be it mild or strong, he can feel safe and satisfied that he is getting what he asks and pays for.

It was because of the fact that Mr. Whittier was satisfied that the Phoenix Cigar Corporation intended to discontinue the use of the labels and signs of Mild Havana, as above stated, that the Court dealt with the defendant corporation so leniently.

This prosecution was brought to the attention of Joab H. Banton, District Attorney of New York County, by former Assistant District Attorney, Alexander H. Kaminsky, special counsel to the League in its Tobacco Investigation, and was prosecuted by Assistant District Attorney, Max Salomon, assigned to the Commercial Frauds Division, and who appeared at the Special Sessions ready for trial.

To Prosecute All Offenders

In commenting upon the result of this prosecution, Mr. Salomon said that the District Attorney's Office will prosecute diligently all complaints, after a proper investigation, which justify bringing a prosecution for similar offenses and will ask that the Courts impose as severe punishment as possible in order to discourage and to insure discontinuance of such practices.

Judges Alive to Situation

In commenting upon the result of the prosecution of this matter. Mr. Whittier, representing the American Fair Trade League, expressed his gratification and deep satisfaction at the manner in which the above case was prosecuted by the District Attorney's Office, and also for the expressions of opinions by the judges of Special Sessions, namely, Judges Freschi, Edwards and O'Keefe; and he feels satisfied that the judges are alive to the importance of this kind of litigation and will give the American Fair Trade League, and other institutions of similar kind who have the community's interest at heart, their entire co-operation.

Co-ops Against Co-ops

RALEIGH, N. C., June 30,—Condemning the action which is being taken by some disloyal members of the Tobacco Growers' Co-operative Association, the organized tobacco growers of Pitt County in a unanimous resolution passed at Greenville on June 29 in their regular monthly meeting, stated that they proposed to resist to the uttermost the efforts of the class and character of men who are attempting to disrupt their association. Following the statement that "as loyal members, we pledge ourselves to aid and urge our directors to enjoin and prosecute to the uttermost such flagrant contract breakers," the Pitt County members of the tobacco co-operative declared, "We express our confidence in the directors and other officers of the association and our hearty approval of their administration of the business of the association. We call upon all loyal members to rally to the support of the association to fight for our rights, to resent all misrepresentations and slanders of our association and its officers, as reflections upon and insults to every loyal member."

Other resolutions approving the sales policy of their association and favoring the orderly selling of their tobacco at the association's prices, instead of dumping and selling at the buyer's prices, were unanimously passed with an expression of thanks to all business interests who have supported and helped the organized growers.

Under Restraining Order

The fate of Fred A. Elks, the largest tobacco grower of North Carolina's biggest tobacco growing county, who is under a restraining order to show cause why he should not deliver his 1923 crop to the co-operative association, and is being sued for $6,000 liquidated damages for tobacco that he is alleged to have sold at auction, may be shared by more than a hundred other Pitt County farmers who brought legal action against the association on the night of June 25.

According to M. O. Wilson, Secretary of the Tobacco Growers' Co-operative Association, these growers of Pitt County, "by their very suits have invited and laid themselves open to counterclaim and injunction."

Like W. T. Jones and Z. A. Harrell, the first contract breakers sued by the association, whose tobacco of the 1922 crop is still under the injunction issued by Judge Daniels more than eight months ago, the Pitt County farmers who seek to avoid delivery of their 1923 crop to their own organization, are giving their fellow-farmers with whom they have contracted to deliver, an early notice of the intention to abandon at its very start the enterprise which Chief Justice Clar of the North Carolina Supreme Cou called, "the most hopeful movement obtain justice and improve the conditio of farmers."

The effort of a few of the farmers Pitt County to avoid delivery of the 1923 crop of tobacco to their own ass ciation has caused a wave of loyal throughout Eastern North Caroli which has never been equalled in the h tory of the association. Several hu dred members of the association fr Craven County who met in Vancebo held the most enthusiastic meeting association members which has tak place in that section since the farm of Eastern North Carolina joined han to improve their system of marketi Director, J. Y. Joyner, from Rale headquarters; Director, J. H. Coward, Ayden; R. J. Works, of Kentucky; a Archie D. Odum, of Nashville; w among the speakers who addressed me ings of Pitt and Craven County toba growers during the past week.

The serious crop shortage in Virgi has reached alarming proportions, acco ing to the latest reports of the cou chairmen and secretaries of the toba association in twenty-four counties that state, and a shortage of 35 per c as compared to last year's crop, se certain from the estimate based u reports handed in from twenty-four V ginia counties on June 21.—S. FRISSELL.

Oxford Crop Outlook

OXFORD, N. C., July 2.—A light sho Thursday night and cooler weather s has tended to improve the growing c Indications are today that we will h rain which is quite badly needed.

The eastern and southern section the county are beginning to top and crop in these sections looks fair. northern section, along the Virginia is quite dry and the crop small for first week in July.—W. A. ADAMS C

From the Old North Stat

H. G. Whitehead, of Whitehead & derson, leaf tobacco commission chants and exporters, of Wilson, N arrived in New York a few days ag a business trip. He returned to his s southern home Tuesday evening.

J. D. Rogers Makes Change

DANVILLE, Va., July 2.—J. D. Rogers for several years vice-president of the E. B. Ficklen Tobacco Co., of Greenville-N. C., has resigned that position to become associated with the John E. Hughes Co., of this city.

The Tobacco Association Convention

(*Continued from page* 11)

of this, representatives from all branches of the tobacco industry were recently invited to Washington to discuss with the Department the program of work to be pursued, and to advise us how we could best serve their industry with our organization, consisting of the staff in Washington and more than a thousand representatives in all parts of the world. As an outgrowth of this conference, a committee, composed of five representatives from various branches of the tobacco industry, was selected to co-operate with the Department in the promotion of the tobacco industry, and to act in an advisory capacity on problems arising in the Department concerning the trade.

This committee, known as the Commerce Relations Committee, is composed of your esteemed President, Mr. Carrington, W. L. Crounse, of the National Cigar Leaf Tobacco Association, B. G. Meyer of the General Cigar Company, of New York City, Charles Dushkind, Managing Director of the Tobacco Merchants' Association, of New York City, and James C. Stone, President and General Manager of the Burley Tobacco Growers' Co-operative Association at Lexington, Kentucky.

I shall not ask your indulgence in a long outline of a program we propose to execute, but as indicative of the scope of work we expect to accomplish I desire to call your attention to the following brief synopsis of the lines of activity already outlined, which is to embrace every important producing and consuming country in the world.

First, production by quantity and type; second imports and exports—indirect shipments; third, lists of foreign importers and manufacturers; fourth, Internal Revenue, tariff laws and foreign tobacco monopolies; fifth, port and warehouse facilities—free zones; sixth, contracts, terms of payment, credits and exchange; seventh, current information from the leading markets of the world; eighth, consumption.

There is another matter which I desire to call to the attention of the members of this Association, and that is the special agricultural inquiry that is being undertaken by the Department of Commerce, under special authority granted by Congress during the last session. There have been many conflicting statements emanating from various sources regarding the economic conditions of our principal agricultural products and the Department is undertaking a thorough study of the conditions affecting our international trade, in order to determine the true situation as it exists today. By virtue of its position in our international trade, ranking fourth among our export agricultural commodities, and constituting more than seven per cent of our total exports, tobacco has been included in this special survey that is to be made between now and October 1.

The general intention back of this work is to provide a fund of information and a basis of fact upon which a policy for marketing agricultural products may be predicated.

It is planned to make a thorough-going statistical analysis of trade in tobacco in each important consuming and producing country, the object of which is to compare the present trend of our own trade with that before the war and to show the relation of our trade with that of other countries and to make a general analysis of the trends shown. The second phase of this study deals with the question of export facilities and methods. We plan to study the supply of credit, methods of financing followed by exporters and importers now as compared with those before the war, as well as questions of transportation, storage, trade routes, free ports, and a large number of related subjects which have a bearing on the future of our tobacco industry.

It is imminent that some pertinent facts can be developed on the international trade of tobacco in connection with this work that would be of paramount interest to the members of this association, in view of the fact that such a large proportion of its membership consists of firms directly interested in export trade. The Department welcomes any suggestions you may have to make in this respect.

In this work, the tobacco industry is in a position to have a real service rendered them, such as has not heretofore been offered. Therefore, I earnestly solicit the fullest co-operation of this Association with the Department in this undertaking, and can assure you that if we can have the support of the members of this Association, as well as other important tobacco trade associations, that something will be accomplished of real value to the industry.

Mr. Hughes address was greeted with hearty applause.

Crop Reports

Crop reports were made from the various sections, as follows:

W. A. Goodson said that in the Winston-Salem section prospects were for a good crop, with the acreage about the same as last year, but from ten to fourteen days late.

W. H. Cozart of Wilson, N. C., reported for Eastern North Carolina, that there would be an increase of about 10 per cent with prospect of a good crop, but about 10 days late.

W. P. Clark of Mullins, S. C., reported that the South Carolina crop was the best since 1902, and of much better quality than the 1922 crop.

C. W. Walters, South Boston, Va., said the crop in his section was not looking any too well, needing rain badly, and also that the crop would be quite late.

C. B. Davis of Danville, Va., said the crop in Pittsylvania County was the worst in 20 years; was three weeks late on account of dry weather, about 80 per cent acreage planted, and if rain comes quickly there may be a fair crop.

R. G. Robertson of Lynchburg, Va., said that 75 to 80 per cent crop was planted, but would be a little late.

J. W. Dunnington of Farmville, Va., stated that in his section and Blackstone, there would only be from 65 to 70 per cent of a normal crop, owing chiefly to the scarcity of plants.

James G. O'Brien, Louisville, Ky., said that there would be from 10 to 15 per

cent increase of the crop in Kentucky, and that the crop was looking excellent.

H. E. Spilman of Huntington, W. Va., said the crop in his section was very good, but was a little late.

James W. Dean, Knoxville, Tenn., said there was a special increase in Knox County and that the crop would be somewhat later than in 1922.

Around the "Festive Board"

At the conclusion of the crop reports, everybody seemed perfectly willing to retire to the banquet hall. Hence, adjournment was taken until after the feast had been properly dispatched.

About 125 sat down to an excellent banquet, and after coffee was served, President Carrington introduced R. L. McKellar of Louisville, Ky., foreign representative of the Southern Railway who said:

Exports and Transportation

"Great Britain has practically resumed its position as the leading nation of the world, which leadership was voluntarily relinquished by the United States in refusing to become a member of the League of Nations."

Mr. McKellar said that it is no doubt true that the exporters of tobacco have suffered along with all other exporters since the slump in foreign trade subsequent to the war, due so largely to unsettled economic conditions in Europe.

While the European situation is by no means yet in anything like satisfactory shape he stated, nevertheless, it shows some signs of improvement. Continuing he said: "England has perfected a very satisfactory arrangement for the payment of its immense debt to the United States, and is rapidly getting its financial affairs in order. Its coal mining industry has been pacified and restored with exportation of this commodity practically back to normal. It has also taken steps to protect its oil interests in the Far East, Mexico and even in this country."

"France," he said, "is taking no chances in collecting its indemnity from Germany, and the latter is endeavoring to evade its just obligations, with result that these two countries are now engaged in a commercial conflict which will likely mean the survival of the fittest."

"As an illustration of what these European conflicts mean to us in this country," Mr. McKellar declared, "I will state that our export movement to Europe through one port alone dropped off approximately 500 cars the first month following the occupation of the Ruhr by France, which is a slight indication of what 'splendid isolation' would mean to this country.

Turning to the railroad situation, the speaker said in part: "If the domestic and foreign commerce of this country continues to expand as it has within the last 10 years, the ratio of railroad betterments to keep pace with our commercial expansion, should approximate one billion dollars per year for a period of 10 years; or, in other words, the investment of railroads at the end of that period should approximate thirty billion instead of twenty billion as at present."

Quoting figures on the progress of the railroads, Mr. McKellar said: "In 1904 the value of all kinds of property in the United States was estimated by the Bureau of Census to be $107,000,000,000. Of this amount the property of the railroads represented $11,000,000,000, or thirteen per cent. In 1919 the total national wealth had risen to $188,000,000,000, of which the railroads represented $16,000,000,000, or eight and five-tenths per cent in 1920 the total national wealth had jumped to the enormous figure of $290,000,000,000, which the railroads may be taken as representing approximately $19,000,000,000, or only six and six-tenths per cent.

"As an evidence that active measures have been taken and are being taken to care for the expansion," he continued, "attention is called to the fact during the year 1922, the railroads' commitment in cars, locomotives and other essential materials approximated $440,000,000. While the figures for 1923 are not complete during the first four months of 1923 the commitment was $1,100,000,000.

"Present indications point to a flood of adverse if not radical railroad legislation with the opening of next Congress," he said.

"It is true," he continued, "that the Transportation Act of 1920 is by no means perfect. Its compulsory consolidation provision is, in my opinion, wholly impracticable, and, it will likely require a Supreme Court decision to determine whether the surplus earnings of the stronger roads should be taken from them and used to build up the weaker roads."

"The Railroad Labor Board," Mr. McKellar said, "has also developed weakness, but, in the main, the law is constructive and the best that has yet been placed on the books, and in view of the vital need for adequate and sustained transportation service, the shipping public should urge that railroad legislation be minimized until this Transportation Act has been given a fair test under something like normal conditi

Following Mr. McKellar's address, a ech was delivered by Charles A. ebb, President of the North Carolina ss Association. Mr. Webb was ened to with marked attention.

Although the majority of delegates sent at the banquet were from neighing states, they were astonished at statistics on the progress of North rolina, presented by Mr. Webb.

Of peculiar interest were the figures the tobacco industry. Mr. Webb dered that last year North Carolina paid enue of over $93,000,000 to the govment and indications point to over 0,000,000 for the fiscal year ending e 30.

Mr. Webb has massed interesting data the growth of North Carolina since war between the states to the present e, covering all lines of industry in all ions and these were strikingly preted.

His humorous stories of the great ustries of the state were heartily apded and injected a good natured it into the occasion.

The Election of Officers

After these two able and informative resses, the Nomination Committee orted. The result showed that Col. M. Carrington was elected for the nty-fourth consecutive year. The owing are the other officers, executive committee and board of governors ted for the ensuing year:

V. T. Clark, Wilson, N. C., First e-President.
V. T. Reed, Richmond, Va., Second e-President.

Resolution on Storage Bonds

Lower rates for bonds on tobacco storage warehouses were urged by the association and the members passed the following resolution:

"Whereas, the companies issuing bonds on tobacco storage warehouses have advanced their rates very materially, and,

"Whereas the protection offered by the revenue laws minimizes the risk in the greatest degree. "Therefore, be it

RESOLVED, that the president of the Tobacco Association be requested to take the matter up with the proper authorities in an effort to have the rates reduced."

Opening Dates for Auction Sales

After considerable discussion, the Warehousemen's Committee and the Standing Committee of the Association, finally agreed upon the opening dates for the auction sales, as follows:

August 1, South Carolina.
August 2, Georgia.
August 21, eastern North Carolina, from Raleigh east.
September 25, Old Belt, territory including Danville, Va., Winston-Salem, and Durham, N. C.

This completed the regular work of the convention, which was then adjourned until 1924, the time and place to be selected and announced later.

Co-op Growers Get Checks

HOPKINSVILLE, Ky., July 1.—Checks totalling about $700,000 were sent the last of the week to the 7,000 members of the Dark Tobacco Growers Co-operative Association in the Stemming district. This was their second payment on their crops delivered to the association. The amounts were about seventy per cent of the initial advances paid the growers.

Many of the growers had made assignments of their participation receipts and this necessitated the issuing of about 8,000 checks instead of 7,000.

This payment was authorized at the meeting of the directors held at Paducah on June 7. It was greatly desired that a payment equal to the first one be made the members, but this would have necessitated such a heavy loan that it was decided best not to do that. This course was taken on the advice of the bankers. With the matter handled as it has been the association is left in a very st financial position which not only as the taking care of present conditions quately, but also during the delivery son next fall.

The second distribution in the Fired district has also been autho and it is to be made the latter pa July. This will approximate $4,50 This will be between 70 and 80 per of the first payment.

A payment in the Green River di will come later in the year. The m for that tobacco does not open until September, at which time the sal partment of the association believ large part of it will be market short order.

Smaller Crop Indicated

Reports from the school district in many sections of the district in that the crop this year will not be so large as last year. It is yet too

make definite figures on this, but a iber of reports have come in stating planting at this time is not so large ast year. Labor conditions have had h to do with this, for large numbers negroes have been attracted to the s by the offer of large wages on conction work there. It has been nothunusual for tobacco growers to lose y negro on their farms and in many s the farmer was fortunate if he reed these in part. And without good r and plenty of it, tobacco cannot be wn successfully. So without a proper unt of labor many farmers have had urtail their crop this time.

he warehouse being built at Paris, n., by the business men of that town rovide adequate accommodations for iving the crop there, has about been pleted, but is yet to be equipped. t station during the past season lled nearly 2,000,000 pounds of to-o, which averaged fourteen cents a d.

he school district locals are now rishing all over the district and are ing a source of much interest and e to the members, as well as furing the officials at headquarters with ful information as to crop condis and the problems of the individual bers.—M. E. Bacon.

Paducah Prospects

ADUCAH, Ky., June 30.—The movet of loose tobacco has been light n this week, which is due largely to vorable weather conditions. Besides larger part of the crop has moved no doubt the greater part of the in farmers' hands will move during next few days.

ne Dark Tobacco Growers' Co-opve Association warehousemen have busy with classing and prizing the ld stocks and have gotten the greater of this prized, and from now on the ries will be cleaned up very quickly deliveries have been made.

ost of the dealers are getting gh with packing and the handling n will be over in the next few s.

e have had heavy rains and wind ns during the past several days h has caused great damage to be to the growing tobacco crop in some ons. A great deal of tobacco has drowned in low lands and considerable damage on uplands by washing. It is hard to say what the damage will be, but no doubt something like 10 per cent of the crop has been badly injured, but plants are plentiful and some of it will be replanted.

The crop, generally speaking, is in fair condition and a good part of it in splendid condition, but farmers generally have not been able to work their crops as they would like to do, but with favorable weather the crop will soon be put in good shape and indications are that we will have a good crop. Some tobacco will be topped in the next fifteen days and the greater part of the crop is early enough. —W. B. Kennedy.

Owensboro Outlook

Owensboro, Ky., June 30.—While the week has not been altogether favorable for the cultivation of growing crop, I can say that it is making rapid growth and farmers are availing themselves of every opportunity for timely cultivation. —J. S. Phelon, Tobacco Broker.

Burley Officials in Indiana

Madison, Ind., June 30.—James C. Stone, president and general manager of the Burley Tobacco Growers' Co-operative Association, today told a crowd of farmers of Jefferson and adjoining counties in Indiana what the Burley Co-operative had been instrumental in accomplishing for the tobacco producers of Indiana, Kentucky, Ohio, West Virgina, and Tennessee in the past two years.

Mr. Stone told of the plans for financing the organization, how the merchants and bankers of the district, realizing its importance to them, had turned out and helped to sign up the farmers. He said that every cent received by the association for the tobacco, except the actual expense of marketing their crops, is paid by the association to the growers. This expense, he said, for the first year was $1.54 a hundred pounds. The crop for the second year of the co-operative's operation, he said has not yet been sold. He said that the association had received approximately 200,000,000 pounds of the 1922 crop, that it had sold of this amount close to 150,000,000 pounds on the association grades and at the association prices, which he read to the audience; that the tobacco still in the hands of the association is of the higher grades and that he believed the association would be able to sell it without prolonged delay at a good price.

Discussing the statements made that growers who remained outside the association received more money for their tobacco than the growers who joined the co-operative, Mr. Stone said that was not the fact, but that the growers who delivered to the association received a higher price than outsiders and paid their instalments due on real estate besides.

"But, even if the outsiders did get a good price," said Mr. Stone, "you who

embers of the association have re- far more money than you would received had you not formed the ation. The true test of this organi- is its efficiency, its ability to get fair and profitable price. I have alked with a grower since we sold irst crop but has admitted that we responsible for the stability of s, whether he was in the association t.

hile we have had some complaints ading, the new system of grading the grower a far better chance to his tobacco fairly graded than the ystem. Many of you men here to- ave had in your crops when you to deliver them too many flyings to one basket. You placed half on asket and half on another, and you sold that tobacco at auction some- one bringing 10 cents or 15 cents und more than the other. Our rs certainly do not miss an accurate that much."

. Stone told of plans to organize and the women and children of the rs and to better the condition of communities generally. He declared f the farmers would stand by their usiness, "for this is your business," urley district would witness an era osperity unparalled in its history the next few years.

. Stone said that the organization d with 55,617 growers, that it had the second year and that to date embership had grown to 85,500 and He answered statements as to the tion of the association, and when d concluded his set address said he would be glad to answer any ions asked by any member.

is organization of ours is not per- said Mr. Stone, "but you can de- on it that the mistakes we make are t mistakes and that they will not peated. All it needs to insure its ss is the loyalty of its membership, verlasting teamwork of every farm- the association who has cause for ude that it has given him not only but confidence for the future, and it will mean continued prosperity appiness for the people of the Bur- istrict."

. Stone was accompanied by Captain am Collins, chief of the field service, J. Sherman Porter, editor of the *y Tobacco Grower*, the association's zine, Mr. Porter also spoke briefly.

At the Eleventh Hour

PKINSVILLE, Ky., June 29.—H. C. nnell, of Caldwell County, has just red to the receiving house of the Tobacco Growers Co-operative Association here one of the best crops of tobacco handled this year.

On three acres of ground Mr. McConnell produced 3,200 pounds which graded in price from $8 to $38 per hundred, or at an average of $28.79. The advance check on this crop was $394.50, giving him an average of $12.33 per hundred as a cash payment.

This is a splendid record under the most favorable conditions, but it demonstrates the stabilizing effect of the co-operative plan of marketing to the growers who make late deliveries of their crops.

Under the old method of selling, the market was virtually closed in the late spring or early summer. After that time the belated grower found the demand lessened and often prices reduced when he delivered his tobacco.

But under the Association plan, just as in the case of Mr. McConnell, these late deliveries find they receive the same grades, the same proportionate advance payments and the same grade prices on their crops as did those growers who delivered in the height of the season.

This is not done to encourage slow deliveries. On the other hand the Association has done everything possible to get the tobacco into the warehouses as early as possible. The Association even announced recently crops in the Dark Fired and Stemming Districts not delivered by June 15 would not participate in the second distribution to be made in those districts very shortly. Even this did not cause all the tobacco to be delivered by the date fixed.

However, under the Association plan, every grower is assured the same price for the same grade and condition of tobacco, and that is what they are receiving. And especially among those whose crops came in late is it proving to be most satisfactory.—Press Service Dark Tobacco Association.

Distributes Bering Brand

B. Wasserman Co., Inc., of 77 Chambers street, New York, importers of Havana cigars and jobbers of domestic cigars, are now distributing the renowned Bering brand (manufactured by Corral, Wodiska y Ca., of Tampa, Fla.) in the Metropolitan territory.

A Middle-West Revival

John Riordan, of Grosvenor, Nicholas & Co., has returned from a highly successful trip in the Middle West. He noticed a great revival of business throughout his territory.

Among the Pines

Capt. Joe Cullman, Jr., of Cullman Bros., is spending the week in Belgrade, Maine.

Auction Houses Necessary

Until the co-operative marketing of tobacco grows much more extensive than it is at present, it will be necessary to run auction houses for disposing of tobacco under that plan. Towns where there are no auction houses will lose business and trade by reason of tobacco being carried to the independent floors of other towns. Conway expects to be better off this year than last by reason of having more independent floors than it had last year. Bowles & Bass will run the Peoples Warehouse. It is said that another new auction house will be provided in the brick building in the rear of the Kingston Hotel, the livestock business of Conway Livestock Company being moved for that purpose to one of the new buildings across the street.—*Conway (S. C.) Herald.*

Home from Holland

Lothar Herzog, of Herzog and Sarluy, arrived from Europe recently on the Cunard liner *Mauretania*, after attending the Amsterdam inscriptions.

THIS IS A PORTO RICAN TOBACCO YEAR

No matter what the wrapper may be—Sumatra, Havana, or Connecticut shade-grown—unless the cigar has the right Tobacco in the filler it will not satisfy the discriminating smoker.

No longer is it necessary for a manufacturer to misbrand his product as "A Mild Havana" for the smoking public is gradually realizing that the ideal, mild, fragrant cigar which it has learned to enjoy invariably contains Porto Rican Tobacco either exclusively or blended with other high grade Tobacco in the filler.

This year the crop of this Island is of almost uniform excellence while that grown on the uplands of the interior is said by experts to equal in quality the Tobacco grown in any part of the world.

Manufacturers who have studied the taste of the average American smoker are using Porto Rican Tobacco in their cigars and reaping the reward in their popularity—if you happen to be one of the few who don't, now is the time to start, for

Legal Lore

You May Not Know All This About Post Dated Checks

I want to say something in this article about post-dated checks, that is, checks dated ahead. I have had to take them many times, not only personally, but in the course of professional business, and so has every reader hereof except the fortunate individual whose business is all cash.

What is the legal status of a post-dated check? Is it negotiable like other checks? Can it be passed from hand to hand like an ordinary check? And has it that most peculiar and characteristic element of negotiability—can the third party holder collect it from the drawer, regardless of any defense the latter might have against the drawee? Of course, everybody knows that with an ordinary check dated the day it is given, the answer to all these questions is yes. When you give a check dated a month ahead, however, you are giving what to a great extent is like a promissory note or a draft, and this might change the law.

A case has just been decided (—— vs. —— State Bank, an Iowa case) which, if it is to stand for the law of the whole country, would completely upset the status of post-dated checks. Happily, however, it practically flies in the face of the unanimous opinion of the other courts of the country, which makes it of very little value.

In the Iowa case, A bought $1,000 worth of merchandise from B, and gave him in payment a check dated one month ahead. B, thinking himself quite canny, went to the bank on which the check was drawn and had it certified. He then passed it on to a third person, in settlement of his own debt.

Before the check was due, A found that the merchandise wasn't up to contract, and ordered the bank not to pay the check. The bank was in an unfortunate position, for its certification of the check had made it liable for it. However, it refused payment and the third party holder of the check brought suit against it. The case was fought through the whole line of courts, and the final decision was that the bank needn't pay. There were a number of technical grounds for the decision, such as the absence of legal consideration when the check was indorsed by the drawee to the third party, and so on. Under the facts of the case, which apparently showed the original transaction to be phony on the seller's part, I was glad to see the case decided as it was, but it nevertheless

Lancaster Market Gliding into a Summer Qu

Sales and Inquiries Dropping Off Gradually Into the U Warm Weather Torpor—Interest in 1921 Goods Hol Up Well—Cigar Situation Shows Improvement.

LANCASTER, Pa., July 2.—Sales and inquiries from buyers are dropping off and the Lancaster market is gradually slipping into the usual midsummer torpor. Very few transactions, and those insignificant in size, were recorded during the past week and although requests for samples are still arriving at local warehouses, packers do not expect activity of any proportion until later in the summer or early fall.

Interest in 1921 goods is holding up extremely well and there are prospects of several sales of some importance within a short time. Reading manufacturing circles have for some time shown more than a usual degree of interest in this class of seedleaf and visits from several cigar men from that section were reported by Lancaster packers. Reading-made cigars cover a wide range in quality and the Berks county district turns out everything from nickel goods to the better grades running as high as the twenty-five cent article.

Cigar Business Picking Up

The cheaper cigars have not come out of their early season slump as yet, although prospects look considerably brighter and business is picking up. There will have to be much improvement, however, before the industry is entirely on its feet again and on more of an equal basis with the better grade of smokes. Local merchants and dealers declare the situation, as far as they are concerned, is in *status quo* and shows no sign of change.

Several of the smaller factories in the county in the manufacturing district of Lancaster have been forced to close down, but the larger concerns are running nearly at par. Wages, although not reaching their former high level, are fairly satisfactory and cigarmakers are not disposed to complain. The boom in the building and other associated trades has relieved any surplus of labor which might have existed and there is just a chance that this inflated condition may, in time, react on the cigar industry.

Elastic Industries

Lancaster county, one of the most highly diversified sections of the entire country, presents an extremely elastic labor and industrial situation. Should the bottom drop out of the cigar manufacturing industry, the large industrial plants can, without difficulty, absorb the surplus. If the reverse occurs, which has happened frequently in the past, the cigar and tobacco interests or the enormous agricultural resources of the county equalize the situation.

This condition has nearly always succeeded in isolating Lancaster county, more or less, from any of the depressions which paralyze other sections of the country. The tobacco and cigar interests are assured a stabilization that carries them unscathed through periods which would ordinarily affect them seriously and are guaranteed almost instantaneous recovery from slump periods which would cripple them for some time after "normalcy" had been reached.

The New Crop Now Making Progress

The oncoming crop of 1923 cigarleaf has weathered the worst part of the season and is now on a fair road to a large and well grown acreage of tobacco. depredations of the cut worm durin past several weeks threatened to c tute a serious menace to this year's leaf but danger from that source is removed as the worm has gone int larva stage and can do no more A number of large growers had entire acreage totally destroyed b worms and were forced to replow plant over the second time. In s cases this was done three times immunity was finally secured fro pest.

Dry Weather at Critical Peri

A protracted period of dry w which arrived just after the bulk planting was completed struck the at its most tender stage and played with the young plants. Heavy rai week alleviated this condition to a extent but large quantities of m will be needed to put the plants they should be. The diversified cr system employed by Lancaster farmers was responsible for the la son affecting the care given the t crop and many growers have been n ing their seedleaf. Indications at are that no harm has been done th however, and with favorable weath tobacco will come through in good

Annual Tour in August

The annual tour of the county w conducted by the members of th caster County Tobacco Growers' ciation will take place this year on 20, it was announced by Otto Olso retary of the organization. The made up of practically the total growing fraternity of the county cludes all of the good tobacco fa this section. A visit to the Feder perimental Station at Ephrata will cluded in the itinerary and it is e that the program of entertainme include speakers of national promin tobacco circles.—KEYSTONE.

York County Activities

York, Pa., July 2.—The General Cigar Co., which recently leased the D. Frank Kaltreider building, South Charles street, Red Lion, began operations Tuesday. The White Owl and the William Penn brands will be manufactured in the Red Lion factory. The factory is in charge of Grover C. Smith, a Red Lion man, who has 10 years' experience in conducting a cigar factory, having been superintendent in factories for the San Telmo Cigar Co. and the Tampa Cigar Co. Although there were practically no idle cigar makers in Red Lion, there was no trouble in securing workers for the new factory. The building, which is a four-story brick, is the largest cigar factory in the borough of Red Lion. There is room in the building for 200 cigar makers.

The Fair & Square cigar factory, Stewartstown, formerly the J. C. Heckert Co's cigar factory, closed June 26, to take an inventory, necessitated because of the recent death of a member of the firm in New York city.

Stewart S. Shindler, manager of the C. N. Foreman Cigar Co., Red Lion, has returned from a business trip to Ohio.

B. S. Sentz, manager of the Consumers Cigar Box & Lumber Co., Red Lion, has gone to Janesville, Wis., in the interest of the firm.

The H. J. Roth Cigar Co. is operating in full time at its factory in Bair.

Fred Gabbach, a member of the firm of Gabbach & Cukrote, cigar manufacturers, who became seriously ill on June 26 in the factory at Windsor, has recovered and resumed his duties.

The General Cigar Co., which recently leased a building in Dallastown, is reported to be operating in full.

"Youth" Believes in Tobacco

That tobacco will hurt no one, if used moderately, and that it assists in preserving the teeth, is the belief of George W. Keller, the oldest resident of Shrewsbury, York county, who recently observed his 90th birthday anniversary. When a young man he started the use of tobacco and still continues the habit at his advanced age. He is a farmer by occupation and up until a short time ago worked several lots all alone "in order to give himself exercise and keep healthy." Mr. Keller claims that there is nothing that will keep one alive longer than work. When a young man, he was one of the strongest in the neighborhood. He is the last of his family in that section of York county. All lived to be old and he expects to exceed them by reaching the century mark. He is one of the oldest Odd Fellows in Pennsylvania and is a member of the Masonic fraternity also.

Revenue Receipts Show Slight Decline

The tobacco industry in the York-Adams county district of Pennsylvania during June shows slight decline, in the returns from the sale of revenue stamps for the month reported by G. Frank Lindemuth, collector of internal revenue for the York office. These receipts show the cigar stamp sales amounted to $197,718.73. The report of the tobacco stamp sales is very similar. The receipts for the month ending June 30 were $8,525.61, or $331.11 less than the receipts of May.

New Benedict

Henry S. Throne, a wholesale cigar dealer of this city, and Miss Nora A. Sechrist, also of York, were married last Saturday in Christ Lutheran church by the pastor, Rev. Walter H. Traub. The ceremony was witnessed by a number of relatives and friends.

Legal Lore

(*Continued from page* 39)

transgresses about all the law there is in the United States on the subject. For this reason the case may attract some attention, and that is why I am attempting to make it clear that it does not express the general law. Under the general law of the United States the bank would have had to pay.

Under all the cases but this new one, a post-dated check is a negotiable instrument just like an ordinary check. You can transfer it to somebody just as freely as any check, and it has, just like any ordinary check, the element of negotiability I spoke of, viz.: That which lets a third party holder collect it regardless of a possible defense between the drawer and drawee. If the Iowa case had been tried anywhere else, the third party holder would have been given a verdict against the bank, because he *was* an innocent third party holder, and was therefore not bound at all by the fact that A could have defended against the note had it remained in B's hands. The bank would have had to pay because of its certification.

A bank, however, has no right to certify a check before its maturity, and if it does, does so at its peril, because the maker of a check who dates it a month or a week ahead has the right to stop payment any time up to maturity, and the bank is robbing him of this right when it certifies it ahead of time. Not only that, but the bank that certifies a check ahead of time of course plays safe by deducting the amount from the drawer's account, thus practically forcing him to pay his check before it is due. I explained in a former article that a bank couldn't do this with a depositor's note, and by the same token it can't do it with a post-dated check. If it does do it and the drawer could have escaped payment except for the certification, the bank must itself pay.

But even when the bank doesn't certify a post-dated check, the drawer may not be able to stop payment on it. If it has gotten into the hands of an innocent, third party holder for value, he will have to pay it even though he has a perfect defense as against the man that he gave it to in the beginning.

Perhaps I don't need to explain, but will do so on a chance so that nobody may misunderstand any part of this article, that when a bank certifies a check it makes itself responsible for payment—guarantees the account in other words. Naturally it only certifies when it has enough of the drawer's money on its books to make it safe to do so.—*Copyright, 1923, by Elton J. Buckley.*

Philadelphia Business Showing Reasonable Gai

Hot Weather Affects Production—Wholesalers and Retailer Generally Share the Better Conditions—Federal Reserv Bank Reviews June Business—Collections Are Fair.

PHILADELPHIA, July 3.—Big business for the big producers continued to be the trade experience during the week of such intense weather that production, which the larger manufacturers are endeavoring to increase, lagged behind their desires. The wholesalers and the retailers generally were able to share in the better experiences of the big producers, the increment in sales arising principally from the special demands for the holiday celebration, and the vacation period, but also most satisfactorily from a slow but perceptible increase in staple business. It there could be made any distinction between counter and box sales it would be in favor of the latter, although, despite several torrid days when transient business fell off markedly, the aggregate for the week still was satisfactory and most encouraging after the season of quiet passed through during the last fortnight.

Conditions in the manufacturing, distributing and leaf branches of the industry, as they are viewed by the Third Federal Reserve Bank, whose territory includes the largest cigar manufacturing district in the United States, are set forth in an official bulletin, reviewing June business which goes into the mails this week, advance proofs of which were furnished for TOBACCO. It sets forth the following:

Cigars

"Manufacturers of cigars report that orders booked this month (June) have been larger than those received in May, but in general the demand is only slightly better than it was in June, 1922. The large producers of cigars state that business is good, but the smaller manufacturers characterize it as only fair. With the smaller producers, particularly makers of 5 cent and 8 cent cigars the demand has been light since April, and stocks on hand are rather heavy. Consequently, they have curtailed production severely, and are operating at an average of only 65 per cent of capacity. However, the recent improvement in business makes the outlook more encouraging. Large manufacturers of nationally advertised brands report that though sales are not as heavy as had been anticipated, they are on the whole satisfactory. The warm weather of this month has stimulated the demand, but jobbers' orders for the summer resort business are smaller than usual. The very cautious buying policy of retailers has caused some jobbers who have a standing order for a fixed quantity of cigars weekly, to cut down the size of these orders. A distinct decrease in the call for 15 cent, 3 for 50 cents, and higher priced cigars is noticeable, but this has been counterbalanced by an increased demand for 10 cent and 2 for a quarter sizes. Several manufacturers of Class C and Class D cigars have temporarily stopped the production of 15 cent and 3 for 50 cent sizes and are concentrating their output on 10 cent and 2 for a quarter sizes. The average of plant operation by the large producers is approximately 80 or 85 per cent. Practically all orders are for prompt shipment.

"Though the demand in April and May was rather disappointing to many manufacturers, the output of cigars in the United States during the first five months of this year was considerably greater than during the same period of 1922 and 1921. Cigarette production during this period was enormous and far in excess of the first five months of 1922 and 1921.

"In general, cigar prices have remained unchanged during the month. Leaf tobacco prices, too, are holding firm. Manufacturers' stocks of cigars are moderate and are remaining stationary or decreasing slightly. The supplies of leaf tobacco held by manufacturers, also, are moderate.

"The supply of skilled cigar makers at most factories is adequate, but some scarcity of unskilled labor is still noted. Wage scales, on the whole, are unchanged.

"The majority of firms report that collections are fair to good, and in most i stances they are stated to be more prom than they were a month ago.

Tobacco Leaf

At the close of May many large fa tors entered the Lancaster market a made some big purchases of 1922 Pen sylvania packed wrappers, but that ma ket has not shown much activity sin Leaf dealers report that buying by man facturers has been light and that the lar producers are really the only purchase The packings of 1922 Pennsylvania wra pers have appeared on the market in lar amounts and about a month earlier th usual. Current quotations on these va from 26 to 30½ cents per pound, act weight based on September 1, 19 weights and inspection. Of the to amounts that have appeared on the m ket, leaf dealers report that about 80 cent was purchased by large cigar man facturers. No 1922 packed fillers ha yet been offered in the Lancaster distr and practically all of the 1922 fillers the bundle were brought up several we ago by tobacco manufacturers.

"Nearly all of the 1922 Pennsylva and Ohio tobaccos have passed from farmers' hands, probably not more tha per cent of the crop being still held the growers. Leaf dealers state that in the past 25 years have the growers Ohio and Pennsylvania tobacco b sold out as closely as they are now.

"On June 8 American importers cigar manufacturers bought 2,750 ba of Sumatra tobacco on that day's sale Amsterdam, Holland. The aver prices paid for American grades w considerably higher than the average any of the previous sales this year. L dealers report that their sales of Sum tobacco this month were heavier t those of a month ago, despite rec prices. The Rotterdam sales of J tobacco have opened and about 1 bales have thus far been purchased Americans. The prices although h were much lower than at the Sum sales at Amsterdam.

Current Prices High

"American packers and dealers tailed their buying in Porto Rico late month, and as a result that market not been very active. Because of lack of buying, prices softened somew although they are still higher than were last year. Purchases of the Cuban (Havana) crop by dealers packers have been heavy in the Vu Abajo district, but in the Remedios Partido sections buying has been ra light. The prices demanded by the gr ers in the two latter districts—50 t cents per pound—seem to have effecti stopped buying. A strike of the tob selectors, who demanded a 50 per increase in wages in the Cuban distr also contributed to the halt in purch The strike in the Partido section been settled by granting the strikers' mands. Most of the Vuelta Abajo has been sold by the farmers in the dle at close to 1920 prices, but the mand of the other districts for p higher than those of 1920 has made Cuban market less active than usua June. As a result many of the gro are accepting lower prices and the P edios crop is now selling at about 40 per pound."

Making Progress

All the production of the Louis Cigar Co., and of the closely allied K Co., hereafter will be concentrated in Philadelphia factory at 9 Bank st established several years ago and w has grown steadily as a result of ness which increased at so rapid a that it is now three times as large the beginning. Executive and distr ing offices will be continued in Hart Conn., at 284 Asylum street, where iously production also was carried The Philadelphia headquarters now cupies three floors of the five-story b

ig, 9 Bank street. The company recent- l took over the additional floor, and it ntemplates in the near future adding t two remaining so as to become sole tant of the building. All the produc- rn will be under the continued super- ision of A. N. Davis as general manager. laf buying is the specialty of President (M. Kahn, who far a quarter of a ntury, has been experienced in this lanch of the business and who now is i Europe in the interest of the company. e is expected to return a week hence, which time further announcement of pansion probably will be made. J. J. argolies, Secretary and Treasurer of t company will be in charge of the irtford distributing center. The com- ny employs 150 hands, producing the ng Perfecto in 3 sizes; the Little Jr., ailing at 5 cents, the Perfectos at 2 r 25 cents and the Imperials at 15 cents. ie cigar is a Havana filled with Sum- a wrapper, or Connecticut broadleaf apper. Four salesmen on the road ntribute its 40,000 per day production ve for the standing order of 40,000 per ek from the Schulte Co. disposed of rough its New England stores. The le is handled by many jobbers through- t the New England States and is cked in 20's, 40's, 100's and 200's, all lted at the same price. Established ree and a half years ago the King t. has concentrated efforts in the New gland field with Hartford as the main ntributing point.

Alfred Mellor's Estate

An estate valued at $230,000 of which 0,000 consists of personal property, is disposed of to the widow, two sons d grandchildren, by the will admitted probate during the week of Alfred ellor, who long was associated as Vice esident with the MacAndrews & rbes Co., of Camden, manufacturers licorice flavoring for tobacco manu- cturers. He died recently at his home, 2 West Walnut Lane, Germantown.

Wedding Bells

Herbert E. Calves, of E. Calves & Co., lvana leaf tobacco importers, 3rd and ne streets, has taken unto himself a fe in the person of Miss Elizabeth sanave, daughter of Mr. and Mrs. John Casanave. The ceremony took place ring the week at St. Matthias' Church, la-Cynwyd, Montgomery County.

Trade Notes

Charles M. Hipple, head of the firm of ipple Brothers, 151 N. 3rd street, is ring the central part of the state, find- g ready sales for the Sumatra which purchased at the recent inscriptions at nsterdam.

Premises at 1220 Chancellor street, ve just been leased by John J. Mc- nley retail cigar dealer.

In the United States District Court, a tition in voluntary bankruptcy was filed ring the week by the Friedman Cigar ., Inc., of Bethlehem, Pa., giving liabil- es as $16,589 and assets as $5,222. eorge F. Coffin, was appointed referee.

Factory Changes Location

Word was received during the week at the Vetterlein Cigar Co., formerly of iladelphia, is moving its factory from opersburg, Pa., to Greenville, Pa.

A large lot of the 1921 crop of Con- ecticut Seedleaf and Broadleaf has just en received by Samuel Yudelson & Co., N. 3rd street. Already much of the tter has been disposed of, sales having en made before the arrival of the ck. The firm has been at the present adquarters since the first of the year d is fast advancing to the forefront of e leaf trade.

G. R. Conover & Co., which occupies rt of the Yudelson store has disposed the complete stock of Havana leaf it d on hand. The head of the firm, G. Conover, leaves shortly for the Cuban etropolis to replenish the supply.

Baltimore Market

BALTIMORE, Md., June 28.—Gieske & Niemann, leaf tobacco merchants, make report as follows:

MARYLAND.—For the past week receipts were 439 hogheads and sales 405 hogheads. All desirable grades continued in good demand.

OHIO.—Nothing to report.

San Francisco

(*Continued from page 26*)

be fair with both factory and customer, and to profit more by large sales than by large margins." H. L. Judell, the "boy" of 73, is off for the annual convention of the Commercial Travelers, to be held this year at Columbus, Ohio. Mr. Judell is one of the "boys" who gets no older in spirit, and will prove himself one of the youngest of the crew. If progress is youth, he has it yet.

Chas. Knubel, representative of Charles the Great and Salvador Rodriguez, is taking his vacation in Fresno County. He has a valuable ranch there, and will spend the time in part at least, looking after farm and crop.

C. W. McCormick, the Norwood Dream promoter, has left for a trip east, and a visit to the factory. His last trip through the Sacramento Valley recently was very satisfactory.

David Horn of the Golden State Leaf House says he is ready now to do all kinds of business if the business will just come along. This is a little doubtful, however, as it is the quiet season for the leaf trade. He has just returned from a most enjoyable trip to the Santa Cruz Mountains with his family, where they had a quiet, restful time.

E. Horn is taking an extensive trip through the south part of the state accompanied by his family. They are having an easy-going pleasure trip, which will be interspersed with a little business as well.

Ed and Ben Rotholtz, of Reno, Nev., have been visiting the city, calling on the trade.

Sol Spring, of the well-known Spring Cigar Co., of Seattle, Wash., was a recent visitor in the Golden Gate.

G. R. Webb has been making an extensive tour of the Pacific slope, both north and south, in the interest of the J. Martinez products of Tampa, Fla., and has been meeting with good results.

Izzy Mendelson is smoking the pipe of peace at the popular resort known as Siegler Springs in Lake County, sometimes known as the Switzerland of America.

Robert Gans, of the former firm of J. J. Gans & Bro., which sold out a year ago in Los Angeles to Glaser Bros. of San Francisco, has been making the city the past week and calling on old business acquaintances.

A few business changes continue to take place, regardless of whether trade is lively or dull. Among others, Karl Matthias has sold his stand at 35 Montgomery street to Henry Fox. Henry Fox recently sold his business in the Santa Marina building.

George Morse, formerly with Irving Pollack in his Merchants' Exchange stand, has opened a stand of his own at 28 Leidesdorf street.

The Harry Bercovich Cigar Co. has opened a new stand in front of Stevens Bar on Market street near Drum.

E. R. Walter, formerly with the Reynolds Tobacco Co., has joined the splendid sales organization of Jos. Rinaldo & Co.

Michalitschke Bros. & Co. have found business improving, especially with Henry IV. They have put on another salesman in the East Bay region.

Sam Israel, the Jackson street jobber, reports an increase from 72 to 74c on smooth Climax tobacco, effective from July 1.

The distributing house of George R. Webb reports surprisingly good placement of their new cigar, the Tampa Hand Made.

A. Czarnecki, salesman for Frankel, Gerdts & Co., is reported to be having a fine time in New York.

ool had another rally meeting last n Edgerton. About 55 growers esent. The only pool official to as Lars Lien, one of the two most l men in the organization. The its on grading are unceasing evi- as grading was the crux of the The decision was reached to committee of seven members for ol district, to nurse things along grading complaint. The com- or this district meets tonight for t meeting. It is safe to say, that ork remains for them to do on

Handling Expenses

Lien might have intimated, per- at expenses of the pool were heavier than commonly expected, as accentuated that next year the ght to be able to bring their charges down to a half cent a pound. This is all the more an unwelcome surprise to the grower, for Selmar Neprud, the northern power of the co-op, announced in an April number of the *Pool Bulletin* that expenses of the farmers venture were under a half cent a pound for the '22 crop handling charges. This statement has been constantly referred to by growers whenever expenses were on their minds. It was explained at last night's meeting, that many expenses incurred last year owing to the organization's inexperience, could be avoided next year, in whole or in part. Today the town is buzzing with guesses as to what the pool's deduction to the farmer will be per pound.

A plausible explanation was given sub rosa to the writer, by a pool man who knows, that conditions are very unsatisfactory to the pool's officials within their organization. That the organization could not go on without an improvement in its internal conditions, and of its *esprit de corps*. Hence the unceasing round of rally meetings.

Wednesday next sees the big pool picnic at Hippe's Grove, north of Edgerton. Bands are hired, and all equipment commonly used to quicken the pulse are to be there. Meanwhile, one or two rallies are held every day at some point throughout the state.

Various Activities

E. M. Hubbell & Sons have about two months to run. When Spitzner shut down, they took over a large portion of the latter's crew.

A. Jenson & Son report the purchase of a small 1920 packing purchased from L. O. Felland & Son.

W. Dickinson & Son closed their season's run this week.

The pool's assorting is running along in fair shape. They must be putting out in excess of 125 cases a week. Chippewa Falls, London, Rockdale, Cambridge, Stoughton, Madison, Janesville, Orfordville, and Edgerton are all running at least one warehouse on their packing of unsold southern.—BADGER.

Big Gain Expected at Greeneville Market

GREENEVILLE, Tenn., July 7.—It is now estimated that the burley tobacco crop in Greene county will be fully 30 per cent larger than in any previous year, and from reports the same thing can be said of the adjoining counties. Many sections are raising burley for the first time this year, and especially is this true in Hawkins, Sullivan, Hamblen, Carter and Unicoi counties and as a result instead of this market selling 10,000,000 pounds this fall, the amount sold last year, the sales are expected to reach the 15,000,000 pound mark over the Greeneville warehouse floors alone.

Never before has there been brighter prospects for the burley crop, so farmers state. A good stand was obtained in almost every instance and the season since planting has been ideal. With anything like favorable weather conditions the next few weeks, farmers of the burley section apparently will be able to rest on their oars in so far as their money crop this year is concerned, as tobacco men say there is no question but what the splendid prices that prevailed the last two seasons will be maintained possibly for several years to come.

Proposed Warehouse Deal Falls Through

While it has been known for several weeks that the Kentucky co-operative association is making an effort to organize this section in the tobacco pool, especially in Greene county, where the bulk of the burley tobacco is grown, but little headway has been made, in so far as is known. It is quite certain, however, that they have not abandoned their intention of trying to enter this field, but plans on foot for the purchase of local warehouses seem to have been halted for some reason.

Prices Again Sky-High at Amsterdam

AMSTERDAM, Holland, July 7.—The prices on American grades at yesterday's Sumatra inscription, which was the closing sale of the season, are said to have reached new high records. More than 1,500 bales were purchased for the United States market. The principal American buyers, and the approximate number of bales bought, follow:

General Cigar Co., 500 bales.

Manus, Muller & Co., 423 bales, including Senambah/TR, Senambah/LP, Deli My/—, Deli My/C, Deli My/LM, and Deli My/NO.

H. Duys & Co., 420 bales, comprising Deli My/L, Deli My/WB, Senambah My/SA, and other fancy marks.

Cullman Bros., 86 bales.

D. Dreux, Inc., 75 bales, including Deli My/L.

Arthur Bornholdt & Co., 35 bales.

Herzog & Sarluy, 20 bales.

Kingsport to Have Tobacco Warehouse

KINGSPORT, Tenn., July 7.—Kingsport is to have a tobacco warehouse, the work of construction of which is to commence very shortly. A corporation has been formed, capitalized at $50,000; and the building is to cost $30,000, on a site valued at $10,000.

The committee appointed by the Kingsport Business Men's Club for the sale of stock consists of I. M. Fuller, chairman; A. D. Brockman, W. R. Jennings, G. W. Taylor, T. C. Warrick and J. E. Huffaker.

Tentative plans for the warehouse call for a concrete, steel and brick structure. The committee on plans consists of C. E. Brooks, A. D. Brockman, Allen Dryden and J. E. Miller. The committee was named at a special meeting of the Business Men's Club to complete plans and estimates and consider bids.

The tentative officers in whose name the corporation, to be known as the Kingsport Tobacco Market, Inc., will be organized were elected at the meeting as follows: J. E. Miller, president; Dr. W. H. Reed, vice-president; H. H. Poarch, secretary, and Clinton Minnich, treasurer.

Pollack Estate Buys West Virginia Factory

WHEELING, W. Va., July 7.—Stockholders of the West Virginia Tobacco Co. recently voted to accept the offer of the Pollack estate to buy outright the four story factory of the company, located at Eighteenth and Eoff streets. The sale meant the dissolution of the West Virginia Tobacco Co., and the surrender of its charter. No official figures were given out on the sale price, but it is understood to have been in the neighborhood of $60,000. Ninety per cent. of the stock was represented at the meeting.

The West Virginia Tobacco Co. has not operated actively for the past fifteen years. Previous to that time the company manufactured Red Letter chewing and smoking tobacco and Tabby Long Cut, a once popular brand.

For the past ten years the factory at Eighteenth street has been leased by the Pollack estate, and has been operated as a part of the Pollack Tobacco Co.

The factory represented nearly the total assets of the West Virginia Tobacco Co.

Jess W. Speidel, president of the dissolved company, conducted the final meeting of the corporation.

R. M. Barker Tells of the Greeneville Situation

LEXINGTON, Ky., July 6.—Burley tobacco growers in eastern Tennessee not only will have an opportunity to join the Burley Tobacco Growers' Co-operative Association, but will have a receiving plant at Greeneville at which they can deliver their crops, according to a statement made by Ralph M. Barker, Director of Warehouses of the Burley Association.

Mr. Barker's statement followed his return from Greeneville, where a meeting of the interests opposed to the co-operative marketing of tobacco was called hastily, when it was learned that Mr. Barker was in Greeneville and that his purpose was to obtain possession of the Bernard warehouses in that city for the Burley Co-operative. Word was sent to Mr. Barker that he was not wanted at this meeting and he did not attend it.

"We have the support of the leading warehousemen of Greeneville, Walter W. Bernard," said Mr. Barker. "He is thoroughly in accord with and believes in our co-operative association. I was refused a hearing at the meeting in Greeneville because it was dominated by pinhookers and speculators who have always profited largely from the efforts of the farmers of that section to grow a crop of tobacco. We intend to put the co-operative idea of marketing tobacco before the farmers of East Tennessee within the next ten days or two weeks. We are going to do this because some of the leading farmers of that section, who talked with me while I was in Greeneville, were enthusiastic over the prospect of an opportunity to join our Association and to market their crops co-operatively.

"The opposition in Greeneville is led by a warehouseman and the farmers in that territory have not forgotten the big profits he made off them in 1920. We are fully aware of the fact that all the pinhookers and speculators who formerly infested the Burley district of Kentucky

now are centering their activities about Greeneville, for that is about the only Burley territory left that is not signed up to our Association.

"Western Tennessee has signed up almost solidly, and the growers are thoroughly satisfied with their first year's experience.

"The business men of Greeneville do not understand the co-operative marketing of tobacco, and they never will understand it if the Greeneville warehousemen, pinhookers and speculators can prevent it. At the meeting of the citizens and business men of Greeneville, called as soon as the warehouse interests learned that I was in town, everything said in opposition to the co-operative marketing of tobacco was 'played up' in the Greeneville papers, but nothing said by Walter W. Bernard, or other advocates of the Association ever appeared in these newspapers, which carried reports of the meeting. The whole effort of the warehousemen and speculators is to prevent the growers of that section from learning the truth about the co-operative marketing of Burley tobacco.

"At Johnson City we were cordially treated by the Chamber of Commerce and the attitude of the business men was entirely different, as they appeared to want to know the truth about the new system of selling tobacco, which removes almost entirely the middlemen who have been dividing with the farmers the fruit of their toil.

"We invited a delegation from Tennessee to come to Lexington June 25, to make a first hand investigation of the methods and merits of co-operative marketing of Burley tobacco. We were perfectly willing to abide by the report of this delegation, as we were to abide by the reports of the delegations of representative men who came here from other states and looked into our methods of operation before recommending to their tobacco growers that they come into the Association. In every such case the report of the visiting delegations was that the Association had the right plan, and the only plan that would guarantee a fair return to the grower for his crop and get him permanently out of the clutches of the tobacco speculator. That, after all, is the real reason for the vigorous opposition to the facts of co-operative marketing of Burley tobacco being made known to the growers and business men in Greene County."

Putting Up Stiff Fight Against Dark Co-op

HOPKINSVILLE, Ky., July 9.—The first hearing in Court of the legality of the membership contract of the Dark Tobacco Growers' Co-operative Association is scheduled to come up at Springfield, Tenn. The association is organized under the Bingham co-operative marketing act, a Kentucky statute, and in this state a number of suits have been filed against alleged violators of the membership contract but none of these has ever come to trial. On the other hand, most of them have made settlements by paying liquidated damages and costs of action, before the cases came up for hearing.

But in Robertson County, Tenn., R. H. Mason and W. H. Holman, two growers against whom suit was filed, employed attorneys and have laid the foundation for a vigorous fight. The defendants to the suit first filed their formal motion for a dismissal of the action, and then last week, without waiving their rights under this motion in any measure, they filed their answer to the petition. This is a lengthy document of seventeen paragraphs and it sets forth fully the position of the defendants.

For the defendants the attorneys named are, John E. Garner, of Springfield, and John Belle Keeble and Ed T. Seay, of Nashville.

Make Strong Demands

The defendants answer denies every allegation made in the plaintiff's petition, even to the incorporation of the association in Kentucky, and demands strict proof of every allegation, such as proof of the organziation, production of the charter, etc.

But even if it be proven that the association is duly incorporated in Kentucky, the defendants deny at length that it has complied with the laws of Tennessee for doing business there; or that if it did comply with the Tennessee laws it was not until November 25, 1922. And it is specifically charged that at the time the contract complained of in the petition was signed in October, 1922, that the association had not been organized, it is claimed that the contract is therefore void.

Say Contract Was Defective

Objection is raised to the manner in which the contract appears, defendants contending that it was not properly signed or joined in by other members of the association. Also that the signatures were secured by fraud, in that it was represented to them that 60 per cent. advances in money would be made by the association to the growers, and that this was not done.

It is charged that it was promised that farmers would be put in charge of the business of the association, and that this was not done.

Claim Contract to Be Oppressive and Unjust

The defendants claim the contract is hard and oppressive and unjust, unfair and inequitable, and they assert their confidence that it will not be enforced by a court of equity in that the association, it is alleged, assumes to itself the right to incur such expenses as it deems proper for warehouses and overhead expenses and the right to run the business as it thinks best without the consent of the grower, making such advances to the grower as it sees fit and when it sees proper.

The defendants further charge that the association has breached the contracts, even if they were ever in force, which th defendants deny.

Charge Reckless Management

The answer further contends that the association has been reckless in the handling of the business; that it has wrongfully graded low a great deal of the tobacco and sold it from seven to eight dollars a hundred lower than tobacco of the same quality sold outside the association; and it has taken money outside the Springfield territory and has deposited it in banks in other territory in furtherance of a scheme to destroy the Springfield tobacco market.

Finally the petition asks that the case be tried before a jury.

Both sides are understood to have made much preparation and the hearing will be an occasion of much interest.

The association attorneys and officials say they have no fears of the outcome of the case. They say that the co-operative principles under which this association is organized have been amply tested in many other states and they see no reason why Tennessee laws should be an exception to the general rule. Everywhere the association plan and the legal safeguards thrown around them, have been upheld by the courts. The association leaders say that the contracts which the two defendants to this action signed, are identically the same which were signed by nearly 60,000 other growers of the dark tobacco district and they were all signed under the same legal conditions.

(*Continued on page* 33)

Hearing Postponed

HOPKINSVILLE, Ky., July 10.—Hearings of the Dark Tobacco Growers' Co-operative Association suit against two members on grounds set forth that the defendants had violated their contracts, which were scheduled to be heard at Springfield, Tenn., today, were continued to August 15, on motion of the defendants.—M. E. BACON.

Miss Helen Leslie, Now Acting the Part of the Heroine in "Whispering Wires." She Is Here Seen as an Enthusiastic Smoker of "Matoaka" Cigarettes, Whereas She Has Heretofore Smoked Turkish Cigarettes.

Success Crowns Efforts of a Genius

The pronounced success of the Matoaka Smoking Tobacco and Matoaka Cigarettes is undoubtedly due to the great genius of F. A. de Pilis, whose original ideas regarding publicity are bearing fruit. One big jobber reports that his sales on these two brands during the past four weeks increased tenfold over his sales of the previous four weeks, which were then considered good. Other jobbers are doing equally as well.

Mr. de Pilis says that it was only on last May 15 that the real distribution started, and that now these brands put out by the Patterson Bros. Tobacco Corp., can be found from Coast to Coast.

Smokers' League

Mr. de Pilis is taking out a charter for the Smokers' League, and is to have associated with him some of the most prominent men in the country.

F. A. de Pilis has demonstrated he is an important factor in the tob industry. He has recently made con tions abroad, whereby the export bus to be conducted, will no doubt prov be a most valuable asset to the Patte Bros. Tobacco Corp.

Not Afraid to Raise Prices

A big advertising campaign is sc uled to start on September 15, at w time the price of Matoaka cigarett to be raised to 25 cents per package o Mr. de Pilis is the first in this cou to raise prices on cigarettes, and he not entertain any fears as to the c quences.

The T. M. A. Cig Committee Active

The sub-committee, headed by President Best of the General Cigar and consisting of R. E. Christie, president of the American Cigar Julius Lichtenstein, president of the solidated Cigar Corp.; Ben R. L president of Otto Eisenlohr & Bros., Samuel Bayuk, president of Bayuk Inc., and Geo. H. Hummel, vice-pre of P. Lorillard Co., appointed b general Cigar Committee formed a recent T. M. A. convention for the pose of considering ways and mea improving the cigar business, with F G. Wemmer, of the Deisel-Wemme as chairman, as well as the Special gan Committee composed of Fran Harwood, advertising manager o General Cigar Co., chairman; F. J. president of F. J. Ross Co., Inc.; H. Eyles, president of the Richa Foley Advertising Agency; Geo. C. man, president of Sherman & L Inc., and C. R. Sherlock, vice-pre of the United Cigar Stores Co., been devoting a good deal of thei and attention to the development of for increasing cigar consumption.

Unhampered by the recent hot and with a sincere ambition to wo some practicable and beneficial these committees have held not les three meetings at the office of Mr within the last three weeks, bes number of informal conferences, before them the benefit of advice expert advertisers, draftsmen, writers, and general promotion ad ing specialists.

It is now reported that the initi for the promotion of the cigar b has practically been agreed upon announcement to this effect is ex to be made by Chairman Best wit next week or two.

Leading Leaf Dealers R from Holland

Distinctive Types

ith respect to the several distinctive of tobacco, significant changes have place both at home and abroad in arity of the different forms in which co is consumed. These changes sarily affect the relative demand for different types of leaf. Maximum iction of chewing tobaccos was vir- reached as early as 1897. On the hand, production of pipe-smoking cos increased rapidly until about while the subsequent rate of in- e has been much slower. Manufac- of cigars increased rapidly until t 1906, but since that time the rate crease has fallen off.

eginning about 1910 the production achine-made cigarettes began to in- e with remarkable rapidity, and this of increase has been steadily main- d. It is apparent that chewing is popular than formerly and is giving to smoking, and the cigarette is now ning the favorite smoke. In line these facts there has been a very increase in production of the bright cured tobacco, which is the leading ette and granulated pipe-smoking with an upward trend in price. e has been, moreover, an increasing gn demand for this type, thus plac- t in a relatively strong position.

lue-cured tobacco has long occupied nportant position in the manufacture lug, but any loss in demand in this tion has been more than offset by the in domestic and foreign demand for king purposes. Burley, which has the leading type of leaf for the man- ture of plug, also has recently come great demand for cigarette and smok- grades of leaf, the net result being a rate increase in total demand for this type. The dark fire-cured and air-cured tobaccos have always been mainly export types, domestic use being confined mostly to the production of chewing tobacco and snuff. Foreign markets are indicating more and more a preference for the light-colored cigarette types of leaf, at least so far as concerns increased purchases in this country.

"As would be expected from these facts, there has been no notable permanent increase in production of the dark types in recent years. Cigar leaf is largely restricted to a single domestic use, and production has shown but little increase in the last decade, thus further indicating a slowing down of the increase in consumption of cigars.

Tobacco Culture in New Territory

"The question is frequently raised whether tobacco could be grown with profit in sections where it is not at present a commercial crop. In the search for new crops in various regions it is natural that attention should be directed toward tobacco because of the fact that it is a cash crop of high acre value. For the five-year period ended with 1920 the average acre value of tobacco was approximately $205, as compared with $125 for potatoes, $42 for cotton and $26 for hay.

"There are two principal aspects of the question as to prospects for tobacco culture in new territory, namely, whether present production fully equals the demand and whether new regions could successfully compete with the sections already growing tobacco. As a matter of fact, from the earliest days of the colonists overproduction has been the one greatest menace to profitable tobacco culture. In most of the principal centers of production less than 10 per cent of the total acreage of the tobacco farms is devoted to this crop each year, and rising prices for tobacco are almost invariably followed by marked increase in production. In recent years by far the most marked increase in demand and in production has been in the flue-cured type of the South Atlantic States, but in these States there is a very large acreage of land lying idle which is not sufficiently productive for general farming but is available for meeting any increase in demand for flue-cured tobacco.

"It is apparent, therefore,that commercial tobacco culture in new territory must be at the expense of the established producing districts. As bearing on the second phase of the question, it has been described in full elsewhere how through a long process of evolution and specialization tobacco production has become definitely localized, each region because of its particular combination of soil and climate producing a type of leaf peculiarly suited for certain uses and differing in important characteristics from other types.

"So marked are the effects of soil and climate that it rarely if ever happens that two different regions will produce exactly the same type of leaf, and for this reason the trade usually looks to some particular section producing tobacco of known characteristics for the required supply of each of the commercial types of leaf. Under ordinary circumstances, therefore, commercial tobacco culture is not likely to prove successful in new territory."

Receives Havana Shipment

Selgas & Co., of 128 Water street, the well-known importers and packers of Havana and Porto Rican tobacco, recently received a consignment of 254 barrels and 140 bales of choice Havana leaf per the New York & Cuba Mail S. S. Co.'s liner *Orizaba*.

Covering Western States

Leonard Jacoby and J. W. Small are covering the western territory for the Kohlberg- Gonzales Corp., and are securing a good number of orders for their enterprising organization.

An entirely new standard of cigar value—the new

Flor de MELBA

The CIGAR SUPRE

Flor de Melba was born with our determination to surpass every previous effort at value-giving.

We determined to offer a cigar of such quality—at such a price—that equal value could not be found in any other cigar in the world.

Through changing conditions we have stood by our resolve and now, with the return to normalcy, we are able to offer the new Flor de Melba, increased in quality and size—all Havana filler — delightfully mild — with the taste and aroma found only in imported cigars.

Display the Flor de Melba—and watch 'em sell!

Minneapolis and St. Paul Doing a Good Business

Dealers Catering to More Tourists Than Ever Before at this Season of Year — Factories and Jobbers Selling in Good Volume — Placing Orders for Christmas Goods.

MINNEAPOLIS, Minn., July 6.—The summer trade has been very healthy this year and the St. Paul and Minneapolis dealers have waited on more tourists than ever before, at this season of the year. This is due to the fine country roads that cover the state, and with the hot spell, the stream of travelers has been very heavy. Dealers are buying from the jobbers and factories in good volume and already some early orders have been placed for Christmas packings. While it is a little early, the conditions of the Tampa factories must be considered by the merchant. At present the word that comes from Tampa is that many of the larger factories are today taking orders subject to six weeks' delay. As we get nearer the holiday season for buying, conditions will become worse, so now is the time, Mr. Dealer, to get busy and place your holiday orders.

Jonas Schuchat, representing E. Popper & Co., New York, was a recent visitor. Popper's Ace, a 10-cent cigar in cans, is, from reports that reach here, one of the big selling cigars in Chicago.

Made in Bond

When buying Tuval and Redencion cigars, from Marcelino Perez & Co., one must think of Mort Hammer, the clever chap who represents this bonded factory. Mort called here recently and while he sells fine cigars, he does not refer to his brands as "clear Havana" but says "Bonded." He has several fine accounts in the Twin Cities.

Three Favorites

Graham Davis comes here for the General Cigar Co., and it's a safe bet that Wm. Penn, White Owl and Robert Burns cigars are not overlooked by the local dealers.

E. S. Peters of the cigarette department of the Liggett & Myers Tobacco Co., spent several days here going over the local market.

E. P. Oakes of the Gato Cigar Co. is due for his annual summer visit. Cressida, Gato and Keywesters are sold in many of the local stores.

Independente, created by the Morgan Cigar Co., at Tampa, has a fine distribution. Havana filled and very mild, it has proven to be a quick and steady seller.

Much in Evidence

Blue Boar cigarettes continue to be featured on the tops of the showcases and The American Tobacco Co. is still handing out those crisp new one dollar bills.

In the Front Rank

Harvester cigars get a heavy call. Harry Lewis of The Harvester branch of The Consolidated Cigar Corp., surely hit this market right and Winston-Harper-Fisher Co., his distributors, have placed it right up in the front rank.

Growing in Popularity

Marie Antoinette cigars from E. Kleiner & Co., are coming to the front. Frank J. King Co., of St. Paul, distributes this cigar and it is placed in many cases in both St. Paul and Minneapolis.

A 10-cent size of Cinco cigars has been placed with the trade.

The Endicott Cigar Store, St. Paul, Thos. Short, manager, reports a very good sale on Virginia Lee mild Havanas, made in Tampa, Fla.

Old Favorite in New Packing

Edgeworth tobacco gets much publ and the dealers all push it for E O'Donnell, the Larus & Bro. Co. agent. Several new packings of this brated smoking mixture have been p here recently.

Cashing In

Sight Drafts, now at 5 cents, are ing many friends for E. B. Crabtre This brand, formerly sold at 2 fo cents, and is made by W. K. Gre Son.

Sales Increasing Weekly

Blackstones, from Waitt & Bond, now are on sale in a 5-cent size. W Collins was here after covering a section of the middle west. In Ch he finds Blackstones gaining in sales week.

A Popular Seller

The 10-cent tin of ten El Roi cigars has proven a steady seller the dealers. At $1 per box, many been purchased at week-ends and ers are all featuring this packing.

Featuring Websters

Webster cigars increase in sale the Louis Nathanson Co. is sendin more and more each day to custo A heavy advertising campaign is no and Websters are featured in many dow displays.

Work and Merit Win

A busy fellow and one who early and late, is George Buckin representing Philip Morris & Co. G is having a highly successful yea English Ovals and it only goes to that hard work always wins out.

Kan't Kick

Carl Thomas, who took over the len Cigar Co.'s stores on Seventh some weeks ago, can find no fault business. La Esperanza and H cigars are featured in this and his retail establishment.

Ever Increasing Demand

E. P. Stacy Co., who has so su fully placed the El Producto cig this market, finds the call getting and bigger. Assisted by the G. Cigar Co.'s advertising campaigns time to time, the firm has El Pr strongly entrenched here.

In the 2 for 15 cents field are Owl and Charles Denby, both of have a large sale. White Owl ads newspapers are shown often by the eral Cigar Co.

Makes Maiden Trip

W. W. Rossbro of the New Tampa Cigar Co. paid his first v the Twin Cities for his new conn "Doc" landed, but who is to get hi sonality and Jenny Lind brands s mains a secret, but "it will b shortly.

El Paxo, in 10 sizes, 10 cents a is shown in all the cases. H. S Co., Inc., of Quakerstown, Pa., ma tures this mild Havana.

Business Always Good

Thomas Sweeney of the Sweene Co., and Thomas Sweeney, Inc. stands in the Radisson and Dy Hotels, is away on his summer va Business is always good with hi Tuval, La Palina and Sanchez an always get the big display.

The Short Cut to Succes

Walter Short, Inc., with several features advertised brands strong ever, and in his cases one now fin the popular sellers. "Once upon Walter featured private labels, b he takes it the easy way, quick more of them, at quicker profits.

On the Way

Several factory men are looked day now. Herbert Mesick of Rey & Co., Jack Rosenberg of E Gonzalez & Co., Sig Mayer of F. Son & Co., Wm. Rosenfeld of S Rodriguez & Co., and Albert S of the San Telmo Cigar Co., are ported on the way.—H.

Cigars of Today as Good as Ever

Editor, *The New York Herald:*

Where did Dr. W. H. Ballou get that stuff? Tobacco is a *weed*, but cigars continue to be made from only the tobacco weed, because no other has its requisite qualities.

Cigars are carefully assorted into varied shades of color of their wrappers and then packed into boxes, so that each box and each cigar in it has the shade desired by the smoker.

No Chemicals Used

But no chemicals are used to produce varied wrapper shades, nor are wrappers ironed after applying chemicals. There are no processes for producing dark colors, nor are vats used in preparing wrappers.

There is as much cleanliness, order and system seen in any well regulated cigar factory as in any other, but the factory is equipped solely for the work to be done in it, same as is the kitchen of the Ritz for preparation of meals served in dining rooms.

There may be restaurant kitchens so slovenly that one would not care to dine there, and there may be similar cigar factories, but one neither stops dining nor smoking because of it; one seeks and finds places to suit one's idea of what they ought to be.

There are as good and as many good cigars made now as before the war or at any other time, and there still are popular brands which formerly sold at 5 cents. But they cost more now because everything about the cigar, from the cigar box tack to the revenue stamp costs more.

Your contributor may not know, but since the war tobacco has practically doubled in cost; so have cigar boxes; labor receives better pay, and even the tax from a uniform $3 per thousand has been made a graded one, $4 to $15 per thousand, according to retail selling price of the cigar, the present average tax being $6.50 or thereabouts.

Your contributor may not know that within the last thirty years the paper cigarette has become the popular national smoke; that from an annual consumption then of less than a billion, we devour over fifty billions, over 100,000 *every minute of the day.*

Your contributor may not know that though taxed $3 per thousand, many leading brands of cigarettes are retailed at 13 cents per package of twenty, two packs for 25 cents, $6.25 per thousand; in other words, the mere average tax on cigars equals and exceeds the retail selling price of cigarettes.

Billions Smoked Yearly

Your contributor may not know that despite this wonderful cigarette competition, between 6,000,000,000 and 7,000,000,000 cigars are consumed annually.

The American consumer is no fool; he

THE
STANDARD SHORT MOLD LEVER PRESS

Patented

Features No Other Press Has

When pressure is released, the handle will remain up and can be operated with one hand. With our specially hardened springs, this Press will give all molds a positively uniform pressing, taking care of variations of thickness of the molds, and pressing the entire length of the mold, insuring an even pressure to all the bunches. Our Press weighs but fifteen pounds and occupies less space than any other press on the market.

One Mold Size, Price $5.00 each
Two Mold Size, Price $6.50 each
Net F. O. B. Detroit.

Worthy of its name—STANDARD. Almost indestructible. Different in construction. The most pressing power with the least effort. Adjustable in a few seconds.

STANDARD BUNCH MACHINE CO.

3960 Chene Street
Detroit, Mich.

Remittances may be made by New York draft, postal or express money order, or cash in registered letter.

Each and every one is cordially invited to send us items of information that are of interest to the trade. All such information will be used with discretion.

NEW YORK, THURSDAY, JULY 12, 1923

CRITICISING PRESENT-DAY CIGARS

"In the good old days prior to the world war, the lost, enchanted years when life was lived at its best in all human history, the five cent cigar was the standard, the unit of American smokers. It was a good smoke, a cigar that had the true odor of Virginal tobacco and the taste to the tongue that tobacco should have. Not for five times that amount can one today get a smoker that has either the odor or taste of Virginal tobacco.

"I remember what was known as the 'millionaire's five cent cigar' of from thirty or more years ago, down to 1914. It was manufactured by a concern then in existence, Straiton and Storm, and was called the Cameo. There was a friend then alive who headed a large corporation in Wall Street, who ordered from 5,000 to 20,000 of this brand periodically, according to season. Just before each Christmas he gave his largest order, to present each of his many wealthy friends a box of 100. He passed boxes out right and left to heads of branch offices all over the country, as well as remembering his chums at home. He always had a Cameo in his mouth. When you entered his office, he opened a drawer, offered the visitor a Perfecto, at the same time taking a fresh Cameo for himself. It was a bully good cigar, and it never varied the slightest in quality during all of the years of its existence. Another millionaire head of a great corporation also smoked the brand constantly, keeping his office and house stocked with them.

"During the war, the five cent cigar almost entirely disappeared. The brands in existence that had sold for five cents advanced a cent at a time until they reached a dime. One brand after another disappeared. Today, so far as I know, not one of the former brands of five cent smokers is in existence. Little attempt has been made since the war to restore the five cent smoker to its former supremacy. True, a hundred or more five cent brands are now on sale, but only a strong man can smoke one and live. For that matter, there is little difference in odor and taste between a modern five cent cigar and one costing 35 cents. A president of a great tobacco corporation said sarcastically recently that even in Havana it was possible to get a very good cigar for an American dollar, 'and,' he added, 'it is a possibility which is destined to continue for some time to come.' In other words, we must continue indefinitely, smoking the present wretched and almost abominable cigars, no matter what price is paid.

"A cigar today of whatever price looks very tempting in its box. So far as the eye can discern, the exact color and appearance is there. The exact shade wanted is easily secured. There's a reason. Tobacco leaf is put through chemicals which will produce every conceivable shade and appearance. Afterwards, the wrappers are ironed until perfectly smooth. Chemicals are used to make mild smokes for those that call for them. Strength is given for dark colors of maduros and Colorado maduros, or 'black' cigars, by other processes. A visit to the vats where the leaf for wrappers is in its original preparation would cause the oldest smoker to give up his life long habit. For that matter, by use of chemicals, the manufacturer need not use tobacco leaf at all, as he can produce the same appearances with the large leaves of ordinary weeds. For all we know, we are smoking just weed leaves."—Dr. W. H. Ballou, in *New York Herald*.

Although we strongly suspect that the balderdash quoted above was intended for the comic supplement of the Sunday edition of the *New York Herald*, the lingo really appeared in the magazine supplement and, therefore, has to be taken—like the good medico's pills—more or less seriously—that is, supposing him to be a medical doctor. Of course there are others.

Anyway, time has evidently wrought havoc with the Doctor's palate, and if he could only prescribe for himself the right kind of medicine, one that would restore a healthy taste, we feel assured that he would be able to extract full enjoyment out of many of our present-day high-grade brands of five cent cigars, while the "thirty-five" cent cigar—which he professes to scorn—would indeed taste like Nectar to the Gods.

The most extravagant part of the Doctor's jargon is the statement that, by the use of chemicals, the manufacturer need not use "virginal" tobacco at all, as he can produce the same appearances with the large leaves of ordinary weeds. This is "rich," and perhaps the Doctor will tell the world something more about this remarkable process. It requires much elucidation—and then some!

For the Doctor's information, we can assure him that the tobacco produced today is even better than it ever was before. Only the very best fertilizers are allowed to be used in its production. Government experts, scientists, and growers are working continuously to improve the quality of the leaf and they are making rapid progress towards perfection.

The Doctor evidently is unaware of the intense competition that has taken place this year in the world's leaf markets, for all kinds of tobacco, and the remarkable prices that have been paid by dealers and manufacturers for the best leaf—especially for light colored wrappers. But then, we must not take the Doctor too seriously.

However, if he is not a real jokesmith, Tobacco extends to him its deepest sympathy for his evident loss of the power to appreciate the flavor of the good cigars now on the market; and we sincerely trust that his sense of taste will speedily return to him, and that he may live long to enjoy many more five, ten and even "thirty-five cent" cigars.

CHECKS AT PAR—AN ULTIMATUM

When a New York manufacturer pays for raw material shipped to him from Pittsburgh, or Chicago, or St. Louis, he gives a check on a New York bank. Similarly when Oshkosh, Wis., or Atlanta, Ga., or New Orleans, La., firms pay the New Yorker for his finished product, each sends a check on his local bank. That all such checks, all checks, should be accepted at par for deposit everywhere, collection to be free, is the contention of the Federal Reserve Board. Some Georgia banks, which had been charging one-tenth of one per cent for collection, carried the issue to the Supreme Court of the United States and got a ruling that the Federal Reserve Board had no control over the practice of nonmember banks, though member banks might be regulated, says the *Brooklyn Eagle*. This was a technical victory for the Georgians, a technical defeat for the universal "checks-at-par" principle. Now the Federal Reserve Board, pursuing its purpose, has issued what is real ultimatum to nonmember institutions.

Henceforth the banks that keep up t charge for check collection will find chec on them barred from deposit in Reser banks, and member banks accepting su checks will be compelled to collect a retal tory charge of one-tenth of one per cent. T two rulings taken together cannot be m understood. The petty annoyance of m chants must cease. Recalcitrants in any s tion will be brought to terms very quickly

Our judgment is that the Federal Reser Board deserves the thanks of the whole m cantile community from Maine to Californ and from the Gulf to the Great Lakes. U der our present unified financial system the is no expense of check collection that justifi in any way the practice which has prevail in many rural sections in the past, and all t banks will find checks at par more profitat for them in the long run.

SEDATIVES AND STIMULANTS

A distinguished man in Salem (Mas who is a great scientist, celebrated his 85 birthday recently, and as he is still at work the same job he has had for 50 years, peo asked him how he kept his health and he t them. He summed up his story by a talk tobacco, as follows: "The use of sedativ and stimulants is merely natural to man. Africa, where one can find the finest spe mens of physical strength in the world, t bacco is used by both sexes in various forn almost from childhood. I do not wish be understood, however, as recommendi the use of tobacco by young people, but it as natural for a man to use tobacco as it for a cow to eat grass."—*Northampton (Mas Gazette.*

SIXTY BILLION CIGARETTES

In 1895 the nation produced 4,000,000,0 machine-made cigarettes. Last year the p duction exceeded 60,000,000,000, or appro mately 600 for every man, woman and ch within our borders. Fortunately, as so may think, a considerable proportion of th were exported chiefly to the Orient.

Today more than 450,000 farmers, in states, are growing tobacco on 2,000,0 acres, and more than 60,000 plants, empl ing 183,000 individuals are engaged in t manufacture. The leaf tobacco industry alo aggregates more than $500,000,000 a year a the nation's internal revenue from t source is in excess of $300,000,000 annual It is a lot of money.

You may abominate tobacco and all works, but you cannot blind yourself to part it plays in our national life. Ev though the defense which Matthew Arnold up for wine-drinking—"that it adds to pleasure of living"—may fail, it will lack for earnest advocates when its enem brings it to the bar of public opinion *Bangor (Maine) News.*

THE TOBACCO WAREHOUSE

The method and lesson of the drive for tobacco warehouse for Knoxville, which been closed with an over-subscription of $75,000 called for, can be conned and cop with advantage for the city in future ent prises of this character.

The committee of the Board of Comme promoting it set out to convince the mone and business people it selected as prospe of two things: that a tobacco warehouse Knoxville would be a good thing and pr able thing for the city and that it would a good and profitable investment for the dividuals who put their money into i *Knoxville (Tenn.) Sentinel.*

The Progress in Domestic and Foreign Cigarette Tobacco Culture

Quality of Cigarettes Depend Mainly on the Tobaccos—Other Materials Considered —American Products Play Important Parts in Popularizing World Consumption— Every Requirement Met—Prime Requisities in the Production of Cigarette Leaf.

By Dr. ARTHUR SELWYN BROWN

THE EXCELLENCE of a cigarette depends upon the tobacco it is made from, the paper it is rolled in and the way it is made. The most important factor is the tobacco. The reason that American cigarettes have played such an important role in the smoking world arises from the effective way in which they are prepared. Every requirement is met. The light yellow Virginia leaf is ideal for cigarettes, the best of cigarette papers are used and the cigarettes are perfectly made in the finest machinery and by the most effective methods known.

The prime requisites for every class of high-grade tobacco are suitable soil, temperature moisture and climatic conditions. Fortunately, these in certain of the Southern States are ideal for bright yellow tobacco and it can be grown in quantities to meet all market requirements.

The use of white burley tobacco in cigarette making began in 1864, when, the records show, 19,770,000 cigarettes were made in the United States chiefly from Bright Yellow and Burley leaves. Bright Yellow tobacco is the principal crop grown in the United States for cigarette-making purposes, and is largely exported to foreign countries for the manufacture of cigarettes, or for blending with foreign-grown leaf. It is the most famous cigarette tobacco grown in the United States and the one which has done more to make cigarettes popular the world over. About 240,000,000 pounds of yellow leaf, as compared with 220,000,000 pounds of Burley tobacco is grown annually in the United States. These types are also extensively grown for cigarette purposes in many foreign countries, but rarely does the quality of the foreign-grown leaf compare with the American grown.

Virginia, North Carolina, South Carolina and Georgia are the main producing areas of bright yellow crops.

First Production of Bright Yellow in Commercial Quality

The first bright yellow crops were raised in Caswell County, N. C., about 1852. Several crops were marketed in that year. Some lots brought such high prices, that in the following season yellow tobacco crops were grown in other parts of North Carolina and in Virginia. It soon became one of the favorite Southern crops. The Civil War prevented its expansion for a time. After the war, there was an extraordinary demand for this variety of leaf for plug fillers and wrappers. Soon afterwards flue-curing came into wide use in the South and this greatly improved the value of plug tobaccos made from the yellow leaf. The improvement in quality of the yellow plug tobaccos led to a world-wide demand for them. This was reflected in a greatly increased local demand with higher prices. Farmers in other states began to cultivate the crop and almost every year since the statistics have shown a greater acreage under yellow leaf.

Improvement Pays

The favorable response which followed the improvement in the strain of the plants of the yellow tobacco plant, and the improved and more intense culture, together with the improvement in manufacturing introduced with flue-curing, contributed to mark an epoch in the history of the American tobacco industry. The increased demand for the new leaf and the improvement made in the tobaccos showed in a remarkable manner that the public, and foreign buyers, quickly respond to improvements in manufactured tobaccos and that it pays to always keep on improving them.

There are important variations in the qualities of the yellow leaves grown in various parts of the Southern States. Each of the principal tobacco districts in the Carolinas, Virginia and Georgia produces a distinctive quality of leaf. The Durham district, for exemple, has long been celebrated for its plug wrappers. The western section of the Old Tobacco Belt, North Carolina, has a reputation for producing an unusually high proportion of leaves adapted for fillers in flat plug tobaccos. The soil around Winston-Salem, and Stokes County, N. C., and Henry County, Va., which are noted producers of good plug fillers, is more clayey than that in the districts producing the highest grades of cigarette tobacco. Fine cigarette grades appear to prefer a sandy soil, rich in vegetable mould which has been augmented by lime phosphates.

The soils in South Carolina are more sandy than those in the eastern portions of North Carolina and they produce leaves which are lighter, both in color and body than compared with tobacco grown in North Carolina.

There also appears to be a marked correspondence between all the good qualities of the leaf and the soil. It is found that yellow leaf tobacco grown in good sandy loams, with clayey subsoils, rich in humus and artificial phosphates, has good color, a good general appearance, comparatively low nicotine content, mild flavor, a marked aromatic fragrance and splendid keeping qualities. It is because of the fine qualities and mildness of the tobaccos made from the Virginian flue-cured leaf, and the adaptability of the leaf to such a variety of uses, including granulated and cut smoking tobacco, paper and all-tobacco cigarettes, plug fillers and wrappers and the regular forms of popular tobacco, that a practically universal demand for flue-cured leaf is created. Their colors run to mahogany and red.

Cigarette Mixtures

Cigarettes are made from the pure yellow leaf tobacco or from mixtures of this leaf with Turkish and other choice varieties or with perique.

"White Burley" is a fairly recent development of a "sport," or the result of accidental cross-fertilization, which attracted attention about 1867, when cigarettes were becoming more popular in America.

The success of the early white burley crops in Kentucky and Ohio led to experiments in adjacent states. Before its culture in Kentucky, growers in Ohio were familiar with this type through their crops of "Little Burley," from which "White Burley" appears to have sprung. They were the next to plant "White Burley" extensively. Growers in Indiana and West Virginia planted crops later.

The White Burley crop in Kentucky has given its name to the river counties where it was first raised and is now most extensively grown. The district north of Lincoln, Marion, Nelson and Carter counties is known as the "White Burley District." It includes the famous "Blue Grass" areas which have been referred to as containing the richest agricultural soils in the United States. These important factors, the peculiar qualities of "White Burley" leaf, the rich soil and the large crops grown annually have brought great wealth to the people of Kentucky. It is their finest "cash crop," and one of their greatest economic assets.

The soil best suited to "White Burley" crops in Kentucky is limestone debris from the Lower Silurian limestones of North Central Kentucky, and Southern Ohio.

The tobacco lands are in rolling areas with many depressions and valleys. The hills are from 300 to 400 feet high and extend back from the Ohio River.

The tobacco lands on the Ohio side of the river, where the best crops are grown, are on both sides of hills which are well drained and have a similar soil to the Kentucky tobacco farms. The valley land in Ohio, not being well drained, produces an inferior crop to the hill land, unless the farms are artifically drained.

Heavy clay soils of a deep red color produce the best crops. Virgin soils were mostly favored in the early days, but now growers apply scientific methods of farming and get equally good results from crops on soils, which have been extensively worked. Burley is much used for blending various popular brands of cigarettes.

Tobacco land is plowed, harrowed and rolled with the necessary quantities of fertilizers. Ammonium sulphide, potash, and similar fertilizers are suited to the limestone soils. Phosphate of lime gives good results where the soil has smaller lime contents.

The Culture and Uses of Perique Tobacco

Perique is a peculiar American product. It is a tobacco which has been cured in a special manner so as to give it extraordinary properties. Perique is principally used in small quantities for mixing with other cigarette and smoking tobaccos with the object of giving them, or developing in them, special flavors and aromas.

Perique tobacco has been made in America since the time of the first European settlements. It was made in South and Central America in the time of the Spanish Conquistadores. The French settlers in Louisiana, known as the Arcadian colonists, grew Perique extensively in the bottom lands in St. James and Assumption parishes, in Louisiana.

The annual production of Perique tobacco in the United States in 1897 amounted to 50,000 pounds. The present production exceeds 250,000 pounds annually.

The principal Perique-growing district today is a small area in St. James Parish, Louisiana, on the eastern bank of the Mississippi River.

The farms are small and have between 9 and 15 acres of dark tobacco varieties under cultivation in addition to some sugar cane. The land is usually the higher and drier portions of the alluvial farms. It is generally heavily bedded and set with about 2,500 plants per acre. The plant rows are between 5 and 6 feet apart. Annual crops are raised, but, after harvesting the tobacco in June, crops of cowpeas are raised in order to prepare the land for the following year's planting of tobacco. The usual advantages of crop rotation are thus obtained on account of the exceptionally rich character of the alluvial soil. About 200 pounds of cottonseed meal, or the equivalent in other fertilizer is plowed into the land before the tobacco is planted out. The plants are topped and suckered in the usual way.

When the tobacco is harvested and dried, by hanging on wires stretched across a barn, it is twisted into ropes, then cut into lengths, weighing about a pound, and packed in strong boxes 11 inches square and 16 inches in height, to undergo the sweating process. Up to this time, the leaves resemble the leaves harvested in the

dark tobacco districts of Tennessee and Kentucky. Lever presses are utilized to compress the twists until the tobacco juices ooze out of the leaves in a black and sticky mass. The juice is allowed to remain outside the tobacco until fermentation is completed. It is then permitted to be re-absorbed. In order to promote re-absorption, the boxes are opened every few days and the twists are "worked" by being loosened so that the air, with its moisture, can reach the tobacco. Once or twice during the process, the twists are opened out completely so that any dry leaves from which no juices have been expressed, may be discovered and put on the outside of the twists. These are dampened by blowing a water spray upon them before they are returned to the boxes and pressed.

When the fermentation is finished and the bulk of the tobacco has shrunk to one-half the original size, the pressure on the leaves is renewed. The tobacco is then allowed to rest for several months in order to mellow. During this period it acquires its strong aromatic odor and its peculiar characteristics. It strengthens the flavor of cigarette blends and improves the appearance of some mixtures.

Turkish Tobacco Long Famous Among Cigarette Smokers

In the early years of the 19th century, when cigarette smoking was beginning to become fashionable in Europe, the cigarettes were chiefly made out of Turkish tobacco, and mainly from the variety known as Latakia. The Russian, and other Slavic peoples, were largely dependent upon this tobacco, and an early authority on Egypt tells us: "The tobacco smoked by persons of the higher orders, and some others, in Egypt, is of a very mild and delicious flavor. It comes mostly from the neighborhood of El-La'-dickee-'yeh, Syria. The best is the mountain grown type known as *geb-elee*. A stronger kind is grown near Soor and is known as Sooree. People of the middle class smoke a mixture of gebelee and sooree. Some Egyptians smoke a Persian tobacco called *toombak*. It is a mild tobacco having a very agreeable flavor."

In an American trade report on tobacco, written in Constantinople in 1875, we find the following interesting statements: "Turkish tobacco is light yellow. It is used for cutting and cigarettes. Present prices three pence to three and four shillings per pound. Tobacco is largely cultivated throughout the whole of the Empire. The present crop is estimated at 43,000,000 pounds. The best is produced in Macedonia and Syria. Goat manure is much used on this crop. The exports to the United States are insignificant, but they are considerable to France, England, Anstria, Germany, Italy and Russia. Russia takes nearly as much as all the rest together. The home consumption is enormous. The bulk of the product of the Levant goes to Egypt. Of this tobacco, that of Tyre and Sidon is inferior; that of Mt. Lebanon, which is chiefly consumed locally, and Latakia are very superior. Latakia is black in color, owing to its fumigation in the smoke of the tree called Elezzer which imparts to it an aromatic flavor. The fumigation lasts ten months. The average crop is about 784,000 pounds and production is diminishing."

The Turkish cigarette smokers consider the leaf grown in the Vardar River Valley makes the best cigarette tobacco. Few European or American smokers distinguish the Turkish types. To them Turkish and Egyptian cigarettes appear alike. Some, however, discriminate and hence we have T. B. Aldrich's fine poem to the Latakia type which runs as follows:

Latakia

When all the panes are hung with frost
Wild wizard-work of silver lace,
I draw my sofa on the rug,
Before the ancient chimney place.

Upon the painted tiles as mosques
And minarets, and here and there
A blind muezzin lifts his hands,
And calls the faithful unto prayer.

Folded in idle, twilight dreams,
I hear the hemlock chirp and sing,
As if within its ruddy cove
Is held this happy heart of Spring.

Ferdousi never sang like that,
Nor Saadi grave, nor Hafiz gay
I lounge, and blow white rings of smoke,
And watch them rise and float away.

The curling wreaths like turbans seem
Of silent slaves that come and go,—
Or Viziers, packed with craft and crime,
Whom I behead from time to time,
By knocking with a single blow.

And now and then a lingering cloud
Takes gracious form at my desire,
And at my side, my lady stands,
Unwinds her veil with snowy hands--
A shadowy shape, a breath of fire!

O Love! if you were only here
Beside me in this mellow light,
Though all the bitter winds should blow,
And all the ways be choked with snow,
'Twould be a real Arabian night!"

All who have visited the Near East will recognize that the poet in the foregoing verses has truly caught, and reflected, the charms exercised by smoking Turkish cigarettes. They are universally smoked by men, women and children in the Orient and serve to soften their hearts and free their spirits in gaiety and song.

Greater Attention to Cigarette Tobacco

The recent wars have resulted in territorial and industrial changes in the Near East in the past few years which have left their impresses on the tobacco trade. Cigarette tobacco constitutes the chief cash item in the exports from Bulgaria. More attention is being given in Bulgaria and Greece to the cultivation of cigarette tobaccos then ever before. The Maritza Valley tobacco is the leading grade now exported. The Stanimaka and Xanthe districts are celebrated for the fine, aromatic tobaccos they produce. Xanthe is now a part of Greece. The present production of tobacco in Bulgaria averages about 45,000,000 pounds per annum. The Stanimaka leaf is chiefly exported to Hungary, Poland, Germany and Holland for mixing with local tobaccos for use in cigarettes. Leaf of similar grade grown in Greece, Asia Minor and the Black Sea littoral also goes to those markets for similar purposes.

The peoples of India and the Far East have been cigarette smokers from the remotest times. They prefer indigenous types of tobacco and roll their cigarettes in palm leaves instead of paper. U. S. Consul Struder, of Singapore, reporting on tobacco culture in the Straits Settlements March 20, 1889, said: "The tobacco consumed by the native residents is grown by Malays and Chinamen near their own houses, in small patches or small fields. This tobacco, the growers don't cure; they don't know how, and there is no one to show them how. The leaf, after maturity, is cut and hung up to dry in their open attap houses. When they want to cut tobacco for use, and they cut it very fine, they hang the dried leaves out over night to get the dew and thereafter just enough morning sun to a little more than half dry them. They then roll them up and cut them; women, as a rule, doing this work. As quickly as cut, while still moist, they pack it tightly in a pot or tin and in this condition it is marketed for use by both sexes, with or without the addition of Sirih leaf, betelnut and slacked coral lime. They call their cigarettes socco. These are wrapped in thin palm leaves in lieu of paper. I cannot say that the socco ever found favor with white people, as a rule, because the palm leaf destroys the aroma of the tobacco; and the latter, not having been cured, is strong, sharp, penetrating. The smoke is unpleasant to the olfactories of one used to good, fragrant tobacco. The Chinese use a fine cut dark brick-red colored tobacco."

Blue Tobacco Cigarettes

Blue tobacco is grown in Reunion for cigarette making. The plant is hardy and produces strong leaves of a rich, dark-bluish green color. The tobacco is not cured or fermented by the planters, but, immediately after drying, it is made into bundles or "carottes," as they are called, and stored away for about two years to age and mature. The cigarettes made from this tobacco are coarse and have a strong flavor. It is largely in demand locally and is exported to Africa and France.

Cyprus tobacco is largely smoked in that island. It is raised from Samsoun, Trebizond, Kavalla and Hassan Keff seedings. Cigarettes manufactured by the Cyprus Tobacco Association from the local leaf have recently won the high regards of cigarette smokers. Since the war the cigarettes manufactured in Cyprus have been greatly improved in quality. Today they are not inferior to the best made in Constantinople, Athens or Cairo. It is a tobacco that is limited in quantity and will not become available to foreign smokers.

Non-Smoker Seduced by Subtle Influences to Smoke

Persian tobacco has a fine reputation in the Orient. A recent visitor to Persia says: "The superb tobacco grown in this country, whose agreeable qualities are in part due to the quantity of nicotine it contains, in part to the manner in which it is prepared, entices all to smoke. Though a non-smoker, while in Persia, I never failed to succumb to the subtle influence of the weed, especially when drawn through a Shiraz Tumbaker, or water pipe, a few perfumed inhalations of which are sufficient to fill the remotest cells of the brain with an Olympian contentment."

The chief districts raising the Persian leaf are Shiraz, Kashan, Tabbas, Isfahau, Kum, Nichavend, Veramin, Semnan and Sharud.

A similar tobacco is grown in Kurdistan, near Urumiah and on the Caspian littoral. These tobaccos are used, like Turkish, for cigarettes in Bagdad, Beirut, Arabia, India, Afghanistan and Central Asia. They are ranked among the choicest of cigarette types.

Everyone Rolls His Own

Shiraz, the city of the poets, is a leading shipping center for the choicest grades of Persian tobacco. It is a delightful city, greatly beloved by travellers. Everyone smokes cigarettes there and no one takes life too seriously. The charming tobacco smoked appears to extend its charms to the smokers, as it evidently did to the poet Hafiz.

In Curzon's work on Persia may be found a description of his visit to the poet's tomb. He said: "Nearer the city, and on the outskirts of its northern suburbs, the tomb of Hafiz stands in a cemetery crowded with Moslem graves. The enclosure is known as the Hafizeh, and consists of an upper and lower part, the graveyard and the garden, separated by a summer-house. The cemetery is of comparatively modern growth; for ancient authors describe the poet's tomb as surrounded by trees, the last survivor of which, a cypress, which was said to have been planted by Hafiz himself, was cut down in 1814 A. D. A copy of the poet's works, once chained to the tomb, was carried away by Ashraf the Afghan. Nadir Shah, visiting Shiraz and being well entertained and presented with and encouraging talesman of the Mullahs, or priests, embellished and repaired the poet's tomb. The present marbles are of Yezd yellow, and have two odes from the poet's works beautifully chiseled in relief on them. The center panel has a verse that may be freely translated as follows:

"Tell the glad tidings abroad, that my soul may arise in communion,

] with celestial wings, rise from the snares of the world.
lidst thou but call me to come and wait as a slave on thy bidding,
'et should I rise in esteem over the lords of the world.
ard, may the cloud of Thy mercy descend in raindrops upon me,
ow ere my body arise, scattered as dust on the wind.
t on my grave, ye friends, with tobacco and mirth of minstrel,
o shall I arise dancing, smoking and aglow with desire.
ough I be old, one night with friend and wine and cigarettes
en refreshed in the morn shall I sing again.
nage of deeds that are lovely, on high shine forth, that as
afiz from his grave arises, he may soar above life and the world."

The Home of Pomp and Pleasure

The convivial Hafiz, like Firdusi, Sadi, and e other poets, were fond of Shiraz, where they ten smoked the famous local tobacco both in garettes and through the water-pipe, or Hub-e-bubble. In those old days, the famous city as an active center, and as Southey said:

Then pomp and pleasure dwell within her walls,
he merchants of the East and of the West,
[et in her arched bazaars.
ll day the active poor
howered a cool comfort o'er her thronging streets.
abor was busy at the looms,
hrough all her open gates
ong troops of laden camels lined the roads."

Nature has been very bountiful to the people f Shiraz. With roses, an abundance of cool ountain water, the richest grapes, and finest bacco, in a salubrious climate. Can we wonder at Shiraz has produced such exquisite literare as well as cigarettes and cigarette tobacco?

Land under tobacco crops in British India mounts to over 1,500,000 acres. Madras, urma, Bombay, the United Provinces and the unjab are important tobacco-growing districts. Many varieties of leaf are grown including Virinia, burley and many local types.

The Indians, like all Oriental peoples, smoke bacco in all ways. The waterpipe is popular. t is called a "hookah." Native tobacco is work-d into a paste with oils and several aromatic gredients for smoking in the hookah, in a anner similar to the preparation in China for e Chinese waterpipe.

Indian Cigarettes

Cigarettes are made from local tobacco. In Mysore and Madras, a fine, light tobacco is rown for the local cigarette factories. Indian bbaccos are cured in a peculiar way and have nattractive flavors to European tastes, although the natives prefer them to imported tobaccos. The practice of soaking the freshly cut af tobacco in oils and careless curing destroy e flavor and aroma of the tobacco. The limate and soil in many districts in India are ighly favorable for tobacco growing and manfacturing. When the native taste is raised and here is developed a larger market for high rade tobaccos, India may compete with the orld in the manufacture of cigarettes. Today, wing to lack of care in growing the tobacco nd poor curing, Europeans in India are comelled to smoke imported cigarettes. About wo-thirds of the imported tobaccos and tobacco roducts come from Great Britain. American af is used for blending purposes in the local igarette factories.

Tobacco Cultivation in India

The Director of Agriculture ot Hyderabad, Deccan, in reporting on the outlook for tobacco ultivation in India, recently wrote:

"India is situated more favorably then the European states where foreign varieties of tobacco have been acclimatized. The climate in Europe is such as not to allow of the full attainment of the original aroma; but Cuban seed has been successfully grown in Austria with a remarkably good aroma and the tobacco retains its original qualities if manuring and curing are properly attended to. There is no reason why foreign seed should not be grown successfully in this vast India of ours, and the plants should easily be acclimatized. The present stock is chiefly of foreign origin and as peanuts and other crops become, in course of time acclimatized, we ought soon to have an excellent tobacco on foreign markets and India should be the chief tobacco supplier to the rest of the world."

Cigarette Smoking Japan and China

The Japanese are cigarette smokers, like the Chinese. They smoke a cheap type of cigarette made from Chinese tobacco mixed with American or other foreign leaf. There are numerous Japanese cigarette factories in Japan, Korea, China and other parts of the Orient devoted to the manufacture of cheap grades of cigarettes for the natives. Europeans smoke British, Egyptian, Australian and American manufactured cigarettes.

China is a tobacco-growing country. From time immemorial the Chinese have been inveterate smokers of locally grown tobacco. That tobacco is known as the black and brown types or Kau Hung and Tiao Si Hung. The black tobacco is chiefly raised near Changchow, while the great center for the brown tobacco is Yung Ting. Amoy and Swatow are important manufacturing centers for local tobaccos.

Oriental Cigarette Paper

The tobacco is prepared for cigarette making in the following unusual manner. The tobacco leaves are gathered about May. When stripped the leaves are dipped, or painted, with a mixture of peanut oil and water. They are then pressed, cut and dried in shallow pans. Cigarette paper manufactured in Amoy and other Chinese cities is sold at the rate of 120 pieces for an American cent. A slightly better grade of Japanese paper sells at rate of 200 sheets for four American cents.

Most of the Chinese roll their own cigarettes; but attempts have been made to manufacture cigarettes in imitation of the Manila cigarettes which attract the attention and fancy of Chinese visiting the Philippines. Several Chinese and Japanese companies are manufacturing cigarettes in China and the American Tobacco Co. makes cigarettes there from American tobacco for the better class trade. The greatest demand is for a cheap cigarette selling at the rate of 10 cigarettes for 2 cents U. S. Currency. Such cigarettes are made from Chinese tobaccos flavored with American and other high-class cigarette tobaccos. Chinese tobaccos are exported to Japan, Korea and other Oriental markets.

Production in the Union of South Africa

Tobacco is grown in each province of the Union and in both Southern and Northern Rhodesia. The chief producing area on the Transvaal are Magaliesberg, Potschfstroom and Piet Relief districts. The Magaliesberg tobacco affords mild smokes and varies in color from a deep cherry to a dark brown. It is heavy in body and has small nicotine contents. The manufactured product burns very freely, has a mild, sweet flavor and a pungent aroma. The cigarettes made from this leaf burn well and have a decidedly different flavor to those made in America from Virginia leaf.

The Piet Relief-grown tobaccos have a better body, more elasticity and a stronger flavor than most Transvaal tobaccos. It is used for pipe and roll tobacco, for snuff and, mixed with other leaves, for cigarettes.

Virginia types of tobacco are grown in the Oudsthoorn and Kat River districts of the Cape. The leaf is of good size, heavy in texture and burns fairly well. It has to be blended with lighter types for cigarette purposes.

The Cape and Transvaal tobaccos are generally air cured while the Rhodesian is always flue cured. Virginian tobacco grown in Rhodesia is small, light in color, with good body and low nicotine content. It has a mild flavor, good aroma and keeps well. Cigarettes made from it compare favorably with the best American cigarettes.

The Turkish tobacco grown in Rhodesia and elsewhere in South Africa has good texture, body, burning qualities and color. Its flavor and aroma, however, are not equal to the best grown in Turkey. Cigarettes made from it lack the full flavor found in Levant cigarettes. They afford most pleasing smokes because they are very light and can be consumed in great quantities without causing any inconvenience to the smoker. It is a fine blending tobacco to use with other African types.

The Australians are great cigarette smokers, Sportsmen to a man, they live out of doors in a superb climate and reap much pleasure from smoking. Tobacco of every type grows to perfection all over Australia and the South Sea Islands. Present production amounts to about 2,000,000 pounds annually as compared with 11,000,000 pounds imported, chiefly from America. Cigarette production exceeds 2,000,000,000 per annum. Foreign cigarettes imported amount to under 200,000 pounds per annum. Great Britain and Egypt are the chief countries manufacturing cigarettes for the Australian markets.

Cigarette Production in Australia

There are numerous cigarette manufacturing concerns throughout Australasia, the most important being British Australasian Tobacco Co., which is allied to the American Tobacco Co. This company consumes about 2,000,000 pounds of Australian grown leaf in its factories. According to the sworn statements of the managers before a recent commission on tariff rates, the whole of the company's leaf requirements would be purchased in Australia provided the tobacco were cured properly. The growers state that the reason they do not cure properly is because skilled labor is not available and the market is not large enough to warrant them in insuring the curing of the best grades of tobacco.

When the population of Australasia increases, the great Southern Commonwealth will not only produce all its own tobacco but will assume a position as one of the leading supply centers for the world. The country is exceptionally well suited for tobacco and other semi-tropical crops.

New Zealand is also a most promising prospective tobacco producing country for the finer types of leaf. The tobacco at present grown in limited quantities is of excellent quality when properly cured. The New Zealanders, like the Australians, are great cigarette smokers.

The consumption of cigarettes is about a million pounds per annum. The imports are chiefly from Australia, Great Britain and Egypt. Imported American leaf is used in the local factories. New Zealand, like Australasia, is an exporting center for the South Sea Islands which afford good markets for cigarettes.

Russia has always been a great cigarette smoking nation. Large quantities of tobacco are annually raised there for cigarette manufacturing. This is the basis of its tobacco industries. The local leaf is blended with Persian, Turkish, American and other choice types. Cigarette consumption in Russia amounts to about 40,000,000,000 cigarettes per annum.

It is generally recognized that the correct choice of cigarette tobacco is the most important factor in promoting the consumption of cigarettes throughout the world.

The leading tobacco experts are continually experimenting in order to make further improvements in tobacco, used in the manufacture of cigarettes.

Cleveland Cigar Business Was Fair During June

Month Was Marked by Alternating Good and Bad "Spells" Dull Days Did Not Discourage Dealers—Sales, Deliveries and Collections All Came Out Reasonably Well.

CLEVELAND, Ohio, July 7.—Another month has gone its way in the annals of the Fifth City cigar, cigarette, and tobacco trade. The month of June showed the trade a fair month, one in which alternate spells of good and bad business prevailed. For a time it looked like this was going to be the best month ever as far as sales volume was concerned. Then we hit a period where things didn't go so very well. Dealers did not get discouraged, but kept plugging and working and sure enough the worm turned and business actually took a decided and sudden change for the better. On the average June was a fair month with sales, deliveries, and collections all coming through in fair shape. The average dealer showed a fair amount on the profit side of his ledger for the month but nothing so great as to mark the month's business as one long to be remembered. Deliveries were decidedly good in comparison with prior months and dealers could now expect and actually receive shipments in a reasonable time at least. Collections were another item to be checked off the worrying list of local dealers for most of them found that their accounts paid in period usually set for that purpose.

"Fred" Oakes Drops In

F. P. Oakes, long with the Gate Cigar Co., dropped in on us the other day. He was just as lively and as full of pep as ever before. Every store that does any kind of business at all through this way carries a full line of Gates, Keywesters, and Cressidas. "Fred" never finds it hard work to smile, but then perhaps one can blame it on the fact that one always smiles when business is good and "Fred" always gets away with a husky lot of orders for the Gate brands.

Van Gets Older

Many cigar men of this neighborhood attended a little celebration in honor of the birthday of Van B. Winters, popular La Palina man. Van is almost similar to wine in that he seems to improve with age and do more things for his brands now than ever before.

Going Great

One can note very many and very fine window displays about town featuring Popper's Ace cigar. The William Kirtz Co., local distributors are putting lots of time and effort on this brand with th result that it is going over in very fai shape all through this territory.

Mort Hammer a Visitor

We were very pleased to note thi week among the visitors to town ou old friend Mort Hammer. Mort, wh sells the well known Tuval and Reder cion brands for Marceline Perez & Co is always glad to make a stopover in th Fifth City. Here he is assured of som of the biggest and best orders anywhe through his territory.

A Change

S. Newman has accepted a positio with the P. G. Vincent Co., and wi henceforth see to the best interests Girards, Henry the Fourths, Optimo Charles Denbys, La Fendrich and Ros O-Cuba, a formidable array of fast sel ing brands. Newman was formerly wi the Amster Co. of this city's jobbin firms.

A Manilla Caller

Louis Laks, president of the La Cigar Co., of New York,, was a call on the Fifth City trade this week. Th concern carries a very choice lot of M nilla cigars which are proving good be through this way.

For Pipes

During the boom occasioned by N tional Pipe Week many pipes were so Amongst the most popular of these w the G. B. D. brand which is shown every store in the city. H. S. Leder who looks after things for this pi through this way was in town last we and managed to take back with h many orders for pipes for stocks sac depleted by the rush occasioned by N tional Pipe Week.

Still Selling Smoothly

Bumped into Tom McDonald the oth day. "Red" never gets tired telling abo Detroit Hand Mades and one can hard blame him. This fine two for fifte cent seller out of the Mazer factory, like Tom in that it never gets tired a is always shooting ahead, increasing friends and accounts every day. T Baer-Wolf Co., has all it can possi do and then a little besides in trying fill the orders for this brand.

St. Louis News Notes

Business Improves Despite Hot Weather

ST. LOUIS, Mo., July 7.—The weather here has been extremely hot, but business continues to improve. The heat does not seem to interfere with the demand for smokes.

The will of the late Jacob Lampert, the millionaire cigar manufacturer who died February 10, 1921, leaving an estate valued at about a million dollars, the bulk of which was left to his sister, Mrs. Graff, and which has been contested by several nieces and nephews, after going from one court to another, finally landed in the Missouri Supreme Court, where the will was sustained. It is said that no further action will be taken and the bequest will stand as originally written.

The International Convention of the Rotary Clubs, which was held here recently, was a harvest for the downtown cigar dealers. They sold lots of cigars and the smokes they disposed of were not cheap ones by any means, for the visiting Rotarians wanted the very best brands which they got and paid for. One of the entertainment committee was W. F. Beideman, secretary of the F. R. Rice Mercantile Cigar Co.

D. H. Dickery has been succeeded by W. J. Schlappner, as division manager of the American Tobacco Co. here.

Recent visitors here have been Harry Mitchell, Belinda Cigar Co.; W. W. Nay, broker; J. M. Landfield, representing Joseph Berran & Co.

The Ozarks continue to be the alleged Mecca for cigar representatives, who go on their vacations. The latest who says he is going there is Emmet Murnahan, of the Charles P. Stanley Cigar Co.

Notable Window Displays

Window displays have been the Flor de Melba, by Stickney-Hoelscher Cigar Co.; Garcia & Vega, by Dengler & Hatz; Henry the Fourth, by the Grand Leader; La Tessina by Scruggs, Vandervoort & Barney; Charles the Great by Charles P. Stanley Cigar Co.; Emanelo, by Moss & Lowenhaupt, and Cuesta-Rey by the William A. Stickney Cigar Co.

Lorillard's Dividend Record

P. Lorillard Co. common, at recent low of 148½, off 30 points from its high for the year, yields more than 8 per cent on the $12 dividend basis. The company has unbroken record for dividend payments, regardless of business conditions, since its incorporation on the dissolution of the old American Tobacco Co. in November, 1911. With a surplus equivalent to $48 a share, December 31, last, and the dividend earned with margin of 66⅔ per cent to spare, the present $12 dividend rate appears firmly established.

P. Lorillard Co. has more than trebled its profits and loss surplus and almost doubled its net working capital since 1915. Net working capital as of December 31, last, was $44,716,636; 1921, $43,028,965; 1920, $37,364,343; 1919, $30,396,642 Working capital is more than twice bonds outstanding. Deducting $20,615,600 of bonds there remains a balance of $24,-101,036, equivalent to more than $200 a share on the $11,300,000 preferred.

For year ended December 31, last, company showed net, after taxes, of $8,133,-000, which, after charges and preferred dividend, was equivalent to $20.11 a share on the 303,051 common shares, compared with $7,616,000, or $18.15 a share on the common in 1921. After payment of common dividends there remained $2,079,000 to be carried to surplus.—*Wall Street Journal.*

American Can Co. Dividend

A quarterly dividend of one and one-quarter per cent has been declared on the Common Stock of the American Can Co., payable August 15, 1923, to stockholders of record at the close of business July 31, 1923. Transfer books will remain open.

General Cigar Co. Dividend

A quarterly dividend of $1.50 per share has been declared by the General Cigar Co. on its common stock, payable on August 1, to stockholders of record on July 23, at 3 P. M.

Capital Increase

BOISE, Idaho, July 2.—An amendment to the articles of incorporation of the C. Z. Seelig Co., of Wallace, Idaho, has been filed in the office of the Secretary of State, increasing the capital stock of the company from $30,000 to $50,000. The company does a wholesale and re bacco and confectionery business.

Tobacco Products in Stronger Position

By CARLTON A. SHIVELY

In *New York Evening Post*

hese rather uncertain times in- doubtless will bear in mind the nt record made by the leading to- ompanies during the depression of Now, when opinions are divided he course of business during the months those companies which eathered storms in good fashion more attention. The assumption they will repeat past perform-

ely because of the increased pop- of the cigarette (for which the at least partly responsible and to women are contributing) the to- usiness has grown enormously the past few years. At the same he character of the business is g. Time was when cigars, chew- d smoking tobacco made up by greater volume of sales. These of tobacco are now losing their acy and the cigarette is not only ig them in popular favor but is a trail of its own into new terri- In this connection it is pertinent e companies which deal almost in cigars, chewing and smoking s have not as a class fared nearly as the large cigarette producers.

suming More Importance

ig the tobacco companies the an Tobacco Co. and its former es—Lorillard, Reynolds, and Lig- Myers—still occupy the strongest s. A comparative newcomer in l, the Tobacco Products Corpora- however, beginning to challenge adership. Enthusiasts for this y go so far as to predict that s eventually will be the premier manufacturer and distributor in ntry. They base their statements opes, perhaps—on control by To- Products of important retailing —namely, the United Cigar which afford an unbroken chain the company's factories and the consumer.

co Products was incorporated in in 1912. For the first five years merely a holding company, hav- en over a number of concerns turing cigarettes, smoking tobac- little cigars. But since 1917 it rated both as a manufacturer and or, as well as a holder of stocks r companies. The dozen or so ries of the company manufacture xteen popular brands of cigar- well as smoking and chewing and cigars. The company is also gent in this country for a famous f cigarette papers.

garettes Principal Output

. number of years Products has the entire capital stock of the ino, Surbrug, Nestor Glanclis, , Khedivial and Prudential To- ompanies. In addition it owns interest in Stephano Brothers, Morris & Co., Tobacco Products Association, and the American Trade Corporation. These com- are mainly cigarette manufac- More re-additions to the com- oldings include the entire stock and property of the Falk Tobacco Co., a manufacturer of smoking and chewing tobacco and cigarettes; Harris & Co., whose output is smoking and plug tobacco, and Bagley & Co., whose principal product is smoking tobacco. The latter company was acquired in February of this year and, it is understood, without any new financing. It is an old concern which has made good profits in the past.

But the most important of the company's acquisitions was its interest in United Retail Stores. This company is in process of dissolution, and as the principal stockholder Products will be the chief beneficiary. Products holdings of Retail stock are estimated at 87 per cent. Retail Stores own substantial interests in United Cigar Stores, United Retail Stores Candy Stores, Montgomery Ward & Co., and other companies. Although Retail's equity in its various holdings is considerable, dividends have come chiefly from cigar stores. The candy stores are doing much better now, however, and present earnings of Montgomery Ward and future prospects are good. This company suffered severely from depression, but a resolute readjustment and a new and efficient management have brought about a remarkable change in its fortunes. Nevertheless, dividends on the common are not an immediate probability.

Value of Cigar Stores

But regardless of what Products eventually may derive from these holdings, it has a trump card in Cigar Stores, not only because of its share in the profits of that company but because also of the retailing advantages which it gets.

Cigar Stores has been a good earner and its stock is on an 8 per cent. basis. Products owns a large majority of the stock of Cigar Stores. Last year profits were somewhat over $4,000,000, equivalent to 12.30 per cent. on the $32,865,348 of outstanding common stock. Like Tobacco Products itself, Cigar Stores values its good will highly. This item is carried on the balance sheet at $21,000,000. To a business of this kind, however, good will is worth much. Moreover, lease-hold interests are carried at only $5,000,000, and doubtless they are worth much more. Cigar Stores holds long-term leases on extremely valuable locations in important cities all over the country.

During the early years of its corporate existence earnings of Tobacco Products were not especially good. While it earned by a wide margin and paid regular dividends on its 7 per cent. preferred stock, it was never able to show much on its 160,000 shares of common stock until it began to feel the stimulus of war orders. As is well known, the tobacco companies were hard pressed to fill war needs. By 1917 Products's net income had passed the $2,000,000 per annum mark. Dividends at the rate of 6 per cent, were inaugurated on the common stock. This rate was maintained until reclassification of the stock last year, although both in 1919 and 1920 3 per cent. was paid in

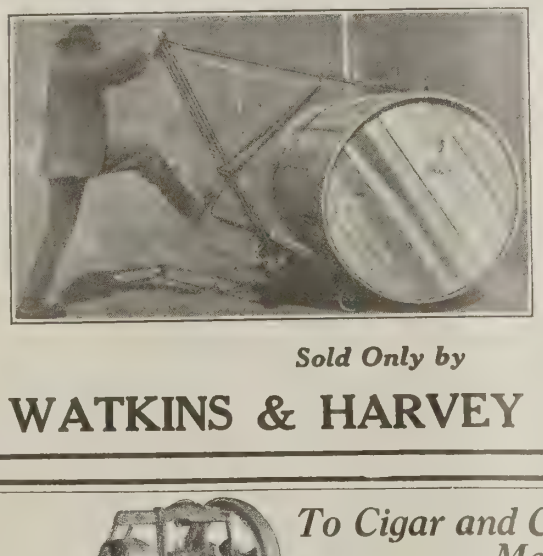
THE 100% MARK

—is a high mark and you never will get it out of your tobacco crop—curing it the old way. The old brick furnace just simply won't do it, it makes no difference how hard you try.



The Johnson Tobacco Curing Furnace is the nearest to perfection—"Ask those who use them." They are easily fired, save fuel and time and improve the quality of the tobacco.

Up-State Cities Empty But Resort Trade G

Mountains and Lakes Chock-a-Block With Travel—Sara Prepares for Races—Pat Back, Full o' Pep—Hoot, I White Owls!—How Many Counties in New York S Anyway?—Silent Salesmen Speak for Eddie!—Why Cigars Served With Coffee!

New York State
Capitol District
Another Half-Holiday, 1923.

"Gosh, Sam, but these here resorts are doin' a smashin' business!" greeted Jim Stubb, just in from a travelogue through the mountain and lake country for the wholesale and retail house o' Stubb & Ash, Inc., cigarists to the Up-State folk. "Never saw so many automobiles in all my life, Sam! Roads just full of 'em! And everyone beatin' it for some $9-a-day hotel, league o' donations plan!"

"Sure, people all should have piles a-money—but how is collections?" demanded Sam Ash, going over the cash book a fourth time to locate another twelve-cent error. "Get anney kale, or just promises, as usual?"

"Well, you could hardly expect a big week of collections now," reasoned Jim Stubb, chucking his twin grips, sample and social, alongside the Hot Chair Club. "Give 'em a chance to sell some cigars! They ain't got even quite so much jack yet as Tom Gibbons squeezed out o' Shelby!"

Watch for Opening Dates!

"Which wasn't nothin', y'unnerstan'," reflected Sam Ash, finding the twelve cents charged off on the expense account to a lost pack o' Camels. "But these two new stores o' the United and Schulte in Albany should pick up some lint pritty soon."

"Oh, you mean those new downtown locations?" Jim Stubb supplemented, as he found a suitable seat with the Committee on Half-Holidays. "Yes, they have no bananas perhaps, but they both have excellent shots on Pearl street, Sam."

"Uh-huh, an' I hear it the should open their North Pear Steuben streets store this month n put in Sam Ash, proceeding to t the day's cash with the usual "While Schulte is figgerin' on havi South Pearl and Division streets open in August, anneyhow."

Back They Come, On the J

"By that time we'll have Sa covered three feet deep with Fatir Chesterfield advertising," offere Doyle, Chief-Chester o' the Lig Myers Tobacco Company's cigare van in the Capitol District. "A boys are now on the job, back fro July vacations.

"So we're starting out immedia cover the earth with poster and even as Sherwin-Williams claims of our recent products from the art department is now in the win the Maiden Lane store o' the Bruc donald Company. It is a compos play o' Fatimas, Chesterfields and monts, worked up in orange an very effectively."

Where Are Them White Ov

"Yep, fine window, Pat," O. K.-e Wessells, walking in on the Cor of Art with his General Cigar Co merchandise shy of White Owls. we don't need any displays. Couldn't possibly permit any de make one!

"I'll tell you why," added Pau worried whisper, "We can't g goods. No sir, the demand rig in the city of Albany is now so mous that I'm out of White Owls of almost every week. So are my

GREATER PRODUCTION AT LESS COST

'd they write, phone, and yell for 'em, : what can I do?"

dd Seven More Counties—Seven!

'Give 'em Totems," proposed Earl odrich, showing the Hot Chair Club t a few tricks from his Dearstyne thers Tobacco Company portfolio. nd we've now just secured seven more nties on the Waitt & Bond line. 'These are all Hudson River territory. ded to what we already had in the ntry roundabout, we now distribute ckstone, Totem and Endicott cigars practically all this end of New York te. Some business!"

Life Size—and Full o' Life!

'Like Eddie Quebec's," compared Jim bb, unlimbering a fly-swatter and a tch for present quick action. "Some siness and some distribution Eddie has w with his San Felice and El Verse nds. All due to quick work of his vertising assistants.

'Ask J. W. Stevens, the State street ler, about this! For, when Mr. evens went into his store, the other y, after an absence to his other home Bronxville, he bumped into a party nding right by the telephone.

"'Beg pardon,' requested Mr. Stevens, pping back, 'My fault, I assure you!' d he turned about to see who he had mped into. Yep, it was one of Eddie ebec's life-sized El Verse salesmen, nding there on the floor with a box Verse cigars extended from his hand —*cardboard!*"

Why?—And Why Not?

'Yeh, an' we should need it some more e-sized salesmen, also-as-well," sighed m Ash, locking his cash book and gers in the safe for the day, and put- g the cash in his pocket. "Sure, we t it confectionery silent-salesmen. But y shouldn't a see-gar store also have soap and shavin' brushes, tooth brushes, so on besides them there razor des?

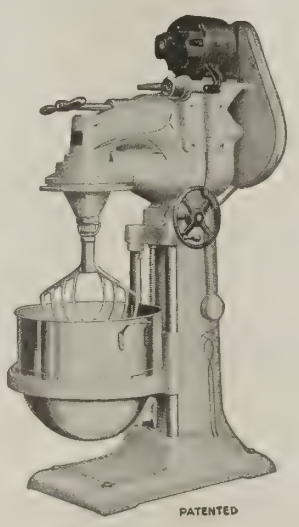
"'An', at the same time, unnerstan' me, a drug store should sell it coffee an' , why shouldn't a see-gar store? Men buy 'em! Men use 'em! Also all them other profit-producers which these here druggists has taught the gang to ask for in a soda store!"—*The Smoker.*

"Rolled His Own" On the Job

A Chattanooga bank was having some repair work done on its building, and had occasion to have a few bricks laid. The contractor was overjoyed to find an available mason, with his usual two helpers. The cashier of the bank watched the mason's methods carefully and reports: "He laid three bricks, stopped, took out a bit of tobacco from his pocket, and 'rolled his own,' smoked, then a few more bricks, then smoked again. He laid exactly 62 bricks. Labor cost was $17. The contractor told us we were lucky. We are thinking of having a tablet put on those 62. They represent a liberal education for all."—*Wall Street Journal.*

Wanted Cigarette First

HALIFAX, N. S., July 2.—After being adrift without food or water in an open dory for six days and nights, rowing and sailing about 180 miles, John Olive, a Portuguese, of the Gloucester fishing vessel *Edith C. Rose,* was picked up off Tor Bay by the coastal steamship *Chedabucto.* His home is in Gloucester. When rescued Olive was almost exhausted. The first thing he asked for was a cigarette.



Returns from Holland

E. H. Smith, of Hinsdale, Smith & Co., has returned from Amsterdam, where he had been attending the inscriptions. Following a visit to his New York office, he proceeded to his home in Springfield, Mass. While in Holland Mr. Smith secured more than 1,000 bales of Sumatra wrappers for his clients.

Porto Rican Official Here

Chicago's Wholesale Trade Showed Gain in June

Retail Business Displays Healthy Tone — Cooler Weather Helps to Improve Sales — City and Hotel Crowded with Tourists — Trade News, Notes and Incidents.

CHICAGO, July 7.—Wholesale trade in the Chicago district made further gains in June than in previous months of the year. Retail business has had a more healthy tone this week, due to the cooler weather. Chicago is full of tourists and the hotels are packed, which makes the Loop business much heavier.

Hi Marks of Henry Marks & Bro., well known San Francisco cigarists, passed through our city recently.

C. A. Brown is the district manager here for Norris, Inc., candy makers of Atlanta. Chicago headquarters are at 589 E. Illinois street.

In Public Favor

Cuesta-Rey, bonded cigars, are sold by the best of dealers here and at the present time they are displayed in many windows. Herb Mesick, of Cuesta, Rey & Co., has a strong following locally and the dealers all give him a good show.

New Corina signs are seen on the bill-boards and Jose Escalante & Co., of Tampa, are selling more Corina cigars here, every day.

Pleased with Business

Max Kaplan, in the Medinah Building, says business is good. Max features such brands as Cuesta-Rey, Pancho Arango, Lozano and Pan Aran. This is one of the best office building stands in the Loop.

In the Vanguard

Ricoro, of the new Vintage, shows a lot of speed for the United Stores which are at present pushing this brand ahead of all others. Ricoro is sold only where you see the United sign.

Emanelo On Display

The new Schermerhorn store at Dearborn and Monroe sts. shows a full window display of Emanelo cigars made by D. Emil Klein Company of New York.

"King of Cigars"

The United Stores are giving up much window space to the Murias clear Havana cigars. A clever center sign shows a man wearing a crown and smoking one of the Murias, "King of Cigars."

Notable Increase in Business

The Miles Cigar Co., 28 East Monroe st., note a big increase in business over the same period for last year. Their box trade is forging ahead rapidly and they feature 22 sizes of Pancho-Arango made in bond cigars as their leader. Other brands that sell well with them are Du Belle from the Wm. J. Seidenberg Corp., Charles The Great, Francisco G. Bances and Cressida.

Represents a Good Seller

The new El Verso cigar signs are winning new friends for Walter Fleckels and Deisel-Wemmer Co. They are shown in the windows by many dealers here, all of whom report a large increase in the sale of this brand. Is Walter happy? Well, I guess yes!

Booked Many Big Orders

John H. Collins, who represents W. H. Kildow of Tiffin, and C. A. Kildow of Bethesda, O., came in from an eastern tour. Saw John Henry showing Fred L. Wells, where he booked orders for 580,000 cigars in 21 days. John's leaders are Garcia smokers and Tiffins, both 5-cent cigars that have a large sale in the middle west.

Takes Over Jobbing Business

Thomas Slader, 5034 So. Halsted st., has taken over the jobbing business of W. A. Kennedy & Sons, Inc., 1822 East 63rd st. Ed. Kennedy has become cigar manager for Thomas Slader.

Condax Full Size

The Condax Straw Tip packing of 10 cigarettes for 25 cents are now out in the new single row boxes and will hereafter be known as Condax Full Size. The price remains the same.

ess Better Than in 1922

Vreeland, of Benson & Hedges, came in to his Chicago headquarters after covering his eastern territory. Harvey reports his 1923 business as being far ahead of 1922. All the dealers here carry a full line of B. & H.'s tobaccos and cigarettes.

Thomas Harbich is still Al Spellman's chief aide. He recently cleaned up Oklahoma with the San Telmo Cigar Mfg. Co.'s brands.

The Wm. J. Seidenberg Corp. will shortly introduce their new 2 for 15 cents seller under the S. P. V. Havana wrapped smokers' label. It is Havana filled, Havana wrapped and is made in Tampa.

A new 2 for 15 cent Tampa smoker is on sale in the stores of Albert Breitung. They are known as Breitung's Extra Value, and are packed in boxes of 250. They come from the factory of Eduardo Gonzales & Co.

Herbert Mesick of Cuesta Rey & Co., has been busy with the direct city buyers. Herb sells all the good ones here and Cuesta-Rey and Hoo-Hoo are in all the cases.—H. L. H.

Carload of Havana Tobacco

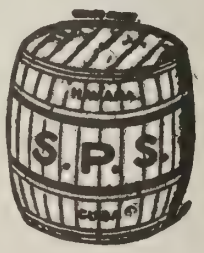
DUBUQUE, Iowa, July 7.—A carload of tobacco direct from Cuba was received recently by Bradley Bros., Inc., local cigar manufacturers. This is perhaps the largest shipment of this kind of tobacco that was ever received in Dubuque.

To Confer with Associates

Manuel A. Suarez, of M. A. Suarez & Co., the Havana partner of S. Rossin & Sons, Inc., arrived in New York from Cuba last Tuesday to confer with Marco Fleishman and William Singer, his New York associates.

Removed to Larger Quarters

HAVANA, Cuba, June 30.—Manuel A. Suarez & Co., growers, packers and dealers in leaf tobacco, have removed their headquarters from Figuras, 39-41 to Figuras, Nos. 28, 30 and 32.



Buys Choice Havana

Ira Strouse, of Strouse & Holzman, has returned from a trip to Florida and Cuba. Mr. Strouse was successful in purchasing a quantity of choice Havana leaf.

San Francisco Gossip

SAN FRANCISCO, Cal., July 3.—Some of the retailers are complaining considerably. And some of the jobbers say that some of the retailers are always kicking. Others, and some old timers too, give more credence to the complaints of the retailer, realizing that they are not all unadulterated grouches.

With leaf tobacco holding strong or stronger, and the factories cutting profits close, both to themselves and the retailer, to keep from advancing prices to the consumers as long as possible, there are, to the unbiased, difficulties to be seen all along the line. And with the large factories driven like the rest to make up for small margins by enormous output and sales, there is presented to every retailer as well as every jobber and every small factory man the necessity of trimming sails close before the breeze; of studying and using the best business methods and the most improved systems of economy in the conduct of business. Every one needs to know his own business, and read his trade papers. It is a fact whatever may be the cause, that the most successful retailers and jobbers are readers of TOBACCO. They know from week to week what we are saying or not saying about them.

Vacation Spirit Abounds

The retailers association has caught the summer vacation spirit. Too many of the stand owners are either taking an outing themselves or are sticking to the job long hours each day to give their helpers a chance also for a vacation. It is certainly an evidence of the spirit of good fellowship of the bunch, that so many are putting in their extra hours to give the other fellow a chance. One of these is Jack Martin. He got back safe and sound and feeling fine from his trip through the eastern cities, to the Shriners' blow-out; and back through Canada by way of the beautiful Lake Louise. He reports business good and fair in spots all along the line—allee samee California.

Another one resting from his vacation, another Shriner, is Emil Judell. He is now holding down the lid in their fine new establishment while his father is shaking hands with the old boys again at the Commercial Travellers convention. Adolph, who has been standing as home guard, faithful as an eight day clock, is having a joyful occasion in the Santa Cruz mountains, together with his family.

Two Newlyweds

There are other ways of celebrating the holiday season also. We have in mind the fact that Harry Durgend of the Oakland Tobacco Co. and Mr. Stoker, the receiving clerk, have both concluded it was the better part of valor to join the ranks of the benedicts.

A Preachment on Discounting Bills

One of the jobbers who appreciates the fact that the retailer sometimes runs up against a stone wall and cannot help himself, is H. Bercovich, manager of H. & S. C. Bercovich, old time jobbers of Oakland. "The trouble is," says Mr. Bercovich, "that when a man gets hold of a stand that is not paying and finds he has a lemon, he hates to let go and pocket a loss; and so struggles on against the inevitable, to his own injury as well as to the injury of those who extend credit. Nine times out of ten, it be far better to pocket the loss v delay and watch for a better chan is my experience," says Mr. Ber "that as soon as a dealer begins t discounting his bills, he is headed s for bankruptcy; for in the disc lies a large per cent of the profit business, and the fact that he dc save this profit, shows very concl that he cannot. Such a customer sooner or later, and when you lo you also lose a friend. So the soc gets into shape to discount his b ceases to be a customer, the bett for him as well as for the jobbers custom of so many jobbers in tr sell to everybody just to be sellir to sell as much as possible, regard the needs of the customer, is one causes of failure of the retaile worry to the jobber." So Mr. Be has adopted the policy of striving so large a number of accounts, bu class of gilt-edge accounts. "I rather sell my customers less at and oftener," he says, "than see the my goods staring at me from shelves."

J. F. McArdle of the Oakland Co. is enthusiastic over the new Between, which they have added t list. "It has been the best go ri the-bat we have yet put over," h "The smoker comes back for it, a means come-backs all along the lir adds that the Little Tan that ha back again is, as it always was, a lar number, so they are glad to again.

Antonio Suarez has severed r with the factory of Cimino, Cortin and returned to his old job in where he was traveling man for wholesale firm of Montreal.

Internal Revenue Increases

TAMPA, Fla., July 7.—A gain of nearly illion dollars in Tampa internal reve- collections for the fiscal year ending Saturday over the fiscal year of ? was announced by Stamp Deputy rles H. Moyer.

he sale of tobacco revenue stamps ie evidenced that 131,709,570 more rs were manufactured in Tampa dur- the fiscal year 1923 than during the e period 1922. Approximately 473,- 300 cigars of all classes have been nufactured up to the present date ng this year as against 341,410,730 ing the fiscal year of 1922. Money ved from the sale of tobacco stamps unted to $3,708,849.53 during the first months of this year as compared with 71,536.32 for 1922.

he monthly report for June, 1923, ved that stamp sales for the month unted to $325,449.55 which signifies there were approximately 41,695,920 rs manufactured during that time.

Companies Consolidate

he Arturo Fuentes Co., Inc., and ador Rico & Co., have consolidated will operate as the A. Fuentes Co. Farmer of the Arturo Fuentes Co., ng sold his interest in the company. . Rainey of Salvador Rico & Co., extend his territory to embrace that by Don Farmer, and will now cover he Southern States.

resident Leo Gottsegen, of Gradiaz, is & Co., leaves tonight for New k. Before returning he will probably over the new crop of shade grown

ne Tampa Cigar Co. has added Fred rles and J. J. Stephens to its sales e. Mr. Charles will cover the west the middle western states, while Mr. hens will look after the Florida sales. e Perez of Marcelino Perez & Co., isiting the New York headquarters.

Building New Warehouse

PALM BEACH, Fla., July 7.—Construc- has been started on the new fire f warehouse of the Palm Beach To- o Co., at Sixth avenue and the rail- The structure is to provide 7,500 re feet of floor space, at an esti- d cost of $4,000, which is to house Palm Beach Tobacco Co., and the Beach Paper Co.

he building will be of concrete and tile. The dimensions are 50 x 100 feet.

S. E. Nichols, president and treasurer of the tobacco company, says that increase of business and the necessity of keeping larger stocks made necessary the new building.

At present the stocks of the tobacco and paper companies are kept at the Osborne Bros. Co. building.

Georgia Growers Expect Good Returns

NASHVILLE, Ga., July 7. — Berrien county tobacco growers are curing their crop, which, according to estimates, will be in excess of two and a half million pounds. Twenty-five hundred acres were given to the crop this season, and although it has been damaged to some extent by too much rain, the growers feel that they will make substantial profit if the market should open at the figures expected.

The selling season will not begin until August 1. Nashville, the county seat of Berrien, claims to be one of the biggest tobacco markets in the state and expects to handle more tobacco this season than any other point in Georgia. Cook county farmers have about 400 acres in tobacco, and Lanier also has a large acreage, and it is expected that the crop of those two counties also will be sold at Nashville. There are two immense tobacco warehouses in the Berrien county capital and some of the largest buyers of tobacco in the country will have representatives in Nashville during the selling season.

Berrien has been growing tobacco for several years, and while there are some large tobacco farms in the county, most of the 2,500 acres given to the crop this season was planted in tracts of three to ten acres. According to demonstrators Berrien's crop this season is showing up better in quality and color than it has any previous season. It is also insisted that wrappers, the grade that commands the highest price, will constitute a bigger part of the crop than it has in former years.

Selecting Havana Leaf

Max Schwarz, manufacturer of the famous Primadora cigar, is at present in Cuba, selecting highest grade Havana tobacco for his factory.

Going to Cuba

M. B. Pendas, dealer in Havana leaf tobacco, plans to visit Cuba in the near future.

A Cigar of *rare excellence*

Millions of smokers insist on Manuel because they know from experience that it always delivers a distinctive satisfaction, which they can obtain in no other cigar.

In the making of Manuel, only certain selected tobaccos can be used to produce the quality that meets the high Cressman standard, and we respect the confidence that Manuel smokers place in us by adhering strictly to this high standard.

MANUEL *will make a definite business for you*

Connecticut Notes

HARTFORD, July 7.—This week the growers had good showers and tobacco is growing very fast and is "blocking it," indicating a heavy crop; it is hugging close to the ground.

The growers now have all their crops set out, and much hoeing has been done, some crops for the first time, and a considerable acreage has been hoed the second time.

During the recent "hot time," much of the acreage had to be reset due to the plants burning up in the hot, dry soil, but plants were plentiful and rains came on and the work of resetting went right along and the plants got started without much delay. They are now up to the water plants in the fields.

Cut worms have also been very troublesome and many growers have had to replant entirely, owing the ravages of the worm, which played havoc in many fields.

Help is growing more abundant in some sections. Several applications have been made for jobs in the tobacco fields. It is expected that within the next few weeks more help will be available, as when cutting time comes a large force will be needed on the farms.

The "shower" on the 4th was a miniature cloudburst in some sections, and while the rain did not last over 10 minutes, the fields were flooded.

Daylight-Saving with a Vengeance

Now that the crop has got started, the growers find themselves with plenty to do keeping the land stirred up following the frequent rains recently, and it is a common sight to see men following horses cultivating as soon as it is daylight and late in the evening until dark.

Mrs. P. Manning Honored by Associates

BOSTON, Mass., July 7.—Joseph P. Manning, president of the Joseph P. Manning Tobacco Co., of 500 Atlantic Avenue, who celebrated his 42d year in the tobacco business a few days ago, was given a splendid surprise by his 128 coworkers and employes at noon, when he was presented with a handsome silver service set.

Previous to the presentation to Mr. Manning there was another gathering being held in the salesroom and he was quite unaware of any celebration in his honor.

At 12 o'clock last Saturday Mayor James M. Curley arrived, and going upstairs he went in the midst of the large group and began a most interesting address on something about everyday affairs. He suddenly shifted to a eulogy of Mr. Manning and then made the presentation in behalf of the employes and associates. James F. Logan, vice-president, was in charge.

Mr. Manning began working in the tobacco trade on June 30, 1881, when he was employed by James Quinn & Co. Since that time he has worked himself to the head of his now large concern. For six months Mr. Manning was Fire Commissioner of Boston and for 12 years has been a member of the board of trustees of the City Hospital. He has been president of the board for the past four years. The Manning residence is at 66 Crawford street, Roxbury.

Agricultural Department's Crop Report

WASHINGTON, D. C., July 11.—Transplanting of tobacco is practically completed though it has been delayed in spots by scarcity of plants and unfavorable weather conditions, according to the Bureau of Economics of the Department of Agriculture. In reporting further on the crop situation the Bureau says:

On much of its acreage the crop is late but coming well. Acreage seems to have been somewhat increased. Harvesting is on in Florida and the quality of the crop there is excellent.

Setting of tobacco plants has been practically completed in New England and Pennsylvania. Condition fairly good in New England but crop in Pennsylvania has suffered considerably from dry weather. Transplanting continues in Maryland but plants are scarce in some counties and beds are badly infected with "wildfire." The outlook for the crop in Virginia is very discouraging. Plants are scarce, the season has been unfavorable and labor is hard to get. Acreage is less than the average. Planting is still under way and being delayed by dry weather. In Kentucky the plant needs warmer weather. Crop is very late but coming well. The acreage has apparently been increased in all districts. The North Carolina crop has been injured by drouth and the stands are irregular. In Georgia both growth and quality are good. Harvesting of the crop is well advanced in Florida and the quality is excellent. The crop in Tennessee is late but is starting well. The crop is in fair condition and making progress in South Carolina, where the early crop is harvested. There is an apparent increase in the acreage of burley in Indiana and Ohio.

Connecticut Crop Promising

Alfred I. Mendelsohn, president of Meyer & Mendelsohn, who has been superintending the interests of his organization in Connecticut, spent a few days in town last week. Mr. Mendelsohn reports that the plants are making great progress and are in splendid condition.

To Inspect Shade-Grown

Leo Hirsch left town last Saturday for Hartford, Conn., to inspect the shade-grown crop.

ROCKY MOUNT, NORTH CAROLINA, U. S. A.

Danville District in Dire Need of Rain

DANVILLE, Va., July 9.—The drought which has continued during the past several weeks is watched with increasing anxiety on the part of the tobacco growers in this section. Not only tobacco has been stricken but all kinds of vegetation, gardens and pastures gradually burning up. According to reliable farmers a soaking rain of a character likely to benefit vegetation has not fallen in this section since April. There have been good rains in North Carolina and in several parts of Virginia but in Pittsylvania, Henry and Halifax counties an arid condition rarely equalled has developed. Tobacco plants have grown very little since the late planting season closed, and they have wilted quickly under the heat.

Satisfied with Opening Date

The date set by the Tobacco Association of the United States for the reopening of the Danville market on September 25 is satisfactory to the trade here, according to M. O. Nelson, one of the leading warehousemen. Last year when the market did not open until early in October there was a widely shared belief that Danville lost a good deal of tobacco with the other markets opening before Danville.

The Danville Tobacco Association will still have to ratify the opening date set by the Tobacco Association of the United States and it is expected that this will be little more than a formality.

The local association which at the close of last season proposed to buy 2,000 additional baskets has decided that it will not purchase them, this indicating a reduction in the anticipated size of the crop.—TETLEY.

Two Weeks Earlier at Kinston

KINSTON, N. C., July 7.—The "big season" gets a start two weeks earlier than usual here, as a result of the decision of the tobacco board of trade to open the independent leaf market, governed by it, on August 21. Mercantile interests are gratified. Trade is much heavier here in the fall than at any other time of the year as the result of the pouring of millions of "tobacco dollars" into the bankers' and merchants' coffers. With a crop worth more than $10,000,000 in prospect, leading farm supply dealers, including one or two of the largest in the state, believe the prospects are the best since the record war years. With fair prices the local production should be worth ten million dollars or more, neutral observers have declared.

Usually the market does not open until after September 1. Construction is being rushed to put all of the independent houses in shape for the early opening. The triple-sales system will be in effect here for the first time, and more than a fifth of a million square feet of floor space will be available for sales p poses, besides the large space availa for storage. E. Y. Speed, Board Trade secretary, an ultra-conservat authority, has declared crop prospe the "finest in history."

Tobacco in Anderson Count South Carolina

ANDERSON, S. C., July 7.—Toba is being successfully grown in Ander county.

With the initial step in the introd tion of a new crop for this section hav attained much success, indications be that large dividends will be paid th in this section through the product of this crop during the current year, is assured that a large increase in ac age of tobacco in Anderson county v be seen next year.

One of the examples of the success production of the crop in this sect is seen on the farm of John D. Br located northwest of Anderson, wh there is one of the finest stands of crop ever seen in this country, and co paring favorably with the crops of ot sections. Mr. Britt is cultivating sc six acres this year, this being the f year he has attempted growing toba here, although he is an experienced bacco farmer, having been born in Di and being thoroughly familiar with cultivation of the crop.

Mr. Britt is confident that the c will yield between 1,000 and 1,500 pou of tobacco per acre, and that profits fr the crop this year will aggregate at le $200 per acre.

Although the oldest plants on his fa are only about seven weeks old, some them are nearly four feet in height many with fifteen and sixteen leaves. leaves of the tobacco are well form and approximately 15 inches in len while they are more than half this wi Mr. Britt states that the quality of tobacco, judging by the present outl will be as good or better than s produced in other sections of the st previously believed to better adapte the production of the crop.

Mr. Britt contemplates going into raising of tobacco on a larger scal the future. A plan which is being cessfully put into effect by many farr in counties where tobacco as a cro being introduced now, is that of fo ing tobacco clubs, through which med farmers unfamiliar with the produc of tobacco may have the benefit of knowledge of experienced tobacco fa ers who may be among the group. S a club probably will be formed in county, Mr. Britt indicated.

Mr. Britt's crop of tobacco has cently been the source of much inte to local people. Many have visited farm and viewed with much interest results which he has obtained thus with his crop. The harvesting of crop will begin shortly, and will for about six weeks, Mr. Britt sta

Bingham Wires Views to Tri-State Co-ops

GH, N. C., July 9.—Judge Robert n, native North Carolinian, mil- owner of the Louisville *Courier-* and founder of the successful as- n of Kentucky Burley Tobacco s, which received nearly two hun- llion pounds of tobacco last sea- menting on the opposition to co- e marketing of tobacco, in some of North Carolina, stated last at, "The auction crowd are pur- ctics of desperation."

Bingham, after reading a recent f the Wilson, N. C., *Tobacco* telegraphed the following mes- Raleigh headquarters of the To- rowers' Co-operative Association: nination of issue of *Tobacco* June 6, convinces me auction re pursuing tactics of desperation an not believe the sound, intelli- n who compose great majority co growers in Carolinas and Vir- n be misled by baseless and ap- frenzied statements published in per, emanating as they do from e group who have so long ex- lhe helpless individual grower and w realize that the tri-state co- e, by combining 90,000 individu- pless people, has given them a l strength which will protect m exploitation and enable them n a fair price for the product their energy and labor have forth."

ajority of the farmers who have suaded to sue their own asso- n eastern North Carolina for re- f their contracts are found to d tobacco from their 1922 crop utside, instead of delivering it to n association.

gh less than two out of every members of the Tobacco Grow- operative Association were in- n the effort of a few eastern farmers to again avoid deliv- ir action has brought indignant rom the loyal members of their nties and from association mem- hree states, according to reports ny of the county and local or- ns reaching Raleigh headquarters k.—S. D. FRISSELL.

ased With Situation

A, Ga., July 7.—Tobacco grow- is section have had a very satis- week, most of them having gath- cured twice this week. It is the yield will be well over first ns and the grade is holding up e warehouses from which the ales will be held are not to open r July 15.

ishing Trip Ends

Joseph Cullman, Jr., of Cull- s., has returned to New York, enjoyable week's fishing at Me.

Observations on European Store Methods

Samuel Gordon, of 95 Maiden Lane, New York, importer of pipes, smokers' articles and novelties, upon his recent return from an extensive European trip, made some very interesting observations regarding the methods pursued by dealers "on the other side." Mr. Gordon says:

"I paid particular attention to the manner in which the better retailers market smokers' articles, and I am quite sure that if the American dealers followed the good examples they would soon wake up to the extra profits their business would show. While Brother Retailer in Europe will approach Mr. Smoker in the usual way, about the topics of the day, he never fails to mention that his new lot of Bruyere pipes are the very best in the world, and that Mr. Smoker is surely going to enjoy the football game much more by getting back of one of those well-seasoned Bruyeres; or if Mr. Smoker may be a cigarette user, that his cigarettes will not get crushed in his pocket by having one of the special cigarette cases that were just marked down, and that this will also add dignity. He will not forget to mention the fact that one of the leading specialists in London wrote a very lengthy article in one of the London popular magazines telling how beneficial the cigarette tube is and that it is not a dude article, as a good many smokers are still under the impression, and that it will really add to the enjoyment of smoking.

"It really does one good to see how profitable these conversations prove, and how many friends they make for Mr. Retailer. While I stood in one of the best shops in the Minories, the proprietor actually sold a set of four Underboar Bruyere pipes during a short conversation with a smoker of an Underboar, who 'just hinted that he had to buy a gift for a dear friend' and did not know what to get. Which proves that Mr. European Retailer is always on the job with smokers' articles since he knows that smokers' articles, sundries and walking sticks are the most profitable items in his business.

"The best retailers on the Continent feature the Underboar line of Bruyere pipes, since the majority of them are actually connoisseurs and know that the Underboar pipe, 'which cleans itself,' is the very best made. The increased demand for the Underboar from all sections of the world, and especially from the United States, has compelled the owners of this wonderful line to open a very large, up-to-the-minute, additional factory recently and we hope to be able to take care of every section of the country very shortly.

"I may add that Mr. Retailer abroad gets very little assistance from pipe manufacturers in the line of publicity and if the better dealers in this country would take advantage of the wonderful opportunities they have to increase their smokers' articles business through the advertising campaigns that are being conducted by firms like Wm. Demuth & Co. and others, they would soon learn the successful road to more profits and more friends."

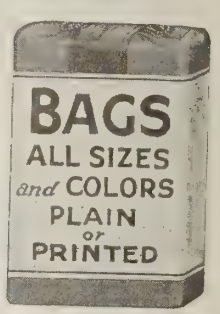
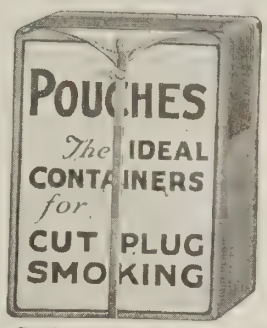
Burley Pool Pageant

CYNTHIANA, Ky., July 7.—Between 10,000 and 12,000 persons witnessed the first co-operative marketing pageant ever presented in Kentucky, which was given under the auspices of the social service department of the Burley Tobacco Growers' Co-operative Association in the Snodgrass grove, three miles from Cynthiana Tuesday. Judge Robert W. Bingham, of Louisville, President and General Manager James C. Stone; Vice-Presidents James N. Kehoe and Bush W. Allin and Directors H. K. Bourne, John B. Winn, Dawson Chambers, Herdy Myers, and James H. Sousley were among the leaders of the Burley co-operative in attendance.



Two moving picture concerns had men on the grounds to film the event to be presented in the news reels of these concerns over the country.



Twenty-five hundred automobiles were on the grounds. It was the largest crowd ever seen in Harrison county. Two bands, one from Boyd and the other from Sunrise, rendered music for the occasion.

Previous to the pageant and the picnic dinner on the grounds, President Stone addressed the crowd on the situation in the co-operative marketing of Burley tobacco. Mr. Stone expressed the opinion that, once they understood the purpose of the tobacco growers, the manufacturers "will not refuse to co-operate with the man who makes possible the continuance of their business, the producer of the tobacco which is their raw product."

In introducing Mr. Stone, Rev. J. R. Jones, the minister-banker-warehouseman, who is director for this district, paid tribute to Mr. Stone's leadership, declaring that the tobacco growers have in the person of their president "an honest, faithful and efficient head, of whom they are justly proud."

The author of the pageant, Mrs. Henry Backus, of Cincinnati, witnessed its presentation with Miss Verna Elsinger, director of social service of the Burley co-operative. The community locals of Harrison county and the men and women who are their members gave Miss Elsinger their loyal assistance in the prepa-

CLOTH BAGS AND POUCHES

for Smoking Tobaccos

The average man prefers his Tobacco in a Bag. It eliminates excess weight and bulk in the pocket. You can Bag your brand attractively and profitably.
Tape Pouches that are self-reducing to fit contents down to the last pipeful. The Smoker appreciates it. A size and color for every idea and attractively printed.

ration and presentation of the pageant, about two hundred men, women and children of Harrison county taking part in it.

The pageant was intended to depict the history of tobacco, from the time of the discovery of the plant and its use by the early colonists in America, up to the present modern method of marketing the weed.

Judge Bingham was called for by the crowd and responded briefly at the close of the pageant.

Old Tobacco Patch and Old Kentucky Home

CARROLLTON, Ky., July 7.—The largest out-door crowd that ever assembled anywhere in Carroll county, Wednesday celebrated Independence Day of the nation and the second year of the "independence of the Burley tobacco growers," with a big barbecue and burgoo on the farm of Mrs. Nannie Tandy six miles from Carrollton.

More than 6,000 persons shared in the festivities and "feed" that had been provided for the tobacco growers and their visiting friends. The crowd was variously estimated at 7,000 to 10,000 and the visitors and growers were fed in an hour and a half in an orderly manner by N. Dud Lawrence, the burgoo and barbecue expert from Lexington, and a staff of assistants.

The celebration was the occasion for a new song, a parody on "My Old Kentucky Home," sung to the tune of Foster's immortal melody, written by Miss Ella Gaines and sung by Mrs. J. Gex Williams and Nathan Hill, with Mrs. Ralph M. Barker presiding at the piano. The song follows:

The Old Tobacco Patch

(By Miss Ella Gaines, Carrollton, Ky.)

The sun shines bright in the old tobacco patch;
'Tis summer, there is not time to play;
The weeds grow fast and the suckers are in bloom,
While the worms make havoc all the day.
Memories come of the treacherous loose leaf floor,
The pin-hooker happy and bright,
By'n by hard times come a-knockin' at the door,
Then ye olden loose leaf floor, Good Night.
Weep no more, my farmer,
Oh, weep no more today,
We will sing one song for the old tobacco patch,
And we'll put it in the pool to stay.

They toil no more for the speculator's fun,
On the meadow, the hill and the shore.
They have some cash when the year's hard work is done,
And sing by the little cabin door.
The day goes by with no shadows o'er the heart,
No sorrow, but all is delight;
The time has come when the farmer has a part—
Then ye olden loose leaf floor Good Night.

Refrain.

The head will bow and the buyer will unbend
Wherever the pooler may go.
A few more days and the trouble all will end
In the pool where the good farmers go.
A few more days for to tote non-pooler's load,
No matter, he'll soon see the light.
A few more days till he joins us on the road,
Then ye olden loose leaf floor Good Night.

Refrain.

Speakers were Director of Warehouses Ralph M. Barker, who presided; General James Tandy Ellis, a native of Carroll county; Hon. James N. Kehoe, former Congressman from the Ninth District of Kentucky, now vice-president of the Burley co-operative; Vice-President Bush W. Allin, of the co-operative; J. Sherman Porter, editor of the *Burley Tobacco Grower*, and last but not least, Judge Robert W. Bingham, who spoke in part:

Judge Bingham's Remarks

"There were three indispensable factors of our success—Aaron Sapiro, Jim Stone and Ralph Barker. Success would have been impossible without any of these.

"Mr. Barker had played so great a part in the beginning, had been so great a motivating influence that it was decided to start in Carroll county the actual signing of contracts by the men who were to be members of the association. I remember that many of us were nervous, anxious, disturbed, troubled. Barker himself appeared confide that he also was scared was sh the fact that he introduced Jim to his audience as 'Mr. Will Sim

Much Done In Two Yea

"It seems incredible, looking that day two years ago, that s could have been accomplished time for peace, progress and pr in the burley district. It is evid a great, continuing and sure suc cannot tell you what a joy it is t feel that I have been permitted some part in such a movement. ago we achieved our political ligious freedom, but so far as bacco growers are concerned, mained in a condition of industri dom and our independence nev achieved until we successfully n the crop of 1921.

"It will require not merely nancing and good business man for us to maintain that independe as important a thing as either nancing or good management, is t ale of the membership. Any ma to be proud to be a member of association as ours, and he shou the man who attacks it as he wo the man who attacks the honor family.

"Nothing from the outside ca us. It is only from the inside can be hurt, and I do not beli are going to fail in your duty a permit that to happen. It is sin possible for me to conceive of a r will stay out of this association ately and 'ride' its members prices for his own tobacco, but y remember that there are men ignorant and to these you must a kindliness and reasonable argum ting an example by your own k and tolerance. Some time a real come and then the men on the in be protected by their own c strength, and those on the outs inevitably suffer.

"This is a great day in Carrol a great day in Kentucky. Th were desperate and hopeless tw ago now look the future in the i hope and confidence. The spir operation developed among ou has been of immense value, if achieved no other result in the tion of this association.

Praises Women's Movem

"The women's movement e Miss Elsinger is the leader, I r absolutely indispensable for bes from this organization. It wa too, that this movement should Carroll county, and the women county, through their county and county locals, have given of their ability to strengthen th of the association and to encou men who are its members to higher and better things.

"Some of the men in the poo to an enemy on the outside an information about your own Nothing could be more foolish harmful to this association. It disturbed about any report you cerning the association, go to officers and get the truth. J will give you any information any time; so will Ralph Ba Kehoe, Bush Allin or any mem board of directors, and you ca on the fact that the informa will give you will be absolutely

"I believe the future of th Association is assured. It is successful co-operative in the day. It is giving encourag thousands, to millions all over As the farmer progresses or s will America go forward or The day when the farmer was past. He is now using his min future success of this associatio now on the individual member.

"So great a success, so well so wisely managed, it still is o beginning of its usefulness.

t brought more money into the y district, but it has established conditions in the homes of the district. It must go on to a ar, finer, freer destiny, when all nd women will have proper home dions and every child in the Burley t will have the assurance of a real unity."

Legal Lore

usiness Man Compelled to Use a Check Protecting Device?

is a question which becomes both ting and important in view of the idespread use of devices to prevent raising. There are supposed to be ion of these in use in the United . Not only that, but an expert em- of an association of bankers has vented a special paper on which can be printed, which if acid is ed to erase the amount, flashes up rd "void" and thus cancels itself, e the check protecting devices are per cent safe, without doubt they reduce the chance of check rais- he question I referred to above, was settled in a case decided only time ago (22 A. L. R. 1,124) was When the maker of a check has out and executed it *without* using he protective devices which would have prevented alteration, and ck is raised and cashed for the mount by a bank, who must stand , the bank or the maker of the n the theory that it was his negli- hat caused the loss? To put it ly, is it negligence in making out not to use a protective device, l something happens which r might have prevented? ase which I refer to decided that k must bear the loss, and that o use a check protecting device negligence. The situation out h this case arose might arise in erience of any business man; it resting. A certain business man Massey, who had theretofore good reputation, went to the t of his local National Bank, with e did business right along, and him several New York exchange for trifling amounts. These were completely made out—that were no blanks left unfilled in t no protecting device was used. y raised the checks for very large l cashed them at the Broad Street Then he disappeared. When the treet Bank sent the checks back ational Bank to be made good, r spotted the fraud right away and refused to pay anything except the original amounts, on the principle that a bank that pays a forged check must stand the loss itself unless the forgery was made possible by the maker's negligence.

The Broad Street Bank retorted that the raising of these checks was made possible by the maker's negligence, viz.: the bank's failure to use some protecting device which would have made it practically impossible to do what was done. Upon that issue suit was started. Note the squareness with which the question was presented, viz.: admitting that the use of a check protecting device will probably prevent check-raising, is it negli-

(*Continued on page* 40)

Dark Tobacco Co-op

(*Continued from page* 4)

Checks for the second payment to growers in the Stemming district, approximating 70 per cent of the first advance, were mailed out last week. Each town has received a substantial amount for its farmers which has readily found its way into general trade and business has been appreciably improved. While the amount of the payment was less than had been hoped for the growers have accepted it in good part, taking the statement of the officials that it was not wise to overstep their borrowing capacity in order to increase the payment at this time. It was explained that the banks and the War Finance Corporation had impressed upon the association officials that it was not wise to go beyond their limit, which is fifty per cent loan on the amount of tobacco on hand, and that his advice has been heeded.

Checks for the growers of the Dark Fired district, their second payment, are now being prepared and will be mailed out about July 27. Like those in the Stemming district, the checks in the Dark Fired area will be mailed direct to the individual growers. While this plan loses the spectacular features of a public distribution of the checks, it has met with favor of the members who are not required to go anywhere except to their post office or mail box to get their check.

The membership campaign in the One Sucker district is moving along. The last report showed 2,000 new members having been secured, these coming chiefly in the counties of Smith, in Tennessee, and Butler, Logan, Allen and Simpson in Kentucky. The campaign will close finally on July 31.

The election of directors will come in September and already the attention of the members is being called to it, and the conditions under which the election will be held are being explained to them in detail.—M. E. Bacon.

A NEW ERA

for

Porto Rican Tobacco

The day of prosperity for the Porto Rican Tobacco Industry has arrived.

The Phenomenal success of many of the advertised brands of "mild Havana Cigars" is largely due to the use of Porto Rican Tobacco either exclusively or blended with other Tobacco as a filler.

In the past it was not always possible to tell whether the Tobacco sold as Porto Rican was all grown on that Island or mixed with a Foreign Tobacco, but now

The Government Guarantees

the source of all Tobacco—either in the leaf, scraps, or in cigars—shipped from Porto Rico.

This is done by means of Stamps affixed to every barrel or bale of Tobacco and on all boxes of cigars or "little cigars."

The White Guarantee Stamp

on shipments of Tobacco guarantees that it is of pure Porto Rican growth; on boxes of cigars that the contents were manufactured from Tobacco grown on that Island.

ederal Reserve Report on Tobacco

WASHINGTON, D. C., July 10.—The ederal Reserve Board has the following say in connection with the tobacco sition in its monthly summary:

With the exception of some of the coerative marketing associations, which e still distributing the products of their embers, the season for marketing leaf bacco has closed. In the Richmond strict most markets closed in April, but few remained open until May. The ason was in general satisfactory, as eater yields combined with higher prices an in the previous season resulted in ger returns to the growers. In the St. uis district the burley and dark tobco associations have functioned satisctorily. Returns from the season's crop e being distributed among the producers the pools are sold.

Regarding the new crop, the season has been backward on account of unfavorable weather, and scarcity of plants have delayed plantings. In the northern sections of the Richmond district dry weather delayed transplantings of tobacco plants in May, but rains in June enabled the work to progress, although the crop is approximately two weeks late. In South Carolina the crop is making normal growth.

Production of manufactured tobacco was in greater volume in May than in the preceding month and, with the exception of small cigars, all types of manufactured tobacco increased over the same month a year ago. In the Philadelphia district the demand for cigars during June was only slightly better than in June, 1922. Production has been curtailed somewhat and is at an average of only 65 per cent of capacity. High grade cigars were in best demand. In general, cigar prices remained unchanged during May and June. Stocks of cigars held by manufacturers are generally moderate and are remaining stationary or decreasing slightly.

Co-operative Marketing Law Assailed

CHICAGO, July 7.—The Chicago Live Stock exchange continues its opposition to the principles of the co-operative marketing bill which was passed by the Illinois state legislature recently and is now a law.

"Gov. Small, in signing senate bill No. 165, known as the 'coop' marketing bill, has placed another law in the Illinois statutes that is known to be unconstitutional, inoperative, and pernicious," said Everett C. Brown, president of the Chicago Live Stock exchange, in a statement issued a few days ago.

Chance for Promoters

It is Mr. Brown's interpretation that the pooling plan covered by this new law will permit promoters to exploit the farmers. He says that similar bills have been declared unconstitutional by the Supreme courts in other states, and that the pooling plan has already lost farmers millions of dollars on fruit in California; on milk contracts in Illinois and Wisconsin, and on tobacco in many southern states.

The local exchange's opposition to this bill was based on the fear, Mr. Brown explained, "that the live stock producer might find, if he signed one of these contracts, that he has tied himself up for the five years which would permit some co-operative association to tell him when, where, and how he must ship his live stock."

Hits Cattle Loans

"The passage of this law, practically means the end of cattle loans in the state of Illinois," continues the statement, "as banks will not loan money to individuals who enter into a contract which removes the control of the live stock or farm products from the individual borrowing the money."

Mr. Brown predicts that there will be such a storm of resentment from farmers "who may be caught on these contracts during the next two years that this bill will be repealed at the next session of the legislature."

To Buy Porto Rican

R. A. Echevarria, of Theyskens & Shaw, Inc., sailed for Porto Rico last week, where he expects to make important purchases of the new crop. He will probably stay on the island for several weeks.

To Supervise Porto Rican Interests

Isadore Cohen, leaf dealer and packer, leaves New York this week for a two months' trip to Porto Rico, to supervise his interests on the island.

Jerome Waller Back

Jerome Waller, of Rosenstadt & Waller, returned from Porto Rico this week. Mr. Waller has been supervising the packing and shipping of new crop Porto Rican tobacco purchased by his firm.

Pennsylvania Tobacco Business Keeping Up W

Undiminished Flow of Orders for Cigar Leaf and Requests Samples from Different Manufacturing Centers—So of the Largest Sales of the Week Noted.

LANCASTER, Pa., July 9.—Summer business continues briskly on the Lancaster market with an undiminished flow of orders for cigar leaf and requests for samples from different manufacturing centers. Low grades and tobacco of the 1921 crop are the chief matters of interest and packers report small sales in both, which, in the aggregate, make up a considerable volume of business. Vacation season has drawn a number of the tobacco men to more congenial haunts than busy offices, but business refuses to take a vacation and warehouses present scenes of unusual activity for this time of the year.

Some Notable Sales

The largest sales of the week were made by J. K. Leaman & Co., independent packers of Lancaster, and J. R. Ulrich & Son, who operate in the Elizabethtown section. These two firms disposed of a quantity of 1921 cigar leaf which may total in the neighborhood of 1,500 cases. The price involved in the transaction could not be definitely learned. The purchaser of the goods was a large New York City cigar manufacturer.

Significant Indications

Some significance may be attached to these sales in indicating the status of the Lancaster tobacco crop in its relation to the market. The absorbing power of manufacturing interests is always equal to the amount of Pennsylvania tobacco grown and a surplus is, and will be for some years, impossible. The need for Pennsylvania cigar leaf is always on par with the production and buyers in plenty are always on hand to contract for the last pound of Lancaster grown tobacco.

Increasing Demands from West

The western and middle western trade is gradually becoming more important as an outlet for Pennsylvania. Business in that section is slowly but steadily on the increase and manufacturers there, as in the East, are coming to a fuller realization of the importance of Pennsylvania cigar leaf as matchless filler tobacco.

Cigar Production Figures

The changes undergone by the local cigar manufacturing industry within the past year are graphically portrayed by a study of the comparative collections of the Lancaster internal revenue office for June, 1922, and June, 1923. The altered whims of a fickle buying public are set forth in the following table:

	June, 1922 Cigars	June, 1923 Cigars
Class A.....	9,355,530	3,288,645
Class B.....	5,294,825	7,788,980
Class C.....	3,436,880	3,168,750
Class D.....	295	2,315
Class E.....	None manufact'd	500

The drop to nearly one-third the production in the cheaper Class A cigars has had a detrimental, and in many cases disastrous, result on the small manufacturer. The effects of this cut in the demand for nickel cigars has also extended to a number of larger cigar men who, through the greater elasticity of their organization and market facilities, were able to survive and switched to making a higher grade smoke.

Class B in Greater Favor

The marked increase in the production of Class B cigars indicates the rise in favor of the 2-for-15 article, which at the present time, according to the figures, is most popular among smokers. Ten-cent cigars have held their own while the more expensive goods are finding increased sale. Although the production of Class E cigars during June, 1923, ran only to 500, the fact that they are listed is portant, as it indicates a new venture local manufacturers. A careful su among the more important of the caster cigarmakers failed to reveal manufacturer who made this grade sn before this year. Whether the comp tively small industry of this section successfully enter the field of high-pr smokes remains for the future to termine.

Although the cigar production in caster County has fallen off nearly million cigars since June, 1922, the on file at the local revenue office sh a satisfactory gain in production May of this year. This would seer indicate an improvement which will, prospects are very favorable for ste increased improvement, soon place Lancaster industry at its former The decrease in value of the manu tured product during the past year been about 24 per cent, while the ber of cigars made has been lessened proximately 26 per cent.

Ranck a Bank Director

Milton Ranck, prominent in tob circles and president of the Lanc Leaf Tobacco Board of Trade, wa cently elected a director in the Pe National Bank, of Lancaster.—KEYS:

York County Activities

Year's Cigar Production Sh Increase

YORK, Pa., July 7.—Figures have been compiled for the govern at the York office of U. S. Internal enue, by Collector G. Frank Linde show receipts from the sale of stamps for the year ending June 30, amounting to $2,642,585. These f represent receipts greater by $131,9 than the corresponding 12-months' p ending June 30, 1922. Cigar man turers and employees of this pa Pennsylvania have reason to be pl with the fine showing made by th dustry. The cigar stamp sales fo year ending June 30, 1922, amount $2,510,587.54.

The total sales of tobacco stamp the revenue year ending last amounted to $106,092.36, which i quite as much revenue as was re by the government over the corres ing period of a year ago, when th ceipts from this source were $106,2 But the decrease in this business amo to only $157.32.

Revenue Receipts in Distric

The nation's income for the p months from the sales of both cig tobacco stamps amounted to $2,748,(The receipts from the same two s for the fiscal year, 1921-22 were $ 837.22, or an increase the past 12 m of $131,840.32.

A comparative table showing th of cigar and tobacco stamps in the revenue office for the 12 months June 30, 1923, and the 12 months June 30, 1922, follows:

1922	Cigars	T
July	$223,584.29	$8
August	229,593.16	9
September	256,159.86	9
October	265,716.86	9
November	271,965.71	8
December	182,354.89	5
1923

meeting of the creditors of M. Shenberger, bankrupt cigar turer, of Dallastown, held on the office of William H. Kurtz, n bankruptcy for York county, ity, Harry M. Raab, Dallastown, ted trustee.

rst meeting of the creditors of J. Knaub and David F. Ness, krupts of Dallastown, has been l by the referee from July 11, ally scheduled, until July 18. er, Ness and Knaub were mem- the State Bond Cigar Co., of n, which recently went into the receivers. The three members rm are now adjudicated bank- individual proceedings.

Havana Cigar Co., of Dover, is ing a period of prosperity, hav- gh orders booked to keep the steady operation for months to he company at present employs hands and is advertising for kers.

Frutiger, D. Curvin Kaltreider vin Kaltreider, cigar manufac- hester Stein, cigar packer, and r Hoffman, cigar broker, all Lion, while on a recent outing s' Beach, Del., the popular re- sort of York county followers of Isaac Walton, caught 95 fish.

An improvement in business is reported by Red Lion box factories, which have many orders booked.

A Destructive Storm

A storm, accompanied by a cloud burst, which swept over the southern part of York county on July 4, is said to have washed out fields of tobacco, wheat and corn, causing much damage in the vicinity of Bittersville. The destruction is reported to be only local and tobacco and grain in other parts of the county did not experience any ill effects.

The Carbon Monoxid in Tobacco Smoke

Science is digging deeper into the mysteries of material things day by day and occasionally turns up some unpleasant and annoying facts. Recently it has taken another whack at smoking tobacco—a perennial subject of controversy—and has revealed some truths which, while they are calculated to give the smoker pause, are not likely to act as permanent deterrents. Real dyed-in-the-wool smokers are unlikely to be deterred by anything save lack of breath with which to puff.

An analysis of tobacco smoke, for instance, has shown that it contains deadly carbon monoxid, which when inhaled in quantity from the exhaust of an automobile kills with great swiftness; its concealed surprise is that it is odorless and hence conveys no warning.

Another revelation of science is the reason why excessive smoking causes headache, and also why cigarette tobacco, yields smoke only half as poisonous as cigar smoke. The reason why smoking a thin cigar is much less harmful than smoking a thick one is also scientifically explained.

The facts mentioned, says the *New York Times,* with their explanations, are contained in the following editorial in the *Journal of the American Medical Association.* The abbreviations gm. and mg. used in the article stand for gram and milligram, weight measures of the metric system. A gram is equal to 15.432 grains of the more familiar system, and a milligram is one thousandth of a gram, which equals 1/65 of a grain.

Writing under the heading, "What We Get When We Smoke," the editor says:

Displaces Oxygen in the Blood

"One of the substances abundantly present in tobacco smoke is carbon monoxid well known as the lethal agent of illuminating gas and of the exhaust gas of motors, which has had so many victims in recent years. Carbon-monoxid is not directly poisonous, but displaces oxygen from hemoglobin, for the red cells have 225 times as great an affinity for this gas as for oxygen.

"Baumberger has found that tobacco smoke may have from 7.2 to 25 parts of carbon monoxid in 10,000 parts of air, a concentration which Henderson found capable of causing serious symptoms if inhaled for more than an hour. But persons never take in undiluted smoke—the heartiest cigarette fiends and the most resolute pipe smokers always take many breaths of fresh air between puffs.

"It is estimated that if a person should smoke continuously for one hour, inhaling the smoke five times a minute, there might occur as high as 22 per cent saturation of the hemoglobin by carbon monoxid, a concentration sufficient to produce headache and perhaps an oxygen shortage during activity; but this figure is undoubtedly far above what smokers do actually accomplish. Perhaps 10 per cent is more nearly the maximum reached in smoking, a figure that has not been found ordinarily to produce symptoms.

Nicotine Chief Active Agent

"Formerly the statement was current that the chief toxic material in tobacco smoke is pyridin, derived by decomposition of nicotine, but later studies agree in indicating that the nicotine is the chief active agent, tobacco smoke exerting much the same physiologic effects as nicotine in corresponding concentrations. By direct analysis, Baumberger found

MARSHALL FIELD

NO OTHER CIGAR IN AMERICA LIKE IT
IT IS DIFFERENT
THERE ARE REASONS FOR IT

The manufacturer has devoted his life in the science of tobacco curing, and the art of blending. The objectionable properties which tobacco contains are eliminated, such as Rosin Gum which makes tobacco strong, and the natural Ammonia which makes tobacco sharp and bitey. It is then ripened, mellowed, and blended.

All Marshall Field Cigars are

Very, Very Mild Regardless of Color

Distinctive Quality

Liked by all who smoke them

Marshall Field wrapped with finest Vorstenlanden Java.

Pioneer 10c., Field 2 for 25c., Bankers wrapped two in foil 2 for 25c., Marshall 15c., L. Corona 15c., Standard 3 for 50c.

Philadelphia Dealers Had a Good Holiday T

Latter Part of Week Was Comparatively Slack — C Week Made Fair Start — Better Class of Goods the Vanguard — Notable Activities in the Industr

PHILADELPHIA, July 10.—A mid-week holiday is usually a deterrant to business; it proved to be so for the retail trade during the last half of the holiday week, although in the first opening days of the succeeding week there has been quite a considerable recovery. But for the two days before the 4th, the celebration was a splendid accelerator of business. Every so often, a wiseacre announces that the public is waiting for the return of the old-fashioned five cent cigar. Trade experience with the several excellent five cent propositions now on the market is at variance with the layman diagnosis. This year there was most emphatically shown in the pre-holiday buying, the lack of interest of smokers in the extremely low priced goods. Many cigar smokers probably have now attached themselves to the pipe and to cigarettes but the veteran cigar smokers continue to want quality at least, as good or better than that to which they were accustomed, and for that reason they are quite willing to pay the higher cost necessary for the gratification of their desires. And so it comes about that the producers of these standard makes could ill afford the decrease in production incident to the holiday and its after effects.

The leaf market is rather quiet for domestic seed leaf. It is better for shade grown, and still better, although by no means rushed, for Porto Roco, Havana and Sumatra.

Congress in New Headquarters

Although quite a number of hands have been at work for the last fortnight in the mammoth new factory of the Congress Cigar Co., at the Southwest corner of 3rd and Spruce streets, the largest plant of its kind in the city, opening exercises of a formal character, were not held until Saturday. Then a floor in the great structure was cleared, services of an officer and a caterer were secured. A dance interspersed with vaudeville acts, was given by the firm as host to its employees as guests. Removal of equipment from the former headquarters factory on 2nd street, and the two floors, one of which was the original Congress home in Philadelphia at the South-east corner of 3rd and Locusts streets, has been going on for some time. These two sites will be leased to other tenants. In the first named, productive capacity was about 90,000, and in the other about 130,000. The new home will accommodate these two factories with considerable additions, of course. Despite the prospective increase in output, the firm is looking for additional location, but outside of the city, in order to make still greater gains on production. William S. Paley, son of the head of the firm, Samuel Paley, has gone to Maine on vacation. George Kraus, manager of the New York branch, visited headquarters during the week en route to Atlantic City for a sojourn there.

Making Good Showing

President Joseph F. Galagher, of Allen R. Cressman's Sons, is on a western trip which will extend as far as the Coast. He will be out of the city during most of the month. James Lynch, of this company was elected a member of the Board of Control of the Exchange Club. The records of this firm during both June and the first six months of this year show a very large increase in city trade, particularly for Manuels, over the corresponding periods of a year ago.

The retail stand conducted for some time by J. Kessal, 3rd and Arch streets, has been sold to William Sattin.

L. Gray, has sold his retail store at 52 N. 13th street, to Max Kr

The store opened not long David Label on 15th street near has been sold to Patrick Shiel.

E. V. Schroon of the Schroo Co., Wichita, Kan., was a visito city during the week.

The landmark retail estal formerly conducted by H. P. at the Northwest corner of Chestnut streets, and recently Wood, who became financially rassed, is no more. The effe sold at auction and removed.

estone State Business Improving

. Clark, of D. Dreux, Inc., is g his clients in Reading, Harris- ul Lancaster, during the week. lk reports that business in the e State is on the up-grade.

Maryland Co-op. Movement

ANNAPOLIS, Md., July 7.—The success attending the recent campaign of the Maryland Tobacco Growers' Association in increasing its membership to approximately 80 per cent. of the total number of tobacco growers in Southern Maryland presages a great future of accomplishment for the association, and, according to those closely allied with the co-operative body, no stone will be left unturned in putting some of the constructive measures for bettering market conditions, packing and grading of the product into effect without delay.

With improved conditions all along the line, members of the association are confident that when the 1923 crop is put on the market, a greater number of buyers than have heretofore sought to purchase the Southern Maryland crop will be bidding for the product. And this, it is contended, will be a big help in getting prices for the commodity that are consistent with the cost of production and the grade of tobacco placed on the market.

During the membership drive just ended, Anne Arundel went "over the top" in fine style, approximately 140 new members having enrolled in the association. Together with those who already were members of the Tobacco Growers' Association, the names of the new members brought the total list well over the 600-mark, or to within about 83 per cent. of the total number of tobacco growers in the county.

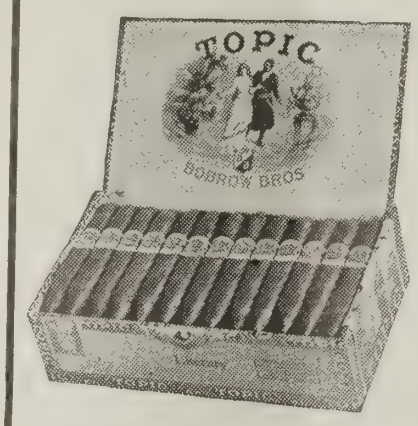
May Earn a Bathing Suit

Smokers who are not now physically able to win a grand piano via the tobacco coupon route may build up their strength this summer by bathing in suits that may be obtained in that way. According to an announcement made by the head of a well-known knit goods house, one of the chain cigar store systems has contracted for 30,000 bathing suits to be given away this summer as premiums. The necessary certificates are now being issued by the chain in question in the form of bathing suit orders, which are good only until August 15. Two types of bathing suits are offered as premiums, one of which may be obtained by presenting 250 certificates and the other by turning in 300. The selection of this suit is made at one of the retail stores of the knit goods concern, but the certificates are turned in at the headquarters of the chain of cigar stores.

Homeward Bound

Charles J. Waxelbaum, the Water street leaf dealer, is due to arrive in New York on Friday, on the Cunard steamer *Berengaria*. Mr. Waxelbaum has been attending the Amsterdam and Rotterdam inscriptions and has made some important purchases of Sumatra leaf.

In Western Metropolis



Harry Lloyd, of D. Dreux, Inc., is in Chicago this week, selling fancy wrappers to the Windy City cigar manufacturers.

Legal Lore

(*Continued from page* 33)

gence not to have used it in a case where none was used and check raising followed? You can easily see the importance of the question upon business practice, for a decision that it was negligence would absolve the bank from all liability for paying a raised check under such circumstance, and put it on the maker. Thus it would practically make it obligatory for every business man to use a device of some sort.

The court, however, decided that it was not obligatory on makers of checks to use check-protecting devices, that it was not negligence to fail to do so, and that where a non-protected check is raised and collected the bank that cashed it is responsible and the maker need pay only the amount for which the check was originally drawn.

But there was one qualification: the check must be completely made out when the maker turns it over. If it isn't, if the amount is left blank and the recipient fills it in for a larger sum than the maker expected, the maker can blame nobody but himself and must stand the loss. Be very careful, therefore, how you give out checks without the amounts filled in.

From the very long and complicated report of this case I extract the following kernel, which gives the gist of the law on the subject:

"Where negotiable paper has been executed with the amount blank, it is no defense against a bona fide holder for value for the maker to show that his authority has been exceeded in filling such blanks, and a greater amount written than was intended. But if the instrument was completed without blanks at the time of its delivery, the fraudulent increase of the amount by taking advantage of a space left without such intention will constitute a material alteration (and the maker will not be liable for the increased amount). In the latter case, under Section 205 of the Negotiable Instruments Law (in force in most states.—E. J. B.), payment therefore may be enforced according to its original tenor (that is, the maker must pay the original amount of the check, but no more)."—*Copyright, 1923, by Elton J. Buckley.*

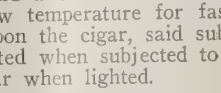
Cigars Today Good as Ever

(*Continued from page* 11)

would not be buying this quantity of cigars at present prices unless cigars qualified for his taste."

Years ago one got a fine "half and half" fry (oysters and escallops) at Clark's on Fulton street for thirty cents, a nice steak with a dab of mashed potatoes and one of mashed turnips on the side at Mike Lyons' for thirty cents, a really good Italian table d'hote dinner at Plavano's, Moretti's or Riccadonna's for fifty cents to seventy-five cents, but equal dishes and dinners cost far more now, and for exactly the same reason your contributors or any one else must pay more than five cents now to obtain a cigar equal to the five-cent cigar of pre-war days. Very truly yours,

ADOLPH OPPENHEIMER.



July 1, 1923.

Opens New Business

BATTLE CREEK, Mich., July 7.—Arthur Mitchell has opened a new cigar and pool hall at 42 North Jefferson street, in this city.

Patents

The combination with a cigar, of a band, and a substance sensitive to heat at a low temperature for fastening the band upon the cigar, said substance being melted when subjected to heat from the cigar when lighted.

Carbon Monoxid

(*Continued from page* 37)

that cigarette smoke contains between 14 and 33 per cent of the nicotine present in the tobacco smoked.

"Cigarettes weigh about 1 gm. apiece, and about 80 per cent of the tobacco is smoked, so that the nicotine in the puffed smoke amounts to about 5 mg. for each cigarette. Of this about 67 per cent is absorbed if the smoke is merely taken into the mouth, but 88 per cent is absorbed if the smoke is inhaled into the lungs. How much of this reaches the blood depends chiefly on how much is lost in saliva, the drooling of the novitiate being an important protective measure, since from 3 to 5 gms. of nicotine dissolved in water taken within half an hour, may cause severe symptoms in non-smokers, whereas habitual smokers can endure twice as much.

"These figures show that an unventilated room 10 feet square and 10 feet high, occupied by 10 men all smoking cigarettes to the best of their ability for an hour, would come to have an air containing about two parts of carbon monoxid and enough nicotine to furnish 2.6 mgs. an hour to the person compelled to breathe it. While these are not large amounts in figures, it is certain that any non-smokers and many smokers in such an environment would have a headache, which is ascribable to the increased intracranial pressure that is produced by both the nicotine and the decreased oxygen in the blood.

"If our hardened cigaret smoker were to puff away steadily for an hour he might absorb as much as 36 mgs. of nicotine if he inhaled, and 27.5 if he only puffed. These are amounts that would undoubtedly produce marked effects even on the habituated, but there is at least the consolation that the lethal dose is 500 mgs. taken at one time.

Some Unknown Solids

"However, the smoker gets much besides carbon monoxid and nicotine, for the solids of cigarette smoke weigh about 10 per cent of the tobacco burned, or about 80 mgs. for each cigarette, and all the things it may contain besides the aforementioned are not known; but the experimental evidence indicates that nicotine and carbon monoxid account for most if not all the observed effects.

"It is to be considered that these experiments were carried out with cigarettes, for the observations of Lee indicate that tobacco burned in cigarettes yields much less nicotine, and presumably less carbon monoxid, in the smoke than when burned in cigars or pipes. For example, a Manila cigar and a cigarette of Virginia tobacco were so burned that the same amount of tobacco was consumed in equal time, and the effect of the products of the combustion determined; it was found that although the cigarette tobacco used contained nearly twice as much nicotine as the cigar tobacco, the smoke of the latter was twice as toxic as the cigarette smoke.

"The explanation for this is that during the slow combustion of a cigar, as in ordinary smoking, immediately behind the point of combustion is an area in which water and other volatile substances condense; during the act of smoking, the hot gases pass through this moist area and volatilize the more volatile principles of the tobacco of which nicotine is one. Therefore the smaller the moist, hot area behind the point of combustion, and the more rapid and complete the combustion, the less likely is the smoke to contain volatile toxic bodies; hence a cigarette or a slender cigar will yield fewer of these products than a thick cigar, and many smokers can testify that a thick, 'fat,' cigar has much more effect than a long, slender cigar of similar tobacco.

"The unpleasant effects that the unaccustomed smoker experiences on relighting a half-finished cigar or pipe are explained on the same basis."

Tobacco Products

(*Continued from page* 19)

scrip. In the former year, however, the company distributed a 10 per cent. stock dividend.

Capitalization Rises

As Products began to reach out for other concerns in its line of business its capitalization, of course, increased. Originally the company issued $8,000,000 of its preferred stock and 160,000 shares of $100 par value of common, the latter being sold under Virginia law at $1 a share. Preferred stock is now outstanding in the same amount as when the company began business. But the common, on the other hand, has increased several fold.

Last year the stockholders approved a plan for a merger with United Retail Stores involving a recapitalization of Products. The plan provided for an increase of $124,354,000 in authorized capital, which consisted of 750,000 shares of $100 par common and 493,540 shares of new Class A common of $100 par. Preferred was unchanged. Holders of Products were given the privilege of exchanging their shares of common for an equal number of Class A or for one-half a share of Class A and one-half a share of new common. Holders of Retail Stores common were offered one share of Products common or one-half share of Products common and one-half Class A for each share of Retail common. As of December 30 exchanges under this plan left Products with capitalization as follows:

	Authorized	Outstanding
Preferred (7%)..	$8,000,000	$8,000,000
Common Class A, 7% non cum...	49,354,000	44,802,250
Common	100,000,000	45,042,550

Net Income Increasing

Tobacco Products is now in an immeasurably stronger position as regards disposal of its wares. Whether it will be able to earn as much per share on its greatly increased common stock as its optimistic supporters hope remains to be seen. The depression of 1921 touched the company lightly. In fact, net income was actually larger than in either 1920 or 1919, though slightly below that of 1918. Last year net income amounted to $5,587,000, as compared with $2,148,000 in 1921, the gain reflecting the new properties. Deducting Federal taxes for the year, preferred dividends and dividends at the rate of 7 per cent. on the Class A stock outstanding at the end of the year, there would remain $1,803,828 for the $45,042,550 common, or 4 per cent. a share.

It does not follow, however, that Products will not in the current year be able to earn more than $4 a share on its common. Net profits before taxes in the first four months, with April estimated, amounted to $976,000, as compared with $467,000 in the corresponding period of 1922. This figure is exclusive of dividends received. Dividends received in the first four months amounted to $1,067,000, making a total of $2,043,000. If earnings were maintained for the remainder of the year at this rate the company would thus have net dividend approximately $6,000,000. Dividends the preferred and Class A as of the of the year call for $3,696,157. per cent. rate on the common w bring the total to $6,398,710.

Future Looks Promising

The company last autumn inaugur dividends on the Class A stock, an president has said that the outlook rants a payment on the common year. In view of the large amour the latter outstanding, however, and rather moderate earnings to date, much must not be expected this One of these days the company may dividends at the same rate as its rivals—namely, 12 per cent. on the mon. Not only will it have the divi income from the very profitable stores, but these stores will afford ever increasing outlet for its products.

Another element in Products's f is its interest in the Porto Rican-A can Tobacco Co. Acquisition of concern has been held up by litig but, assuming that the plan goes thr it may well prove to be a prof transaction for Products. The com produces the finest Porto Rican c on the market, cigars long feature Retail Stores. Earnings of Porto I have not been particularly large, bu company would be a valuable all Products.

Products capitalization repre mainly stock in other companies brands and good will. The latter are not listed separately on the ba sheet, but are included with real e machinery, equipment, etc., carrie $5,338,000. Stock in other compan carried at $53,368,000. But, of c it is earning power that has mo do with the market price of the s Funded debt is small, less than $4,00 and the working capital position is being, in fact, the strongest it has been, with an excess of current over current liabilities of $7,413,00

While the common stock is, of c speculative, the record and prospec the company put the preferred and A in a favored position. A thi watch, nevertheless, as is true wi rapidly growing enterprises, is th company does not overreach itself expansion program.

Injunction Against Po Rican-Am. Dissolved

NEWARK, N. J., July 9.—The Ch Court has handed down an opinio missing the temporary injunction viously granted restraining the Rican-American Tobacco Co. fron ceeding with the capitalization pla ing for an issue of 100,000 shares c stock at $25 a share.

An effort will be made to ha court grant another stay until the tribunal can pass on the matter.

Disloyalty Flailed at Picnic

ol members held their grand iday. It was a big crowd that Music, dancing, and speeches furnished an interesting program. Mr. Ela, and Mr. Neprud gave the principal talks. The "disloyal" farmer members drew the bulk of the ire, and they were severely flailed. Detailed explanations of the working of the organization were given out to satisfy some in the audiences who might have had misgivings. Many members of the trade took it in.

Mr. Morrow, of Bloch Bros., Wheeling, W. Va., was in Edgerton the past week, in the interests of their local stemming plant here. Mr. Morrow's mouth watered when he saw the local links, but a recent operation for appendicitis prevented him from playing. —BADGER.

Milton Durlach Soon to Become Benedict

It is announced that the wedding of Milton I. Durlach and Miss Theresa Mayer will take place on the afternoon of Thursday, July 26.

Miss Theresa Mayer is the charming daughter of Bernard Mayer, the well-

Milton I. Durlach

known real estate operator, of 41 East 72nd street, New York.

Milton I. Durlach is the president of Durlach Bros., Inc., of 181 Water street, pioneer growers and packers of Porto Rican tobacco.

In 1899, immediately after the Spanish-American War, Mr. Durlach sailed to Porto Rico, where he introduced modern methods in the growing and packing of Porto Rican tobacco. Today, Durlach Bros., Inc., are among the leading and most successful packers of Porto Rican stripped tobacco in the United States.

The forthcoming wedding ceremony is to take place on the lawn at Mr. Mayer's country home at Sharon Springs, N. Y., and the event promises to prove most novel and entertaining. Sherry's, of New York, are to take entire charge of the catering.

Immediately after the wedding, Mr. and Mrs. Durlach will depart for their honeymoon, which will be spent abroad. Among other places, they will visit Japan and Hawaii, returning early in November to take up their residence on Park avenue, New York.

Returns and Payment of Taxes Necessary

WASHINGTON, D. C., July 17.—To avoid penalty, returns and payment must be made on or before July 31, of the special tobacco manufacturers' tax provided for by the Revenue Act of 1921.

Capital stock tax returns also must be made on or before July 31, payment being required within 10 days after notice and demand by the collector.

The Revenue Act provides that, "every domestic corporation shall pay annually a special excise tax with respect to carrying on or doing business, equivalent to $1 for each $1,000 of so much of the fair average value of its capital stock for the preceding year ending June 30 as is in excess of $5,000. In estimating the value of capital stock the surplus and undivided profits shall be included. Every foreign corporation shall pay annually a special excise tax with respect to carrying on or doing business in the United States, equivalent to $1 for each $1,000 of the average amount of capital employed in the transaction of its business in the United States during the preceding year ending June 30."

Every domestic corporation must make a return on Form 707 even though the law may indicate that it is exempt from tax. The question of exemption is one for determination by the Commissioner of Internal Revenue.

A foreign corporation is "carrying on or doing business" in the United States if it maintains an agent, or an office or warehouse in the United States, or in any other way enters the United States for the purpose of its business.—LAMM.

Sumatra Tobacco Crop

WASHINGTON, D. C., July 14.—The 1923 tobacco crop of Sumatra which is about to be harvested will be inferior to 1922 crop in quality due to drought on the island latter part of April and first part of May, Consul Spamer, Medan, reports.

* * *

WASHINGTON, D. C., July 17.—American Consul Spencer has sent the following report to the Department of Commerce, in connection with the Sumatra tobacco crop:

"According to advice received from the Administrator of the Deli Maatachaapy at Medan, the 1923 tobacco crop, which is about to be harvested, will be inferior to the 1922 crop in quality owing to the unusual drought which has prevailed in the island during the latter part of April and the first two weeks of May.

"The restriction policy of the Deli Planters Comite, establishing 195,000 bales of tobacco as the 1923 maximum, has apparently been adhered to, but it is estimated that grades suitable for the American trade will be from 5,000 to 7,000 bales less in the 1923 crop than in the 1922 crop.

"In some instances estates have replanted a few fields of tobacco, in an attempt to minimize the losses due to the drought, but the effect will be of little importance."—LAMM.

Col. Theodore Roosevelt Speaks at Burley Burgoo

Assistant Secretary of Navy Confesses He Is Not a Farmer, Despite Country Birth and Rearing—Editor Porter Invites "Dumping" "Sinners" to the "Mourners' Bench"

MAYSVILLE, Ky., July 15.—Col. Theodore Roosevelt, assistant secretary of the navy, made at least one convert to co-operative marketing of Burley tobacco at the big meeting of farmers and tobacco growers at Beechwood Park near here yesterday. Following the address of Colonel Roosevelt and that of Charles S. Barrett, of Georgia, president of the Farmer Union of America, J. Sherman Porter, editor of the *Burley Tobacco Grower*, also spoke briefly. At the close of his remarks he asked if there "is not in this great crowd some poor sinner who desires publicly to renounce the devil and all his works, including the 'dumping' system of selling his tobacco, to make public profession of repentance and kneel at the mourners' bench and be forgiven and allowed to sign a contract pledging his tobacco to the Burley Tobacco Growers' Co-operative Association."

One "Penitent" Throws Self on Mercy of Burley Co-op

In response to Mr. Porter's appeal, Trumbo Snedegar, prominent Bath county farmer and one of the largest tobacco growers in this county, stepped forward and declared that he had been convinced by the address of Colonel Roosevelt that the farmers ought to stand together in the marketing of their crops and that he had made up his mind that it was his duty to go with his neighbors and sell his tobacco in the same way they sold theirs. He said he had a number of "excuses" for staying out of the association, but that, after all, he had no good reason. He said he thought that he ought to make this statement and that he would be glad, if there were any other doubters in the crowd, if they would come forward and join him in going into the Burley co-operative.

Mr. Snedegar is a man of wide influence throughout the Ninth congressional district of Kentucky, having been his party's nominee for Congress in a recent election in that district. Mr. Snedegar declared that he had been "soundly and honestly converted" and after he had spoken the audience sang "Praise God From Whom All Blessings Flow," while a moving picture operator snapped Mr. Snedegar in the act of signing a co-oper-

...HINGTON, D. C., July 16.—De...s that the trade association as a ...it for the promotion and self-regula... industry and commerce has be..., y reason of its scope and activity, ...portant American business institu... ...ith which the public, generally ...kg, is little acquainted, Herbert ..., Secretary of Commerce, in the ...dition to that Department's new ...ntitled "Trade Association Activ... released today, expressed the ... that the constructive purposes of ...organizations have unfortunately ...onfused with the minority of ...s which have been used as a ...or action against public interest. ... as a business house or an in... meets its obligations and carries ...daily relations within the com... so the trade association has a ...ividuality in the business fabric," ...g to Secretary Hoover.

...rade association activities are not ...ist as all individual habits are not ...ntil so proved by their reactions ...n individual and the community," ...retary says, adding that "perhaps ...: way to guide activities into the ...onstructive and profitable chan... through thoroughgoing analysis ...mination of these activities which ...n the surface to be constructive ... application and results."

Shown by Statistics

...e subject of statistics, Secretary ... says, in part: "There is no ...ti... but that the curves in the busi... ...cle from activity to depression ...en less disastrous in those indus... trade where accurate, lawful ...tal data have been available to all. ...entally it is impossible for busi...n to form those vital judgments ... eir future course of action in the ...d safe direction of their activities ...s they are informed as to the ...g currents of production and ...ption, not only in their own lines ...l in other lines of business, which ... broader currents of economic ...e only criteria are statistics and ...try is to march with reasonable ...s instead of undergoing fits of ...and feast, if employment is to be ...nstant and not subjected to vast ...s f hardship, there must be adequate ...tal service. Whether these serv... to be maintained by the Govern... by trade associations, they must ...ntained if we are to have an ...l economic life."

...ssing legislative activities, Mr. ... asserts that, "The interest of ... industry or trade, to be sound in ...nate analysis, must be the public ...s and in their legislative activities ...ade associations have borne this ...oremost. The demand of legis...s for the views of the different ...s upon all sorts of questions of ...nterest is incessant, and the open ...ion and presentation of such ... is far more consonant with ...development of public life than ...rate lobbying of the few or pow...

...he Elimination of Waste

...e elimination, in a vast area of ...es, can only be accomplished by ...te action in a trade. Hundreds ...ions of dollars have been saved ... the adoption of principles laid ... such programs, not alone to the ... groups concerned but to the ... consumer. They have brought ...lower prices, through attacking ...the costs of raw material, in... plant operation, and unnecessary ...aintenance.

...reference to cost accounting ...s, Secretary Hoover pointed to ...ly remarkable findings of Gov... agencies in the war years re... the knowledge and understand...costs in production and distribu... ...sses often were confused with ...those investigations showed, all ...lack of knowledge of the funda... of cost accounting. Today, the ...ssociation is proving itself the ...tent organized influence in the ...f costs in industry and trade, aiming towards standard systems applicable to peculiar conditions. All of which tend to more scientific knowledge of business and ultimately toward costs."

Employee Relations

On the subject of employee relations, the Secretary indicates, that while at earlier periods the individual business concern or manager, perhaps, has taken more frequently the initiative in forward policies of such relations, trade association after trade association is now developing the necessary preliminary stages of more equitable and advanced phases of this subject. In most cases it is largely a matter of research into the tremendous problems involved—selection of personnel, education, welfare work, accident prevention, employment principles, and collective agreements. In the opinion of Mr. Hoover, the associations will recognize that in the years of devotion to improving the processes of production and distribution there has been great oversight of the human factor and its mass relation. "Shall it be approached blindly and without preparation and knowledge?" the Secretary asks, answering, "Not if the present-day indications of trade association activity have real meaning."—LAMM.

New Crop Porto Rican Leaf In Splendid Condition

Benjamin Hamburger, of Hamburger Bros. & Co., returned recently from Porto Rico after a long stay on the island, during which he made a close study of the new crop and made important purchases of the choicest leaf for his organization.

Mr. Hamburger is enthusiastic over the merits of the new crop, which, he declares, is the best in years, and believes that the quality will more than offset the higher costs prevailing. He attributes the higher range of prices to the fact that the quantity of tobacco produced in the best section was overestimated.

To Keep Prices Within Bounds

The tobacco secured by Hamburger Bros. & Co. is now being stripped in Caguas, Utado, Gurabo and San Lorengo. Shipments are arriving regularly in New York, and samples are ready for inspection. Mr. Hamburger announces that he intends to co-operate with the cigar manufacturers in order to keep prices of Porto Rican fillers down to a reasonably low level.

Burley Tobacco Growing in East Tennessee

By RAY D. WEBB

(In Knoxville Sentinel)

urchasing power, the bank ac-s, he prosperity of the farmers of id fifteen adjoining counties will nled within the next six to ten rough the raising of burley to-te money crop that has come to c: in these adjoining counties. igh tobacco raising in counties ni; and in Knox county is yet in fi:cy, more than a million and a lcars is expected from the burley c rop this year alone. Almost five a much as the tobacco crop in the t ritory brought last year. Sur-alr that for years has been wasted n turned into healthy bank ac-s nd this fall farmers will have oney to purchase automobiles, e heir children, pay off mortgages u ish their homes.

s ear there are more than 4,000 r within fifty miles of Knoxville r growing burley tobacco. These f mers will grow between four v million pounds of tobacco that e for a million dollars or more. f mer of East Tennessee has the opportunity to make crops vi bring in the cash and not in-e ith his other crops.

en Million Dollar Crop

t within ten years the tobacco crop n fifteen counties surrounding vie will produce a burley crop w bring more than ten million s has been assured by the East s: Tobacco Growers' Association h Division of Extension of the rsy of Tennessee, which organi-s troduced tobacco raising in this nd are 100 per cent behind the rsin developing the new money-g rop.

e: W. Dean, secretary and man-o the East Tennessee Tobacco r Association, during an inter-onversation with the writer, d out why this section of East s: within the next ten years come the leading tobacco rais-ct n of the south and gave several c:g reasons for saying so.

'en Reasons are Given

t-The East Tennessee farmer is g money crop.

n—The East Tennessee farmer e adaptable soil and facilities for gh grade tobacco.

d-East Tennessee soil and climate fundamentals for raising the best tobacco.

rt—Manufacturers of high grade p ave issued reports which show n world is demanding East Ten-l rley tobacco.

n-The Division of Extension of n ersity of Tennessee is offering n ble service to the farmer who in tobacco.

h-The leading bankers, business c izens and institutions of East ss are behind the farmer.

n.—Knoxville is to have a $75,-0 co warehouse, to be one of the c most up-to-date in the south.

t]-Tobacco manufacturers prefer e nessee burley and have guaran-a the top price will be paid for r le burley.

h-Figures and crops prove that n Tennessee farmer is fast be-e best tobacco raiser in the

h-The highest poundage per acre e highest price per basket burley old in the United States was i Jefferson county.

ght Prospects for Future

I an, manager of the East Ten-obacco Association, who has n rested in tobacco raising for y rs and who hails from Robert-tly, where 5,000 farmers raised th 25,000 acres of tobacco last n brought more than $7,000,000. o that the tobacco crop opens up t the farmer to earn hundreds a more than he has ever raised a and at the same time not sacri-five his other farm crops, but while raising tobacco make money to improve his farm and at the same time, by raising tobacco, according to the latest methods, which is rotating the crops, improve his soil from 50 to 100 per cent.

Mr. Dean pointed out that the tobacco crop of Robertson county last year sold for more money than the entire wheat crop of Tennessee. That alone is something for the farmer to think about. The tobacco crop of Greene county, also brought more than the combined crops of any other two East Tennessee counties.

The 1922 Crop

Discussing last year's tobacco crop in the ten or twelve counties surrounding Knox, which was the initial year that tobacco was raised to amount to anything, the crop brought more than $200,000 and it was all sold on the Knoxville market, said Secretary Dean. The crop totalled between 600,000 and 700,000 pounds and sold at an average price of about thirty cents per pound. There were only about 500 growers and less than 1,000 acres of tobacco produced in this immediate section.

The Present Outlook

This year the same counties, with two or three more added, are expected to raise between four and five million pounds which will sell for possibly as much as a million and a half dollars. An up-to-date survey conducted by the East Tennessee Tobacco Growers' Association, conducted by the secretary who has personally visited every road crossing in the fifteen counties, shows that there are 4,000 farmers who are cultivating tobacco, and that there are between 4,500 and 5,000 acres of burley tobacco planted in the district of which Knoxville is the geographical center.

Credit Due Farmer

Secretary Dean, when asked to whom is due the credit for the developing of the tobacco crop in East Tennessee" answered, "Why the farmer, chiefly, and second the Division of Extension of the University of Tennessee. First to the enterprising, ambitious farmer is due most of the credit for the progress of the tobacco raising crop; and second the untiring efforts of the Division of Extension is responsible for the high grade tobacco that was raised last year and that which will be raised this year." High officials of the Division of the Extension, including C. E. Brehm, assistant director; B. M. Elrod, district agent for East Tennessee; J. C. McAmis, agronomist, and Frank Chance, Knox county agent have personally visited hundreds of farmers, and with the aid of the county agents over East Tennessee have given demonstrations and lectured to farmers at various times in the counties, and taught them the principles of raising tobacco. During the past few weeks, these agents and officials and men connected with the East Tennessee Tobacco Association have toured East Tennessee in automobiles explaining to the farmer the best way to dust, spray and clean his tobacco patch.

Possibilities, Next Five Years

Secretary Dean pointed out that there are 30,000 farmers in East Tennessee and that if each farmer grew only one acre of tobacco that the tobacco crop would bring more than ten million dollars. This is the goal set by the Division of Extension, the East Tennessee Tobacco Growers' Association and others interested in the tobacco industry within the next ten years. "Of course these 30,000 farmers could very easily raise two acres of tobacco each and if they should the value of the tobacco crop would stagger you," said Secretary Dean. The goal for 1924 is double the acreage of 1923 and indications are that the acreage will be more than doubled because the farmers are interested. It is possible that more than ten million pounds of burley will be raised next year in the Knoxville district. Already farmers are plan-

th Cigarette Tax Yields Large Returns

A LAKE CITY, Utah, July 14.—After
nths of operation of the amended
n of the Southwick cigarette law
el re 597 dealers in Utah who have
ni d the necessary annual permit
n their local governmental authority,
or ng to the records filed by W. D.
to State Treasurer. During the
pe riod the State has sold $25,504.36
re nue stamps.
: the opinion of Charles T. Prisk,
en tendent of the cigarette revenue
at ment, that the receipts from the tax on the sale of cigarettes will continue to average around $12,000 a month, or close to $150,000 a year.

In the meantime, a vigorous campaign is being projected to require obedience to the new law. In support of this an opinion was obtained from Harvey H. Cluff, attorney general, to the effect that the licensed permittees are required by the terms of the law to sell the cigarettes under such regulations as may be required and fixed by Mr. Sutton. These regulations have already been furnished to all the permittees in the State. Among other requirements are the following:

"All open stock of cigarettes and cigarette papers must have affixed to them Utah State cigarette revenue stamps, properly canceled"; and

"Do not put stamps on cartons. When selling a full carton of cigarettes it should be broken and stamps affixed to each separate package."

If an officer goes into a tobacco store and finds cigarettes in open cartons, without the stamps affixed to the packages, therefore, the dealer is in violation of the law. Similarly, a person smoking a cigarette from a package which does not carry the State revenue stamp can not evade interrogation by saying that he purchased the cigarettes a carton at a time. The dealer is required in such cases to open the carton and stamp each package.

With such aids it is believed the law can readily and rigidly be enforced, although some complaints have come in as to its violation. In addition, the reputable dealers, who themselves live up to the law, have a pecuniary interest in seeing that others, also, obey its mandates.

Complaint has been made to Mr. Sutton's office, however, that in some instances representatives of wholesalers are selling direct to the consumer, without even the formality of taking out a local permit, let alone affixing the State revenue stamp. Such violations of the law might, under its terms, lead to confiscation of the wholesaler's entire supply of cigarettes.

South Carolina Co-ops Open Markets

RALEIGH, N. C., July 16.—All the markets of the Tobacco Growers' Co-operative Association in the entire South Carolina Belt open this week to receive the 1923 crop, two weeks in advance of the date announced for the opening of the auction warehouses in the Palmetto State.

The organized tobacco growers of South Carolina who are generally conceded to have set the price for tobacco in their state, which almost doubled in value within twelve months, this year set the date of opening. From present indications the Tobacco Growers' Co-operative Association will receive a majority of the crop in South Carolina. The membership of the association in the Palmetto State has been increased during the past twelve months by 1,600 new contracts and more than 7,000,000 pounds of tobacco and the co-operative growers are bringing well-graded tobacco to the association floors, due to the fact that more than 150 locals have held demonstrations in sorting and bundling during the last ten days.

Great mass meetings to celebrate the success of the co-operative association and the opening of its second year are taking place this week at Kingstree, where U. S. Senator E. D. Smith, noted farm bloc leader, is scheduled to address tobacco farmers at a great barbecue, and at Mullins, when Governor McLeod of South Carolina addresses tobacco farmers at what promises to be the record-breaking mass meeting of the year.

T. C. Watkins, manager of warehouses, defines the policy of the association as it enters its second year of marketing in the following words, contained in a letter mailed to every warehouse employee of the South Carolina Belt:

"Our first duty is to serve the farmer, who is our employer, a fact that we should never lose sight of. Your work is not finished when you have completed your routine duties. It is up to you to live and talk co-operative marketing. Our membership is looking to its employees and is judging our organization by their conduct."—S. D. FRISSELL.

Abajo section for their cigars.
the most popular brands which they export are the Elena and Monte Rosa to the United States, and Flor de A. Villaamil, which is a big seller in Spain. The Billiken and The La Moda brands of cigarettes are among the leaders, but their entire line of cigarettes is most popular, as attested to by the fact that the orders so far exceed their available raw material supply, that they are unable to fill the demands of their customers.

Signor Santalla is very enthusiastic over the type of work produced on the DuBrul Cigarette Machines in his own factory and others in Cuba, and after seeing a demonstration of a Durex Automatic Short Filler Bunch Machine he said to Mr. DuBrul: "I have used the DuBrul Cigarette Machine a good many years on the very highest quality of cigarettes, where high grade workmanship is an essential, and I know that the standard you maintain in your cigarette machines is also found in your Durex Bunch Machine. I can see why it will do all you claim for it in every respect, and I can readily understand the big demand for it. It should be in every factory where short filler cigars are made."

Signor and Signora Santalla expect to visit a number of other points of interest in this country before returning to Cuba.

Bound for Gotham

Harold W. Holzman, of the house of Joseph Holzman, sailed for New York Tuesday, on the *S. S. Leviathan*. Joseph Holzman and Mrs. Holzman will remain in Europe for some little time longer and will visit Germany and Hungary.

A New Porto Rican Tobacco Firm

For several years F. Derizanz & Co. have been operating as packers of Porto Rican tobacco with commensurate success at San Juan, Porto Rico. Fred Derizanz, head of the concern, has gained an enviable reputation in Porto Rico as a conscientious and thorough business man, and his clients have always been satisfied.

During the past week a consolidation has been effected with W. J. Ruthenburg & Co., under the title of Ruthenburg, Derizanz & Co. The consolidation is expected to ensure a greatly increased business.

Fred Derizanz formerly had charge of the stemming department of the Porto Rican-American Tobacco Co. for several years, while Walter J. Ruthenburg has been favorably known for more than a decade on Water street, having a large clientele among the big manufacturers of the United States. Mr. Derizanz will have entire charge of the Porto Rican interests, and Mr. Ruthenburg is to be in charge of the New York office. The other members of the new organization are Louis Rubert and Sebastian Bonet, both of San Juan, P. R. The new company possesses ample capital to accomplish big things.

The slogan, "Superior Vegas," has been adopted by the organization, and this will amplify the kind of tobacco always to be supplied by them. Nothing but inland tobacco obtained from the very best vegas (farms) will be handled, and customers may be assured of securing the very best that this wonderful island produces. Incidentally, their purchases of the 1923 Porto Rican crop have been very large.

Ruthenburg, Derizanz & Co. have a fine line of samples ready for inspection at their offices at 126-128 Maiden Lane, New York.

Sam Bijur Home Again

Samuel H. Bijur, of E. Rosenwald & Bro., arrived in New York yesterday on board the White Star liner *Olympic*, after a pleasant voyage. Mr. Bijur was in attendance at the Amsterdam and Rotterdam inscriptions.

Wisconsin Doings

EDGERTON, Wis., July 13.—While the extreme heat of the first days of the week wrought hardship for men and horses in the fields, tobacco moved into the belated patches, and there should not be much left to transplant next week. The season is getting late anyway, and haying and cultivation of corn and early set tobacco fields keep the farmers very busy without having to transplant.

The early fields, many of them delayed on account of protracted dry weather, are now coming along in very good shape; some of them are uneven due to much resetting, but on the whole the stand is very promising, indeed. Some of the reset fields after the weather conditions changed for the better look as well as tobacco ever did at this time of the year; this is true especially of the northern section.

The acreage of 1923, while cut by some growers, is going to be fully equal

Col. Roosevelt Speaks at Burley Burgoo

(Continued from page 3)

ative marketing contract presented to him by Albert T. Day, of the Burley association.

Colonel Roosevelt declared himself unreservedly for co-operative action by the farmers of the United States. At the close of his address he made an impromptu talk about the naval disarmament congress at Washington as an example of co-operation among nations, discussed the army and navy in the World War, and in speaking of the First Division asked if there were any soldiers present who had been First Division men. Owen Wells, of Maysville, and Luther Baer, of Flemingsburg, Route 4, responded and were given a royal greeting by Colonel Roosevelt, who asked them to come to the speakers' stand.

Large Crowd Present

The crowd which attended the meeting was estimated at 12,000 to 15,000 persons and many of them enjoyed the burgoo served on the grounds. Colonel Roosevelt, Mr. Barrett, and Colonel Roosevelt's two "buddies of the First" were served at a table overlooking the Ohio River and the bathing beach.

Hon. Stanley F. Reed, former legislator and counsel for the Burley co-operative, introduced Colonel Roosevelt as "one who wears honorably and worthily an honored name." Hon. James N. Kehoe, former congressman and vice-president of the Burley co-operative, introduced the other speakers. In the audience was Miss Alice Lloyd, known in 1906 and 1907 as the "Joan of Arc of the Burley tobacco growers," because of her connection with the old tobacco pools and her effective and courageous work for them.

A parade a mile long, preceded the speaking. Among the floats in the parade was one of the Bank of Maysville, representing the condition of the tobacco growers at the close of the 1920 marketing season and the 1921 season. The float carried two piles of stage money, the first being a small mound indicating the return to the growers for the 1920 crop. At the foot of the mound sat two little boys in rags and tatters, with hoes in their hands, representing the fact that the children had to work in the tobacco patch following the disastrous slump in the price of tobacco when the 1920 crop was sold.

The return to the farmer for his 1921 crop, the first year of co-operative marketing, was represented by a mound of money about three times as high as that of 1920 and at the foot of this mound sat two little boys, well clad and studying their school books, representing the prosperity that came to the parents of the children as a result of the co-operative marketing of their tobacco crop that year.

Col. Roosevelt's Address

In his address Colonel Roosevelt said:

"I am not a farmer, though I was born and brought up in the country, yet whenever I get a chance I go back to the country again. I don't know as much as I wish I knew about the farm situation in the United States. However, I realize fully its vital importance, not only from the standpoint of the farmers themselves, but from the standpoint of the country in general, and I have studied it and talked much to those who are constantly in touch with them. As a result, there are certain very definite ideas that I have upon it. My position is a good deal like that of the man in John Hay's poem, who says in speaking of religion, that he does not know a great deal about it because he has not had much of a chance. However, he continues:

"'I've got a middlin' tight grip, sir. On the handful of things I know.'

"That is my position. I don't know as much as I wish I did know, but what I do know, I believe in absolutely sincerely.

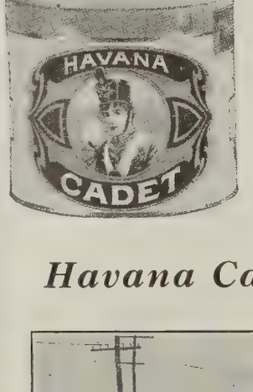
"To begin with, it is axiomatic that the farmer underlies our civilization. Without food we cannot live. The interest of the farmer, in the broad sense, is the interest of the city man, for both are absolutely inter-dependent. That our farmers have suffered in late years is not a matter of conjecture, it is a matter of common knowledge, susceptible of a dozen proofs. One-third of the counties in the United States lost in population between 1910 and 1920. These one-third were farmers' counties. In my own state, where, naturally, I am in touch with conditions closer than anywhere else, this trouble is clearly exemplified. For instance, Allegheney county in 1890 had a population of 43,000; in 1920 this had sunk to 36,000. Schobarie county in 1890 had a population of 29,000; in 1920, 21,000. So the tale runs. The rural counties have almost all lost in population, while the urban counties have gained. This is not healty for our country, and should be a matter of grave concern to all interests, not only the farmer, but everyone in the United States.

Problem One of Finance

"Unquestionably this may be ascribed to a number of reasons. Some we can help, and some we cannot help. I don't put much stock personally in those who get up and speak to the farmer on his condition with a sob in their throats, move the audience to tears, and in leaving leave behind them all their interest in the problem. Frankly, I don't know what the cure-all for the trouble is. Perhaps there is no cure-all. There certainly are, however, remedies that should be applied, and what I say to you I thoroughly believe in and am prepared to back up and down the line.

"When problems get very complicated, I personally always try to get back to the first principles. On this basis, as I see the problem of the farmers, it is in a nutshell that the farmer is not making money. The question, therefore, before us is to see if we can adjust things so that the farmer can make money. Loaning money to him does no good unless he can make money, for it simply means that he accumulates debt after debt until he is scarcely able to stagger under the load. Credit is valuable only when it serves some practical purpose, such as tiding him over a bad moment, or enabling him to sell at a better market without dumping. A loan when no profit is made, as a result, is worse than useless. The condition of the farmer then is like that of the character in the Bible whose last estate was worse than his first estate.

"The great weakness of the farmer has been in the past, and still is, his disinclination to co-operate with his brother farmers. There is an old saying that rings true, to the effect that the Lord helps those who help themselves. In my opinion, this is largely true of the farmer. The principle help for the farmer will come from the farmer. His salvation largely lies in his own hands. Those in government positions can furnish opportunities, but in the last analysis, in order to have those opportunities bear fruit, the farmer has to take advantage of them himself. Co-operative marketing, for example, is to my mind a prime essential in the solution of the problem. It is neither untested nor untried, but has stood the gaff straight through. We have countless instances of its success not only here, but in foreign countries where it has been practiced for years. In spite of this, a large percentage of our farmers in this country do not engage in co-operative marketing. That is, after all, only one phase of co-operation. Co-operation should extend, where possible and practical, from the least important things in every-day life right up and down the gamut. Team work is the secret of success, whether the game be football, war or farming. Co-operation is nothing but team work. We have made real strides along this road, but the journey is hardly begun.



Farmer Consulted Now

"Furthermore, the farmers' problems are now given the collective attention of the farmers through their organizations. This is a great asset to all, for it should mean that legislation on farm questions is never attempted without those who represent the farmer having a full opportunity at such times to give their views in court. The public men now

ad public men should, whenever onsider farm problems, consult nd hear the views of accredited esitatives of the farmers in this tt. It will not always be possible these views to be accepted, for the cmen will have to always balance roblem according to its bearing on h citizens of the country. Public lwever, should endeavor to get at rts of the farm trouble through ling with experts and by experts e farm trouble through consulting cperts and by experts I mean the r of the farm organizations, such h lie Barrett.

I ve said above that the solution of li culties lay, in my opinion, largely t farmer. Government, however, certain perfectly legitimate things r it feasible and possible for him oc out his salvation. They can, er such legislation is not in ex- pass enabling acts in order to -operation possible. In addition, epartments as that of Agriculture, hough specially developed facilities, hnselves in a position where they rnish full information and advice -eration. This should be a most a ial aid to those who wish to undertake such work in its various phases.

"To sum up, therefore, I believe the essence of the problem is to endeavor to create a situation where the farmer can make a legitimate profit. In order to give him a fair opportunity to achieve this, I believe that banks and railroads should extend credit to the utmost limit compatible with this end. Furthermore, the principle of co-operation in general should govern particularly with reference to co-operative marketing for farm products, and therefore, such permissive legislation as will aid, should be passed and the government should be in a position to furnish complete information and advice.

"It has been my pleasure to associate closely with Charles Barrett during the last three years, and I have learned to respect and admire him. Indeed, many of my views on the farm situation came in the last analysis, from him. He and I had the privilege of working together on one of the great achievements of this administration, the limitation of armaments conference, and I am going to discuss that now with you."

An informal discussion of the conference followed.

Successful Retailer's Interesting Story

Told to FRANK H. WILLIAMS

r glad I am in the retail tobacco e., because:

s—It is a fundamental industry. mes may come and good times cne, but whether times are good dnen will continue to use tobacco. vile business may not be quite as sne times as others, there will al- e enough business to keep my ging and to make money for me.

cd—It is a business that has tre- o possibilities. I have been in the bacco business for over a quar- century and during this period I sen a tremendous increase in this e and I have seen the tobacco s adding other lines which have lyincreased their volumes of trade a led materially to their profits. jst as this business has grown so yin the past I am looking for it o in the future. I know of no re- ness that faces such a splendid e s this.

ir—It is a pleasing business. There e kicks in this business. Custom- e happy when they are purchasing obacco store and so there is no ir about prices and no turmoil "ljustments" and all that sort of There is no retail business, to my fat is quite so human and interest- ns.

ih—It is a cash business. During ose of my business career I have i a number of other retail busi- rom time to time and when in ner businesses I have been im- d with the amount of grief and nere is connected with the operat- credit business. I got out of the tail businesses I was in largely s they were not on a cash basis o dn't be put on such a basis, and t o say right now that one of the st reasons why I am glad to be in e il tobacco business is because n s pay cash for the goods they t ny store and thus make it un- ar for me to spend a lot of money v head charges in the keeping of hd that, by reason of the business a cash, I have a lot less worry o er than would otherwise be the

h-There is a quick turnover in uness. It isn't necessary for me n a tremendous amount of high- oods in order to do business. How e this is from the situation in a nt store or a men's clothing o some other business where goods b purchased far in advance of the h the hope that they will please o 's customers and where so much t tied up in stock that it would a man sick just to think of it. urnover and a comparatively a ount of money tied up in stock f the reasons why this business s o powerfully to me.

Sixth—It brings me in contact with a lot of good scouts. Like so many other men, I like to meet my fellow men and talk to them and discuss fishing and sports and the problems of the day and all that sort of thing. I think I'd just lie down and curl up my toes and pass out if I had to run a business where the majority of people I came in contact with were women. I get a tremendous amount of pleasure out of meeting the customers that come into my store from day to day and in talking with them and kidding with them and advising with them and all that sort of thing.

Seventh—There are no tremendously big problems arising in this business. The retail tobacco business doesn't make any demands for supermen in running it. I don't have to get a lot of advice from bankers and financial genuises who demand a big price for their help and information. This business presents no problems that I can't solve without assistance. And so it is MY business exclusively and entirely.

All of which constitute the main reasons why I am glad I am in the retail tobacco business, and I expect that a lot of other retail tobacconists feel the same way about their stores.

Wildfire Less Prevalent in Wisconsin

MADISON, Wis., July 14.—The tobacco wildfire situation in Wisconsin is much improved this season, but there is still plenty of chance for new infection if weather is unfavorable, according to S. B. Fracker, state and university entomologist.

The principal danger lies in the falling of dashing rains before the tobacco harvest, which would cause a wide distribution of the now restricted infection. This disease, which first attacked tobacco in Dane county last year is bacterial and is characterized by brown spots surrounded by a yellow area, appearing on the leaves of the plant. This disease is at present confined to Dane county in this state.

Many Inspections Made

George A. Conant, in charge of state tobacco wildfire field work, reports that 250 inspections have been made in Dane county this year and that 150 fields and seed beds were investigated in June. But 32 cases of wildfire were found in these inspections compared to 90 last year. As a result of the work 100 per cent of the seed beds were given new locations on uninfected soil and 86 per cent of the infected fields of last year were not planted with tobacco this year.

The disease is found in all of the tobacco states of the United States, but it is less common in Wisconsin than in any other place.

NEW YORK, THURSDAY, JULY 19, 1923

WILL TOBACCO BE NEXT?

Such a rumpus is being raised over the dry law and its enforcement, that many seem to have lost sight of another bit of propaganda that is being promulgated over the country, a warfare against the use of tobacco.

The average man will say that such a prohibition is impossible. They said that once about liquor.

The man who smokes, will declare that the nation can never bring itself to ban smoking, as it is attempting to ban liquor. The man who took his "wee nip" in years passed, said the same thing about liquor.

Yet the prohibition of liquor came, and the prohibition of smoking is not the impossible.

There is already formed in the country a well organized movement against the use of tobacco. It has money back of it, and it has plenty of followers, just as the anti-liquor movement did. It is basing its whole campaign on mass action, which will so stir up people that when the right time comes the plan can be put over regardless of what will be its possible effects in the years to come.

Prominent dry organizations, which in the days when the use of liquor was not prohibited were fighting to ban it, have now turned their attention to warring on tobacco. And one need not delude himself into the opinion that these workers and these organizations have not followers:

The enforcement of the prohibition law has, in many respects, reached the status of fanaticism. The provisions of the law have caused things to be done which, twenty-five years ago would have been branded as the height of the impossible, and ridiculous to the extreme. Yet they are being done, and international complications are piling up at an alarming rate.

The use of tobacco has increased greatly in the past several decades. And at the same time the forces intent on doing to it what is being done to liquor, are increasing.

And the man or woman who says that prohibition of the use of tobacco is not to be thought of had best hark back to a short ten years or so ago, when they said the same thing of natural prohibition of liquor.—*Battle Creek (Mich.) Enquirer-News.*

We will not say that it is impossible, but it will undoubtedly take the anti-tobacco bunch longer to put tobacco prohibition into effect than it has taken the "drys" to bring liquor prohibition into its present state of imperfection. And if this be true, the tobacco industry and devotees have nothing to worry about—not for many generations to come—inas much as the anti-liquor war in the United States is said to have had its origin in 1642 when the Maryland colony passed a law punishing drunkenness by a fine of 100 pounds of tobacco.

ALMOST A CURE-ALL

It is fashionable among a lot of economic "experts," so called, to knock co-operative marketing of farm products. The favorite line of talk is to say something like this: "Oh, yes, co-operative marketing looks good to some people who don't know any better. They think it is a panacea or cure-all for farmers' troubles. But these organizations have always exploded with a bang, and the new ones will go just like the rest, only the bangs will be louder. Adam Smith proved—"

And so on.

We rise in our place to say to these croakers, "Gentlemen, you are misinformed. As economists, you are committing the unpardonable fault of basing your conclusions on incorrect premises. We declare in the most solemn earnest, weighing every word carefully, that co-operative marketing of farm products, intelligently directed by its members, is positively a panacea for every known economic trouble of farmers."

Our folks who are in commodity pools, or thinking of going in, or wishing some one would start one in their particular line, can take the above as a statement of what we think about co-operation.

Do not overlook that phrase—"intelligently directed *by its members,*" for that is the heart of the whole matter. Intelligent management by managers or leaders, with a stupid membership, will fail, and this is what our near-economists have in mind. Stupid management by anybody, leaders or members, will fail as a matter of course.

Intelligent management by members would have kept the raisin growers in California from tripling or quadrupling their production, glutting the raisin market beyond even the power of lavish advertising to move the crop. Intelligent management by members in Kentucky would keep down the tobacco acreage, thus avoiding the overproduction of Burley that is certainly going to face the tobacco pool this fall.

Adam Smith was right when he was alive, which was a good many years ago. He and the near-experts will be right again, and every marketing organization will sooner or later go blooey, unless farmers have learned something about crop surpluses in the last hundred years. —*Philadelphia Farm Journal.*

THE CROP ESTIMATE

Estimating crops isn't exposed to all the hazards which confront counting chickens before they hatch, neverthelsss considerable can happen before the harvest may be completed. Usually, however, the government estimates are well supported. That respecting this season's crops is gratifying, except possibly to those who have raised a bumper crop only to find that it doesn't always bring to the farmer's pockets bumper revenues.

Aside from the crops in the lists of estimates it appears there is an enormous yield of tobacco, although users thereof need waste no delusions respecting lower prices in consequence, although such a possibility exists. The report announces that prices for this year's crop have not yet been fixed.—*Augusta (Me.) Journal.*

SMOKES FOR WOMEN

We suppose that to many it is as true today as when Kipling and the tobacco-detesting Maggie quarreled about Havanas that "A woman is only a woman, but a good cigar is a smoke." However, leaving poetry aside and taking a commercial viewpoint, the combination of women and tobacco is, so to speak, a glowing success. Reports from the tobacco manufacturing centers indicate that while a good cigar is undoubtedly the acme of smokers' solace, the cigarette is far surpassing it in widespread popularity. In volume of sales the paper coated weed is gaining steadily on the aristocra cigar, the familiar pipe varieties or the plebe plug.

Two reasons for this are given by those w make it their business to study the market va of the weed. The war and women, say these servers, share the responsibility for the increa sales of cigarettes. The war is over, but cigarette habit, one almost impossible to re in the army, remains. But it is to the ladies t the manufacturers are now turning. Here i new field, certainly no less rich in commer possibilities than the one already practic conquered by the tobacco merchants. We ready have especially prepared brands women, but the reports tell us that these h no extended vogue. The fair fumacious prefers the full-sized brand. Helen and light up from the same package.—*Hartf (Conn.) Times.*

PROS AND CONS ON TOBACCO HAB

Some souls are fearful lest, having secu prohibition of liquor by constitutional ame ment, reformers go after smokers next with same intent. One indeed hears rumbles on horizon. Meantime, use of tobacco in United States increases amazingly. By the of the world war average consumption various forms was nearly seven pounds nually. And production of cigarettes amoun annually to 46,000,000,000. The nation's bacco bill is now said to be about $1,600,000, a year, not counting the accessories of matc pipes, etc. Clearly, a great industry, an national habit of persuasive significance. what the influence of tobacco is a committe scientists and educators organized in 1918 undertaken to determine. The first of series of publications under their supervisio "Tobacco and Mental Efficiency" (Macmi Company), by Prof. M. V. O'Shea, of the U versity of Wisconsin, who devoted consider time to personal research and sifting the findi of others in kindred enterprise.

Professor O'Shea is solely concerned v effects of smoking on the intellectual proces Wise men and famous men are quite ev divided on the question. Grant's cigar is toric. Gladstone never smoked at all. Disraeli's Havana was often in evidence.

Frederick the Great, Doctor Johnson, Tal rand, Napoleon and Gibbon were fond of sr Roosevelt and Wilson were our only presid not using tobacco in any form. The Duk Marlborough made chewing tobacco fam Thomas Hobbes smoked thirteen pipes evening up to the age of 82. Huxley n smoked, but Darwin liked cigarettes. It is that inveterate smoker, Sir Isaac Newton, used a finger of a lady he courted as a tob stopper, while he puffed in silence beside Balzac declared no good could come from brain of a smoker. Goethe also detested "filthy weed." On the other hand, By Keats, Coleridge, Browning, Wordsworth, C smith, Addison and Steel were smokers. M relied on his pipe and a glass of water be retiring for the night. Buckle found his t cigars a day an imperious necessity. . . . so it goes.

Laboratory tests conducted by Profe O'Shea led to the conclusion that tobacco t to retard and disturb mental processes, but to a marked degree. Whether it tend strengthen or weaken creative ability our in tigator does not undertake to say. Educa however, are well nigh unanimous in opi that tobacco dulls young students.—*Philade North-American.*

MUCH EVIDENCE OFTEN REQUIR

Of course, it is absolutely true that the w owes everybody a living, but it frequently t an awful lot of hard work to prove the just of the claim.

Leading Principles Involved in the Growing and Care of Tobacco

The Cultivation of Tobacco in the New England District Has Been Reduced to a Near Scientific Basis As Result of Practical and Experimental W o r k — Certain Amount of Latitude Necessary to Meet the Changes in Various Local Conditions.

By J. B. STEWART

THE CULTIVATION of the Connecticut tobacco crop has been reduced as a result of a vast accumulation of experiences derived from practical work and experimental farm data, to standardized principles. ese are not rigidly adhered to, but permit ers a certain amount of latitude to make ges that local conditions may from time to necessitate.

ie best methods of producing shade-grown co may be summarized as follows:

) Protect the seed bed from north and winds.
) Get a good strain of seed.
) Sterilize the seed beds.
) Do not sow the seed too thickly.
) Give the plants plenty of water.
) Plants will be produced under glass r than under cloth, but the beds will re- more attention.
) Do not allow the plants to get too large e transplanting.
) Wet the beds thoroughly before pulling lants for transplanting.
) Prepare the land well before trans- ing.
(0) Set the plants as close as 14 inches in ow.
(1) Cultivate frequently and thoroughly.
(2) Take out the bud just before the flower s.
(3) Sucker once, taking off four top rs.
(4) Do not let the tobacco get too ripe e harvesting.
(5) Make four primings of the crop and each priming separate.
(5) Prevent pole-burn by firing, if neces-
(7) Do not take the tobacco down until t stems are cured.
(3) Have the proper amount of moisture tobacco when it is taken down.
(9) After it is taken down do not leave bacco lying in bundles too long.
(0) Do not allow the temperature to go 115° F. during fermentation.
(1) Do not ferment too long, so as to dry ie tobacco.
(2) Sort and pack the tobacco without water to moisten it.
(3) When packed, age the tobacco in bales warm, moist room for six weeks.
(4) Figure the cost of production and sell profit.

Time for Harvesting Shade Grown

The time to harvest shade-grown tobacco is the leaves are fully developed. There a slight change in color as the tobacco es maturity, but it is not safe to allow eaves to remain on the stalk until this ne of color is noticeable to the inexperi- observer, for then they are likely to o ripe. The best method to follow, and he which will err in the right direction, to make the first priming about ten days topping and the second about ten days The third priming may be taken off a week after the second, and the fourth, p-leaf priming, can follow as soon after ird as time will permit. The tobacco of op priming is not very valuable and it not be harvested for two or three after the third priming there will not great loss unless there is a freeze.

priming is meant picking the leaves from the stalk in the field. The first priming consists of taking off three or four of the bottom leaves; the second, from four to six leaves; the third, all but two leaves on top of the plant, and the fourth, the remaining leaves.

The leaves, when taken off, are laid in piles along the row. A primer picks the leaves from two rows and puts his primed leaves on the row to his right. Another man priming the two rows to the right of the first primer puts his primed leaves on the row to his left. In this way, two adjoining rows contain all of the primed leaves from four rows of tobacco. A man takes a basket and going between these two rows picks up the primed leaves and carries them to a wagon with a special rack on which they are drawn to the shed or curing barn. Great care should be taken not to jam or press down the leaves in the basket so as to bruise them.

In the barn are laths with string attached on which the leaves are sewn with a needle. This string is fastened to the laths by means of a saw-cut about one-half inch deep in each end. The string is run through the cut, wound once about the lath, and returned through the cut. This holds the string firm. From 32 to 40 leaves, according to their size, are put on each string, face to face and back to back, and the string is fastened to the other end of the lath. These leaves when hung as described are called "lath" of tobacco, and these laths are now hung on tier poles in the barn to cure.

Curing

The curing is an important process, for much can be done to add to the quality of the tobacco at this time and if the weather is damp and rainy much needs to be done to prevent the tobacco from being ruined. Tobacco requires from twenty to thirty days to cure and during this period it needs constant care.

If the barns are properly built the curing is done with a certain degree of accuracy. A model barn for this purpose should not be larger than 100 by 40 feet and 20 feet to the eaves. The walls of the barn should be made of ship lap siding, so that they can be tightly closed. A horizontal ventilator, 6 inches wide, should be placed every 30 inches on the sides of the barn and hung on hinges so that it can be easily opened and shut. By this arrangement, when the ventilators are open there is a circulation of air through the barn between the layers of tobacco.

When the barn is filled with fresh tobacco it should be closed tight, and if the weather is cool or damp small charcoal fires should be built in the barn to warm up the tobacco and wilt it down. When the tobacco has wilted and started to yellow, the doors and ventilators should be opened to allow the circulation of air to carry off the moisture. If the curing season is a normal one the doors and ventilators should be opened every morning and closed at night, but if the season is dry the reverse of this action is required, especially when the process of curing the tobacco is nearly completed. If the season is a very damp and rainy one small charcoal fires, placed close together, should be lighted in the barn to dry out the tobacco and prevent it from pole sweating.

Putting In Case

After the tobacco is cured the barn should be left closed until there comes a damp, foggy time or a rain, when all of the doors and ventilators should be opened, to allow the tobacco to come, "in case," so that it can be taken down. The tobacco is in proper case for taking down when it does not rattle when handled and when at the same time if a number of leaves are squeezed tightly in the hand they will spring partly open again upon releasing the pressure.

When the tobacco is in case it is in proper condition for taking down. The floor of the barn should be cleared and some old blankets laid down. On these the tobacco is piled without removal from the laths, several laths being taken at a time and the first layer laid so that the laths will be next to the cloth and the tobacco sticking up. The next layer is piled so that the tobacco is next to the tobacco of the other layer and the laths are on top. This process is repeated until the pile is several layers high. When the pile is complete it should be covered well with either blankets or cornstalks, and it can be left with safety for several days before it is stripped if the weather is not too warm. If the weather is warm, there is danger of the tobacco heating and spoiling if left more than four or five days in the pile. Great care should be taken.

The two processes of stripping and bundling go together. A lath of tobacco is taken up and the leaves shoved together at the middle of the string. The string is now severed close to each end of the lath, wound around the leaves at the butt ends, and drawn through the "hand" of leaves so as to fasten it. These "hands" of tobacco, as they are called, are packed in a false box lined with paper, butts out, and the tips of the leaves overlapping in the center. About 30 pounds are packed in each box in this way and then pressed down. Paper is wrapped about the tobacco and tied with strings which were placed at intervals along the box before the paper was put into it. One side of the box is swung on hinges, so that it can be let down to allow the removal of the tobacco. The tobacco thus packed is called a "bundle" and is ready for market or for the packing house. When tobacco is to be packed by the grower it is not necessary to bundle it.

The tobacco when packed in bundles may be kept for several weeks or months without much injury if the bundles are piled one layer high and put in a cool, moist place. The sooner the tobacco is put into the ferment after it is taken down, however, the better.

Packing

The term "packing" in handling tobacco means the preparing of the raw product for the use of the manufacturers.

The first step in the packing of shade tobacco is to ferment it. This is done by taking the tobacco from the bundle, shaking it out thoroughly, and laying it down in layers in a large pile, called a "bulk," being careful to keep the leaves straight. To build a bulk of tobacco requires some skill and experience. If the bulk is not made properly it is liable to settle sidewise and fall over.

The bulk is built on a platform made of 1-inch boards and raised about 4 inches from the floor, so as to admit a free circulation of air. This platform is made for convenience 12 feet long by 5½ feet wide. In starting to build a bulk a row of hands of tobacco is first laid around the outside edge of the platform, being careful to keep the butts of the hands close together and the leaves straight. This is called the outside tier. The next tier of this layer is laid so as to shingle over the first, lapping well

over the tips of the leaves of the first tier. This is repeated until the bottom of the platform is covered. Then another layer is laid on top of this one, and so on until the bulk is from 4 to 6 feet high.

When about half of the tobacco intended for the bulk has been laid down, a tube 4 feet long should be placed so that one end comes to the outside and the other extends to the center of the bulk. This is for the purpose of placing a thermometer in the bulk to keep a record of its temperature.

The temperature of the bulk is an index of how the tobacco is fermenting. The nature of the tobacco, its condition, the temperature of the room in which it is bulked, and the time of the year all have their influence on the degree of rapidity with which the tobacco will heat.

Heating Up in Bulk

If the tobacco is in high case and is bulked early in the fall in a warm room, it will heat up very rapidly, and the bulk will have to be taken down, the hands of tobacco well shaken out, and the bulk rebuilt, the tobacco which has been on the outside being put on the inside and that which has been on the inside of the bulk on the outside. On the other hand, if the tobacco is in low case, is not bulked until late in the winter, and is put down in a moderately cool room the tobacco may lay in the bulk for ten days before it begins to heat.

It is evident from these facts that the only guide in fermenting tobacco is the thermometer. The record of the thermometer, coupled with experience, can do much to improve shade tobacco during the fermenting process.

From long-continued experience in fermenting many different kinds of tobacco, the writer has come to the conclusion that the best results can be obtained by placing the tobacco in bulks of about 5,000 pounds, and when the thermometer registers 114° F. tearing down the bulk, shaking out the tobacco, and rebulking. After the bulk has been rebuilt, the temperature should be allowed to come up again to 112° F., or higher if it will, and then the tobacco is ready for grading.

The Fermentation Room

The fermentation room should be kept during the process of fermentation as nearly as possible at a temperature of 80° F., with about 75 per cent relative humidity. The temperature should be as uniform as possible, because any great change will cause the moisture in the room to settle on the butts of the tobacco, and produce mold, which is likely to damage the tobacco. The room should be well ventilated by an air shaft.

As shade-grown tobacco has to be graded principally according to color, a well-lighted room is required, and to avoid deep shadows and a varying light the windows should be on the north side of the room. A low ceiling is desirable so as to keep the moisture as low in the room as possible. The room should be kept so moist that the tobacco will not dry up while it is being handled.

When the tobacco is first taken from the bulk, the hands are untied and the leaves shaken out. It is then "sized" so that all of the leaves of the same length come together. This is done by a person taking the leaves and putting them into a box fixed up with partitions so that there is a space for all leaves from 12 to 14 inches long, 14 to 16 inches long, and so on.

After the tobacco has been sorted according to size, it is taken to tables, where the leaves are opened and graded, all sound leaves of even color and good texture being classed as wrappers and the rest seconds or binders. The wrappers are further divided into light, medium, dark, and off or mixed, according to their color. The seconds are simply divided according to color into light and dark.

After the tobacco has been graded it is tied with raffia into hands of one-fourth pound each. These hands are now packed into bales of about 150 pounds. The common size for a bale of shade tobacco is 31 by 31 inches and 10 inches thick. The tobacco is baled by packing the hands into a false box. A piece of matting is placed on the bottom of the box and another on the top of the tobacco when the box is filled. The top is now forced down by means of a press and held there until the edges of the two pieces of matting are sewn together, when the bale is made. The bale is now given a number, the weight and grade are marked on it, and it is stored away until sold. Before it can be shipped it must be covered with burlap and crated.

The Conquering Cigarette

The United States is rapidly becoming a nation of cigarette smokers. Although assailed from nearly all sides, stigmatized as "coffin-nail," denounced from the pulpit and in a part of the press, legislated against in certain states, the cigarette has withstood and outlived all attacks. In 1895, so the 1922 yearbook of the United States Department of Agriculture, just out, tells us, 4,000,000,000 cigarettes were manufactured a year. Now the yearly output amounts to 60,000,000,000 cigarettes.

According to the same source, the consumption of tobacco has increased from less than four pounds per capita, before the Civil War, to the present rate of eight and one-half pounds. But the once general chewing tobacco has greatly diminished. Even the sailors of the navy are now mostly devotees of cigarettes. The time honored custom of chewing tobacco manufacturers sending samples of their brands to navy yards has fallen into desuetude.—*Syracuse (N. Y.) Journal.*

Manila News Notes

The Philippine National Bank filed suit recently to recover $1,033,650 and interest of 10 per cent against Walter E. Olsen & Co. They are foreclosing on a mortgage on the Manila cigar factory and other property at Manila and in the Cagayan Valley held by the Olsen concern. The Asia Banking Corp. and the Bank of the Philippine Islands hold additional claims. Manila reports state that the Asia Bank protected itself by removing large quantities of leaf tobacco to a neutral warehouse.

* * *

David F. Morris, Philippine Tobacco Agent, now on a western trip, arrived at San Francisco the early part of the week. He reports from various points, including Minneapolis, Butte, Mont., Spokane, Seattle and Portland, that Manila cigar business is making great progress, and that dealers and importers are pleased with the quality of cigars under stabilized brands they have received in recent shipments. Mr. Morris will probably remain on the Coast until late in the fall.

* * *

June shipments from the Philippine Islands totaled about 16,000,000 cigars. More than 40 per cent of these cigars were sent to points in the West where Manila business is thoroughly stabilized on brands. The remainder was largely made up of first-grade Class A merchandise, and a considerable quantity of Class B and Class C cigars that are coming back strong in the markets of the East and Middle West.

* * *

The United Cigar Stores Co. featured a sale of Manila cigars in their stores July 13 and 14. Window bulletins and counter displays were used to call smokers' attention to the fact that Manila cigars of good quality were being offered for sale at a reduction of price for two days only. Reports from various points indicate that the sale was a great success and that a large number of smokers were converted to Manila cigars as a steady diet.

* * *

The Laks Cigar Co. has opened up several new accounts on Germinal Excellentes, a cigar with superior smoking qualities.

Legal Lore

The Last Stage of the Mennen Case, Which Establishes Some Important Law

I have kept the readers of these articles continuously informed about the various stages of the Mennen case, as they have occurred, because I consider it one of the most important of the legal controversies that have occurred between the Federal Trade Commission and business interests. Another stage, the final one, has now been reached. Each time I have discussed this case I have felt it necessary to briefly review it from the beginning in order that the reader might have a clear understanding of the whole case. This wastes some space, perhaps, but it makes for complete comprehension at every point.

The latest development in this case, and as I have said, the final one, is that the United States Supreme Court has refused an appeal to the Federal Trade Commission. This confirms the decision of the United States Circuit Court of Appeals and establishes for all time the law of this phase of the relations between manufacturers, jobbers and retailers.

Now just a word or two to bring the matter up to date. The Mennen Co. manufacturers of various toilet specialties, had a peculiar method of doing business. Most manufacturers have a schedule of prices based on quantity, and every buyer ordering a certain quantity gets the price made for that quantity, without regard to whether he is jobber, co-operative buying organization or in-

A Million Dollars for Cigar Advertising

By PATRICK GALLAGHER

Asiatic Editor, New York Commercial

The cigar manufacturing industry of the United States is preparing to spend at first $1,000,000, and later more, per year, to advertise its product.

Henry G. Wemmer, of the Deisel-Wemmer Co., Lima, Ohio, is chairman of the committee in charge. Charles Dushkind, managing director of the Tobacco Manufacturers' Association, is whipping the plans into shape.

The American cigar industry has been shocked into protective and constructive action by realization of the significant fact that in 20 years the cigar has stuck at a gross annual production of about seven billions, while the cigarette has soared from five to over 60 billions per year.

The fact has caused some hard thinking in the American industry that does so much to pay the high cost of government. Among other things, it has drawn attention to the value of export advertising and co-operative standardization as demonstrated by the Philippine Government tobacco agents, Charles Allen Bond and David Franklin Morris. Seven years ago, Mr. Bond took up the task of rescuing the Manila cigar from a malodorous situation in the American market. The "long-shotter" and "get-it-quick" fraternity in the islands and in the jobbing and retail trades here had done their worst with a smoke that had been famous for centuries in all parts of the world as a cigar of rich aroma and fine workmanship. Put on the free list by then President Taft, the wrong sort of jobbers and dealers found it a good thing to play with. The wrong sort of Manila manufacturer played with them and the upshot was that in 1915, sales of Manilas in this market dropped to 59,000,000 and the wholesale market was "off" Manilas for good and all time. So they said with colorful emphasis.

Mr. Bond, who had studied the trade as a tobacco trade editor, was commandeered by the Philippine Government and the Manila manufacturers. He went to work on what was generally regarded as an impossible proposition; and immediately the results began to show. In 1916 the United States smoked 110,000,000 Manila cigars; in 1917, 220,000,000; in 1918, 246,000,000; in 1919, 263,000,000; and in 1920, 320,000,000.

Advertising Brought Trade Back

Then the market broke under the post-war slump and the deluge of "war-baby" "big stocks" and "smoke 'em once but never again." Mr. Bond, now aided by Mr. Morris, also a graduate of the tobacco trade press, conserved importations and concentrated upon preserving the good name the Manila product had won. Advertising was intensified. The 74,000,000 Manila cigars sold by the United States dealers in 1921, made good with the smokers and the trade. Last year importations jumped once more to 174,000,000 and this year they are coming along at the rate of 250,000,000. Advertising in trade papers and standardization within the trade did it. Domestic manufacturers woke up and got to work to adopt the ideas and ways of Bond and Morris.

Attention was directed to the work of the Philippine tobacco agency by a spirited attack made upon the Manila cigar by a "friend of the Sumatra wrapper" importers. Inquiry developed the facts. The facts showed that organization and advertising brought home the bacon. Mr. Wemmer's committee was the dividend on debate during the recent convention at Washington, D. C., of the T. M. A. The American manufacturers showed their good quality by proceeding to take a leaf from the Manila book, and steps are now being taken to raise the first

Assets of Local Leaf Dealers Sold at Auction

By order of the United States District Court, Southern District of New York, the assets of S. Loewenthal & Sons, leaf dealers, of 189 Front street, New York, which included Connecticut and Florida wrappers and binders, were sold at public auction last Tuesday, by U. S. Marshal Charles Shongood.

Plans for Big Schulte Deal To Be Made Public Soon

David A. Schulte has announced that a statement will be made public in the course of the next few days regarding the proposed Schulte-Park & Tilford merger. If the negotiations are successful, Mr. Schulte declares, agencies will probably be established in various cities throughout the country for the distribution of brands and products featured by Park & Tilford.

Appeal in Porto Rican-American Case

Attorneys for interests opposing recapitalization plan of Porto Rican-American Tobacco Co. have obtained a ruling of the New Jersey Chancery Court at Jersey City, again enjoining meeting called for July 10, to vote on the proposal. Ruling was handed down from the bench and is effective pending appeal of the court's decision which the day before dissolved a previous injunction.

Vice-Chancellor Bentley Monday of last week, decided in favor of the directors of the Porto Rican-American Tobacco Co., giving them permission to issue 100,000 shares of no par stock. Former Vice-Chancellor Merritt Lane, who filed an appeal from the petition, acted as counsel for the five contesting stockholders holding stock amounting to $150,900. They oppose the new plan of the board of directors to issue this new no par stock; alleging a purpose on the part of the directors to accomplish by different means that which they had attempted and were prevented from doing under another plan.

The meeting of the Porto Rican-American Tobacco stockholders, to vote on recapitalization plan, adjourned as result of appeal from decision of Vice-Chancellor Bentley.

A Million Dollars for Cigar Advertising

(*Continued from page* 19)

illion and to regularize the American gar output. A member of the industry ills me: "We are not out against the lanila cigar. It has taught us a lesson e needed. We hope and expect to have e Manila and Porto Rican manufactur-s with us. It should be one for all and l for one."

Mr. Bond's Advice

As the trade seems to be interested in r. Bond's views, I asked him to express em through the *New York Commercial*. "No co-operative advertising campaign as ever successful," said Mr. Bond, "un-ss built upon quality standards, strictly aintained.

"That entails rigid inspection to pre-nt any attempt to market inferior erchandise; and it requires that dam-ged goods under a co-operative label or ade mark be taken from the distribu-rs, or dealers, without question or vil.

"Under no circumstances is it advisable profitable to sell inferior or damaged oods under the label. Sub-standard erchandise quickly destroys good will d confidence of consumers, and when ce that confidence is gone there is no agic in a brand name to win it back ain.

"The Manila guarantee stamp provides at cigars of a certain mixed standard regards processes of manufacture and ality of leaf be shipped to the United ates. Adequate inspection is provided Manila to assure the maintenance of is standard. If cigars are damaged, ey may be returned to Manila, re-con-tioned to restore them to standard ade, or they may be destroyed when -conditioning is impracticable."

"Then, you think organization at the se of the industry should first be ob-ined to back up the advertising cam-ign?"

"Emphatically yes. In plain words, the anila government now does for the anila cigar factories what the domestic ctories must do for themselves, if this w plan is to succeed."

"Can it be done?"

"Why not? That, however, is for the ade and its committee to decide. The ep is a good one, along the right lines. hat is good for one part of the industry ould be good for all of it. The Manila ade welcomes this move. It should help rid the trade of its worst menace, un-ir competition within the trade itself."

Cigar Men's Committee

In addition to Mr. Wemmer and Mr. ushkind, the members of the Commit-e are: George W. Van Slyke, president, . W. Van Slyke & Horton, Albany, N. .; Jacob Mazer, secretary, Mazer Cigar fg. Co., Detroit, Mich.; Julius Lichten-ein, president, Consolidated Cigar Corp., ew York City; Ben R. Lichty, presi-nt, Otto Eisenlohr & Bros., Inc., Phila-lphia; Mortimer Regensburg, of E. egensburg & Sons, New York; Malvin aas, of Haas Bros., Cincinnati, Ohio; eorge H. Hummel, vice president, P. rillard Co., New York City; Samuel ayuk, president, Bayuk Bros., Inc., Philadelphia; Joseph F. Cullman, Jr., of Cullman Bros., New York; John H. Duys, president, H. Duys & Co., Inc., New York; D. Emil Klein, president, D. Emil Klein Co., New York City; R. E. Christie, vice president, American Cigar Co., New York City; Fred Hirschhorn, president, General Cigar Co., New York City; Julius Klorfein, of Julius Klorfein, New York City; Julian S. Bach, of Elias Bach & Son, New York City; Nathan I. Bijur, of E. Rosenwald & Bro., New York City, and George T. Glover, of the Deisel-Wemmer Co., Lima, Ohio. Thus the leaf trade, as well as the manufacturing industry, is represented by strong men. Good progress is reported.

Wisconsin Doings

(*Continued from page* 13)

to that of last year. In fact, the men who have traveled both in the northern and southern sections express the opinion that the grand total will exceed the 1922 acreage. Some farmers in several of the tobacco neighborhoods not formerly in the game are building sheds and expect to enter the market with crops next fall, and if the reports of prices offered in advanced contracts already said to have been written are correct, there is ample temptation for growers to try their hand at it.

The Pool assorting activities continue, but most of the independent men are through and taking care of odds and ends about the warehouses before the season of sampling opens. In view of the conditions reported from Cuba and Porto Rico, first class old Wisconsin B's should not be a source of worry to packers owning them, though packers are reticent about the market situation for old leaf.

Pool Selects Committee

About sixty Pool members of this vicinity held a meeting at the Farmers' warehouse in Edgerton last Friday evening, the main object of which was to select a committee of seven members to act as a local advisory body. Similar committees are being appointed throughout the state to cover the entire tobacco area. Their duties are to investigate complaints and perform general service. The men selected from this locality met and organized Saturday night, and are as follows: Henry Thronson, president; George Goldthorpe, vice-president; E. H. N. Simonson, secretary; Eling Hermanson, H. A. Hanson, Ottar Vein and J. M. Sweeney. Lars Lien, Jr., presided at the meeting and talked at length on the Pool activities, conditions and prospects. Various matters were discussed and much information asked for. On the whole a feeling of general satisfaction seemed to pervade.

Ohio Tobacco Acreage

COLUMBUS, OHIO, July 14.—Tobacco acreage in Ohio increased 8 per cent on the basis of a study of 919 farms, C. J. West, State-Federal Crop Statistician, announced this week. In the Miami Valley, or cigar leaf district, the increase was 7 per cent; in the burley, or Southern Ohio district, 15 per cent, while in Belmont, Monroe and other Eastern Ohio Counties, the gain was only 2 per cent, Mr. West said.

Havana's New Tobaccos Beginning to Move Slowly

Packing Started in the Remedios and Vuelta Abajo Sections—Several Lots of New Stock Arrive in the Capital Market—Cigarette Strike Affects Sales of Low Grades.

HAVANA, Cuba, July 12.—During the last few weeks several new packings started in the Remedios sections as well as in Vuelta Abajo, and a few lots of new tobacco have arrived here.

Some of the regular packers of Remedios who, due to the high prices prevailing in this section just bought only 500 to 1,000 bales of tobacco, sold their piles to the houses who had already secured larger quantities. In this way these houses got rid of their purchases of bundles, without having had a chance to select same; these were very neat and clean transactions. So far very little of newly packed Remedios tobaccos have been sold in the market, the tobacco being too fresh to be shipped or stripped. Some cigarette factories have bought low grades—unassorted tobaccos for cutting purposes, paying good prices for same. The exporters and commission houses are steadily in the market looking at every new arrival in order to be posted when buying starts.

Of the new Vuelta Abajo, as mentioned in the outset, several lots arrived and several sales were made, mostly of Colas for cigarette purposes. Of upper grades one European exporter bought several sample lots of upper and lower grades. Don Antonio Gonzales was the first Vuelta Abajo packer to sell a large quantity of upper and lower grades to this exporter at a fairly good price. The tobacco, however, will be shipped later, when absolutely cured and ready for shipment.

Foyo & Rodriguez, and Muñiz y Hnos, the two Reina Almacenistas, have already received their first lots of very fine quality and well developed tobacco for mixing purposes. Their 14a L., that is, the light part, shows a very good type of tobacco and surely will sell well, as the Remedios section gives next to no light grades. Mendenez, Mendez & Co. have received the first lots of their numerous and large packings of splendid tobacco, being of same high character as that of all of the packings of the other large Vuelta Abajo and Semi Vuelta packers, such as Lobeto y Garcia; Cano y Hno; José Menendez, Ruisanchez, etc. All show a fine type of tobacco of more aroma than for several years.

Of Remedios, as well as V. A., larger quantities of low grades would have been sold if it were not for the strike of the cigarette laborers, and we hope that the strike will be finished soon.

The Partido people are also pretty busy with their packings, but here also not many large packings have started yet.

There is still quite some demand for any old tobacco, but as mentioned in previous reports, there is hardly any stock whatsoever in first hands. A few lots of Remedios, light grades, Partido and Vuelta Abajo tobaccos, were bought on speculation and sold, either to other speculators or to manufacturers, which shows the lack of the necessary material ready to be worked.

There are several American tobacco men in our market. Among them may be mentioned Manuel Corral, of Corral, Wodiska & Co.; J. F. Mayer, M. Schwarz and S. Ruppin, who has secured first class tobaccos, especially in the celebrated Sancti Spiritus section. Also Jacob Labe, of H. Duys & Co., is busy looking after his packings and inspecting the packings of others, which have started to arrive at Havana.

Mrs. Bustillo Passes Away

The funeral services over the remains of José Aixalá's daughter, Mrs. Bustillo, were conducted today. She was a young mother of four little children. Mrs. Bustillo died very suddenly. Seldom has news of such sad character been received by the entire trade. The untimely passing has caused deep and sincere sorrow, and we wish to extend our heartiest sympathy to the bereaved members of the family.—GALLO.

Market Review

We have to report an active business during June.

Arrivals of the new crop Westerns met with approval, and fair-sized sales have been made.

A fair business was done in medium and low grade Brights, mainly old crops, quite a clearance having been effected, for export, of Tobaccos of more or less nondescript character which have been difficult to place here.

Many Cigars, Cigarettes, Etc., Seized in Canada

TORONTO, Ont., July 14.—By visiting various tobacco shops and hotels recently, Officer Floody of the Excise Revenue Department has found, in a number of cases, and seized, a quantity of cigarettes, cigars and tobacco which were offered for sale without the revenue stamp affixed. Part of the confiscated cigars were stolen goods, and many boxes, bearing labels of high-priced cigars, were found to contain an inferior quality, or a collection of different cheap brands. Cigarettes, which had been smuggled in from the United States, were also confiscated, and wherever offenders have been detected penalties of from $50 to $200 have been inflicted.

Key West Key Notes

KEY WEST, Fla., July 14.—There is thing unusual to report in connection ith the work in the local factories. All ntinue to work with practically the me forces as at last writing.

Cigar Production Increases

The manufacturing of cigars during e month of June far exceeded the re- rt of the May output of the factories re. The report of Hon. J. F. Uhrback, amp deputy collector of internal reve- ue for the month of June shows that 444,260 cigars were made here during e month of June. There was, of ourse, a corresponding increase in the mount of revenue. May's report showed at the Internal Revenue Department d received $32,935.01 during May, and e June report shows that this amount as increased to $37,301.51.

Class C showed an appreciable increase the June output compared with the mber made here during May. The re- rt shows that Class C cigars number- 3,021,235 during June, against 478,866 ade in May.

Class A shows a decrease in the last port. May report showed that 850,925 this grade of cigars were made here, hile the June report shows 823,025.

Class B is another class that has de- eased during the time of the May re- rt and the report for June. May is edited with 250,466 of these cigars, hile June's report shows that 215,900 ere manufactured here.

Class D shows a slight increase over e May report. During the month of me there were 365,350 of this class of gars made here, while during May ere were about 357,000.

Class E also shows an appreciable in- ease. These cigars soared from 14,950, e number made in May, to 18,750, the mber recorded by the stamp deputy llector of internal revenue.

Taken as a whole, the cigar production f June increased 2,492,053 over the May oduction.

Miami's Claim to Consideration

Miami being so closely associated to ey West, the report of the cigar indus- y in that city is always read with in- erest by the people of this city. The Miami *News-Metropolis* in a recent is- ue has the following to say of the in- ustry in that city:

"Rapid expansion of the cigar industry Miami is indicated by the reports from e 15 cigar factories now in operation ere which are finding it necessary to crease their force of workers and their uarters from time to time. About 75 en are now employed making cigars ere. While this number is small com- ared with Tampa and Key West, inter- st in the industry is declared to be pick- ng up remarkably in the last few months.

"The Miami Maid Cigar Co., of which A. A. Torres is manager, is one of those hich has made rapid strides recently. When he bought the company from J. A. Smith, a comparatively short time ago, ve men were employed making cigars. Now 15 men are working with the pros- pects of the force being added to in the ear future.

"The Miami cigar factories claim that he best five-cent cigar made anywhere s manufactured right here. They have ad Key West manufacturers admit this, nd ask, 'How do you do it?' The Miami factories are putting out long leaf filled 10 cent cigars to compete with the scrap-filled cigars that are offered by some Florida and out-of-the-State factories.

"What the Miami cigar makers contend is the greatest need of the industry is more general understanding of the merits of the local product. They have had a hard time educating the public to the fact that the local cigar is able to compete successfully in quality with the best made anywhere else. They have had difficulty in getting Miami-made cigars placed on top of counters in cigar stores.

Gaining Ground

"However, they feel that they are gaining ground, and have secured the co-operation of some of the cigar dealers. The Miami Chamber of Commerce directors smoke Miami cigars at their sessions, and many business men have been assisting by word-of-mouth advertising of the merits of the local product.

"If Miami cigars could be brought to dominate the local market, the Magic City manufacturers say, the payrolls of the industry would add in a large measure to the bank deposits of the city, to the merchants' sales, to the landholders in rent, etc. They are inviting the patronage of home industry not on the ground of civic pride alone, but on the basis of excellent merit."

Baltimore Market

More Activity Shown

BALTIMORE, Md., July 12.—Gieske & Niemann, leaf tobacco merchants, make report as follows:

MARYLAND:—For the past week we have to report receipts of 593 hogsheads, and sales of 642 hogsheads, which shows that our market was more active, and prices held very firm for all grades.

OHIO:—No receipts reported. Sales, 3 hogsheads.

Association Data

The Leaf Tobacco Association of Baltimore City, issues these statistics for the week ending July 11:

Receipts, Including Reinspections

	This Week	Previously	Total to Date	Net 1922	Same
Maryland	646	5,488	6,134	4,734	6,853

New Orleans News

Branching Out

NEW ORLEANS, La., July 14.—H. T. Cottam & Co., of this city, distributors of Roi-Tan and other brands of cigars, are preparing to open branches of their establishment in Donaldsonville, Lockport, Morgan City and Thibodaux, utilizing truck deliveries from their New Orleans warehouses. The late improvement in the highways in that section of the state have prompted H. T. Cottam & Co., to inaugurate the movement which will be conducive to closer relations with the retail trade. Direct service has been in operation by the H. T. Cottam & Co., branch houses in Alexandria and Crowley, La., and Jackson and Gulfport, Mis., for some time past.

Makes Good Report

Max L. Block, of the Max L. Block Cigar Co., of Houston, Texas, distributors of the products of the El Trelles Cigar factory, of this city, paid New Orleans his usual semi-annual visit during the week, returning home after a short stay here. He reports conditions in the Lone Star State as good, despite an unusual fall of rain.

Right Up to Limit

W. F. Arledge, representing Falk & Babin, in Houston, Texas, is batting 100 per cent. In two days of the second week in July, he sent in orders for 20,000 Triangulares, a ten cent seller, where this brand of the factory is said to be taking well. The factory has ordered another supply of molds to keep pace with orders received. Mr. Bush, representing the Liberman Manufacturing Co., of Philadelphia, is expected here about the latter part of the month, when he will give a second demonstration of the Liberman Power Bunch machines, the first of which was productive of very satisfactory results. The demonstration will take place at the Falk & Babin factory.

Making Progress

The U. Dominguez Cigar Co., at 2014 North Broad street, manufacturers of Barcelona and Spanish Special, five and ten cent sellers respectively, is one of the few small plants in the city where work at the present time shows no diminution. There's plenty of it. They are doing a very successful business.

A. Nami, their outside man, covers all the territory in Mississippi contiguous to to Louisiana, and Louisiana itself, excepting New Orleans, which is handled by a number of live and experienced cigar drummers. The factory is about to launch a new registered brand on the market, the Jovico, a regular blunt. H. T. Cottam & Co., the big cigar distributors of this city, are supplied with the Green Badge, an excellent piece of merchandise, manufactured by the Dominguez factory. The Bouquet Imperial is another of its products.

A New Square Circle

The master Masons of Louisiana engaged as salesmen in the tobacco industry and cigar manufacturing, as well as those occupied in other industrial lines, have formed the "Salesmen Square Circle" and have applied for affiliation with the Nation League of Masonic Clubs with headquarters at Boston, Mass. The purpose of the organization is to promote thorough co-operation between its members, and to encourage sociability and good fellowship. J. A. Bergey, who has been prominently engaged in forming the Salesmen Square Circle in this city, and who is taking a conspicuous part in its activities, has just been elected president of the new Circle. The other officers of the Circle are all men of high standing in industrial and Masonic affairs of this State. The organization is founded upon similar plans to that of the Drug and Chemical Square Circle of New York.

Back from Extended Trip

Herman Leiser, the executive head of the Pan-American Cigar Manufacturing Co., has returned to New Orleans after an extended trip through Oklahoma, Texas, Illinois, Kansas, and Missouri, where he found trade conditions in the industry good. The Stickney-Hoelscher Cigar Co., of St. Louis, a prominent jobbing house of the Mound City, has been designated as distributor of the products of the Pan-American factory.

Business Keeping Up Well

Mrs. C. Baugnon, the lady cigar manufacturer of New Orleans, who features Spanish hand made cigars, reports satisfactory headway with the Castle Gem, La Favoriter and La Vida, the products of her factory. The "off season" in the industry has not materially affected her trade which is, of course, confined strictly to New Orleans and its environs.—CRESCENT.

Buys Wrappers Here

Leo Gottsegen, of Gradiaz, Annis & Co., Tampa cigar manufacturers, has been making judicious purchases in the local leaf market this week.

Joseph F. Cullman, Jr., President Milton Samuels, Joseph Mendelsohn, Vice-Pres.

Tampa Tidings

AMPA, Fla., July 14.—Frank Sierra joined Manuel Corral in Havana, and are together investigating the tobacco market.

Lopez & Alvarez are preparing to con- on the 8th Avenue Fire Station for ir occupancy as a factory. Some ths ago the city of Tampa decided sell this property, and Lopez & Al- ez were fortunate enough to secure The building is a large 2-story brick, ated in the center of the business dis- t of Ybor, and close to both railroads express depots. During the past year r output has more than doubled, and new location will give them con- ient room for still greater expansion. L. Coon, of New York, is dividing time between the Tampa and the Key st factories of the Consolidated Cigar p.

latt Wendler and Julius Fernbach, of cago, are visiting Tampa enroute to vana.

li Hamer is visiting Corral, Wodeska o.'s Tampa factory.

New Consolidation

he San Luis Cigar Co., A. H. Cross, nager, formerly located at 3rd and ryland avenues, has consolidated with Hava Tampa Cigar Co., and moved heir big 21st street factory.

V. T. Morgan has returned from a ing trip to Havana.

en Cosio, of the Consolidated, is ex- ling his rusticating vacation in the st.

Gold Leaf Warehouse

LAHIRA, Ga., July 14.—The Gold Leaf acco Warehouse at this place has been pleted. It is the largest warehouse Georgia. In celebration of the big nt, the directors of the warehouse, mers' Union, Masonic Order, Booster b, and business men met recently at the Masonic Temple in a joint meeting and put the machinery in motion for the biggest picnic ever held in South Georgia. This will be about two weeks before the tobacco market open, August 2.

Mexican Match Manufacture

WASHINGTON, D. C., July 17.—The Department of Commerce has the following report from American Consul Blohm, in Mexico, in connection with the manufacture of matches at Aguascalientes:

Only one small match factory is to be found in this consular district, i.e., the States of Aguascalientes and Zacatecas. This factory, which is located at Aguascalientes, Mexico, which is now turning out 100 gross packages of 144 small boxes to the package, 25 matches to the box, cannot supply the local demand. Matches are shipped in from other parts of the Republic to furnish the remaining quantities desired. The match made here is about two inches long. Heads are attached at both ends (making the one match serve as two), upon a braid of threads securely and stiffly waxed. The match is really constructed for the convenience of the cigarette smoker as the latter probably uses 90 per cent of all matches consumed in this section.

The stearine used in the waxing of the match is imported from Belgium via commission houses in Mexico City. The majority of the chemicals are secured in Mexico City from German houses.

The American match is not popular in this territory because of its larger size, although a more extended use of the match would probably tend to popularize it much more. The latter is much cheaper than the native product, which sells at one cent U. S. Cy. per box of twenty-five. Better sales campaigns, in which the superiority of the American match is portrayed, on the part of American manufacturers would probably be conducive to an extension in the sales of their product here.—LAMM.

San Francisco Had Fairly Good Half Year's Trad

Dealers Express Greater Satisfaction Than for Some Time Pa —Despite Vacations Business Shows Signs of An Ear Improvement—Notable Activities in the Trade.

SAN FRANCISCO, Cal., July 10.—Now that the glorious Fourth has come and gone, and the dealers have had time to figure up the business of the last six months, there is greater satisfaction expressed than for the past month. In spite of vacations, and the ever present prophets of business depression, indications now point to an early pick-up for the summer. The N. E. A., the medicos and other large gatherings have helped to replace the absentees; and there seems to be still too much to be done industrially to let things stop for some time to come.

Manilas Showing Greater Popularity

Emil Judell, who recently returned from his Alhambra trip east, has found the Manila market growing. They are especially popular in navy circles and at the military stations. The South Western Tobacco Co., at Dallas, Texas, is one of the new distributors. The month of June, instead of being one of the usual quiet months of the year, proved to be the biggest month in the history of their business. They hope to more than duplicate it as the year passes. So far they have made the mistake in not ordering a sufficient quantity of the higher priced Alhambras, but this will be remedied for the future.

Julian K. Solomonson, 703 Market, has had the Alhambra on sale for a week, and has just ordered two thousand more. He expresses surprise at the call he has received since putting his Alhambra notice out. He did not realize there were so many who like the Manila cigar.

Did Good June Business

B. Mirsky, the old-time Third street wholesale jobber, reported that the month of June was a very excellent one with them. They have been having exceptional success with La Minerva, the new five cent Manila cigar they have taken on. The Presidente, a large nickel size, has met with much favor. The Headline cigar of P. Lorillard Co., also is doing very well, being a good five cent value.

Keeping Busy

E. Goss & Co., manufacturers of the El Primo, report that business is moving along very well. They have some 75 cigar-makers busy in their Los Angeles factory, and twenty-five or thirty in San Francisco. They are one of the few local factories trying to do much at the present time, but they have to keep busy, as they have built up a trade that covers the state.

Meeting with Public Favor

Dave Rinaldo is putting in some fine work on the San Felice. He is making personal visits to the different dealers, and placing a goodly number of window cards. The office reports abundant repeats coming in. Frank Tuchler, doing Richmond, the Mission and all South of Market street, calls attention to the remarkable popularity of the Little San Felice. He testifies also that Charles the Great and Van Camps show a constantly increasing placement.

Exceptionally Good Business

Roy Huff, sales manager for the firm of Ehrman Bros., Horn & Co., says that they have never had so much of unsolicited business coming in; orders even from new customers coming in by telephone. These in addition to excell orders from the men on the road ha made June exceptionally good.

Lucky 13

The H. Bercovich stand No. 13, is re izing that the Summer trade is more th usually good. This is the elegant n stand just across the street from the n seventeen story Matson building, adjo ing which the P. G. & E. is erect another building of the same size. Th insure the permanence of business lower Market street.

J. Kleichman has sold his stand Neptune Beach in Alameda, and p chased the Sanitary Cigar Store at Te and Washington streets, in Oakland. has a choice location.

The P. Lorillard Co., has located western office at 1174 Howard str San Francisco.

Sam Isreal reports good success w the new cigarette, Johnnie Walker, fi the Falk Tobacco Co., at $10.50 per

Louis T. Echenberg has been adde the H. L. Judell sales force to make South Coast territory. He was form with Peregoy & Moore, the large ci jobbers of Omaha, Neb.

E. Howard, salesman for Michaitsc Bros. & Co., was severely injured in automobile accident near Aptos last w He was first taken to the Salinas hosp and then removed to San Francisco.

J. A. Jais, formerly vice-presiden the American Cigar Co., arrived on steamer *Cleveland* the other day, aft fourteen months world-tour, and left the Fourth for New York, the p from which he started.

Less Harmful Than Coffee or T

The Medical Association "meet" come and gone. One feature that tracted considerable attention was the that so many of the delegates expre the conviction that tobacco was not essarily harmful, or not so much as c or tea.

Izzy Mendelsohn has returned fron vacation in Lake County, full of pep the sale of pipes.

Adolph Judell is enjoying his vac with his family at Calistoga.

Mrs. Rosa Bustillo

The sudden death of Rosa Aixala tillo, eldest daughter of José Aixala wife of Leopold Bustillo (son of founder of Bustillo Bros., of Ta Fla.), was a great shock to the friends of the family. Mrs. Bustillo very prominent in Havana society was respected and admired by all whom she came in contact. She p away on July 11 after a brief attac influenza.

Supervising Cuban Intere

S. Ruppin, of S. Ruppin, Inc., Havana this week, and plans to st Cuba for an extended period to sup the interests of his corporation o island.

Purchases Broad Leaf Cr

Ira Strouse, of Strouse & Hol paid a flying visit to Connecticu week and bought an exceedingly crop of choice broadleaf tobacco.

All "CHARLES DENBY" and "LA FENDRICH" cigars, strictly hand made, are manufactured in this ONE factory, under ONE management— under ONE supervision thus always insuring that ONE dependable quality

H. FENDRICH (Incorporated)

Evansville, Ind. **Established 185**

Chicago Jobbers Complain of Slow Collections

Some Houses Instruct Collectors to Book No Orders—Credits Have Been Very "Cheap" During Past Year—Much Business Being Done Despite Slumps in Retail Trade.

CHICAGO, July 14.—Collections are reported by the local jobbers as being rather slow. Some of the houses have their men out collecting only, with instructions to book no orders. Credits have been very "cheap" in the Chicago market for the past year, and now, with a slump in business, dealers are not taking in enough to pay current bills. This has forced the jobber to "sit tight," and a merry time is in store for those who do not settle promptly.

Out of Dry Dock

Sig Rosenthal of the H. M. Schermerhorn, Inc., chain of Loop retail stores, is again back at business after a long sick spell. He reports business good in all their stores. At present in the new Monroe and Dearborn streets store a large window of Dutch Master cigars is shown.

Sells One of His Stores

E. P. Oakes has disposed of his retail store at Chicago ave. and State st. He will devote all his time to his main store in the Ashland block, besides taking care of the E. H. Gato Cigar Co.'s interests in this market.

John Ryan, Jr., of the Ryan & Raphael Cigar Co., was a visitor to Detroit, where he went in the interest of Lucius cigars.

Back from Europe

Chris Bauer has returned from Europe. He is back with Ruhstrat-Christian Co., and is going to help increase the distribution and sale of Charles Denby and La Indrich cigars in the city.

Rapid Repeaters

White Owl cigars just sell and sell and all dealers can't keep enough on hand to take care of the demand. The General Cigar Co., Inc., is placing large White Owl ads in the Chicago newspapers.

La Palina in Limelight

The Congress Cigar Co. continues its newspaper work on La Palina cigars. The 10 cent Major, 2 for 25c Senator, 3 cent Magnolia and the 3 for 50 cents Perfecto Grande sizes are the ones that duplicate all the time.

A Pipe Offering

A combination set of 12 Frank, guaranteed pipes that retail at 75 cents, all packed in a neat oak and glass case, to place on the counter, is being offered by Jan Ries & Co., the wholesale pipe house at 104 N. Wells street.

Featuring Personality

Fred Davis, head of the New York-Tampa Cigar Co., spent Monday here. While in the city he sold Personality mild Havanas to H. M. Schermerhorn, Inc., which will feature this Tampa made cigar in its chain of retail stores. Mr. Davis left here for Kansas City to close a very important connection.

Wm. Gaskill, well-known to the St. Paul and Minneapolis trade, has moved to Chicago. He will make his future home here and will connect with a wholesale house or an out of town factory.

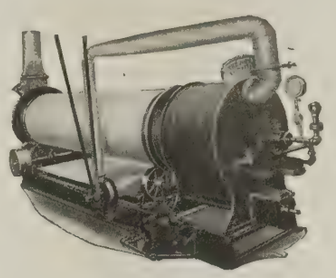
Doc Rotobro, of the New York-Tampa Cigar Co., is still with us.

Seidenberg Activities

Wm. J. Seidenberg, who has been at the Chicago headquarters for the past week, leaves for New York tomorrow. With him goes a holiday order for 25 cases, totaling 1,000,000 cigars, which include Pancho-Arango, Virginia-Lee, Pan-Aran and Wm. J. Seidenberg's Club Special, all Tampa made cigars. Harry L. Harris, general manager of the Chicago branch will shortly have his sales force introduce some new and original packings of these brands. Many holiday orders from jobbers and direct buying retailers have already been booked by the Chicago branch.

Frank Weidling, Cleveland representative, after a pleasant visit to the Chicago branch, has returned to his Ohio home to push the sale of Pancho Arango. Frank Murray has joined the Seidenberg sales staff, and will call on the drug trade. J. P. Brill spent this week in Wisconsin, booking orders for Pancho Arango cigars.—H. L. H.

Decker Tobacco Plantation in Vermont



BELLOWS FALLS, Vt., July 14.—There are great doings in Westminster, says the Bellows Falls *Times*. A tour of its main street makes other nearby communities seem almost sleepy. There are the Dascomb orchards among the largest in the East; a flourishing Kurn Hattin Home for boys; a big handsome brick community house going up, and last but not least, 80 acres of tobacco plants all under cloth.

It is of the latter industry which is strictly new that special reference is made. Eighty acres all under white cloth is rare and spectacular for this part of the country. The boys working there tell of many humorous incidents. Every day autoists attracted by the great stretches of cloth draw up and ask questions. The boys are always ready for them. One party they tell that a mammoth circus is about to show, another that a big cattle auction will soon take place and so on down the line. To get new replies for all the questions is some task.

The Decker Tobacco Plantation is owned and operated by C. J. and R. J. Decker, Inc., of South Deerfield, Mass. In the plantation, which needs only a crew of darkey laborers to make it complete, are three or four farms and the land is all level and fertile, said to be No. 1 tobacco land. The great stretches of cloth extend along the highway at Westminster Station and across the railway track to the west bank of the Connecticut river. The tobacco plants, thousands of them, are all started in hot beds in March and April and are now being transplanted in rows three feet and three

Connecticut Tobacco Crop Makes Rapid Growth

Plants Are "Hopping" Right Along—Some Crops Ready to Top, Others Just Recently Set Out—"Weed" Has Rich, Healthy Color—C. V. Association Arranging for Finances.

HARTFORD, July 15.—Ideal conditions e now prevailing for the making of bacco throughout the Valley, and crops e "hopping" right along. A survey of e fields now show how rapid tobacco ill grow under favorable conditions. tobacco plant has no equal in making large amount of foliage within such a ort space of time. Under favorable nditions Broadleaf plants have been own to grow and mature within 60 days ter plants were set out in the field. The tobacco through the Valley is now a record-breaking race, and has been owing tremendously fast during the st two weeks of genuine summer ather with the hot days. This last ek several of the growers began to top, e plants having made sufficient growth d were ready for the "ordeal." With nother week of favorable weather a large reage will have been topped, not only the Broadleaf but also in the Havana d belt. However, there is considerable e set tobacco scattered through the lley, and in some sections growers ve just completed the setting out for e first time, having been unable to get nts earlier. Much resetting was neces- y, caused by the cut worms, and the t sun burning up the plants as soon as out. It is a very unusual occurrence the Valley, to find one grower topping d another nearby setting out. But, en as a whole, the crop never looked ter. It is giving every promise of being banner year. The plants have not ered after once taking root. The p is also of an unusually dark green or, and go where one may it will be unusual thing to find any yellow spots the fields. Yellow spots have been te prevalent the past few seasons at s time of the year.

Everything now gives promise of the st crop in the Valley for a good many rs. "Calico" plants are very rare, l while there are some reports of ildfire" in the fields in spots, it does seem to be spreading. The hot ather seems to have checked it.

The thing that seems most to worry growers now is the fear of a bad l storm which might raise "hob" in g time." Much credit is due to the rts of President Alsop, of the owers' Association for getting a hail urance policy to protect all growers o are members of the association, and a much lower premium per acre, ering losses up to $300 per acre.

Hail adjustments for members of the ociation in the northern part of the te who had to reset their fields follow- the hail storm recently, have been de and allowances for resetting where tobacco was small, and where the acco was of good size, certain amounts e been paid. The adjusters were L. Grotta, of Warehouse Point, and W. House, of Glastonbury. Hail in- ance is gaining the favor of the asso- ion's members and new applications being made every day.

Picnic Plans Being Perfected

Plans for the first annual picnic of Connecticut Valley Tobacco Associa- n, to be held at Riverside Park, Aga- m, Mass., July 25, are advancing. The re park is reserved for the members the association, their employes and their families. About 6,000 people expected to be there. President op is to make an address at 11 a. m. l games and other athletics are eduled, but the big feature "event" is a 100-yard race between General Manager Fred. B. Griffin and Secretary W. F. Whitmore. While Fred is a heavyweight it is rumored that he is very speedy. Whitmore is thin and his speed is unknown. However, there has been no guaranteed stakes posted, but the dash is expected to be an exciting affair.

New Joiners

During the past week several heretofore known as "independent growers" signed up with the association, and many more are expected to follow suit.

It was reported last week that the local dealers were to start visiting the "independent growers" and would try to buy the 1923 crops on the bundle basis, and the prices that were to be offered was understood to be 50 cents per pound for Broadleaf and 40 cents per pound for Havana seed. It is now rumored that each dealer was watching the other fellow very sharply to see what was going on. Each wanted some of the "independent" tobacco.

Prominent Grower Dies

Charles Wyllis Porter, one of the largest and most successful growers of Havana seed tobacco, died at his home on Porter street, Hockanum, Monday afternoon.

He suffered a shock about four weeks ago, but partially recovered and was about for a while.

He suffered another shock a few days ago, and had been unconscious for two days.

Mr. Porter was born in East Hartford, August 12, 1856. He was a descendant of John Porter, of Warwickshire, England, who settled in Windsor, this state, about 1636.

Mr. Porter raised Havana seed tobacco for many years and had again under cultivation this year, thirty acres. He was very progressive in his methods.

He owned a large warehouse and packed his own tobacco.

For about thirty years he had been associated with the late Louis B. Haas, of Hartford, and the latter's successors in the firm of L. B. Haas & Co., Benjamin L. Haas and William F. Haas. A large amount of the Havana seed and Broadleaf handled by the firm had been assorted and packed at the Porter warehouse, and kept there in storage until sold.

In earlier years Mr. Porter had bought and packed tobacco on his own account.

Mr. Porter was a member of Orient Lodge, F. and A. M., of East Hartford; Pythagoras Chapter, R. A. M., of Hartford, and the Masonic Veteran Association of Connecticut.

Mr. Porter was highly esteemed for integrity and business ability. He gave his entire time to the management of his large farm and was regarded as one of the best tobacco farmers in the Connecticut valley.

The work of sampling Broadleaf Broken and Fillers packed by the association is now under headway, and within the next few days the work will have been completed; samples will be ready for inspection shortly. The samples are showing up very well and sales are being made every day. The choice lots are being picked up rapidly, and at the rate they are now going the entire holding will soon be disposed of.

The executive committee of the association has authorized President Alsop

Prospects in Lynchburg District

LYNCHBURG, Va., July 14.—The seasons for planting tobacco around Lynchburg have been the most unfavorable in many years. There were good rains on June 10, 11 and 12, at which time the farmers planted what land they had ready or what plants they then had suitable for planting.

It was confidently expected that other seasons for planting would follow, but there was no rain to make a season until Saturday night, July 7.

The rains, however, Saturday night were of local character, some sections having a good season, while others not enough rain fell after waiting over Sunday to enable planting on Monday.

In a larger part of the territory adjacent to Lynchburg, the rain was sufficient for planting, and quite a good bit of tobacco was planted, but in some sections none could be planted at all. This, with the scarcity of plants (many beds having dried up during the drought) will not allow the full crop of tobacco to be planted, as anticipated.

Plants set out in June are looking and growing well, and with good season from now on will make good tobacco, and if the seasons are favorable plants set out this week will also make good tobacco, but, of course, will be late maturing.

It can be seen, therefore, that the full crop anticipated will not be planted and it is conservatively estimated that it will only run from 80 to 85 per cent of last year's crop.

The estimated yield, however, is now entirely problematical and will depend entirely upon the growing season from now on, with favorable weather the yield per acre should be normal, but another drought would cut it down materially.

Where plantings were early, reports come that tobacco is looking well, some of it nearly reaching the topping stage.

Indications are most favorable for prices to be good and with a good quality of leaf produced a good average market is expected the coming selling season.

The quantity of wrappers for several seasons has been small; hence there w be a demand for them, and it is thoug they will sell well this year.

Most of the farmers marketing t bacco in Lynchburg have shown a pr erence for the "Open Market" and "a tion system" of selling tobacco, and t four Open Warehouses did a m successful and gratifying business t past season.

The great satisfaction expressed both seller and buyer on the "Open M ket" would indicate that a still lar percentage of tobacco will be sold on t open floors here the coming season JOHN D. OGLESBY.

Oxford Crop Conditions

OXFORD, N. C., July 14.—Light l thunderd storms recently have hel crop conditions. The southern eastern sections show better gro and topping is quite general. The lea are small and the plant hasn't the gro as usual for this time. In the north section, especially along the Virginia l the crop is small and irregular. W is badly needed is a good general rai

Our former estimate of acreage 8 per cent. of last year's crop stands v conditions at about 75 per cent. as c pared to this time last year.—W. ADAMS CO.

Tobacco Led in Acreage Val

RICHMOND, Va., July 14.—Accor to figures obtained from Henry M. T lor, federal agricultural statistician this state, tobacco, regarded as a mor less luxury farm product, had a per value in Virginia of $180, while wh the staple food product of the world, a value of only $15.75 per acre. Tob led all crops in per acre value. W was the lowest.

Virginia last year produced farm p ucts valued at $171,500,000. Corn the most valuable crop in totals for year. Based upon December price was worth $42,116,000. It ra

ıth, however, in per acre value, being ch only $22.12. Tobacco came next orn in total value, it being worth 20,000 last year. Hay came next in t value, it being worth $19,520,000. Wheat came fourth, it being worth 56,000, and apples sixth, with a total e of $7,500,000.

Total value of sweet potatoes was 13,000 and per acre value $117.50, or nd in rank. The total value of the ut crop was $4,295,000, or seventh in . The cotton crop was worth ,1,000, or $53 per acre.

uth Carolina Dealers Hit by Luxury Tax

SPARTANBURG, S. C., July 14.—How to come the loss of business resulting the "luxury tax" levied by the last son of the South Carolina legislature uzzling the retail dealers in cigars cigarettes not only in this city but urrounding cities in the Piedmont on of the Palmetto State.

Instead of buying their smokes at home enen are crossing the mountains over t North Carolina and buying their e's supply where they do not have a ory tax.

io to Sister State for Smokes

A Spartanburg merchant cites the case igarettes which sell in South Caro- for $1.70 per carton. The same gettes can be bought in North Caro- just thirty miles distant, at a saving 30 cents. The average cigarette ner uses about a carton a week, and e is nothing easier to get in his car day, take the Appalachian highway, ignificent route across the Blue Ridge ntains, visit Hendersonville, Tryon, da, or any of a dozen little cities in ch Carolina, and put in his week's ly.

Local merchants are helpless in the face his condition, for there is no law to bit one buying cigars, cigarettes and bco in another State. The mountain es are fine, and travel through the ntains is quite the thing. The ill fortune of South Carolina retailers is the good fortune of North Carolina retailers. While the State loses only a small amount in taxes, the merchants are hard hit.

Say Luxury Tax Must Go

This state of affairs has steeled the retail merchants with a firm resolve that the "luxury tax" must go. The South Carolina Retail Merchants' Association in session in Greenville, S. C., July 11-12, put up a stout argument against it, but the association is composed largely of dry goods merchants, and they do not feel it as keenly as retailers handling cigars and cigarettes. These, however, will fight it in their own way.

"Many of my customers," states one merchant, "have not bought a cigarette in South Carolina since the opening of the Summer travel. They have been going to the mountains each Sunday, and while stopping at Hendersonville or Asheville have found it easy to take on a week's supply of tobacco."

The "luxury tax" is a farce, so all merchants declare, and judging from the unanimity of opinion, it is likely such pressure will be brought to bear upon the various legislative delegations in South Carolina that the next session of the legislature will witness its repeal.

Curing in South Carolina

BAMBERG, S. C., July 14.—The annual tobacco curing period has been in effect for several days, and those who are growing the weed are busy putting in barns and keeping the fires burning. The tobacco outlook is reported as being quite favorable so far. The quality of the plant appears to be splendid.

The acreage this year has dropped off greatly compared to last year, although the reports are that there will be quite a lot of it. J. F. Lane, local manager of the co-operative association, reports that the acreage is really larger than he first thought.

No announcement has been made as to the opening of the local branch of the marketing association.

Bloch Bros. to Offer Stock to Employees

WHEELING, W. Va., July 14.—Employees of Bloch Bros. Tobacco Co. are given an opportunity to become stockholders in their company through a new plan of installment purchases of stock. The policy of setting aside a block of stock for the employees of the concern is in line with similar action taken by other manufacturing concerns of the city and country. Announcement of the plan came through Jesse A. Bloch, vice-president of the company.

Under the proposed plan, employees may subscribe for any amount of stock whose valuation is not more than 20 per cent of their annual wage. Market prices will be quoted. Payment of stock subscribed under this plan will be made as pay days fall due, the amount subscribed being deducted from the wage check. Payments will run for one year only. The plan will be continued indefinitely however, and employees may subscribe for additional stock as their original amounts are paid for.

The stock offered for sale under this plan is from the amount held in the company treasury.

The offer of the company is the same for officers and men. Between 400 and 500 are included in the offer.

Growth of the Tobacco Industry in Georgia

BLACKSHEAR, Ga., July 14.—The following letter from E. L. Darling, mayor of Blackshear, to the Atlanta *Constitution*, is self-explanatory:

"We note a clipping in Savannah *Morning News* of the 1st from the *Constitution* where you quote that the A., B. & A. railway says there will be '1,200,000 pounds of tobacco raised in Georgia this season.'

"For the public information you may publish the following, or as much as you desire, as it is authentic.

"The reported 1922 crop was 4,393,1 at an average price of $19.45.

"We do not know so much about t crop in other sections of the state, b the 1923 crop in Pierce will be abo double or more in 1923 and the qual at present is far ahead of 1922.

"In Blackshear in 1922 there was s in the one warehouse a total of 1,368,3 at an average of $23.15, which was t largest and highest price of any mark in the state.

"We now have an enlargement of t first warehouse owned by the Blac shear Manufacturing Company and stock company of local business men a farmers has been formed and a wa house of 23,040 square feet will be rea for the coming season, which opens abo August 2.

"With the high quality that is bei cured by our experienced and ha working farmers we do not look for minimum less than 2,000,000 pounds a the lowest average of 25 cents in Blac shear alone. These are conservat figures and it is safe to say that unl there is some unforeseen calamity th will be exceeded in quantity and pr

"At present the traveling public th that Pierce, Wayne, Brantley and A pling counties have the best prospe of tobacco they have seen.

"Other crops, such as cotton and f crops, are ahead in proportion."

Mayor Darling is secretary a treasurer of one of the Blacksh tobacco warehouses, and is well ver in his subject.

Gains Shown by Polanc Tobacco Monopoly

WASHINGTON, D. C., July 17.—cording to information received fr Commercial Attache, H. B. Smith, Warsaw, Poland, the operation of State Tobacco Monopoly showed a c gain from January 1 to September 1922, of 27,651,673,159 marks. Canada's 'Weed' Export Trade Shows Growth

OTTAWA, Ont., July 14.—The growth of Canada's export trade in tobacco is strongly emphasized in the returns for the past three years, 1,100,107 pounds of unmanufactured tobacco being exported in the fiscal year just ended, as compared with 200,153 pounds in 1921, and 471,991 pounds in 1922. In March, 1922, there was 62,632 pounds exported, while for the same month this year there was 173,568 pounds sent to outside markets.

One of the results growing out of the war is the increasing appreciation of Canadian tobacco among the British public. The enormous amount supplied from Canada in large and small quantities to individual soldiers by their friends was instrumental in cultivating a taste for this country's tobacco among the British soldiers, and, this market in the old country is rapidly enlarging. Canadian tobacco is now looked upon very favorably by British importers and manufacturers, and is recognized as superior to tobacco imported from other British colonies such as South Africa and Rhodesia, owing to its excellent flavor.

Big British Demand

So great has the British demand for Canadian tobacco become that over 1,000,000 pounds, grown in Essex county, Ontario, was shipped to Great Britain during 1922, to be used in the manufacture of cigarettes, pipe tobacco and twists. In anticipation of increased requirements in Great Britain it is reported that a British tobacco firm has purchased land at Kingston, Ontario, and proposes to erect a modern factory there for the processing and curing of Canadian leaf tobacco. The Canadian Tobacco Growers' Co-operative Co. has entered into a contract to supply the new British firm with 2,000,000 pounds of dark leaf tobacco.

How Canadian tobacco users are increasing the consumption of the home-grown product is shown by the record of imports for the past three years. In 1920, there was imported 21,120,729 pounds of unmanufactured tobacco; in 1921, 19,924,721 pounds, and in 1922, only 14,453,671 pounds.

Paducah Prospects

PADUCAH, Ky., July 14.—Recepits of loose tobacco at the receiving stations of the Association have been very light again this week. This is due to the fact that the undelivered part of the crop is very small and farmers are extremely busy with their harvest and trying to dig their crops out of the grass and weeds. It is hard to estimate just what is left in the country, but no doubt a million pounds will cover it. At any rate we will be able by August, to give a very close estimate of what was produced last year. We are sure the amount will run close to 90,000,000 pounds which was my estimate on the crop last Fall.

The Association is receiving and prizing its stock as it comes in and it is practically through with prizing at most of the receiving stations. We will soon know what the unsold stocks are in the dark fired district and of what gra they consist.

Practically all dealers are through ceiving and packing and are clear house ready for the Fall campaign.

The weather for the past week has all we could wish for on the grow crop of tobacco. It has been very with occasional showers and the grow crop generally is in fine condition growing splendidly. There is still siderable tobacco in need of cultiva and unless it is soon thoroughly wor out, a small part of the crop will su on this account; but taking the cro a whole, will say that I never saw a bc prospect for a good crop of tobacco we have at present. The weather co tions and the manner in which the is cultivated and handled will have a do with the quality and yield, but we pleased with the flattering prospects we have.—W. B. KENNEDY.

Burley, Aircured, Green River, Fired Dark, Maryland, Virginia and Seed Leaf Tobaccos.

On all markets. We air dry and steam dry on most of the loose markets, and have the latest improved Philadelphia Textile Steam Dryer in our Louisville Factory for handling Leaf and Strips. Orders and correspondence respectfully solicited.

ger Tobacco Acreage

NKLIN, Ky., July 14.—"Traveling h Sumner and Macon County, see, and Allen County, in this I was astounded during the closing f June to find some crops of toready to be topped, as this is forin the extreme, and still further ied to find on the adjoining farms d boys at work setting plants," nator John H. Durham.

a matter of fact, the territory I nly embraces a few of our neighcounties, but if the increased acre- to tobacco throughout the dark in keeping with that of the terrihave been over, the advice of the tion heads to limit production has tally ignored.

Acreage Increased

m all indications visible from the ys, the farmers in these counties reatly increased their acreage, and ve we are going to find that the crop of 1923 will be the largest in point of acreage which has been set in this tier of counties during the whole of tobacco culture.

"I am in no way identified with the industry and would not be in position to say what amount of tobacco would glut the market, but having read so much concerning the desire of the association heads to have only a normal acreage, I was made to wonder if other counties are following this advice, or like the ones of which I have knowledge, planting a greatly increased acreage."

Owensboro Outlook

OWENSBORO, Ky., July 14.—The weather during the greater part of the week has been warm and while we have had some heavy local rains the condition in a general way might be reported as somewhat improved over last week, although the farmers have not caught up with the much needed cultivation.—J. S. PHELON.

Kentucky Tobacco Sales During June

ures Compiled by the State Commissioner of Agriculture

NKFORT, Ky., June 12.—W. C. Hanna, State Commissioner of Agriculture. report of sales of tobacco in all warehouses in Kentucky during the month e, 1923, as follows:

e Burley Association Activities

XINGTON, Ky., July 15.—West Vir- tobacco growers who are members ie Burley Tobacco Growers' Co-op- ve Association are working to bring ose who are still outside, J. Sherman er, editor of the *Burley Tobacco uer*, who has been spending the past days in West Virginia, said Friday is return to Lexington.

here are hundreds of tobacco grow- n West Virginia," Mr. Porter said, do not grow over half an acre to an of tobacco. These men have not ht it worth while to come into the iation, but the members have indi- to them that they will be welcomed as cordially as would those who longer acreage."

. Porter said that among the grow- p in the hills, far from the centers opulation, the propaganda of the dative interests had been believed as l and that the growers of some of inaccessible places had never had an tunity to learn the truth about co- tive marketing of tobacco and some em manifested considerable bitter- ness against the system, because it would mean the "taking of our tobacco to Kentucky."

"At one place on our trip," Mr. Porter said, "hoodlums gathered outside the schoolhouse where we spoke and made so much noise that I called the chairman's attention to it and told him if we could not have an orderly meeting we would not have any. A warning from him terminated the trouble and the citizens of the community expressed regret at the incident."

Chief William Collins, of the field service, and Ralph M. Barker, director of warehouses, went to eastern Ohio last week to look into the situation there, where a new territory has been added to the association.

Robert E. Beatty, assistant director of warehouses, said that no warehouses would be sold in the sale of surplus property, announced for this month, but that lots taken over with some of the warehouses would be disposed of, as would a number of barns and dwelling house property of the association. The Lexington property includes a new street south of the Big Burley house, desirable building lots on both sides of the street being included in the sale. A concrete street, sidewalks and curbing already have been laid by the association. All the lots formerly occupied by the Planters and Shelburne No. 2 warehouses also will be sold.

The Central District Warehousing Corporation, a subsidiary of the Burley Tobacco Growers' Co-operative Association, filed amended articles of incorporation in the county clerk's office increasing the capital stock of the corporation from $1,485,110 to $1,645,110. The stock of the corporation as amended consists of 11 shares of common at $10 each and 164,500 shares of preferred at $10 each.

Plug Tobacco

The Cleveland (Ohio) *Press* answers the question, "How is plug tobacco made?" as follows:

"The stem is taken out of tobacco leaves, and the leaves are immersed in 'sauce' for flavoring. This sauce is made of licorice paste, sugar, fruit juices, etc. The leaves are then passed thru a wringing machine to press out the surplus liquid, after which the leaves are dried to the proper moisture, and shaped into a plug. They are then put in a press, wrapped and put thru another press. After the plugs are made, they are cut into pieces for chewing tobacco, and shaved for smoking tobacco."

SEAL OF LEXINGTON CIGAR
A Genuine 10c Hand Made Product. Blended Havana Filler and Broad Leaf Binder.
Open Territory Assigned to Jobbers Only.
THE JOHN C. GUY CO., Inc., Lexington, Kentucky

A Smoker Blind-Folded or with His Eyes Closed

Can not tell whether he is smoking a cigar having a dark or a light wrapper.

Cigar manufacturers know that the mildness or strength of a cigar is governed solely by the Tobacco in the filler.

We feel that the consumer should be educated by means of a publicity campaign to the fact that when he wants a pleasant mild smoke it makes no difference whether he chooses a dark or light wrapped Cigar.

It is conceded that no Tobacco in the world combines so many essentials to the making of a good mild cigar as Porto Rican. Besides being aromatic and fragrant it possesses practically no chlorine and therefore burns evenly and freely.

This year's crop is of exceptional quality, which means that a treat is in store for the American smoker, as Cigar Manufacturers throughout the entire Country are realizing more and more that Porto Rican Tobacco used as a filler exclusively or blended with other Tobacco makes a cigar which pleases the majority of smokers who prefer a mild but fragrant cigar.

CLINTON, O., July 14.—According ts just compiled by County Audi- A. Guth, Rocky Ridge is the only in Ottawa County where cigarets sold. A village ordinance pro- he sale of fags.

Iowa Cigarette Tax Law Operations

DES MOINES, Iowa, July 14.—Possibility that enforcement of the state cigarette tax law would remain with the treasury department instead of being turned over to the attorney general's office was intimated recently as Superintendent C. C. McCoy announced the results of the law's first two years of operation.

A total of $1,233,013.63 has been collected since the law went into effect July 4, 1921. During the past year cigarette dealers contributed $639,733.89 to the state, while the tax yielded $593,279.74, the first fiscal year. The increase alone was enough to cover the department's expenses for the two years.

"The Fortieth assembly transferred the enforcement division to the office of the attorney general," a treasury department official declared, "but Attorney General Gibson has inferred that there is some question as to the transfer and has further intimated he would render an opinion which would leave the enforcement of the cigarette law still in the hands of W. J. Burbank, treasurer of state, and where, the attorney general says, it belongs."

Attorney General Gibson has also stated that there is no law on the statute books of Iowa that has been as well taken care of and enforced as the cigarette law under the supervision of the treasurer of state.

As this is the close of the cigarette permit year, renewal permits and new permits for dealers who have never engaged in the sale of cigarettes and cigarette papers have been coming in very rapidly, Superintendent McCoy said. As soon as possible all city clerks and county auditors will be required to certify to this office every cigarette permit holder who has paid the required mulct tax either in a new permit, renewal permit, or unexpired permit. At the same time, any who have not complied with the law and paid the mulct tax fee will be cut off the list on the treasurer's office and orders for stamps will be refused.

New Imported Cigarette Cases

A line of new high-grade imported cigarette cases made of Spanish leather is being introduced to the trade here. A novel feature is that the sewing, which is done from American patterns by a small group of Moorish artisans in Granada, is done without needles. A fine steel needle, two pig bristles and a block of wood are described as the only tools used. The thread is spliced with the split pig bristle instead of being passed through the eye of a needle, which would cause the fine quality morocco or calf leather to rip, says the *New York Times.* As a result the seams are said to have an extreme fineness and delicacy, the threads working out into a minute tracery pattern. The interior section of the case, which slides in and out of a pouch holder, has two divisions, each with a capacity of eleven cigarettes. Four different colored leathers are available. Some of the cases also have gold trimmings. Wholesale prices range from $18 to $42 per dozen.

Pennsylvania Tobacco Crop Started on Its Wa

Growers Have Been Beset By Various Drawbacks—Cold, Lat Spring Followed by Dry Weather Were Great Hindrance —Conditions Changed for the Better—Market Is Quie

LANCASTER, Pa., July 16.—Fears that the 1923 crop of Pennsylvania cigar leaf might not be up to the high standard that growers have maintained for years, have been dispelled under the beneficial influence of a period of very favorable weather conditions. Dry weather during, and for a period after transplanting, held back the development of the young plants which, in some sections of the county, looked very unfavorable. Good, soaking rains have prevailed in nearly all localities, however, and the crop is coming along in good shape. About the worst thing that can be said of the tobacco fields over the county is that they present a very uneven stand of plants due to the large amount of resetting that was necessary. Stalks from several inches to nearly a foot high may be found in the same row.

Many Difficulties Encountered

The grower has weathered some very stormy times this spring and only through his doggedness of spirit will the acreage and quality of Pennsylvania tobacco be up to par. His early operations in the seed bed were fraught with endless disappointment, through cold weather and a multitude of insects and fungous diseases which required continual watchfulness and never ending attention to control. When his plants were finally set out into the field, after weeks of waiting for favorable weather, they were set upon by the voracious cutworm, which totally destroyed large areas (we know of one grower who was forced to replant his entire acreage of 26 acres three times because of the depredations of this pest). The cutworm danger passed, the crop ran into a period of dry, hot weather which for a time threatened more serious damage than any that had gone before. Rains and lower temperatures have alleviated this condition and just when the crop is "booming" along and the plants have taken on the deep green color and sturdy appearance that marks the product of Lancaster County soil, the tobacco horn worm, the most deadly, pestiferous foe that local growers know, puts in its appearance.

The Destructive Horn Worm

Having brought his crop through the many ills which beset the path of its perfect development, the grower is making determined efforts to stamp out this most recent invader which threatens his tobacco with destruction. The horn worm is yearly becoming a greater menace to the crop and can, if allowed free rein, devour an entire field.

Hand picking, the haphazard method of eradication which has been in vogue since tobacco was first raised in Lancaster County, is giving way to more modern control methods which have proven themselves nearly 100 per cent efficient in ridding the crop of this destructive pest. Arsenate of lead, applied either in powder or spray form, is deadly to the horn worm and has been the means of keeping damage to a minimum in fields where it has been used as recommended by the Lancaster County Farm Bureau and by Otto Olson, federal tobacco expert, who developed this remedy to its present stage of efficiency.

The arsenate has the double advantage of doing the work well and at low cost and of not harming the leaf. Paris green, a favorite insecticide among some farmers and still used to a small extent, had to be handled very gingerly as the leaf was severely burnt if the poison w applied in excessive quantity. Arsena of lead destroys all forms of insect li and leaves the leaf of the plant in perf condition.

The life of the horn worm is about days. During the last ten or eleven da of its existence it eats about 25 times much leaf as it does during the first ni and growers are putting forth every fort to get rid of the ravenous "anim in the early stages of its growth. Da age to the 1923 crop up to this time been practically negligible, as the wor have not reached their destructive sta

Not Much Activity in the Marke

Interviews among packers this morn disclosed little movement of the crop pack. The 1922 cigar leaf still in hands of the packers seems to be c tralizing itself and is nearly all in warehouses of the larger concerns. Sa were not heavy during the past week the Lancaster market is running true midsummer form. Requests for sam are still arriving, and although act business is practically nil, interest Pennsylvania is still active. Packers fidently look forward to a recurrence the buying which absorbed the bulk the crop this spring and predict a g demand for 1922 cigar leaf within a weeks.

Seeking Recreation

With little to keep them in the the packing fraternity, almost to a has sought out more congenial haunt which to pass the hot Summer days. Susquehanna River, with its myriad lands and vacation resorts, is a pop Mecca for the tobacco men of Lanca and many are spending a part of time there. One group who have enthusiastically "roughing it" for s time along the banks of the Susqueh consists of Christ Nolt, local represe tive of P. Lorillard Co.; Benjami Good, of B. F. Good & Co., and He B. Weaver, of the I. H. Weaver KEYSTONE.

Co-operative Seeks L of Credit

BALTIMORE, Md., July 14.—Neg tions are being conducted by the Fe Intermediate Credit Bank of Balti and the Co-operative Tobacco Gro Association of Richmond, Va., for of credit that will bring the Balti bank up among the largest lender far, in the intermediate credit bank tem.

The act creating the interm credit banks provided that co-ope associations must have certain char istics in order to enable them to b from the banks, and the delay in p through the transactions is occasion the neecssity of amending the char the Tobacco Growers' Associatio that it will conform with the re ments of law. It is understood changes are now being made.

The association asked a credit li $5,000,000. In addition to a tobacc to finance, the association is indeb the War Finance Corporation, an aim of its managers is understood to take up this indebtedness with of the proceeds of the loans fro Intermediate Credit Bank.

An issue of debentures by the mediate credit banks is now unde

eration and the amount is understood have been tentatively fixed at $10,000,-. This loan will be the joint obliga-n of all the banks and will run for months. It is understood that the in-est rate will be 4½ per cent. per an-n.

The proceeds from the sale of the de-tures would be allocated among the eral banks so that even after funds m this loan are available the Balti-re bank would have to draw down ad-onal capital from the United States easury. The act made an appropria-n sufficient to give each of the banks 00,000 capital, but at the start only 00,000 of this was allowed each of m.

York County Activities

To Boost Short Fillers

ORK, Pa., July 16.—Why and how a er cigar to retail at 5 cents can be le with short filler than with long r is to be explained in a circular letter, ch the York County Cigar Manufac-rs association will mail to the jobbing le. The decision to issue a letter to trade was reached at a meeting of association held recently at Red Lion. lembers of the association have ned that manufacturers of long filler rs have been circulating propaganda ch grossly misrepresents the short r cigar. The attack, these members has been particularly malicious and n gone to the extent of representing the short filler used in the majority 5 cent cigars is nothing more than e trash. Such statements, the manu-urers of the short filler cigars say, ot go unchallenged, because they are only unfair, but untrue.

is for this reason that the York nty Manufacturers Association has ded upon the campaign of education nform the jobber that the best 5 cent r on the market is made of short r. Another reason given for the cam-n is because 90 per cent of the cigars ufactured in York county are made hort filler.

Committee Appointed

. E. Brooks, C. S. LaMotte and C. O. ds were appointed a committee to de-some plan to start the campaign. ted blotters, circular-letters and e journal advertising were among the gestions for the publicity campaign, it was finally decided to use the cir-r letter. Those who participated in discussion were: T. E. Brooks, Max sh, H. A. Waughtel, William C. iger, C. S. LaMotte, L. M. Sentz, . Adair, D. A. Horn, J. C. Winter B. M. Hannigan.

en members of the association were ed by President Hannigan to write rs to be used in the campaign and nit them at the August meeting. J. Winter, of the J. C. Winter Co., an-ced that he would give a prize of to the writer of the letter accepted the association. The members ap-ted are: C. S. LaMotte, J. C. Winter, . Ehehalt, L. M. Sentz, T. L. Adair, . Brooks, Charles C. Meads, A. S. ler, Stewart S. Shindler and D. A. n. Not only these men, but all mem-of the association have been request-o write letters, which will be eligible the contest.

fore adjournment, the members of association were addressed by C. L. ier, of Bethlehem, Pa., who was a t of J. C. Winter. At the close of meeting refreshments were served.

ose in attendance were: B. M. Han-n, C. S. LaMotte, John Keller, Quay ich, Charles F. Laucks, Charles F. man, Arthur H. Thompson, C. M. alt, J. C. Winter, Daniel E. Spang-L. M. Sentz, D. A. Horn, W. H. rist, Charles C. Meads, S. M. Downs, Snyder, Ellis Strickler, Horace E. T. E. Brooks, Max Kalisch, Perry schopp, Stewart S. Shindler, H. A. ghtel, Arthur S. Ziegler, C. O. ls, William C. Frutiger, W. H. ler, Paul E. Reichard, B. S. Sentz, . Connor, Vernon D. Frey, Clair , Sterling Knisley, Frank Snyder, ner Sechrist, L. Earl Grove, Stewart F. LaMotte, W. H. Myers, T. L. Adair, David E. Wolf and C. Edward Mate.

Thomas A. Myers Dies

Thomas A. Myers, for over 20 years a members of the firm of T. A. Myers & Co., printers and cigar box manufacturers, died July 8 at his home, "The Cedars," Lincoln Highway, east of this city. He was in his 51st year and had been in ill health for several months. Fraternally he was affiliated with the Benevolent Protective Order of Elks, the Fraternal Order of Eagles, the Loyal Order of Moose, the Improved Order of Red Men and the Patriotic Order Sons of America.

Trade Notes

The Fair & Square Cigar factory, Stewartstown, which had been closed down for 10 days following the death of a member of the firm residing in New York City, has again resumed operation.

David P. Gipe, this city, a former deputy collector of the York office of internal revenue, has gone to Philadelphia, where he has accepted employment as a bookkeeper in a large cigar factory.

C. M. Ehehalt, Red Lion, cigar broker, is on a three weeks' business trip through the New England states.

Alvin Norris, cigar manufacturer, Red Lion, is receiving congratulations of friends upon the arrival at his home of a daughter.

Charles F. Roseman, a member of the firm of the W. M. Gemmill Co., Red Lion, leaf tobacco packers and dealers, accompanied by Mrs. Roseman, have gone to New York City, there to visit their daughter, Miss Corena Roseman, at St. Luke's Hospital, where she recently underwent an operation for appendicitis. Miss Roseman's condition is reported to be improved.

Mrs. Ellen Sechrist, Red Lion, who died July 12 at the age of 60, was one of the oldest women cigarmakers in this county. Her death followed a stroke of paralysis four days previous. Mrs. Sechrist was in her teens when she first learned cigarmaking. For the last 15 years she was employed by C. N. Foreman & Co., Red Lion.

The "Outing" Season

Outings seem to be in favor among the employees of cigar and cigar box factories of this vicinity within the past few weeks. About 400 persons, employees of Bobrow Brothers at Hanover, and their families, participated in the annual outing held at Kuhn's fording, along the Conewago creek, near East Berlin, Adams county, on July 11. Transportation was by automobiles and trucks. A band of 20 pieces, composed of employees of the shop, under the direction of Edmond Frock, furnished music. A large stand was erected from which refreshments of all kinds were dispensed by the shop committee.

An outing was held at Rocky Springs, Lancaster, by the employees of the C. H. Norris cigar factory, Red Lion. The trip was made to the resort in automobiles.

The Kohler & Snyder Cigar Co., the G. A. Kohler & Co., and the Lion Cigar Co., all of Yoe, held a joint picnic at Conewago, a resort along the York Railways line. The picnickers were conveyed to and from the resort by special trolley cars. Several selections were sung in the evening by the Sterling Glee Club.

The employees of the General Cigar Co. branch at Yoe, motored to Hershey, Dauphin county, where they held their annual outing.

The first annual outing of the employees of the Consumers Cigar Box Co., of Red Lion was held on July 13 in a wood along the Susquehanna river, near Long Level. The trip to and from the river was made in automobiles and trucks.

Returns from Holland

D. Dreux, president of D. Dreux, Inc., importers of Sumatra and Java, arrived in New York last Friday on the Cunard steamer *Berengaria*. Mr. Dreux attended all the Amsterdam and Rotterdam inscriptions and obtained a good share of fancy Sumatra and Java wrappers for his customers.

MARSHALL FIELD

NO OTHER CIGAR IN AMERICA LIKE IT
IT IS DIFFERENT
THERE ARE REASONS FOR IT

The manufacturer has devoted his life in the science of tobacco curing, and the art of blending. The objectionable properties which tobacco contains are eliminated, such as Rosin Gum which makes tobacco strong, and the natural Ammonia which makes tobacco sharp and bitey. It is then ripened, mellowed, and blended.

All Marshall Field Cigars are

Very, Very Mild Regardless of Color

Distinctive Quality

Liked by all who smoke them

Marshall Field wrapped with finest Vorstenlanden Java.

GIRARD

America's foremost cigar

Philadelphia Trade on Usual Summer Schedul

Business of Past Week Comparatively Satisfactory—Considerable Increase Over Corresponding One a Year Ago—Bo Sales Better Than Expected—More Life in Leaf Line.

PHILADELPHIA, July 17.—Though retail trade continued very quiet during the week, experience of the dealers were little different from those always encountered as a reaction after the Nation's Birthday and during a spell of such hot weather as has been suffered. Comparatively, however, the week was satisfactory, because there was considerable increase over the corresponding one of last year. Sales of box goods were even a little better than had been anticipated, but counter sales were not quite up to expectations. A round of the trade develops the fact that optimism continues unshaken and the only division of opinion is over the question of how soon activities again will start in and how great will be their extent.

Seasonal quiet maintains in the factories whose largest field of distribution is close by, but those catering to the trade of the Middle West, found no cessation of orders which have been flowing in from a district where prosperity has been continuous.

Dealers in leaf report a greater interest in their lines than has been shown for some time, and they ascribe it to anticipation of a big fall business. All say that new crops are of better quality than old and that there is little haggling over prices. More and more the dealers are reporting the new crop sold before it was placed in the warehouse. Considerable buying is being done for September 1 delivery.

Bayuk Cigars, Inc.

Stock holders of Bayuk Bros., Inc., met in Baltimore during the week and gave approval to a change of name to Bayuk Cigars, Inc. Just as soon as legal requirements can be met, the new title becomes effective. The change was decided on in order more closely to suggest the character of the Bayuk business than the old title. Approval also was given to the changing of the second preferred stock, from an eight to a seven per cent. basis, but with a conversion feature, this being privilege of subscription to common stock. In this connection it may be of interest to know, as it was to the most decided financial interest of those involved, that some years ago owners of the original second preferred stock were given the privilege of purchasing four shares of common for every share of the preferred which they held. The price fixed was ten cents per share. The current price of this old issue stock is now between $58 and $59. None of the common stock was on the open market. A fact in connection with the tremendous increase in value of the Bayuk stock is that all the equities which stand behind it are definite real and concrete. Good will, although of tremendous value, is not chalked up at a high valuation for the sake of boosting assets.

Boosters Have Good Time

There is Bayuk boosting, however, and this was vociferously voiced at the close of last week when the Bayuk Boosters, made up of Bayuk salesmen, journeyed to Atlantic City, 24 strong, headed by Sale Manager Fred J. W. Allen, for a week end glorification on the sands and in the official headquarters the Hotel Schlitz. On the sands of the sea two novitiates were made full fledged members. They were John W. Allen and Edward Collins, club members of the Bayuk Brothers' sales force. Headquarters received a visit during the week from Max Lowenstein of Newark, a Bayuk Brothers distributor, who also visited Atlantic City.

Congress Getting Into New Home

Some slight hindrances prevented the removal last week, as contemplated of the executive offices and factory of the Congress Cigar Co., from the old headquarters, on Second street, to its new factory at Third and Spruce streets. During the week, however, the removal is to be made. Many hundred hands were at work last week in the new building and by the end of the month it is anticipated that all the Congress productio in Philadelphia will be concentrated the immense new quarters. There w enjoyed during the week a visit from La Palina distributor, Charles Bock, the Bock-Stauffer Co., Pittsburgh. Bock had been visiting New York a Atlantic City and stopped en route ho in an effort to expedite increased sh ments.

Eisenlohr Factories Operating a Capacity

A visit to the nine factories of O Eisenlohr & Bros., Inc., has just b made by advertising manager, Doug Irvine. He reports them all operating capacity. The company accepts as a m ter of common place, the news fr Washington that the Federal Trade C mission had dismissed the compla against the firm on the alleged charge fixing and maintaining certain speci standard prices. It was never in do as to the outcome.

New El Producto Warehouse

In order to provide for the increa production which the G. H. P. C Co., has been steadily striving for, gro was broken during the week for the e tion of a two story warehouse on a adjoining the factory at Third and Br streets, running through to Mentor str It is to cost $96,000 and will be of b and correspond architecturally to the factory building. The company now erates three factories in Philadelphia one in Camden in addition to a number throughout the State. It is the eve of opening an additional Ph delphia factory most centrally locate

E. M. Laing, of P. C. Fulweile Bro., 927 Sansom street, returned du the week from a trip through the No ern tier section of the State with filled order books for Ivanhoe, Mac and La Madrid. President Harry Norton, is now a daily commuter to Ocean City.

There was reported during the week death of John H. Mack, farmer to bacco dealer of Marietta, Pa., whose was due to infirmities of age. He 88 years old.

Sig C. Mayer, who for many y headed the Sig C. Mayer Co., at Cherry street., it now operating his at Hellam, Pa., on the El Wadora w reputation long has been established is using the warehouse at 306 New s for a temporary office and sales William C. Christman, an officer former Sig C. Mayer Co., and ass sociated with it at the old address, tinues his affiliation with Mr. May the conduct of the new business, present business is being conducted the title of Sig C. Mayer.

Dr. L. H. Baekeland Hono by France

Dr. L. H. Baekeland, of Yonkers, Honorary Professor of Chemical gineering in Columbia University, just been made *"Officer de la L d'Honneur,"* by the French Rep The insignia was presented in New on June 5, 1923, by M. Barret, the C General of France.

In 1919, King Albert of Belgiu stowed a similar distinction upon Baekeland, making him officer o "Order of the Crown of Belgium.

Dr. Baekeland is specially know his research work in chemistry an chemical inventions, notably Bakelite, etc. He is president o Bakelite Corporation and of the G Bakelite Co. Prior to, and durin war he was a member of the Naval sulting Board, the Nitrate Board other committees of the National search Council. He is past presid the American Institute of Chemica gineers, the American Electro Ch Society and the Inventors Guild.

Market Comment

e market during the month has con-d active, the sales made being a full ge for Kentucky and Virginia ths, and the lower classes of Brights ow in limited supply. Dark Nyasas also sold well, enquiries for the nt cigarette types being difficult to

ports from the Carolinas, Virginia Kentucky give good promise of the now growing with a full planting in sections.

hough the amount of tobacco cleared hand for May is less than the cor-ding month of last year, yet the de-liveries to duty paying factories for the five months show an increase over those of the two previous years, which is remarkable considering the conditions of trade generally in this country.

Legal Lore

(Continued from page 19)

dividual retailer. The Mennen Co. based its schedule of prices on the character of the buyer. If a jobber bought 100 cases, for instances, the price would be so much the same to every jobber. If a cooperative buying exchange, or an individual retailer bought 100 cases, the price would be different than the jobber's price, in fact, somewhat more than the jobber's price. Thus as between different [illegible] buyers the usual uniformity was entirely lacking.

The Federal Trade Commission said this was unfair competition, unlawful preference and discrimination among buyers of the same class, and brought suit. The case was heard before the Commission, which decided that the law had been violated and ordered the Mennen Co. to give every buyer who bought the same quantity the same price. The company appealed to the United States Circuit Court of Appeals, which reversed the Commission flatly and held that everything the Mennen Co. had done was legal. The Federal Trade Commission then appealed, or tried to appeal, to the United States Supreme Court, but failed in doing so, and the case is now closed. The appeal failed because the Supreme Court doesn't have to allow an appeal in these cases if it doesn't want to, and in this case it refused. Appeal in a Federal Trade Commission case, in which the United States Circuit Court of Appeals has acted is a matter of grace, not of right, and while the Supreme Court handed down no opinion in refusing the appeal, it evidently approved the law as laid down by the Circuit Court of Appeals court.

The law is therefore fixed and settled throughout the whole United States that a seller of merchandise doesn't need to make the same price to all buyers who buy the same quantity, notwithstanding Section 2 of the Clayton Act, which provides that "it shall be unlawful for any person engaging in commerce, in the course of such commerce, either directly or indirectly, to discriminate in price between different purchasers of commodities, * * * where the effect of such discrimination may be to substantially lessen competition or tend to create a monopoly in any line of commerce." It is now the law that a seller may divide his quantity buyers into other categories and classes. the Mennen Co. said it gave the jobber a better price because he performed a greater service than the good buyers—and give one class one price and another class another price. It is now the law—although this part has always been the law—that a seller may refuse to sell one class or the other on any terms at all, if he has no monopoly.

The only thing that appears to be necessary under this newly established law is some logical reason for giving one 100-case buyer one price and another one another price. The Mennen Co.'s reason was that the jobber performed more service than anybody else, therefore was entitled to a lower price. Any other reason equally convincing would doubtless be sufficient to justify discriminating selling prices under the Mennen case. And if the seller has no monopoly, his right would probably be upheld to do almost any old thing he liked with his trade without any reason at all, except policy—refuse to sell some at all, sell some at one price, others at a different price, some on one set of terms, others on entirely different terms. None of this is a violation of the Clayton Act unless the effect may be to substantially lessen

EL PRODUCTO *Mild*

Not only is there a shape and size of El Producto to suit every taste, but you can offer your customer El Producto in the colors he prefers—with the absolute knowledge that every El Producto is the same mild but distinctive blend—unvarying in quality, in character and in workmanship.

That's why your customers get the El Producto habit—they are sure that the next smoke will give the real enjoyment they seek.

competition or tend to create a monopoly. Naturally, if I am a manufacturer of account books, selling one twenty-fifth of the total output, nothing I can do with my little business can substantially lessen competition or tend to create a monopoly.

The Mennen case unquestionably gives sellers of merchandise a lot more commercial freedom than for years they have thought they had.—*Copyright, 1923, by Elton J. Buckley.*

Showing Preferences

MUNCIE, Ind., July 14.—Tobacco dealers say pipes are coming into favor with young men. Young women, however, still smoke only cigarettes, the dealers say.

Vermont Tobacco

(*Continued from page 27*)

inches apart and a foot apart in the rows. A pair of horses and a driver with two men handling the plants do the transplanting as fast as the horses can walk.

The 80 acres are divided into seven fields each completely covered with cloth, top and sides. Chestnut posts 12 feet long are set three feet into the ground two rods apart. The posts are all connected with strong wire strung by a tractor and the cloth is fastened to the wires. The cloth on top is new each season, the old top each year being uesd for side cloth the following year. This cloth specially constructed for the purpose, comes in bales containing 500 yards and weighing 400 pounds. A bale will give top covering for an acre.

Fertilizers Necessary

Tobacco land has to be well fertilized and the fertilizer used at the Decker Plantation is a commercial fertilizer manufactured for tobacco, and horse manure which comes from New York city by the car load.

At present about 60 boys and men and 20 girls are employed. Many come from Bellows Falls and North Walpole, going down in the morning and returning at night in auto buses.

The cloth is used to create a special atmosphere in the inclosure, an atmosphere adapted to the development of the Cuban tobacco being raised. At harvest time there are several pickings of the lower leaves as they reach maturity and the leaves instead of the complete plant are placed in the drying houses.

Not From the Emerald Isle

The general manager is Frederick Weissleder and he wasn't born in Ireland either. He has been in this country for nine years and knows the tobacco game from A to Z. This is his first year with the Decker Co. He is the only one on the plantation who knows how to handle the tobacco plant, but seems to be able to get remarkably good results from the help he has.

CLASSIFIED ADVERTISING

It requires no great stretch of the imagination to believe that the tobacco industry will grow in Westminster and become as important as in any part of the Connecticut Valley.

Connecticut

(*Continued from page 29*)

to represent the committee in negotiating a new open account loan of $2,000,000 for the 1923 crop financing. This loan is to be negotiated with the banks in the Connecticut Valley. It is planned to make the first payments on crops to the growers earlier than they were made on the 1922 crop. Secretary W. F. Whitmore took a few days off this week and attended the state golf tournament at New London, Conn.

Pleasure Bound

The week ends now find nearly all of the tobacco packers "out of town." They skip down to the beaches on Long Island Sound for over Sunday.

Edgar Farnham, of the Farnham Tobacco Co., while driving in a limousine last Saturday, was in collision with a car driven by John Hughes, of Rockville, on Ellington street in South Windsor. At the cross roads where the accident happened, trees obscured the view of both drivers. Mrs. Hughes, when the cars came together, was thrown out of the rear window of the car with such force that her skull was fractured and died almost instantly.

It is expected that some of the shade growers will start priming this week.

To Take Advantage of New Law

The Connecticut Valley Tobacco Association, Inc., is sending the following notice to its members:

"Our association agreement in paragraph B, of Section 1, provides that should a satisfactory co-operative marketing act be enacted, either in Connecticut or Massachusetts, we may take advantage of its terms by becoming a corporation in accordance therewith.

"Such an act has now passed the Connecticut General Assembly.

"At a meeting of our directors held on June 19, the following resolutions were unanimously adopted:

"'That the Executive Committee be and it is hereby authorized and instructed to submit or cause to be submitted at any time after July 1, 1923, the date when the Legislative Act hereinafter referred to takes effect, to the members of the association for their vote by postal ballot the proposition that the association proposes to avail itself of the provisions of an Act of the General Assembly of the State of Connecticut, being Chapter 251 of the Public Acts of 1923, and being an Act entitled "An Act Relating to Co-operative Marketing Corporations," and that the association proposes to become a corporation pursuant to the terms of said Act, and be it further

"'RESOLVED, That the directors do hereby recommend to the members that they vote in favor of said proposition, and that the Executive Committee be and it is hereby authorized to inform the members that a favorable vote upon said proposition is recommended by the directors.'

"In accordance with these resolutions a postal ballot is herewith enclosed. This ballot to be counted must be in our hands on or before July 23, 1923."

PIPES & PIPE SMOKING

ome of the Important Roles the Tobacco Pipe Has Played in History

Has Been a Cherished Personal Favorite of Men from Time Immemorial—Artists Have Developed It from Straight Tubes of Prehistoric Periods Into Elaborate Designs—Pipe Production Caused King James to Issue Famous Proclamation.

By Dr. ARTHUR SELWYN BROWN

PIPE SMOKING has played many important roles in history. The pipe has from time immemorial been a cherished personal favorit it of men, and to a large extent of women, since the dawn of history. Naturally, it has received attention of artists, and has been ornamented embellished in innumerable ways. The re- of the artistic care bestowed on pipes since historic times is that we are able to distinsh and classify pipes in accordance with age nationality by their shapes and ornamentan. The early pipes were merely straight es. Subsequently the tubes were bifurcated, branched like the letter Y so that they could smoked through the nostrils. Gradually a vl was developed because of the trouble exienced in smoking tubular pipes when the vdered barks, herbs or gums, or other smok- mixtures, showed tendencies to spill out. wls were supplied to single as well as double ular pipes and, even until about a century ago, rcated clay and metal pipes with double vls were smoked in the market places in many the large trading centers in Central Asia.

Prehistoric Tubular Pipes

The pipes smoked by prehistoric men in rope appear to have been of the tubular va- y and made from the hollowed leg-bones of ds and animals. These were often marked, ved, colored and otherwise ornamented. The bylonians and other Oriental peoples smoked es made of clay, metal and many other maials. These pipes had small bowls. The yptians, Greeks, and probably the Romans, oked similar pipes.

The museums in Switzerland contain many e specimens of pipes found in valleys in the s and in northern Italy. These pipes were covered on sites of battle fields, prisons and itary camps. They vary from simple clay es with short bowls and stems up to metal es decorated richly in animal and floral dens or representations of animals and the ds of men. Many of these pipes are of considerable artistic value and show the care bestowed in their manufacture. The metal pipes are quite numerous and show that at one period European pipes were largely made of metal. They also indicate a highly developed knowledge of the casting of metals and alloys on the part of the pipe-makers. There is a decided divergence in the opinion of experts regarding the antiquity of these pipes. Many of them which are shaped like modern tobacco pipes and are richly ornamented are believed by some authorities to have been owned by Roman soldiers of the armies of Julius Caesar. They point out that

The Columbus pipe, a meerschaum which was shown at the World's Fair at Chicago in 1893

the pipes were found on sites formerly used as military camps by the armies of Caesar and other Roman generals. They were accompanied with other articles which appeared to belong to débris from Roman camps. These authorities, however, are opposed by others who assert that we have no direct evidence that the Romans smoked and that débris from camps and market places in the Medieval Ages were also found with the pipes. It seems to these men that it is better to attribute the period of the manufacture of these pipes to the Middle Ages rather than to earlier times.

Controversies as to Discovery of Pipes

In controversies of this character it is often difficult to determine who is right, owing to the lack of adequate details regarding the actual circumstances surrounding the discovery of the pipes. The men who dug the pipes up would be easily able to determine the correct period of antiquity to which they belong. When the pipes are studied in cases in museums, the judgments formed can only be taken as hypothetical and not final.

The appearances of the Swiss pipes indicate that they were made in a period when art flourished and when the common taste of the public was much higher than it is today. The pipes are all shaped on graceful lines and the character of the ornamental details of the decorations is chaste and dainty. Such conditions are found in Roman art, and that of the periods before the renaissance.

Found in Ruins of Pompeii

Pompeii, a Greek settlement in Italy, was destroyed by an outbursting of lava from Mount Vesuvius in A. D. 79. The lava covered up the town until 1753, when the people of Naples began excavations.

These disclosed that many of the buildings were preserved intact with all their pictures, wall decorations and furniture. We are able, with their aid, to get a fine appreciation of the artistic status of the Greeks and Romans of that age.

The city and its people were Greek, but they were trading with the Romans, who were a commercial and wealthy people, like the British in our day, who purchased the Greek art works. From a study of the ruins of Pompeii we learn that the Greeks introduced into their homes the love for fresh air, sunlight, flowing water and flowering plants and ferns.

In the rooms, courts, street squares and even in the commercial markets in Pompeii we find decorations of garlands of flowers, fruits and leaves, birds, fishes, moonlight, starlight and sunshine pictures and beautiful sea and landscapes. The towns and cities of Latinized Greece and the

Roman settlements in Italy were very beautiful places in the early years of the Christian era.

The people loved beautiful things and surrounded themselves with them. Their thoughts were beautiful, as their literature shows, and they lived among the most beautiful surroundings that money would buy. It is evident that the more artistic pipes found in the camp sites in the Alps would be suited to such a people.

Fresco paintings from inner rooms of Pompeiian houses exhibited in the Metropolitan Museum of Art, New York, afford Americans good opportunities to study the extraordinary luxuriance of middle-class dwellings in Italy at the dawn of our era. The beauty of the decorations in Pompeii excells that in the finest palaces of the royal houses in Europe today.

Byzantine Ornamental Pipes

The Asiatic impulses which characterized the brilliant and delicate art details of the Byzantine period greatly impressed the European peoples during the sixth to the tenth centuries and the end of the Middle Ages. Studying the details of the ornamentation of the antique Swiss pipes, we find it difficult to trace in them any of the Persian theme suggestions which are so noticeable in art works of the Byzantine periods. The contours of the pipe ornaments are of a heavier type than those found on articles of Byzantine manufacture. Unless the Swiss pipes belong to a comparatively modern period, their decorations point to them being of Roman workmanship.

Smokers Found by Early Explorers

There is little doubt that prehistoric man smoked, and there is evidence that the early Asiatic people smoked. Explorers relate that when they first visited savage peoples they discovered them smoking or chewing tobacco. The aborigines of Australia smoke and chew tobacco. The people of the Andaman Isles smoke clay pipes. The Veddahs, or wild natives in Ceylon, were found to chew tobacco. Primitive races in the East Indies, New Guinea and the Malay Peninsula were all found to be smokers when they were first visited by Europeans.

Throughout Africa the smoking of local tobacco has from time immemorial been popular. It appears probable that the negroes of Africa at a very remote period learned the art of tobacco smoking from Mesopotarian and Asiatic peoples.

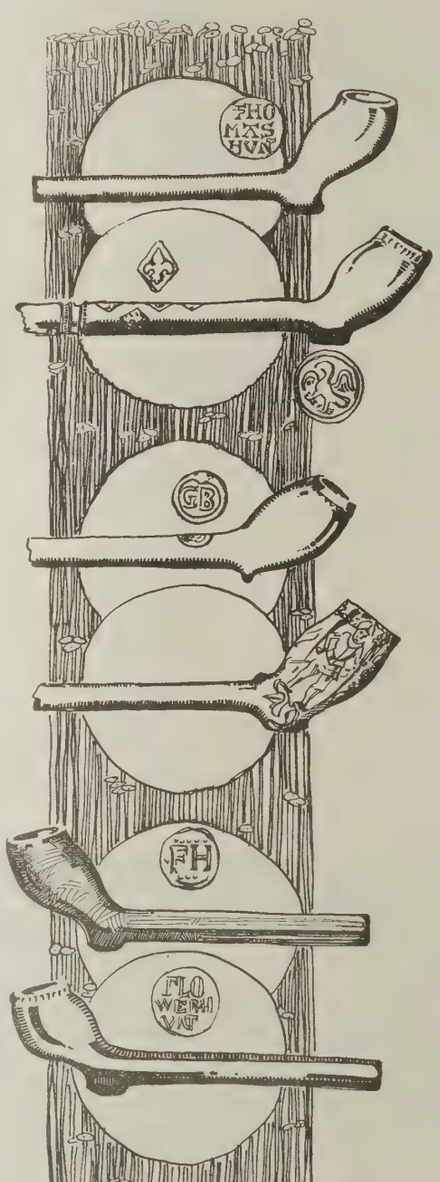
Tobacco smoking and chewing were practiced in North and South America since the remotest times, and these customs were most probably brought over from Asia by the first immigrants which constituted the earliest American races.

The evidences of the first uses of tobacco all seem to point to the spreading of the customs from Asia at a very remote period in history. If this is correct, it furnishes the finest example we possess of an invaluable gift bestowed by primitive man upon all subsequent ages—a gift excelling in value gold and all the precious stones, which, in long ages after its bestowal, caused a poet to exclaim:

"Friend of my youth, companion of my later days
What needs my muse to sing thy various praise?
In country, or in town, on land or sea,
Tobacco's still delightful company.
In joy or sorrow, grief or racking pain,
We fly to thee for solace once again,
Delicious plant by all the world admired,
'Tis pity thou, like man, to ashes soon art doomed!"

Indian Method of Smoking

The introduction of American tobacco into Europe was due to Columbus. The great navigator wrote in his log-book after discovering the island of San Salvador, on October 12, 1492, the following interesting observations regarding the Indian method of smoking at that time:



"In the middle of the gulf between the islands of Santa Maris (or Rum Cay) and Bernandina I found a man in a canoe carrying a piece of bread about as large as his fist, a gourd of water, and a bit of reddish clay reduced to dust and then kneaded, and some dried leaves which must be a thing very much appreciated among them, because they had already brought me some as a present at San Salvador."

Leaves Were Undoubtedly Tobacco

There can be no doubt that the dried leaves which the natives of the West Indies treasured more than gold and pearls was tobacco. They knew from experience what a later poet expressed in verse, that one of the supreme excellencies of tobacco is that:

The savage in his wild estate,
When feuds and discords cease,
Soothes with the fragrant leaf his hate,
And smokes the pipe of peace.
Long may tobacco peace create,
And banish strife afar,
Soon may world history relate:
"Smoking has banished war!"

The Indians who were first seen by Columbus smoked tobacco in the earliest known manner by burning the powdered leaves on a little clay hearth and inhaling the smoke. Primitive, prehistoric men smoked that way until tube-pipes were invented. It is interesting to learn from the notes of Columbus that the American Indians cultivated this primitive smoking custom until the fifteenth century.

The first four pipes above are early clays of the 16th to 18th centuries, found in London. The two lower pipes are 17th century clay products found in Bristol

"Tobacco Muskets"

Las Casas, in his *Historia,* tells us that Columbus sent two men, Rodrigo de Jerez and Luis de Torres, a Jew who was engaged as an Arabic interpreter, fifty miles into the interior of Cuba to interview and observe the natives. And the historian says:

"These two men found on the way many people, men and women, going to and from their villages, and always the men with a brand in their hands, and certain herbs in order to take their smokes, which are some dry herbs put into a certain leaf, also dry, in the manner of a musket formed of paper, like those the boys make at Eastertide. Having lighted one end of it, by the other they suck, absorb, or receive the smoke inside with their breath by which they become benumbed and almost drunk, and so, it is said, they do not experience any fatigue. These *muskets,* as I shall call them, they call *tabaco.*

This account gives us our first description of Cuban cigars. Later observations of Las Casas indicate that the Indians in the West Indies chewed tobacco and used snuff. Their tradition indicated that smoking with them was a custom of great antiquity.

Early Indian Smokers in Espanola

Gonzalo de Ovieda observed in 1514 on the island of Espanola that: "The Indians of this island have, among other vices, a very bad one which is that of taking smoke, which they call *tabaco,* in order to lose consciousness; and this they do with the smoke of a certain herb. . .

"They take it in this manner; the caciques and chief men have small hollow sticks a few inches long and of the thickness of a little finger. These pipes have two channels which merge into one in the shape of the letter Y. The double end they insert in their nostrils and burn the dried leaves in the single end. These pipes are polished and finely manufactured. The smoke they inhale the smoke until they fall senseless and lie for long upon the earth unconscious, drunk and wrapped in profound slumber."

Soothing Effects Mistaken for Drunkenness

Ovideo and other writers on early American history appear to have mistaken the sleepiness of Indian smokers for drunkenness. There are many references to the narcotic effect of tobacco on the natives. The truth seems to be, however, that the Indians smoked in their leisure moments and then fell asleep, not from any poisonous effects of the "herb" but from its sweetly soothing influences upon them. They cherished tobacco as a

Sacred substance! sweet serene;
Soothing sorrow's saddest scene;
Scent suffusing, silv'ry smoke,
Softly smoothing suffering's stroke—
Solacing so silently—
Still so swift, so sure, so sly;
Smoke sublimated soars supreme.
Sweet soul-sustaining stream!

Spaniards Quickly Followed Example of Indians

The effects of smoking upon the Indian, whether they were good or bad, attracted the attention of the Spaniards, and the historians all relate how quickly they became the "victims" of tobacco's charms. They felt like the writer who said:

Sweet smoking pipe; bright, glowing stove,
Companion of my retreat,
Thou dost my gloomy thoughts remove,
And purge my brain with gentle heat.
Tobacco, charmer of my mind
When, like the meteor's transient gleam,
Thy substance gone to air, I find
I learn, alas, my life's the same!
What else but energized dust am I?
Thou showest man what his fate shall be;
And while thy glowing ashes die
I see, some day, I'll fade like thee!

Sir Walter Cannot Fade from History

Sir Walter Raleigh is the popular hero English-speaking peoples praise for the greatest services rendered to pipe smokers. He is

nighty smoker and fought against prejudices in England in favor of universal smoking. He, undoubtedly, made smoking fashionable in Europe at a time when such missionary work was urgently needed.

Aubrey, in his memories, tells us that Raleigh was the first that brought tobacco into England, and into fashion. In our part of North Wilts, near Malmsbury, it came first into fashion at Sir Walter Long's. The first pipes were made of silver. The common people made pipes of walnut shells and straws. I have heard my grandfather say that in the large mansions one silver pipe was handed around from guest to guest at a smoking party."

Quite Properly Lauded

Raleigh is lauded by many writers as the first to bring tobacco into England. The truth is, however, that many adventurers before Raleigh carried tobacco to England and induced their friends to smoke it. Raleigh's glory is due to the fact that he made pipe smoking popular in England and subsequently in Europe and all over the world. He was tobacco's greatest knight errant.

About 1577, pipe smoking was commonly seen in England. In 1587, the satirists began complaining about the general prevalence of the new custom. Every gentleman of the day studied to smoke tobacco gracefully. Ben Jonson, in his great play, *Every Man Out of His Humor,* introduces Sogliardo, so that he may describe social customs of the time. He describes Sogliardo as "an essential clown, yet so enamored of the name of gentleman that he will have it though he buys it. He comes up every court term to take tobacco."

We are told by other writers in Elizabeth's time that "The hangers on of society, the needy cavaliers, the hotel sharpers, the captains of the Boabdil sort, made a profession of the art of smoking."

Rowlands relates how, in an inn in 1610, a country knave was cheated in London by a teacher of smoking. Here is the expensive lesson:

"I'll teach thee (do observe me here)
To smoke tobacco like a cavalier;
Thus, draw the vapor through your nose and say,
'Puffe, puffe, it's gone, aromatic smoke away!'"

Smoking Rules for Beginners

Many books, of course, were written and published, which professed to teach the art of smoking. From one of the latest of these, written in the nineteenth century, we find the principal doctrines were, with respect to pipes, those dealing with form, weight and mounting. One says:

"The best pipe for beginners is the ordinary straight-stemmed billiard pipe with upright bowl. A light pipe will permit the novice to give more attention to the drawing and expulsion of the smoke than a heavy one. The smoker's innate taste and character is shown in his pipe mounting. A careless man will smoke a clay or cherrywood pipe. But a man of refinement requires a well-made pleasingly mounted pipe just as urgently as a well-mounted umbrella handle or walking cane."

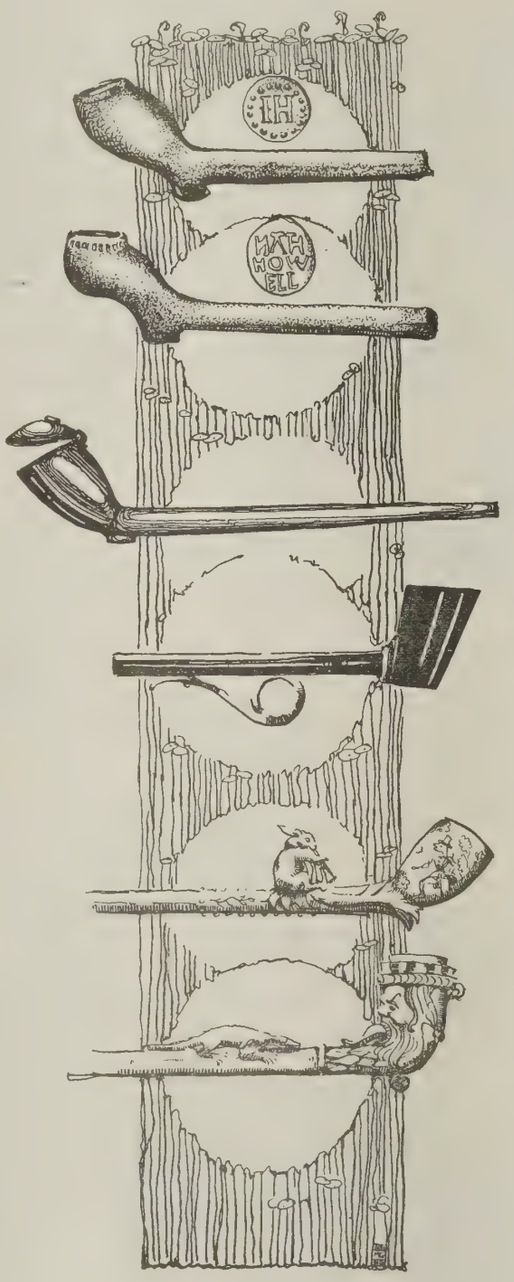
Then we are commanded as follows: "Lay these rules to heart:

"First—Smoke as slowly as possible and for these very sufficient reasons, viz., in order that too much of the aromatic essence of the tobacco be not evaporated too early; and also to avoid overheating the pipe.

"Second—The pipe should not be smoked in a draft, because any little breeze will cause the tobacco to burn more quickly than is desirable.

"Third—Always load the pipe immediately after smoking it. By this precaution you will keep dirt and other matter out of the bowl.

"Fourth—Take care in lighting up to see that the flame ignites the whole area of the exposed tobacco. Otherwise the smoke cannot be drawn easily and freely and the tobacco will burn unevenly.



"Fifth—When one pipeful has been smoked allow the bowl to cool completely before the second charge is lighted. This is a most important matter, because most authorities on smoking are agreed that continuous smoking is always harmful to good pipes.

"Sixth—When you notice your pipe begins to foul clean it with great care. Smoking is only delightful when the pipe draws freely and cleanly.

"Seventh—Do not draw the smoke into the lungs or nose. Simply draw it into the mouth cavity and then expel it through the lips.

"Eighth—Avoid expectoration when smoking. It is an evil habit due to unskillful smoking. A good, clean pipe smoker never needs to expectorate. Expectoration is a sure sign of smoking incompetence.

"These are the main rules for smoking. Very simple you see, and guaranteed to be effective.

The two pipes at the top are clays of the 17th century, found in Bristol, Eng. The third pipe from top, with metal cover, was found in Freiburg, and is in the Freiburg Museum. The fourth pipe is a curious iron product found in the Alps, and now in the Lausanne Museum. The two lower pipes are curiously decorated French specimens of the 17th century

The results of studying depend on the genius of the student; but if these suggestions are carried out, I can promise with confidence that no smoker need despair of becoming a good smoker and of being the possessor of a fine pipe and good smoking requisites. A good workman always insists on being furnished with good tools."

From England, smoking gradually attracted attention in Europe and English fashions were closely copied.

American tobacco was at first thought to possess great medicinal value, and it was sold in the drug stores. Then it was made a special business because the apothecaries could not handle the business. These early tobacconists were great propagandists and advertisers. They engaged the greatest artists to design their trade signs and literature. Hogarth was especially celebrated for the sketches he did for the English tobacconists.

Hone, a popular writer in the seventeenth century, relates in his Table Book that a man named Farr opened a tobacco shop on Fish Hill Road, London, and attracted a lot of customers away from another tobacco shop on the opposite side of the road by writing below his trade sign the following: "The best tobacco by Farr." The injured tobacconist replied to this with a notice appended to his trade sign which stated: "Far better tobacco than the best tobacco by Farr!"

Pipe-Making Brought Forth Interesting Proclamation from King James

The pipe-makers became people of consequence through the great demand for pipes. They had their manufacturing centers, their markets and trade guilds. The following proclamation, made by King James of England, relates to the first charter of the tobacco pipe-makers, and is an historical document of importance worthy of quoting in full. It says:

"Whereas many of the poorer of Our subjects have heretofore lived by the trade of making tobacco pipes, but for want of power to retain and keep their apprentices and servants in due obedience, and to restrain others from intruding upon their art, the ancient makers have not so well prospered as was desired. For prevention of which inconveniences, and for reducing the workmen in that trade to such a competent number, as they might be governed after the example of other societies, who flourish by ranging themselves under good orders, We did by Our late charter incorporate a selected number of the most ancient and such others as they for skill and honesty should admit into their society (Charter of Oct. 6, 1619); thereby prohibiting all others, who were not mentioned thereof, to make any sort of tobacco pipe within Our realm of England or dominion of Wales; and thereby also commanding, that no person or persons, directly or indirectly, should buy tobacco pipes to sell again, or from others than the known members of the said Society.

"Yet, nevertheless, being lately informed by certificates from sundry of Our Justices of Peace of our counties of Middlesex and Surrey (London City) that divers obstinate offenders had fortified themselves in their houses with weapons, and, in contempt of Our royal authority, resisted them, coming with the several warrants of the Lord Chief Justice of Our Bench, and the other Justices of the Peace within Our City of London, and the said counties of Middlesex and Surrey; and also that there were divers ill-disposed persons (who delight in opposing all good orders) contemptuously maintained these underhand offenders, some by harboring the unlawful makers of tobacco pipes secretly in their houses, there to make them contrary to Our Charter, to the end to partake of the stolen profit thereof; Others, by buying secretly these under hand made articles, in contempt of Our Authority, and with an evil intent of overthrowing this Society which We have sought to establish.

"Now, Therefore, that by the presumptuous example of these disobedient persons others may not be encouraged hereafter by impunity to presume to resist and condemn Our Royal Commandment in matters of greater moment, or to withstand the authority of magistrates and government, These are to charge and clearly command, that no persons whatsoever within this Our realm of England and Dominion of Wales

HITTING A COMMUNITY PIPE IN TURKEY

The World and his pipe, by Hy Gage

sall hereafter presume to make any manner of tobacco pipes, but such as are here or shall be members of the said Society; nor shall presume t harbor in their houses any tobacco pipe-makers to use their trade there who are not members of the said Society; nor that any person or persons (especially those who buy tobacco pipes to sell again), shall at any time, or in any place, buy or obtain by any means, directly or indirectly, any tobacco pipes whatsoever, from any under-handmaker or others, but only from such as are known members of the said Society, and that at their Common Hall, or other known warehouses appointed, or hereafter be appointed, where they may be bought by Our loving subjects, upon pain of Our high displeasure, and such punishments as are due for such contempts, whereof We shall require a strict account by proceedings against the offenders in Our Court of Star Chamber; Further commanding, that if at any time hereafter any person shall be so audacious as to fortify himself in his house, or in the house of another, or withstand Our will and pleasure herein, or to resist Our authority given and imported to our Lord Chief Justice and others, in search or apprehension of them, or any of them; Then We do hereby will and require, that sufficient power be had and taken by such who shall have such warrants, to apprehend such obstinate and contemptuous persons, and, to carry them before Our said Chief Justice, or other Justice of the Peace, that punishment may be inflicted on them in the severest manner Our laws will permit by imprisoning their bodies until they have put in sufficient suretie for their behavior afterwards.

"Hereby, further, clearly charging Our Attorney General for the time being, that he cause all and every such wilful and disobedient persons, for such then high contempt in this behalf, to be prosecuted in Our Court of Star Chamber, (where Our will is they shall be sharply punished), according to the measure of their audacious and bold resistance of Our royal commandment. And to this intent that these frauds and abuses may the better be found out and punished, our pleasure is, that it shall, and may be, lawful for any two or more of the members of the said Society, together with a law officer, to enter into any suspected place or places, at lawful and convenient times, then to search for, and find out any under-hand made, or sold tobacco pipes; And all such so found to seize, take and carry away and safely keep them to be disposed of according to the tenor of Our said Charter.

"And lastly, for the full execution of this Our Royal Commandment, We will and require the Lord Mayor of Our City of London, for the time being, and all other Mayors, Sheriffs, justices of the peace, bailiffs, constables and all other officers and ministers whatsoever; that they and everyone of them in their several offices and places be from time to time aiding and assisting to the Master, Wardens and Society of Tobacco Pipe Makers in the due execution and accomplishment of this Our Royal Will and Commandment as they tender Our pleasure and will answer the contrary at their peril.

"Given at Our Court at Theobalds, the seven and twentieth day of May, 1620, in the 18th year of Our reign of Great Britain, France and Ireland."

Portrays Struggles of Pioneer Pipe Makers

This famous proclamation pictures some very interesting stories and shows some of the struggles the pioneers in the manufacture of pipes and other smoking requisites had to contend with.

The continental countries established pipe-making and marketing centers like those in England and formed pipe-makers guilds. The United States is the only important nation which never had such a guild.

The establishment of the guilds in Europe led to a rapid development of the tobacco industries and established them on such sound lines that they have ever since followed sound and progressive policies.

Tobacco Pipes of the World and the Universality of Pipe Smoking

No Custom More Popular Among Men the World Over, Than Pipe Smoking—Undoubtedly an Ancient British Practice—Aptly Compared to Elias' Cloud—Brief Descriptions of Pipes Peculiar to Various Parts of World—Pipe Growing in Favor

By HERBERT J. LAUGHTON

SMOKING of pipes is universal. No custom is more popular among men, the world over, than pipe smoking. It is an exceedingly old custom; but it has become more popular than ever in recent years. Credit for this principally due to Sir Walter Raleigh. There appears to be no doubt that pipe-smoking was an ancient British custom. Various herbs and barks of trees were used in place of tobacco. The early Atlantic navigation brought tobacco to England from the West Indies and Central America and taught their friends to smoke. It remained for Sir Walter Raleigh to make smoking popular. He did this at great personal expense by presenting valuable silver and gold pipes to distinguished Englishmen and by giving numerous smoking parties. Such parties were very popular in England and on the Continent in the early days of tobacco smoking. The guests were always carefully selected and they were furnished with pipes, tobacco and ale. The parties lasted well into the early hours of the morning and were celebrated for the wit and pleasantries which often sparkled.

Raleigh's devotion to the pipe continued until his death. The Dean of Westminster, who was present at his execution, wrote: "He ate his breakfast heartily, and smoked his tobacco pipe before he went to the scaffold." Another writer of the period, Winstanley, stated: "Sir Walter Raleigh is reported to have had three tobacco pipes in his possession when he went to his trial."

Smoking Spread Like Elias' Cloud

An early writer on tobacco, Dr. Everard, speaking in 1659, about the progress of smoking in Europe, said:

"It is like Elias' cloud, which was no bigger than a man's hand, that has suddenly covered the face of the earth. Holland, Scandinavia, Germany, Poland, Arabia, Persia, Turkey, almost all countries, drive a trade in it. No other commodity has caused so many merchants to advance from small fortunes to the ownership of some of the finest estates in the world.

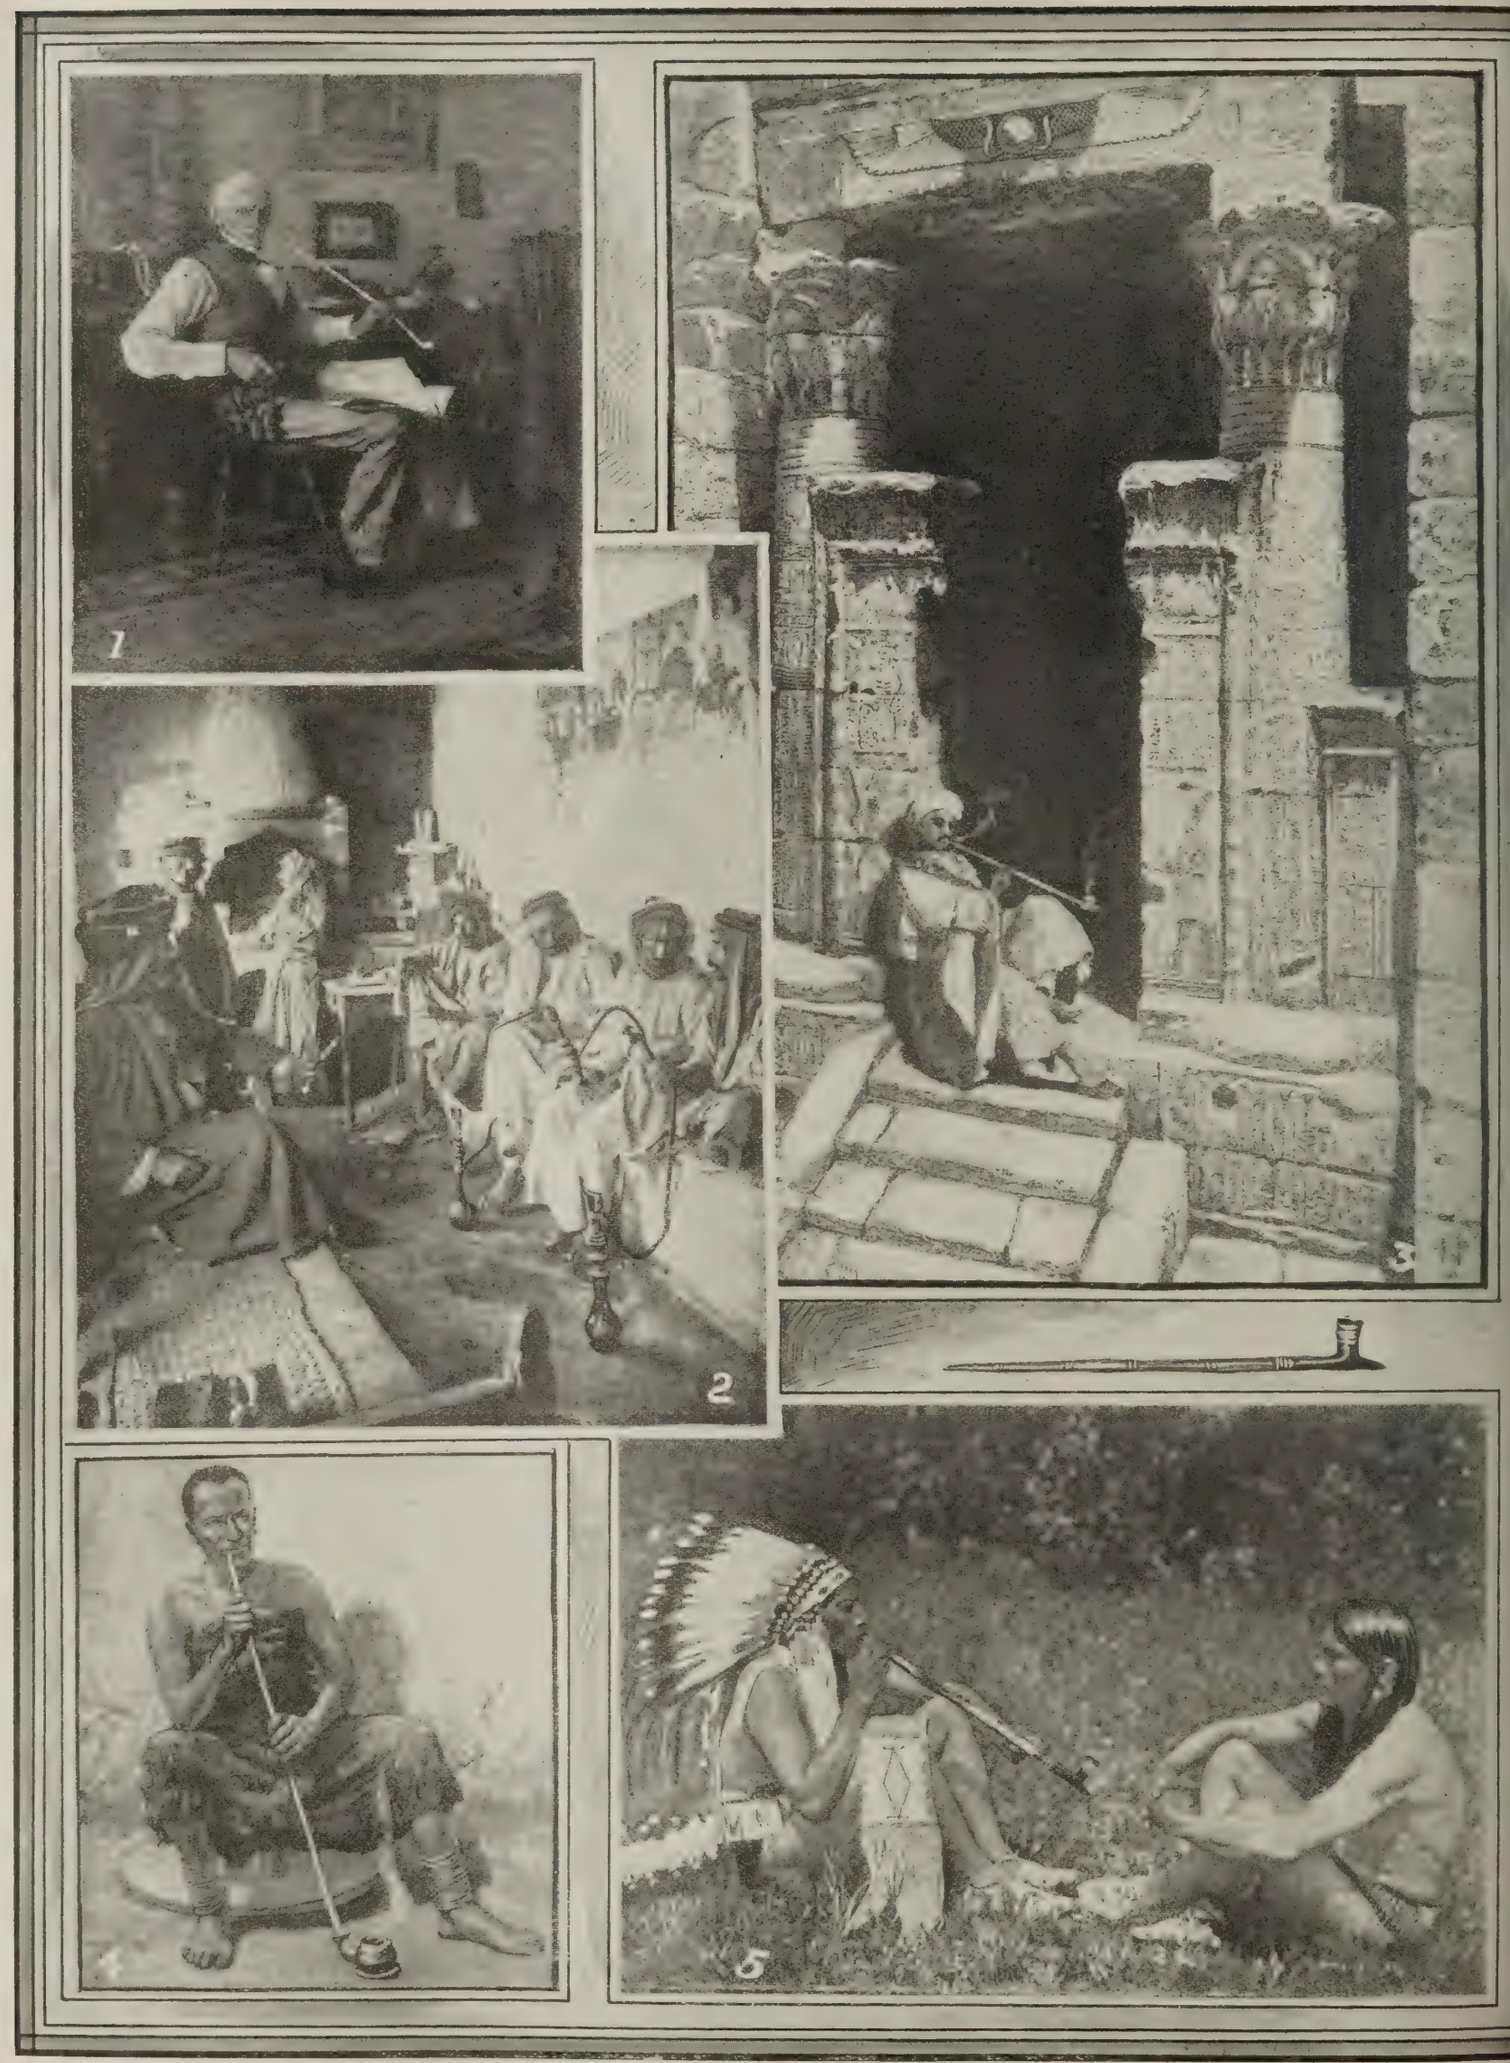
"Sailors are now supplied with tobacco for the longest voyages; soldiers smoke while on the night watches; farmers, ploughmen and working people plead for it, saying it brings great refreshment to them. Scholars smoke much, and many serious and great men use the pipe to such an extent that tobacco has now become not only the physic, but also the meat and drink of many men, women and children. In other words, it is so fashionable that there is no living without it. There is great commerce in tobacco and pipes and many druggists, grocers, tobacco shops, taverns, inns, alehouses, victuallers, carriers, cutters, dryers of tobacco and pipe-makers deal in it."

Another writer tells us that in 1661: "One Everard, a Justice of the Peace in Westminster, ere I was stirring, sent a sergeant and 34 soldiers for me to Whitehall. He had seized that night about sixty men, supposed fanatics, very despicable fellows, many of whom were elderly, some being water-carriers and some had been Parliament-soldiers. Many of these men were laborers. They were kept under guard all night in a large room and then committed to the Gatehouse prison. I was taken into their guard room at Whitehall and thought it looked like a part of Hell. Some of the prisoners were sleeping, some were swearing and fighting, while others were smoking tobacco. On a shelf in the room I saw about two bushels of broken clay tobacco pipes, and in the grate about a ton of tobacco ashes."

A Frenchman's Observation on Smoking

Jorevin de Rochefort, a French visitor to England in 1672, related the following experiences he had during a visit to a friend in Worcester:

"The supper being finished, they set on the table half a dozen pipes and a packet of tobacco for smoking, which is the general custom, as well among the women as men, who think that without tobacco, one cannot live in England because it dissipates the humors of the brain.



"While walking about the town, I was asked by my friend if it was the custom in France, as it is in England, for school children to carry in their satchels a pipe of tobacco which their mothers had carefully filled for them, it serving instead of breakfast; and at the proper hour, the children gave up their school work to smoke their pipes and receive instructions in smoking from the schoolmasters, this being done in the belief that pipe-smoking was essential to good health. This question reminded me of a Spaniard who was a confirmed smoker. I met him in a seaport in Calabria, Italy, where we were delayed by storms on a trip from Malta. He was not able to procure tobacco in the town, and was so desirous of smoking that he cut off a piece of the ship's hawser rope, chopped it up and filled his pipe with it and smoked it in place of tobacco. I also met an Irishman, 24 years of age, who had smoked tobacco all his life. Falling sick, he was forbidden to smoke because tobacco was a great dryer of the body. He submitted to the restriction for some time, but his health became much worse, and he was melancholy. Finally he could eat nothing and craved tobacco, which was at last permitted to him. He rapidly was restored to perfect health by its use. I have also known many others who were not content with smoking during the day, went to bed with their pipes in their mouths; others who have risen in the night to smoke a pipeful; all of these people enjoying smoking as drinkers would have enjoyed a tankard of Alicante or Greek wine."

Smoking Enjoyed Four Centuries Ago

The old writers just quoted show us a smoking world four centuries ago that differed little from what we can see around us today. The pipe, as far back as we can trace its history, always appears to be a natural companion of man, and many have echoed the poet Arbucle's verse, which says:

> "Blest be his shade, may laurels ever bloom,
> And breathing sweets exhale around his tomb.
> Whose penetrating taste first taught mankind
> The charms and solace smoking brings the mind.

The first tobacco pipes used in England were made of clay. American tobacco in the 17th century was smoked in silver and metal pipes.

1. Unwelcome News; a painting by C. Y. Turner, N.A. 2. Arabs enjoying the "weed" in a coffee-house of Mosul. Copyrighted by Underwood & Underwood. 3. An Arab smokes his pipe in the doorway of a side chapel of the temple of Edfu. 4. African native smoking a heavy terra-cotta bowl pipe. 5. An American of the old stock taking a few fragrant whiffs.

in ancient Britain the clay pipe was almost versally used.

One of the many celebrated clay pipe-king centers was in Broseley, Shropshire, gland. The Broseley clay pipes and church-rdens have long been world famous. Some the most distinguished English pipe makers l their factories in that district, and the rec-ds of the Pipe Makers' Society contain numer-s names of pipe makers in Broseley, Bewdley, nlock, Benthall and Hull. Before the rail-ds were built these manufacturers sent their es and clay tobacco jars by wagon to Bewd-, and thence down the Severn by barge to stol, whence they were shipped to London or ris.

Family Pipe Shops

n the remote past, each English family had own pipe shop where its pipes were made by rking and moulding. Subsequently kilns re established which did the burning. When demand for pipes increased, factories were ablished, and when these became established pipe-making industries in the homes gradu-decayed. The principal business of the vn of Wenlock at one time consisted in the nufacture and trading in clay tobacco pipes. The London taverns chiefly stocked Broseley ys and churchwardens, and the consumption these was enormous in an age when nearly eryone smoked. Even today, a Broseley rchwarden is a favorite pipe in English ntry houses.

Broseley pipes were chiefly made plain. But special trades, they were beautifully or-mented and tinted with various colors.

The Thursfield and Bragge collections of lopian pipes in the British Museum contain out 900 specimens besides specimens of clay pes. "From every quarter of the world and arly every date, all relating directly to the use tobacco, or some other smoking substance, d tending to show that the use of clay pipes s practically universal, and that when the rginian weed was brought over and King mes fulminated his counterblast against to-cco, smoking was almost universal, and dated om the earliest times, and indicated that some rm of narcotic had been smoked or chewed all the tribes of men in all the ages of the rld," as one of the Shropshire historians said.

The manner in which the clay pipe-makers tended that their signs and trade-marks on the urs of the pipes should be read was as fol-ws: Take the bowl between the fingers with e stem of the pipe pointing towards the reader d the flat part of the spur facing him. The tters may then be found to be the right way . If the pipe is held in any other manner, fficulties will be found in reading, the inscrip-ons.

ipe Makers Regarded Themselves as Artists

The pipe-makers took great pains in stamping eir initials, monograms and trade-marks on eir pipes. Many of these exist in the Euro-an museums today and prove interesting ex-bits. The pipe manufacturers considered emselves artists and took pride in the fine nish they put on all their works. The chaste-ss of the designs of their monograms indi-tes the care they took in manufacturing and nishing these pipes.

There were many important clay pipe-making nters in the 16th to 18th centuries in France, elgium and Holland. The French clay pipe akers imitated the British types for their for-gn trade, but made most artistic pipes for rench trade. Many of their clay pipes seen day in the museums are elaborately adorned ke the finest meerschaums. The clays made in elgium, Holland and the Scandinavian coun-ies were very plain, and their bowls were aped more squarely and had a steeper angle slope away from the stem than the British pes did.

Carved Briar and Wood Pipes

The briar and carved wooden pipe is a comparatively modern English invention. The first briar pipes were made in the South of England from local woods. Then French, Italian and Moroccan briars were used and the industry spread to France, Italy and Switzerland.

St. Omer was the principal clay pipe-making center in France. In that district were many pipe factories and porcelain pipes, often adorned with paintings and sculptures, were made. Wooden pipes turned in lathes and fancy woods and lined with clay bowls were often made there. The French also made special pipes of agate, amber, rock crystal, gold, silver, ebony, ivory and other valuable substances. The French were celebrated for the grotesque figures they carved on their pipe bowls.

The Russian and Scandinavian pipes were generally plain. But those made of wood were often well carved. These wooden pipes were often furnished with copper or bronze mouthpieces.

German Pipes Were Large and Heavy

The German pipes were larger and heavier, and of a different shape from all others. They were copies from the Dutch and Danish porcelain pipes with cherry-wood stems and had large, long, heavy, pictured-decorated bowls. The Germans were also fond of meerschaum pipes which they made of enormous size and ornamented in most extraordinary ways. The German tobacco bags, which the students and military men carried, were also large and heavy things like flour sacks closed with a string at the top. They were made out of fancy cloths or leather.

Austrians Believe in Fine Pipes

Vienna was once called the city of smokers, and the Austrians believed that a man could never pay too much for a good pipe or for good tobacco and smoking requisites. They smoked porcelain bowl pipes of a lighter make than the Germans or wooden pipes made from the roots of a dwarf oak which were generally finely carved and ornamented.

The briar pipe during the nineteenth century became the universal favorite, although for a time its supremacy was challenged by South African calabashes and British corncobs.

Oriental Countries Have Water Pipes

Persians taught all Oriental countries the delights of the water pipe, which in India, China, Turkey, Arabia, Egypt, Morocco and elsewhere, has long been the favorite type of pipe. It is known in each country by a special name such as Chibouque, Narghile, Hookah, etc., but it is made and smoked on the same general principles.

In the countries which favor the water pipe, the working classes and all who travel much, smoke small pipes of the clay pipe type, because they are so portable. They smoke the water pipes when in the taverns or in their homes.

A Most Unusual Legend

The natives of Persia have a legend about the origin of the water pipe which may have been founded on a truth. It is related that a young man, son of a wealthy prince, having lost his favorite wife, went to a priest for consolation. The priest, who lived in Shiraz, was greatly moved by the nobleman's trouble, and said to him: "Go, my son, to thy wife's tomb, and in the garden where it is situated search for a weed like this. Pluck and dry it. Then put it in a bowl like this, apply a light and smoke it by drawing air through the long stem. This instrument, or pipe, will serve you as wife, mother, father and brother; it will cheer you and make you forget all your bereavements, and, above all, it will ever be a wise counsellor, and it shall teach your soul wisdom, charitableness and will give you great solace and joy."

Many a native of Shiraz, and other Oriental cities, has found the truth of the poet's teaching, that:

"In good tobacco oft is found,
Lessons of rare instructive type;
And, so with calm, contented mind
I live, and smoke my faithful pipe
In reverence where e'r I roam—
On land, o'er water and at home."

Cupid's Smoke Shop

In Asia, many a gallant has felt that:

When Cupid open'd shop, the trade he chose
Was just the very one you might suppose.
Love keep a shop?—his trade, oh! quickly name!
A dealer in tobacco—oh, for shame!
No less than true, and set aside a joke,
From oldest times, he ever dealt in smoke;
Than smoke, no other thing he sold, or made;
Smoke all the substance of his stock in trade;
His capital all smoke, smoke all his store,
'Twas nothing else; but lovers ask no more—
And thousands enter daily at his door!
Hence it was ever, and it e'er shall be
The trade best suited to his faculty:
Fed by the vapors of the heart's desire,
No other food his votaries require;
For that they seek—the favor of the fair—
Is unsubstantial as pipe-smoke or air!

African Pipe Styles

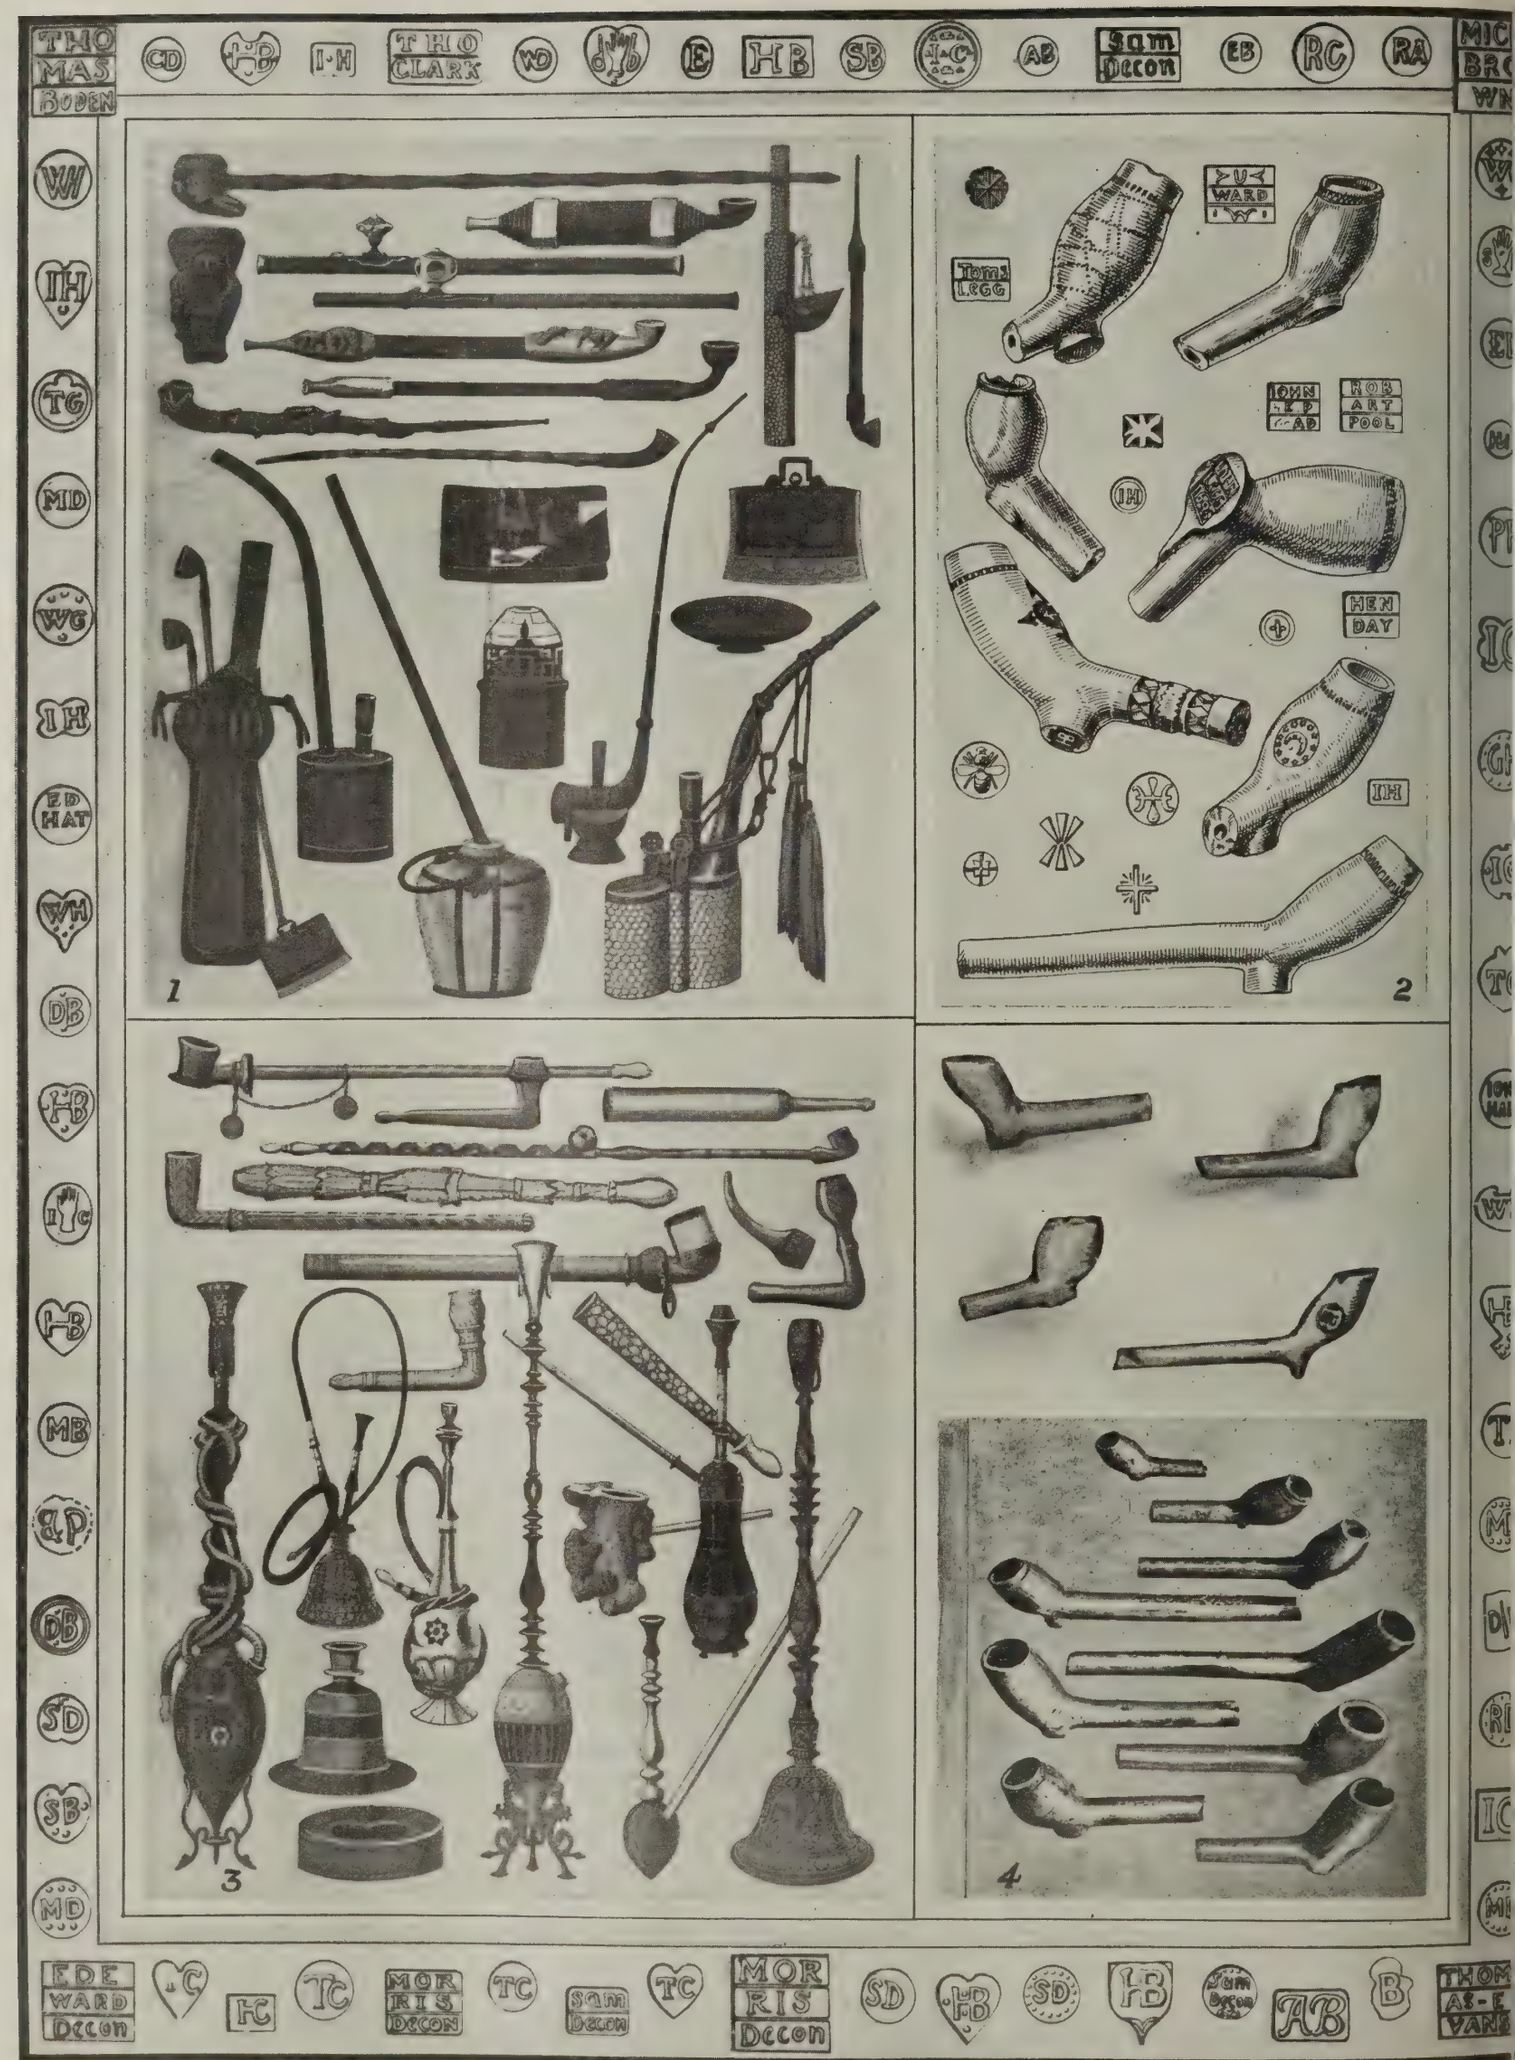
The dusky African has always been wedded to a clay pipe. All over the great continent tobacco pipes with clay bowls are to be found. These are of all sizes, designs and shapes. They often have clay stems, but most frequently the stems are made of bone, wood, metal or other substance. Some of the African pipe designs are as fantastic as any which could be seen at an Arabian nights' entertainment. The African pipe-maker, like the Persian, strives to secure a cool smoke. That is why he is so wedded to clay, terra cotta, and similar materials, and also why he shapes his pipe-bowls so strangely. He discovered the value of the calabash when experimenting with cooling ideas.

Pipes of the Arctic Regions

The pipes of the Arctic regions have long been famous among collectors on account of their fine animal and hunting scene carvings. They are made of ivory, walrus tusks, bone and, in rare cases, of metal.

Japanese, East Indian, South and Central American and the South Sea Islanders have pipes made of clay, wood, the common metals, shells, bone, stone or other substances. Each nation has set types of pipes which are so characteristic that they may serve to identify the people who made and smoked them. They are as distinctive as finger prints.

The world is full of pipes and types of pipes, and it is true, as a poet sings:



The Pipe You Make Yourself

There's clay pipes, an' briar pipes, an' meerschaum pipes as well,
There's plain pipes, an' fancy pipes—things jes' made to sell;
But any pipe that can be bought for money gained as pelf
Ain't ekal to the flavor of the pipe you make yourself.

Jes' take a common corn cob an' whittle out the middle,
Then plug up one end of it tight as any fiddle;
Fit a stem into the side an' lay her on the shelf,
An' when she's dry you take her down, the pipe you made yourself.

Cram her full, clar to the brim, with natural leaf, you bet!
'Twill smoke a trifle better for being somewhat wet.
Take your worm tin an' fishin' poles, an' jog along for health,
An' you'll get a taste o' Heaven from that pipe you made yourself.

There's clay pipes, an' briar pipes, an' meerschaum pipes as well,
There's plain pipes, an' fancy pipes—things jes' made to sell;
But any pipe that can be bought for money gained as pelf
Ain't ekal to the flavor of the pipe you make yourself.

Figures 1 and 3 show a number of rare Oriental pipes. Figures 2 and 4 are specimens of early British clay pipes and pipe makers' marks. The figure the borders are old time pipe marks of the Shropshire (England) pipe makers.

ie Production and Commerce Growing

ie tobacco pipe has played a grand rôle in istory of mankind. It has proved itself to e best of our companions, a touchstone of nd wisdom, a promoter of dreams and our est solace and friend. Today its manufac- constitutes a great and valuable industry. commerce in pipes, like that in tobacco, is ly growing. The pipe continues to grow vor, and it appears to have a brilliant future in store for it. If the modern poet Henley were a king, he tells us:

"If I were king, my pipe should be premier,
The skies of time and chance are seldom clear,
We would inform them all, with bland blue weather,
Delight alone would need to shed a tear,
For dream and deed should war no more together.
Art should aspire, yet ugliness be dear;
Beauty, the shaft, should speed with wit for feather;
And love, Sweet Love, should never fall to sere,
If I were king."

That verse appears to reflect the sentiments of the experienced pipe smoker the world over. With such sentiments predominating, not only the future of pipe smoking but of society and civilization appears to be of the greatest promise.

ncient and Modern Fashions and Tastes in Smoking Accessories

An Important Auxiliary of the Tobacco Business That Is Frequently Overlooked —Accessory Manufacture Undoubtedly Keeps Pace With Tobacco Production and Pipe-Making—Many Modern Articles Made to Please Particular Smokers.

By GEORGE EDWARD LOCKWOOD

ACCESSORIES for pipe smokers have always been important features of the tobacco business. The great extent and value of this auxiliary trade is often overlooked while the immense trade in tobacco and pipes is in view. There are no adequate statistics ow the annual value and the rapid increase he manufactures of smoking accessories; hey are undoubtedly proportionate to those bacco production and pipe-making.

ashion plays a more important role in the ufacture of accessories than in pipes and cco mixtures. Almost every year the num- and character of accessories change. They ster the tastes of smokers more rapidly than s do.

me of the best known accessories in former have quite gone out of fashion. We rarely a tobacco box. Yet, in the sixteenth to teenth centuries, tobacco boxes formed a of the equipment of every pipe smoker. se were usually made of gold, silver, ivory, or tortoise shell. They were elaborately mented by carvings, engravings or enamel ires.

The Tobacco Boxes of Long Ago

obacco boxes were fashionable and in gen- use in England in the reign of Queen Eliza- . In "The Man and the Moon," a play rten in 1609, a character, speaking of another, : "I do not know with truth, but I think omes to play a joke on you, for I saw smok- pipes in his pockets. He draws forth his er box and touchwood box; surely his throat ire, the smoke flies out of it so densely and ; dash his beard with a bucket of water, lest urn it off; he must have taken some dan- us stuff, because you see how it makes him and look pale. It surely has a bad taste use it compels him to spit so copiously."

ere we find an early smoker carried a tinder , a touchwood box as well as a tobacco box.

A Penny-in-the-Slot Box

he tobacco boxes of the seventeenth century e often made of brass or bronze or horn. y were much larger than those made in the ious century. An early book tells us about utomatic penny-in-the-slot tobacco box used ublic meeting places. It says:

There is a simple and ingenious tobacco box l frequently in ale-houses and taverns which s its accounts with each smoker and acts as a money box. It is kept on parlor tables the use of all comers; but none can obtain pe-full till the money is deposited through a in the lid. A penny dropped in causes a to unfasten and allow the smoker to help self from a drawer full of tobacco. His r is trusted so far as not to take more than pipeful, and this duty was impressed upon by the legend printed on the box which

"The custom is, before you fill,
To put a penny in the till
And load your pipe with just one fill;
Your friends will each one pay the till.
When you have filled, without delay
Please close the lid, or sixpence pay."

Sir Walter Raleigh had a tobacco box made of cedar with gilded stamped leather covering and gold ornaments. It contained a pound of tobacco when full and provided receptacles for pipes, stoppers, graters, tinder and other articles. It was 13 inches long and seven in diameter and was a very handsome article.

Economized to Buy Tobacco Boxes

The gentlemen of Elizabeth's time possessed many handsome tobacco boxes which were presented by friends. These set the fashion and the craving for fine tobacco boxes was so great that poor people curtailed expenditures so as to save money to buy a good tobacco box. Marston, in one of his plays, had a character say:

"I'll have my meals at an half-a-crown ordinary so that I may eventually possess an ivory box of tobacco."

Another writer, in 1617, said:

"He never walks without his looking glass,
In a tobacco-box or a dial set,
That he might always to himself confess
And often in his walks confer with it."

The working classes copied the gentry in owning tobacco boxes. Soldiers and sailors were particularly fond of them. They paid as much as 30 shillings for them in King James' time. That was a large sum. Most of the sailors' boxes were large and fitted to carry a set of clay pipes. The Dutch catered to the tastes of soldiers and sailors and ornamented the boxes with gay scenes. Sweethearts at various ports rivalled each other in making presents to sailors of these boxes.

Chatham's Possession

A friend of Lord Chatham, the statesman, possessed a valuable gold tobacco box with a Latin inscription which may be translated as follows:

"Ah! lordly man, how lowly in your type!
A fleeting shadow, a tobacco pipe!
Your mind's the fire, your frame the tube of clay,
Your breath the smoke so idly puffed away.
Your food the herb that fills the hollow bowl
Death is the stopper, ashes end the whole!"

A Most Remarkable Creation

One of the most remarkable tobacco boxes ever made is owned by the overseers of Saint Margaret's Chapel, Westminster. A history of this remarkable work has been published, from which we learn that Henry Monck, a parishioner, purchased the box at a fair at Charlton, Kent, in 1713, for the sum of four pence. He presented the box to the overseers' club. Seven years later, the lid of the box was decorated with silver as a memorial to a dead overseer. A silver side casing was furnished in 1726, as another memorial. A portrait of the Duke of Cumberland with allegorical ornaments to celebrate the defeat of the Pretender was made in 1746, by Hogarth, the great engraver and artist. In 1765, other additions were made and these completely hid the last traces of the original box. By this time it was the custom for each senior overseer to add an ornament or inscription to the box. In order to permit this to be continued, a large case was made for it with ample room for new inscriptions. In the course of time the inscription and ornaments filled the case. Then a new case, to envelop the old, was made. This custom still continues, and the original box is now covered with many cases and weighted down with many extraordinary inscriptions.

The fame of this wonderful tobacco box led to a general custom in England of presenting tobacco boxes to the trustees and other church officials after discharging their duties well and faithfully.

The Continental smokers were furnished with tobacco boxes made of wood, bone or ivory. These were carved with a wealth of ornamentation.

The tobacco stopper was another important smokers' accessory upon which artists labored to make "a thing of beauty and a joy forever." An old writer on smoking told us:

"This was an article upon which every English smoker prided himself. It was made of various materials—wood, bone, ivory, mother of pearl, brass, bronze, silver, rock crystal, amber, glass or other carved material. The forms it assumed were exceedingly diversified. In a collection of 30 tobacco stoppers which I have seen, dating from 1688 to 1839, the following were noted: A bear's tooth tipped with silver at the bottom and inscribed with the name of Captain James Rogers of the whaler *Happy Return;* a clergyman in full canonicals carved in ivory; a boot; a horse's hind leg; a caricature of Punch; a statuette of the Devil as a dramatic actor; a farmer holding a flail; an emblem of Priapus; a whiskey bottle; a greyhound's head; statuettes representing Hope, Faith, Charity; Lord Nelson; the Duke of Wellington; Bonaparte and a multitude of similar designs."

A Boswellian Poem

James Boswell, famous poet and musician, best known as Dr. Johnson's immortal biographer, published the following celebrated poem to a tobacco-stopper in 1760:

"Oh! let me grasp thy waist, be thou of wood,
Or levigated steel, for well 'tis known
Thy habit is diverse. In iron clad,
Sometimes thy features roughen to the sight;
And oft transparent art thou seen in glass,
Portending frangibility. The son
Of laboring mechanism here displays
Exuberance of skill. The curious knot,
The motley flourish winding down thy sides,
While freaks of fancy steal upon our view
With complicated charms, and as they please,
Astonish. While with glee thy touch I feel
No burn my finger dreads. No fractured pipe
I ask, or splinters and, wherewith to press
The rising ashes down. Oh! bless my hand,
Chief when thou comest with hollow circle crowned
With sculptured signet, bearing in thy womb
The treasured corkscrew. Thus a triple service
In firm alliance may thou boast."

Tobacco stoppers made from ship-timbers, memorial trees and other cherished articles were greatly prized by old smokers. Sir Roger de Coverly, in one of his whimsical essays, said when inspecting the coronation chairs in Westminster Abbey: "If Will Wimble were with us and saw those two chairs, it would go hard, but he would get a tobacco stopper out of each of them."

The flint used for making sparks and the tinder to be lighted were carried in separate boxes or in a single box divided by compartments. These boxes were made of similar materials to tobacco boxes and were often suitably engraved and ornamented. Early in the 19th century, tinder boxes were superseded by a chemically prepared paper tinder which was a distinct improvement over the older tinder of rags or dried moss. The reign of the explosive tinder was not long. It caused too many accidents and was too uncertain in action to satisfy smokers' requirements. The modern match has displaced it completely.

Many of the smokers of earlier days "took snuff" as well as "drank tobacco." They were also provided with snuff boxes. These resembled tobacco boxes in design, materials, and ornamentation. Their inscriptions were often of a most amusing character. A lady in Cromwell's time was presented with a snuff box upon which was engraved these lines:

"She who with pure tobacco will not prime
Her nose can be no lady of the time."

A fine suggestion to be given in a period of strict Puritanism!

Eary Methods of Preparing Tobacco

When tobacco was first used in England, it was thought best to smoke it in powdered form. A rasp, like a nutmeg grater, was made for that purpose. It was called a tobacco grater. Similar graters for making snuff were also used. These graters, like all smokers' accessories of the period were splendidly ornamented. Magnificent examples of them are to be seen in the principal European museums today. They were beautiful and costly articles used by every smoker. The French vied with the English in making and beautifully ornamenting them. The makers seemed to have felt as Robert Bridges, the present Poet-Laureate of England did when he wrote his finest lyric which says:

"I love all beauteous things,
I seek and adore them;
God hath no better praise,
And man in his hasty days
Is honored for them.

"I too will something make
And joy in the making;
Altho' tomorrow it seems
Like the empty words of a dream
Remembered on waking."

Those fine lines were written recently. They picture the sentiments and guiding principles of workmen of olden ages. Democracy has leveled down our tastes, and money-making has blunted our feelings, and today we possess neither artistic longings and inspirations nor even a moderately good taste. Far from regretting our degeneracy we glory in our practicality—and show no interest in things of beauty.

Beginning of the Tobacco Jar

The tobacco jar began its famous career at the beginning of the nineteenth century. It was the outcome of the tobacco parties which used to be given in English clubs when new tobacco mixtures began to be introduced by manufacturers. The finest were made of porcelain and were ornamented by the greatest porcelain painters. The most famous potteries like those of Wedgewood and others were the most expensive of these. The commoner kinds were made of terra cotta. These were ornamented in a most extraordinary way. Some represented skulls, negro heads, corn-cobs, swans, animals, dancing girls, fruits, vegetables and other objects.

Tobacco jars are still cherished by British students who are mighty smokers when burning the midnight oil. They believe that a good porcelain or terra cotta jar keeps tobacco in a better condition than any other kind of a container. These jars are not only beautifully made and ornamented but carry inscriptions of a witty or ludicrous character. One makes Henry Clay say:

"Fill the bowl, you jolly soul,
And burn all sorrow to a coal!"

Another tells us:

"That man is really wise and content indeed
Who finds food, solace and pleasure in the weed."

One jokingly says:

"A weed, you call me, but you'll own,
No rose was e'er more fully blown."

A tribute to Sir Walter Raleigh is often carried by tobacco jars. That on a beautiful specimen in an English museum says:

"Sir Walter Raleigh, name of worth,
How sweet it is for thee to know
King James, who never smoked on earth
Is smoking down below!"

Another says:

"Great men need no pompous marble
To perpetuate their name;
Household gear and smoking trinkets
Best remind us of their fame.
Raleigh's glory rests immortal
On tens of thousands of 'bacco urns,
Every jar's his in *memoriam*,
And ev'ry smoking pipe that burns."

Finally, the following solacing verse ma mentioned:

"The savage in his wild estate,
When feuds and discords cease,
Soothes with the fragrant weed his hate,
And smokes the pipe of peace.

"Long may the plant good-will create,
And banish strife afar;
Our only clouds, its incense sweet,
And this our only jar."

When American smokers begin to appre the value of artistic accessories they will that many of the ancient products can fu them, not only with beautiful designs and sh but a multitude of wonderfully expressive and inscriptions for those which may them.

The number and character of smoking a

The illustrations in the top row represent 17th century tobacco stoppers of English make. The left hand figure in the second row is a tobacconists' sign representing the three hands in the "sleeve of fellowship," showing a pipe, a charge of tobacco, and a piece of tobacco for chewing. This sign was popular in English cities in the 17th and 18th centuries. The two following sketches show ancient metal tobacco jars. The fourth is a caricature on smoking, showing a dragon smoking and carrying his tobacco box in his mouth. The three lower figures are quaint tobacco crocks or smokers' jars.

ries have declined in recent years. Many oderu smokers seem to want simple, cheap noking articles. Paper match-books, a rubber uch and a plain briar pipe is all an ordinary noker wants.

Some particular smokers, however, want a tle more than that and crave novelties. For them we find a multitude of articles are made. There are automatic lighters, glass tobacco jars and bowls, pipe cleaners, pipe stands and racks, tobacco ash trays and holders, humidors, and many other things. These constitute a large trade and call for the investment of a large amount of capital on the part of manufacturers and business men. It is a branch of commerce that could be greatly developed by those who are interested in it were they to advertise as extensively as the tobacco manufacturers and pipe makers do. And they could help to raise the national taste by improving the artistic qualities of their goods.

The French Briar Pipe and the Great Popularity It Has Attained

The Pipe Puts a Smoker Into an Agreeable, Meditative and Contemplative Frame of Mind, Enabling Him to Get a Proper Perspective of the Beauties and Joys of Life —An Interesting Story of the Briar, "Rac'ne de Bruyere" and the Discoverer.

By PAUL E. POITRAS
of A. & J. Vassas, Inc.

FREQUENTLY we hear that "a good briar pipe is the truest friend a man possesses"; probably because it does not talk and while being smoked it puts the smoker into an agreeable meditative and contemplative frame f mind, enabling him to get a proper perspecve of the beauties and joys of life.

While the pipe made of briar root is of comaratively recent invention, it has become a ost popular product. Probably every smoker as asked himself at one time or another why pipe is called a "pipe." It is easily explained. Archeologists have discovered clay and iron ipes, dating from the Roman period. These ere called *pipa,* a Latin word meaning "tube" r "reed." A curious coincidence is that, in early all the European languages, its extraction is derived from the same origin: in French nd English *pipe;* Spanish and Italian *pipa;* erman origin *peiffe* and *phifa;* Holland *piip;* anish *pibe;* Swedish *pipa;* we also see it in ie old Scotch term of *piob* the Turkish name self, *tchibouq,* has its origin in the old Tartar liom which signifies *reed;* the last, but not the ast, the calumet of the American Indians. alumet, the name adopted by the English lanuage, was given by the French who in turn ook it from *calamellus,* diminutive of *calamus,* atin word also meaning *reed.*

An American Product

Although, as we said before, the smoking ipe was known at the time of the Roman eriod, it may be stated that tobacco as it exits today is justly an American product, as the merican Indians, even prior to the discovery f America, are known to have smoked pipes ade out of stone or wood, and to which a ng stem made of hollow reed and ornamented ith feathers had been added. This pipe was sed by the North American Indians later on n their ratifications of treaties. Even some ribes of the aborigines thought that a treaty as not valid and completed unless both parties ad smoked a calumet together.

Although the custom of smoking is believed o have come to the Romans from old India, nd that hemp was most probably the substance sed in their crudely made pipes, this custom ied out with the Romans and was not taken p again in Europe until after the discovery f America.

Introduction of Return

The reintroduction of the custom of smoking n Southern Europe was mainly due to the ortuguese Prince, Henry, called the "Navigaor," who conceived the idea of circumnavigatng Africa to reach India. Both he and anther Portuguese, Vasco da Gama, who in 1497 ached India by the Cape of Good Hope, noticed ie natives smoking an herb to which they ave the name *petun.* On their return they introduced petun, which was smoked from a small ilver bowl to which a tube was attached, and as also used as a snuff.

After the discovery of Brazil by the Portuuese in 1500, the returning voyager brought back the Indian pipes. About the same time the Spaniards brought from America an herb smoked by the Indians to which they gave the name of *tabaco,* from which comes the English word tobacco.

Nicot, French diplomat and statesman, who was then Ambassador to Portugal, introduced the pipe and tobacco to France in 1559. Nicot gave his name to the herb substance which was called petun by the Portuguese and tabaco by the Spanish, and botanically it became accepted as *nicotiane* from which was derived the word nicotine, well known to every smoker.

The smoking pipe and tobacco were brought over to England in 1587 by Sir Walter Raleigh, an English explorer who on April 13, 1584, sailed on an expedition accompanied by Philip Amidas and Arthur Barlow and explored the Pamlico and Albemarle Sounds in the Summer of that year. The name Virginia was then given to the newly discovered region, for Queen Elizabeth, and from that spot tobacco was first introduced into England.

Pipe Smoking Became More Popular

From that period to about 1848 the habit of using smoking pipes gradually became more popular. In the making of pipes every kind of material was used. Many fine pieces of art and sculpture were achieved, which are now proudly kept in museums or private collections.

Discovery of Briar Root

The discovery of the actual species of *briar* root used in the making of smoking pipes is due to a French gentleman, F. Vassas. In 1849 Mr. Vassas, then in his youth, while traveling for pleasure discovered that the natives in the Pyrenees were making a crude bowl out of a species of briar called *scaparia* of the *ericaceæ* family or heath family which is composed of scrubby plants or small trees of over 1,200 different species. This crude pipe was obtained first by drying thoroughly the trunk of the tree, then the bowl was roughly carved in the wood, and a hole bored at the bottom. Then they added a tube, also roughly bored, and made to fit in the hole at the base of the bowl with one end small enough to be held in the mouth.

Going further in his experiments, Mr. Vassas discovered in the Mediterranean basin that one of the species of briar (*bruyére*) called arbutus or *arborea* of the *ericaceæ* family, contained in its root a great quantity of tannin, while the root itself proved to be a wood of very fine grain with close fiber, having the peculiarity, as well, of being porous and very resistant to fire, and instead of burning, taking a deposit of carbon, this deposit having the advantage of rendering sweet the bitter taste of the tobacco.

Saw Advantages of Product

Mr. Vassas, visualizing that a new industry would be the result of his discovery, decided to devote his life to it. He started production on a small scale, and began to introduce this wood known as *Racine de Bruyére* (Briar root). His efforts were successful, and in 1851 was established in Paris the first briar root pipe factory by Gonneval, Bondier & Donniger. From 1851, the briar pipe remained more or less as it is today. New factories were established in Europe and America, and these pioneers of the industry are still producing pipes for the devotees of My Lady Nicotine.

The first roots came from France and Italy, from Carcasonne, Siena, Grosseto and the Jura District. Later, production was extended in the entire Province of Calabria, Italy, and in Corsica, where it is still flourishing today.

Early in the eighties F. Vassas, whose researches and trips of study had taken him to Algeria in Africa, discovered a similar species of briar of a superior quality, but owing to the transportation difficulties of those days had to abandon the production of it.

Algerian Briar Brought Into Use

Some twenty-seven years ago, however, the son of F. Vassas, Justin Vassas, in collaboration with his brothers, threw all of his energies to developing the briar found in Algeria, and, transportation facilities having improved in the meantime, succeeded in giving to the pipe-smoking world an improved grade of briar. Today about seventy per cent of the world production and needs are supplied from the South Mediterranean basin along the African Coast in the French Province called Algeria. The production of good briar, far from being simple, is a very complicated process.

Long in Growing to Maturity

The briar tree grows wild in sandy or rocky ground, and, therefore, requires many years (from forty to sixty years) before the root develops to a size sufficient to be worked. The size of the roots usually used is from ten to eighteen inches in diameter, although some are found to be larger. The tree itself reaches the height of about ten or twelve feet. Nowadays the roots in some cases have to be gathered from distances of over forty miles from habitation. The roots first have to be dug up from the ground from a depth of four to eighteen inches.

After the root has been dug up it is cut from the trunk of the tree, cleaned and any decayed parts taken out. Owing to the sap containing tannin the root has to be kept in moisture to prevent its cracking and immediately brought from the forest to the factories on mules' backs. Where good roads are available the roots are carried to the edge of the forest only and then transferred to trucks.

Preparing the Blocks

In the factories these roots are then cut into small blocks called *ébauchons,* the French trade name for rough shape, from which pipes are made. These blocks are of various sizes and shapes, according to the style they are ultimately intended for. Great care and dexterity is necessary at this stage in order to cut the roots to the best advantage so that the surface of the block will present the best grain. The workers doing this work are very few, and become proficient only after several years' apprenticeship.

This will be more appreciated when we say that, owing to the nature of the roots, only about

er cent in weight of the entire root is avail- for the industry when cut into blocks and d as to quality. These blocks are then im- ately put into big vats and boiled for sev- ours. By this process the tannin contained e sap is taken out and is replaced by the g compound, which in turn gives to the that yellowish brown hue so much desired pe smokers.

ese blocks are dried for several weeks, after sorting as to size, are put into bags, ining from forty to one hundred dozens according to size, and shipped all over the world to the various manufacturers, who in turn, with the aid of skilled hands, make the beautiful smoking pipe as it is known today.

A Companion in Solitude

A good briar pipe is indeed a friend in need and a companion in solitude. Someone once said that if equality and peace were removed from the earth, the only place to find them would be in the firebowls of the pipes of two good smokers. Let us all hope, therefore, that at the next conference on the reparation question the briar pipe will have the place of honor and serve the same purpose that the Calumet served for the American Indians.

Probaly the best commentary on the part a good briar pipe can play in the affections of its owner is contained in the words of the well-known French humorous artist of the nineteenth century, Guillaume Paul Chevalier, who under the pseudonym of "Gavarni" once said: "My dear friend, I leave in your care my wife and my pipe. Take good care of my pipe."

Smokers' Equipments Form Most Interesting Exhibit—Collection Purchased Out of Income from Fund Generously Donated by William Demuth to the Department of Anthropology—Opportunity for All to Help Make Exhibit Best in the World.

By DR. ARTHUR SELWYN BROWN

HE WILLIAM DEMUTH collection of pipes and smoking accessories forms one of the most interesting exhibits in the Museum of Natural History, New York City. It is the most important pipe collection in ica, after the collection in the Museum at ington. The Demuth collection has been ased out of income from the William ith fund in the Department of Anthropol- This fund was started by the Museum es in 1902 when William Demuth, of Wm. th & Co., the well-known pipe manu- ers, of New York, presented the Museum check of $200. Nothing was specified by onor regarding the uses to which the might be applied. But the authorities of stitution had long desired to add a col- i of smoking utensils to the anthropologi- partment and knowing that Mr. Demuth n eminent pipe-maker, applied his gift to d for securing pipes and other smoking s. The fund was invested. The income ts to between $16 and $20 per annum. this amount and by careful management, resent fine collection of pipes and other ng articles in the museum have been ed.

The Initial Collections

of the first purchases made from the was the fine collection of Chinese tobacco collected in China by Dr. Berthold Laufer. ollection was made in 1904. Later, in the year, the Pawnee Indian pipes of peace, ed by Francis La Flesche, were pur- , together with a fine collection of Eskimo

Demuth collection was greatly aug- d in 1906 by the purchase of a group of n pipes illustrating the main lines of de- ent of the tobacco pipe among the nu- s tribes of Africa today. An outstanding of this collection is a great pipe made cow's horn, with a wooden stem inserted he top of the bowl. It would have been resting sight to have witnessed the dusky smoking this gigantic pipe. The pipe evidence of having given its original good service.

nted With Narghile or Hubble-Bubble

e fine Philippine pipes and a collection of ine cigars and tobaccos were acquired in and in 1912 Leopold Demuth presented useum with a fine narghile, or hubble-

Demuth collection of pipes has become, famous and the Museum authorities are congratulated for the manner in which plied the original Demuth donation to a g exhibition fund and the extremely fine which they applied the income. The now 21 years old, and the Demuth col- is of the same age.

Opportunity to Help Make Exhibit Greatest in World

Now that the value of the collection has been proved and the efficiency of the Musuem authorities in administering it, the pipe manufacturers, and the whole tobacco trade of America, have an opportunity to increase the fund to the sum of $20,000, which will enable the museum to make the pipe collection what it should be—the largest and most representative in the world.

The Museums of Europe are far more advanced in recognizing the importance of smoking collections than are American Museums. Although we have the greatest tobacco-growing, manufacturing and trading industries in the world, and have an immense pipe-making and smoking accessories business, we have no museum in the country possessing an adequate exhibit of any single branch of these vast industries which have brought and are bringing so much wealth to the country. The Museum of Natural History, New York, is striving to supply a pressing want. The tobacco industries have the opportunity to help, by donating a fund which would be large enough to enable the trustees to purchase a complete line of smokiana representing the whole history and development of smokers' equipments. Further delay in making collections of American Indian, Arctic, African, and South Sea island pipes might endanger the possibilities of a representative collection. These pipes are becoming rare and only timely action can secure them.

The Eskimo Collection

The Eskimo pipes in the Demuth collection are fairly representative of the kinds of pipes smoked in the Arctic regions. There is little wood or metal for the Arctic pipe maker to work on. He is compelled to use the best materials at hand. These are ivory and bone. Therefore, we find Arctic pipes are chiefly made of the ivory of walrus or other teeth and tusks, or of the bones of various polar animals. These pipes are gracefully made, of moderate size and weight and are often elaborately ornamented or carved. Many of the pipes have beautifully carved images of the musk ox, seal, walrus and other familiar animals, parading their stems.

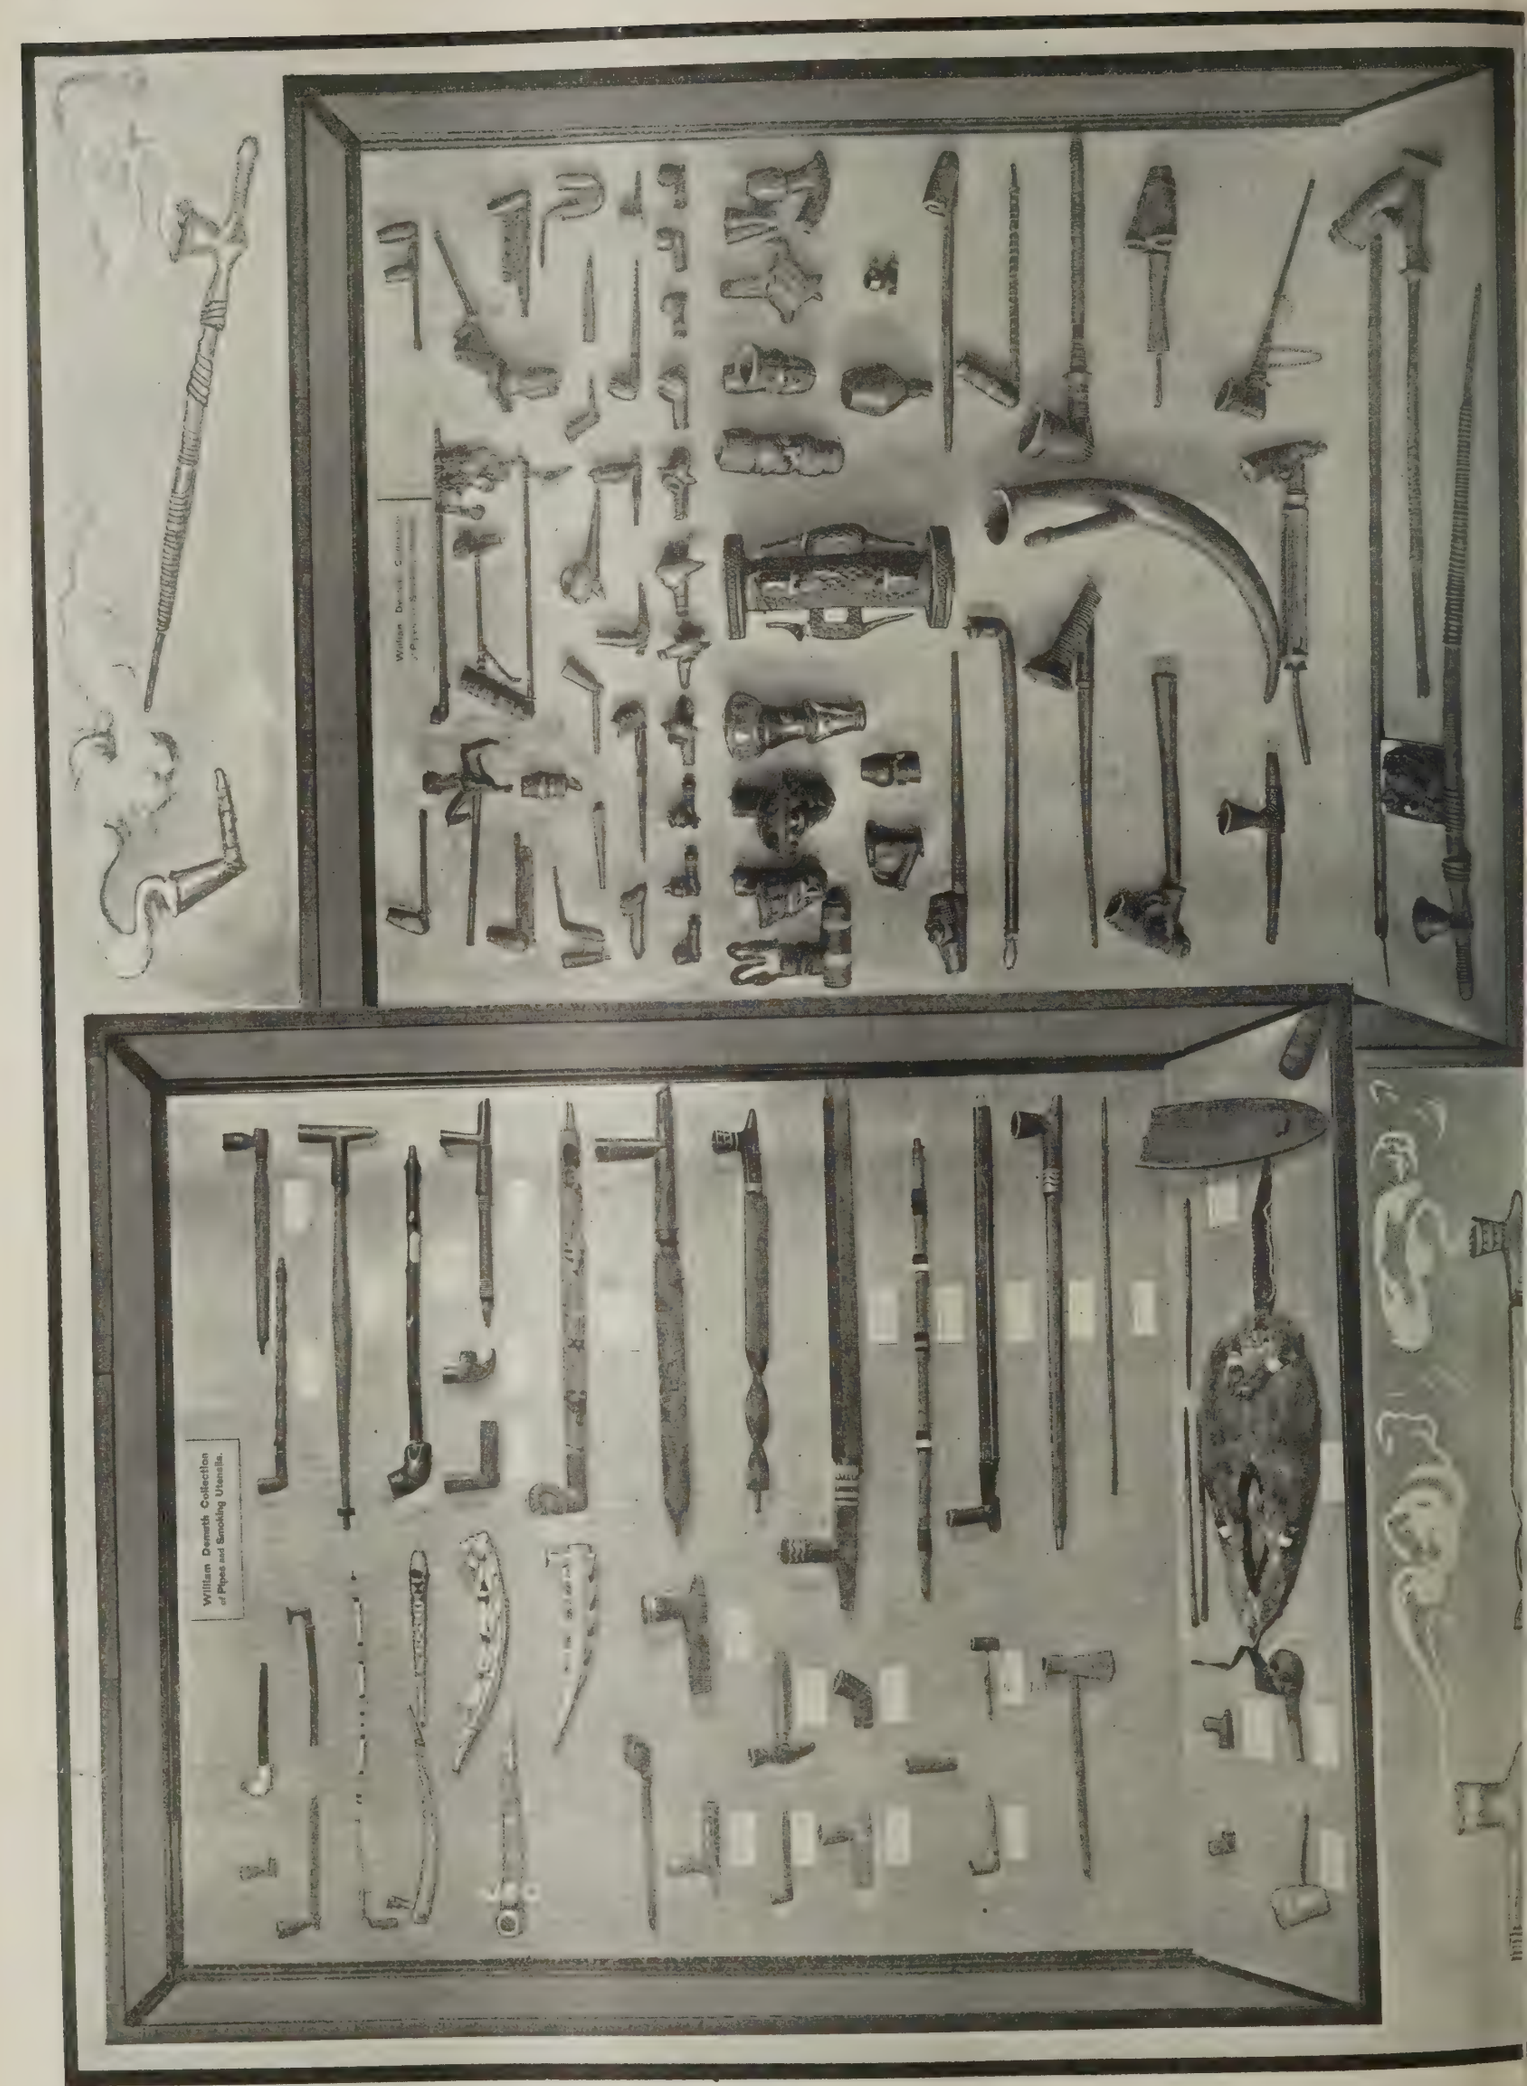
Since the Eskimos have come in contact with white sailors they have secured wood and metal, such as the copper casings of rifle cartridges. These they have used in making pipes like European clay pipes in design. The bowls are cut out of soapstone. The stems are made of wood with stone mouthpieces. The joining of the wooden stem with the stone bowl and mouthpiece is effected by copper laps.

The Laplanders and some of the Arctic people of Northern Asia, make finely shaped pipes of iron, copper and other metals.

American Indian Pipes

There are some fine specimens of American Indian pipes in the Demuth collection. The Indians were famous smokers who glorified smoking. They had a high regard for the efficacy of their calumets, or peace pipes, and possessed many ceremonial pipes which played important roles in their social functions.

In the Museum of the American Indian, New York City, there are many effigy pipes which were once used in ceremonies by the Eastern tribes of Indians. One pipe in this collection is remarkable for its size and weight. It is a pipe that was discovered in the Indian mound country, near the Green River, Kentucky. It has a well-carved head of a wolf projecting in front of the bowl. The whole pipe is carved out of soft slate. This pipe is 16 2/3 inches long and the bowl is 1⅜ inches in diameter. The weight is 5 pounds 7½ ounces. It was found embedded in the roots of an old tree that had been blown down during a storm about thirty years ago and has every appearance of great age. The pipe is well made and finished. Its great size and weight indicate it was not made for smoking but for some important ceremonial purpose. Some of the pipes in the Demuth collection, while not so large as the Kentucky specimen, were also made for strictly ceremonial uses.



The early explorers in North America confirmed Catlin's statement that, "The Indians are all excessive smokers and many of them would seem to be smoking one-half of their lives. When they can get no tobacco, they smoke weeds, leaves or bark of trees. These they sometimes dry and pulverize and carry in pouches, smoking to great excess. A peculiar expedient resorted to by them when about to undertake a long journey is to mix the juice of tobacco with powdered shells, in the form of little balls, which they keep in their mouths and the gradual solution serves to counteract any uneasy craving of the stomach. When they have lost their pipes, they have been seen to dig a small hole in sand, fill it with tobacco and after lighting it, cover it over and draw the smoke up through a hollow reed."

Interesting Indian Devices

They made fire by friction caused by turning a stick quickly against a dried piece of wood around which cotton waste or dried birch bark was packed. In the Demuth collection there is a very interesting series of Indian lighting devices. These are all well preserved and are mounted and exhibited so as to show visitors how ingeniously the Old Indian smokers were able to light their tobacco pipes.

There are also some interesting examples of tobacco pouches and pipe and tobacco bags used by the Indians. The pouches were usually of large size and made from the fur of a muskrat. They were ornamented in an elaborate manner with beads, shells, and other bright objects.

The peace pipes were used with a dance cere-

Pipes in the William Demuth Collection. The show-case on the left contains pipes and smoking materials used by the Eskimos and American India the bottom is a muskrat skin tobacco bag. The collection on the right consists of pipes and smoking materials used by the natives of Africa

rd organized to cement peace between ng tribes or personal enemies. According H. McCulloh, an early writer: "The net, called after a Norman word signifying reed, is a tobacco pipe whose stem is about feet in length, sometimes round and at times flat. It is painted and adorned with porcupine quills, dyes of various colors the most beautiful feathers that can be pro-. The bowl of the pipe is most frequently apstone, though some tribes admit of only soapstone, and if it be presented to them ner black or red color will have it whitened they smoke it. It is considered a sacred nsecrated object, and on this account is suffered to touch the ground, being laid two forked sticks, stuck upright in the for that purpose. To dance the calumet, nake a sacred kinship, which is done after consultation in which the party selected netimes advised against doing so, because rty to be danced for is either not worthy r he may himself refuse to be adopted in nce. If all is agreeable, all parties repair articular place, where the pipes are placed forked support. Instead of the pipe bowl, is the head of a green-necked duck placed calumet of the Omaha Indians and some tribes. Wing feathers of the great war decorate the stems!" Several fine speci- of peace pipes are included in the Demuth t.

mpum belts took part in the peace cere- s after the advent of the white men in la and the United States. It was the evi- of a fact, a title deed or a contract, ally a mere string of beads or shells, it ped into a beautiful, artistic beaded belt significant symbolical designs. The m possesses several fine samples of um belts.

ipes of Various Primitive People

re have been numerous races of primitive s who have at remote times settled in ca. These were all inveterate devotees oking. They have left us numerous pipes dence of their presence here and of their s, arts, trades and migrations. Their life is largely displayed for us through pes found in their grave mounds. These e records indicate the part played by g utensils in illuminating anthropological problems. The Museum has sent several parties to Kentucky, Ohio, Pennsylvania and other states to search the mound districts for prehistoric pipes and as a result of these enterprises, it has some fine specimens of stone pipes of the American Stone Age.

Tomahawk and Other Indian Pipes

The Indian had a hatchet which he called a *Cunscnagwas.* This was usually made of stone. When the white men came to this country, the Indians greatly admired the efficiency of his steel hatchet and gave it a new name. They called it a *Taccahacan* or *Tamahaac,* which has now become tomahawk. They shaped their stone pipe bowls after the tomahawk and later on, after the white man's hammer and other tools. There are some good specimens of tomahawk, hammer and similar Indian pipes in the Demuth collection.

The African pipes are represented by a small but good set of specimens. One having a large clay bowl, ornamented with rich designs and figures of crocodiles and other animals, makes an attractive showing. The strangest pipe in the collection, perhaps, is a Zulu pipe made of a sow's horn. It has a stem of wood which is inserted about a third of the distance from the bowl opening. This pipe held a large charge of smoking mixture and must have required a strong and experienced smoker to smoke it.

Double and Triple Bowl Pipes

This exhibit contains samples of the strange double and triple bowl pipes made by some of the African tribesmen. There are also examples of dainty terra cotta pipe bowls, clay pipes and an assortment of carved wooden and calabash pipes. A number or pipe bowls exhibit many queer designs and show the unusual pains that are often bestowed by negro races in the manufacture of their pipes. The African pipes in the Demuth collection show how pipemakers the world over stamp their local characteristics upon their pipes so strongly that it becomes a simple matter for strangers to tell where the pipes were made and also at approximately what period.

The Asiatic Collection

The pipes in the Asiatic collection contain numerous specimens of various types of water pipes. The water pipe cools the smoke before it is taken into the mouth. On account of its size, shape and water contents, it is essentially a house pipe. Smokers who go abroad and travel require pipes of the ordinary European type with stem and bowl to take on their voyages.

Water Pipes Treasured

The water pipes bear different names in the different countries. In Turkey and Egypt it is usually called the Hookah or Hubble-Bubble, pipe. The word Hookah is derived from the Persian word for vase. It means a vase pipe. Hookahs are often splendidly made and richly ornamented. The long flexible tubes, particularly those on hookahs intended for women smokers, are often inlaid with valuable gold filigree work and set with rich gems. Great care is taken in keeping hookahs clear and polished. They are treasured among the most important household goods in Oriental homes and are handed down in families from generation to generation.

The water pipe in India and some of the adjoining states is called a narghile. The tubes are often made shorter than is customary in Turkey and Egypt and the bowl is likewise smaller. Occasionally the bowl of an Indian water pipe is made from a cocoanut or the shell of an ostrich egg. In such cases the bowl is elaborately etched with pictures or artistic designs.

The Chinese Water Pipe Differs From Others

The water pipe in China differs radically from other water pipes. It is much smaller and made from metal with metal tubes, excepting for a flexible mouthpiece. The sides of the Chinese pipes, which resemble the sides of flat, oblong metal cans, are often very fine ornamented or covered with fine enamels or lacquer work. The Chinese street pipe is distinguished from all other pipes by the smallness and the peculiar flanging of the rim of the bowl. These pipes can only be charged with a small pinch of the finely cut reddish tobacco which Chinese smokers use. The Chinaman increases the aroma and strength of his tobacco in the curing, so that he finds that just a little of it goes a long way. The Demuth collection of Chinese and Japanese pipes, both water pipes and street pipes, afford a good opportunity for American smokers to see numerous types of these pipes. There is also a fine set of them in the Metropolitan Museum of Art, New York.

oduction of the Marvelous Meerschaum Pipe and the Amber Stem

Origin of the Wonderful Sepiolite and the Various Processes of Manufacture Into Pipes—Meerschaum and Amber Both Come in Irregular Masses — With the Two Rare Materials Carefully Coupled Together a Much Treasured Article Is Produced.

By FELIX J. KOCH

MARVELOUS meerschaum pipe with amber stem! Love it? Indeed you *do* love it! You loved it the very first day that it arrived, and the very first fraction of the instant when, tossing back the cotton blanket, yes beheld, for the first time, a meer- pipe with an amber stem that was posi- absolutely your own!

ve loved it ever since then, week on week nth after month, on through the years, in ts, bit by bit, and so very gradually you olored it, just a fraction of a degree with ccessive smoke, until now experts declare ie and hues superfine.

Highly Prized

you love it now—well, you really love it h that you can scarcely conceive any men might reasonably name that would you to part with that pipe!

it came—? Well, it came from the cigar acco store down on Main street, and the lk down there secured it from a jobber; and he, in his turn, obtained the pipe, along with many others—never two alike—from a big manufacturer.

Origin of Meerschaum

Now, who shall say whence came the meerschaum and whence came the beautiful amber required by the producer of high grade meerschaum pipes, and—brought from their natural sources—how have these been worked into place?

The meerschaum, those who really should know tell us, received its German title (meaning sea-foam, of course) because of the extra lightness, softness and whiteness of color for which it is renowned and which resemble not a little some sudden petrification of the whipped over-froth of the sea.

The French, seeing a similar resemblance to the sea-foam in the substance, termed it *ecume de mer,* or whippets of the sea.

Certain mineralogists, upon the other hand, gave the meerschaum its official designation of *sepiolite,* and this as a result of its resemblance to the bone of the sepia, or cuttle-fish, familiar to every housewife through hanging it in her canary cage.

"Possibly the fact that pieces of meerschaum, washed out of their matrix, are occasionally found floating in the Black Sea," one man suggests upon this point, "may have led to the association of the mineral with marine produce. As a matter of fact, though, the meerschaum is an opaque, earthy mineral, basically of a white, greyish or yellowish shade. It is compact in its texture, and breaks with a fine, earthy fracture.

Adheres to Tongue

"Curiously enough," he adds, "meerschaum adheres to the tongue, and is so soft as to be easily scratched by the finger-nail, its hardness being only about two or two-five.

"The specific gravity of the meerschaum again varies from .988 to 1.279; so that it floats in the sea water, when carried down to the ocean, until it has become saturated.

"As a matter of fact the meerschaum is hydrated silicate of magnesium."

Pipes in the William Demuth Collection at the American Museum of Natural History, New York. The upper show-case contains pipes and tobacco used by the Eskimos. The lower comprises many of the curious Chinese pipes gathered by Dr. Berthold Laufer for the Museum

Where Meerschaum Is Found

Most of the commercial meerschaum in use the world over comes today from Asia Minor, and particularly from the plains of Esku Shehr, where it occurs in nodular masses, of variable size and irregular shape, found distributed through the alluvial deposits of the plain. These deposits are systematically worked for its extraction by means of pits and galleries. The mineral is found then to be associated with magnesite, a carbonate of magnesium, and has probably been derived from the neighboring mountains, where a similar carbonate is found.

Meerschaum is also found, though very much less abundantly, in Greece and in some of the Grecian Islands, in Moravia, and in Morocco, where it is used, when soft and fresh, as a substitute for soap. A coarse variety is found in Madrid, where it is employed as a building stone. Meerschaum also occurs in South Carolina.

Mainly Used for Pipe Bowls

The great use of the meerschaum is, of course, for the bowl of the smoker's pipe, a purpose for which it is fitted admirably by its porosity.

The nodules of the meerschaum, no two just alike, come to the bowl manufacturer through a New York or other jobber in small wooden cases, known to the trade as *kasten,* or chests. In these chests they have been packed at their Black Sea or other point of origin, each in its special swarthing of cotton.

Payment for the contents of such a box is made, not on a basis of weight or cubic content of meerschaum enclosed, but according to the number of individual pieces of meerschaum in the box.

Paradoxical as this may seem, the bowl-makers prefer boxes containing a great many smaller pieces to boxes with a less number of nodules, each of a larger size. This fact arises from the nature of the meerschaum-working industry. Bowls are deliberately sawed from the meerschaum nodules for their initial or "rough" forms. Very few are the men who can saw a perfect bowl from a nodule, and the work is much more difficult as the nodule increases in size over what is wanted. One mustn't waste meerschaum by useless cutting away (of course), therefore the raw material is adapted to the workmen, rather than workmen training to their raw material as is the more usual course!

Small Daily Production

Skilled at his work though a craftsman becomes, and dealing with nodules of really small-size possible size, such a man does very well if he produces two dozen roughed-out bowls in one day.

The crude-looking bowls, carved or sawed from the meerschaum nodules, are thrown into great vats of cold water, where they are allowed to soak very thoroughly.

Fully saturated until meeting such tests as the pipe makers may choose to put them to, the bowl blocks are turned over to a nearby attendant who is operating a very finely adjusted drill. With this drill the man cuts a hole into the head of the pipe-ball; making a cup, or a pipe-head of the globe.

Using this newly cut cup, then, as a means of fitting the pipe-bowl to a plug, the piece soon to become a pipe is made secure in this holder and is applied by the next man in route to a lathe built for this purpose.

Processes That Add to Cost

Here, indeed, once again, comes the skill of the meerschaum-man, one of the many reasons for the subsequent cost of these pipes: As a result of grain, or texture, of the meerschaum, it is said, these men always cut their bowls from the stem end. Cutting for an actual pipe at heart, they cut and they carve, too, with an eye to the eventual pattern which may be desired. Now it may be a so-called "bull-dog" pipe, blunt, and yet most attractive, first for its whiteness; later for the color it takes. Next, it may be a pipe to be made in the "Hungarian" or Magyar style. Next after that they may be seeking an egg-shaped pipe. Always, be it ever what it may, the lathe—or rather the man who is behind the lathe—brings the bowl to its shape.

This artist's part of the process of manufacture being finished, one has a pipe-head that does resemble a pipe-head now, indeed.

Only, it isn't ready—not by a good deal, still—for the consumer.

Finishing Touches by Hand

It is next to impossible for the man with the lathe to reach the base of the pipe. Consequently, the base of the meerschaum pipe must be "cut off," as it is called, by hand.

Finishing touches along cutting lines are then in order; after this the pipe-bowl stands ready for polishing.

Polishing a meerschaum pipe is an art all in itself. Rushes are obtained from the marshes yielding them. They are cut, or torn, into "slits." These slivers of rush are then moistened thoroughly; the bundle, which there may be of them, is reduced to a mass, and with this the pipe heads are scoured.

Simple as these things may be to tell, they require work, and with it skill, always.

Finally brought to this stage, your meerschaum bowl is subjected to another unique process. If left as it is in its raw state, no meerschaum pipe will color by use. Nor, again, will it take on the exquisite polish always associated with a meerschaum pipe, and which the eventual purchasers require.

Must Be Boiled in Wax

In order that the pipes may do these things, then, a great kettle of beeswax is set to boil, and when this is brought to a boiling mass, the pipe-heads are dropped into it. According as the "run" of the meerschaum has been found "hard" or "soft," the pipes boil anywhere from five to fifteen minutes in the wax.

Duly saturated, super-saturated even, with the material, they are dipped out of it, and set aside to cool.

Experts at polishing, who do nothing but this the year around, take bowl by bowl in hand; polishing them with cotton flannels, to which they apply generous helpings of prepared chalk as occasion requires.

That initial polish finished, a second polish still must follow; this is performed by hand, too, and with alcohol.

Sorting and Grading

The various processes of manufacture being completed the pipes are ready for the sorting and grading. Were a pipe to have been "run through" squarely from start to finish, raw material out of the *kasten* to turning over just now to the graders, half a day of work would be required.

Pipes are sorted at the plant, according to the nature of their materials into a first, second and sometimes a third grade. Then each grade is re-assorted, according as the pipes are carved or not. Uncarved pipes, even in normal times, bring from three and a half to ten and even fifteen dollars wholesale. Rarely, indeed, can the carved pipe be had for as little as twenty-five dollars.

But, when dealers speak of a pipe, it is well to remember, they refer to the bowl, the meerschaum portion alone.

Bowls, in almost the majority of cases, are sold absolutely separately from their amber stems. Then the purchaser invests in a stem, as an essential accessory.

The Amber Stems

These amber stems, however, are quite as interesting as, if not even more than, as the bowls to which they fit.

Amber is described technically as a hard, brittle substance with a resinous luster, sometimes found perfectly transparent, but more usually of varying degrees of translucency, and possessing a prevailing yellow color, passing from a pale straw tint to a deep orange.

It occurs in irregular masses and has neither taste nor, at ordinary temperatures, odor.

It develops electrical phenomena by friction, a property which doubtless early drew attention to amber and invested it with the romantic interest which attached to it in early times. The

Starting to work on the meerschaum

Threading amber pipe stems

popular regard for the substance among the ancients was further maintained by the fabulous tales of the manner in which it was formed and the mystery connected with its occurrence.

The Sources of Amber Supply

The great source of supply of amber in all ages appears to have been the Baltic coasts, from which the supplies of commerce still continue to be drawn. After heavy storms large quantities of the amber are usually found thrown up on the coast at the localities where it is regularly mined from veins near to the shore. The supposition is, therefore, that deposits crop up in the shallow waters near shore, from which pieces become detached during violent commotions of the water.

"The appearance of enclosed foreign bodies, such as insects, leaves, twigs and the like, which amber very often presents, and the markings on its surface very early led to correct inferences as to its origin. Insects found in amber are, for the most part, of extinct species, and so also are the remains of plants. A certain species of conifer has been established as *the* amber-yielding tree, although many other trees may have yielded the exudation as well.

Amber has been found to consist mainly of a resin insoluble in alcohol, along with small quantities of another resin which is soluble in alcohol.

Exposing amber covered with sand in an iron pot to heat for forty hours, or boiling it in certain oils, pieces will cement and mold together.

Primarily Used for Pipe Stems

Its prime use today, however, is as pipe stems for the smoker.

One great pipe-stem factory obtains the greater part of the amber it employs from a Königsberg exporter, who takes the raw amber as found and brought in to him and reduces it to blocks, or "bricks," in much the form of the ordinary building brick, but about four inches wide, and from eight to ten inches long. These bricks weigh something like a pound and three quarters. The substance, exclusive of the duty, costs at normal rates about $22.50 per pound.

Amber is so very hard to get that, aside from price, the pipe manufacturer must make sure of his supply when required, and so amber bricks are kept with much care in great safes.

Amber Shavings Used in Varnish

A brick brought out for use, an electrically driven saw of fine grade is used to saw it into two-inch, two and a quarter inch, or two and a half inch lengths, as desired. In this work, as with the meerschaum, extra care is essential that there shall not be useless waste. The shavings that must occur are sold to varnish manufacturers, as they produce the best varnish that may be found.

A single "brick" will yield three to six dozen pipe-stems, according to size.

These "pieces" as they are always called, are put on a lathe adapted to this purpose and reduced to the size and the form required.

Shaped in this way, the newly made stems are drilled by machine. After this the "threads," for holding stem and bowl together, are cut by hand. The "sand," or dust, resulting from this process is carefully gathered also; it is mixed with linseed oil; the whole reduced to a molten mass and then allowed to set in small containers, when it forms *the* ideal resin for high-grade violin-strings.

The Finishing Touches

Shaped, threaded, almost ready for use w the pipe-bowl, the amber pipe-stem must still "run down," as it is called, on powerful sar wheels. This process goes to complete the wo of shaping a pipe-stem to exactly the form sired. Work of this sort proceeds rapidly or one really has acquired the knack of it, and expert workman thinks nothing of "finishi off" five dozen stems in a working day.

This done, the stems are polished on elect buffers, after which there is a final inspecti a touching up here, there and elsewhere, and within two days of the time the brick was moved from the safe, if necessary, the cor sponding lot of pipe-stems is complete.

Basis for Fixing Amber Prices

Amber stems sell at the factory doors at an where from fifty cents to three, and even fo dollars apiece. Amber in these stems is sold the basis of the square millimeter diameters. fifty-cent stem will be perhaps an inch in leng flattened or squared about, and marked at t millimeters through.

A four-dollar pipe-stem will be quite a lo affair. Length is of no especial advantage, simply helps on the novelty of the whole.

The big average in stems is one two and half inches long, and selling for a dollar and half without case.

A Priceless Treasure

Given a stem of that sort; attach it, when y will, to just the simplest of meerschaum bowl give the owner but the slightest of opportuni to color it, and you will place him in possessi of what, to him, is a *treasure* not to be part with for persuasion, or price!

The Tobacco and Pipe Trade in Bristol, Eng., in Seventeenth Centur

City Greatly Benefited By Her Favorable Geographical Situation—Was One of the Early Tobacco Centers of Europe—Embarked Extensively Upon Importation of American Tobacco—Many Interesting Details of Historical Events.

BRISTOL, owing to her favorable geographical situation, was one of the early tobacco centers in Europe. The Bristol merchants were active ship operators and, shortly after the development of trade with the American continent, embarked extensively upon the importation of American tobacco. A writer in *Wills' Works Magazine,* basing his remarks upon *Latimer's Annals of the City of Bristol,* gives many interesting details of the growth of the tobacco and pipe industry in Bristol, from which we glean the following:

The practice of smoking was observed by the companions of Columbus on their first voyage, and was introduced into Spain by some of the followers of Columbus on his second voyage, from which he returned about 1512. It was introduced into the British Isles about 1550, but it was not until 1586 that the plant and its use were widely known, and that Raleigh distinguished himself by growing tobacco on his estate and himself smoking publicly.

Early Forms of Tobacco Pipes

How early the smoking of tobacco had made its way to Bristol is shown by a document, dated October 9, 1593, only about eight years after tobacco had been first landed in England, and still nearer the time at which Sir Walter Raleigh had astonished the villagers of Iron Acton by "blowing a cloud" in the garden of Sir Robert Poyntz. In a letter to Mayors and Justices in the Western Counties, the Lord Admiral Howard stated that he had been informed by Thomas Aldworth, of Bristol, merchant, that a vessel partly belonging to him had been carried off by lewd mariners, who sold her to others, and that the buyers, naming her the *Tobacco Pipe,* had sent her to sea as a privateer, and had had the good luck to take an Indian prize, which the Justices were ordered to seize, together with the stolen ship, and deliver both to Aldworth. The Wiltshire antiquary, Aubrey, who gathered information on the subject from aged yeomen whose memories extended to the reign of James 1st, states that the pipes first used by the middle classes were made of a walnut shell and a straw, but that a silver pipe was used by the gentry, who passed it around from man to man during an after-dinner carouse. The manufacture of ordinary clay pipes, however, began in Bristol at a very early date, and employed many workmen. The bowls were at first little larger than a lady's thimble. The price of tobacco was then very high. Aubrey asserts that it sold for its weight in silver, and that when yeomen went to Malmesbury or Chippenham market "they culled out their biggest shillings to lay in the scales against the Tobacco."

A Pioneer Pipe Making Monopoly

The creation by the King of new monopolies was a constant occurrence. A monopoly of making tobacco pipes having been sold to a company in London, a Royal Proclamation was issued in May, 1620, forbidding anyone from violating the terms of the patent by manufacturing pipes or buying from unlawful makers, and threatening offenders with fine and imprisonment. This industry was largely prosecuted in Bristol, and the grievance caused by the royal policy must have been keenly felt. The monopoly continued until dealt with by the Long Parliament. By that time smoking had become so prevalent that the House of Cor mons, in July, 1644, passed an ordinance, ir posing an excise duty on "Tobacco pipes of a sorts, to be paid by the first buyer, for eve grosse fourpence."

The men who *smoked* in 1623 were th styled *tobacconists.*

With reference to the scarcity of money, M Guy adduced as its primary cause "the extrao dinary importation and use of tobacco," a su prising complaint in the mouth of a Bristoli (tobacco, however, was still a costly article Although the Customs duty was insignificar the Corporation in 1624 paid three shillings f a quarter-of-a-pound, presented to one S Richard Hill.

Proclamations Hardly Have Any Effect

In January, 1631, the King issued a proclam tion by which Bristol merchants were prohibit from pursuing one of the most importa branches of their commerce. The mandate, aft asserting that notwithstanding previous roy decrees, great quantities of tobacco continued be planted in several parts of England, while a incredible quantity was being imported secretl forbade the cultivation of the plant at home, its importation from the plantations into ar port save London. The quantity to be admitt was to be fixed at the King's discretion, H Majesty disapproving of an immeasurable outl on so vain and needless a commodity. Notwitl standing this emphatic expression of the roy displeasure, the culture of tobacco in Glouceste shire became so prevalent in the followin Summer that the Privy Council sent down peremptory order to the sheriff to cut down tl plantations—apparently with little effect. Th above proclamation was re-issued in May, 163

l again in January, 1638. It is probable that l restriction of the foreign trade to London as devised to extort money for licenses to port into Bristol, and it will be shown under 41 that such licenses were occasionally ob-ned. In the meantime a jealous watch was ot upon local merchants. In April, 1635, en a ship laden with tobacco was driven into s port through stress of weather, a petition as sent to the Government praying that she ght be discharged here, but the Lords of the easury sneeringly expressed doubts as to the p's change of course, and peremptorily ered her to London.

rowing Went on Despite Proclamations

n spite of numerous royal proclamations the acco plant was very extensively cultivated at s period in Gloucestershire. The Privy ncil in June, 1637, forwarded a letter to the unty Justices strongly censuring them for issness in supporting the officers sent down root out the plantations; they had been riot-ly resisted in various districts. Similar ssives were frequently dispatched, clearly hout effect, and it is probable that the landed ntry winked at an industry that tended to ance their rentals. A document in the His-ical Manuscripts Reports (vol. 10, part 2) tes that the price of the best tobacco in 1638 as one shilling per ounce.

Government Had to Capitulate

he Government, in February, 1639, was com-led to withdraw the arbitrary orders by which foreign tobacco trade was made a monopoly the benefit of London merchants. At a sit-g of the Privy Council on the 17th, a petition as considered of the farmers of the Customs an abrogation of the system, owing to the at injury they sustained from it, many ships en with tobacco being, they alleged, carried o Western outports under pretence of dam-e, when the cargoes were smuggled ashore l the duties lost. Their lordships determined reverse their policy, and it was ordered that acco might be thereafter landed at Bristol, mouth, Dartmouth and Southampton. A at stimulus was thus imparted to local com-rce, and the trade rapidly developed.

nough Tobacco to "Victual" for Voyage

A commission was issued by the Court of chequer in July, addressed to Thomas Col-n, Nathaniel Cale and other local merchants, lering them to hold an inquiry in reference a suit raised by a Customs Waiter against lliam Penneye, Bryan Rogers and other stolians. This court was held at the Rose vern, then a noted hostelry, the case arising of the King's edict of 1631, and the evidence ws how local merchants were driven to seek ef from this edict. It was deposed that in vember, 1637, the Lord Treasurer, on the nest petition (and doubtless at the heavy rge) of Richard Lock, merchant, and with approval of Lord Goring and others, framers the tobacco duty, ordered the Customs officers Bristol to permit Lock to land a cargo of acco from St. Kitts. Also that the same nister, in January, 1638, on the prayer of nneye, gave a similar license for the landing this port of ninety cwt. of tobacco from rbadoes, and in the following month granted mission to a ship to take in as much St. ts tobacco as would "victual" her for a rney to France. The prosecutor further de-ed that during the last-mentioned year cer-n ships brought large quantities of tobacco the Avon, and landed some without warrant, that when he attempted to seize part of this hibited merchandise he was thwarted by the endants.

Testimony Causes Suspicion

The evidence on the other side disclosed the l cause of the prosecution. The defendant, gers, was the local agent of the tobacco farm-, and had been accustomed, with their approval, to grant licenses to merchants to land tobacco, on their paying handsomely for the privilege in addition, to the regular duty; Cale, one of the commissioners, deposed that he had himself bought 40,000 pounds weight by an arrangement with one of Lord Goring's officers. Other witnesses asserted that much of the tobacco alleged to have been smuggled out of Hung Road was, in fact, delivered to the agents of the farmers, and sent to London in accordance with the King's mandate, while the full duty was paid on what remained in Bristol. The whole testimony raises a suspicion that the prosecuting Landing Waiter was irritated by seeing that the bribe he coveted for himself went into the pockets of other people. He doubtless dropped his suit, of which there is no further mention.

An ordinance decreed that the Tobacco-pipe Makers Co. should consist of twenty-five members, from which it may be assumed that the export of pipes, afterwards considerable, had already commenced. Any inhabitant, not a pipe-maker, presuming to buy pipe-clay to sell again,

Struck by cheerful expression of this Californian stone face, a local enthusiast inserted the steel pipe

was threatened with a penalty of twenty shillings.

How Like Modern Night Riders!

Although statutes had long been in force prohibiting the growth of tobacco in England, the profits of the culture, and the widespread "love of the weed," caused them to be often violated, especially in Gloucestershire. In 1652 the House of Commons passed a fresh ordinance interdicting cultivation, and authorizing anyone to destroy the plantations; but this was felt as a grievance in the district, and a number of petitions were sent up for its repeal, one of which, signed by the Mayor of Bristol, alleged that riots had been caused by the attempts made by certain persons to destroy the crops. Accordingly the Barebone Parliament, in August, 1653, resolved that a duty of threepence per pound on all tobacco produced in Gloucestershire should be paid by the growers, who should reap the profits of the cultivation for that year only without molestation, after which planting was to be stopped. The cultivation, however, went on as before. In June, 1655, the Government issued an order to the army officers in Gloucestershire, Somerset and Bristol, commenting on the prevalence and persistency of the unlawful industry, and ordering them to assist the persons authorized to destroy the plantations and to suppress the tumults of those who might oppose them.

Among the "Instructions" prepared by the corporation of the guidance of the new City members of Parliament is the following: "To prevent the growth of English tobacco, which was to the 'Extraordinary prejudice' of local trade; there being very vast quantities planted this year (1654), and daily brought into this city."

In the State papers of 1656 there are numerous letters addressed to Secretary Nicholas, the exiled King's Minister, then living at Cologne, by various spies and correspondents, showing that Royalist conspiracies for a revolt were then rife in many districts. The following extract from one of the letters is interesting: "If the King effected a landing, Major W. C. would have 1,400 men in readiness to march from Bristol within four days, besides many who would be left to guard the town and fort (!) whilst the gates of Gloucester would be opened by D. F. to Colonel V., who was assured of the assistance of 600 'malcontented tobacco planters.'"

On August 6, 1662, a resident of Tormarton reported that the militia were being called out to destroy the tobacco planted in Bristol, in which many were interested.

More Ineffectual Proclamations Against Tobacco Culture

The yearly proclamations of the Protectorate Government prohibiting the culture of tobacco in the west of England continued to be issued after the restoration, but as before, were ineffectual. In March, 1666, the Privy Council, in a letter to the Lord Lieutenant of Gloucestershire, stated that from information received, the quantity of the root then growing in that county was greater than in any previous year, and that some of the cultivators in resisting the King's officers had declared they would rather lose their lives than obey the law. The Lord Lieutenant was ordered to make use of the malitia to reduce the mutineers, and was promised the assistance of a troop of cavalry. A dispatch was sent on the same day to the Judges of Assize at Gloucester, urging them to see the law put into execution, and to censure the local magistrates for their remissness. As the Council issued similar orders the following year, it is clear that the cultivation was still unchecked, to the great annoyance of Bristol merchants interested in the American trade, who naturally disliked home competition.

Vigorous Measures Taken

In the State papers of 1667 (August) is a representation to the Government from local firms respecting this grievance, pointing out imperfections in the Act prohibiting domestic culture. The plant, it was alleged, was grown throughout Gloucestershire, even on the estates of magistrates, whose interest forbade them to interfere, as they received half the profits in the shape of rent. Probably in response to this appeal for more vigorous measures, a considerable body of the King's Guards were sent down to assist in the destruction of the plantations.

Many Hogsheads of Tobacco Lost

In December, 1667, the Privy Council was called on to consider the griefs of certain Bristol merchants. These applicants stated that during the late war with the Dutch the enemy had captured six of their ships laden with 3,300 hogsheads of tobacco in 1665 and 1666, while in 1667 nine ships with 6,000 hogsheads had been taken and burnt in the James River disaster. On all this tobacco an impost of 2s. 3d. per hogshead had been levied by the Governor of Virginia—professedly for the erection of fortifications, though no such works had been built—and the petitioners prayed that the money might be refunded. The Council promised an

inquiry, but there is no evidence that relief was afforded.

In November, 1670, Sir John Knight asserted in the House of Commons that of the 6,000 tons of shipping possessed by Bristol, one half was employed in the importation of tobacco.

Observed Prevalence of Tobacco Smoking

M. Jorevin de Rochefort, Treasurer of France, visited Bristol during 1670, and among other impressions are the following: He notices the prevalence of tobacco smoking. Supper being finished," he says, "they set on the table half a dozen pipes and a packet of tobacco for smoking, which is a general custom amongst women as well as men, who think that without tobacco one cannot live in England, because they say it dissipates the humors of the brain." He goes on to allege that smoking was common among school boys in the neighborhood of Worcester.

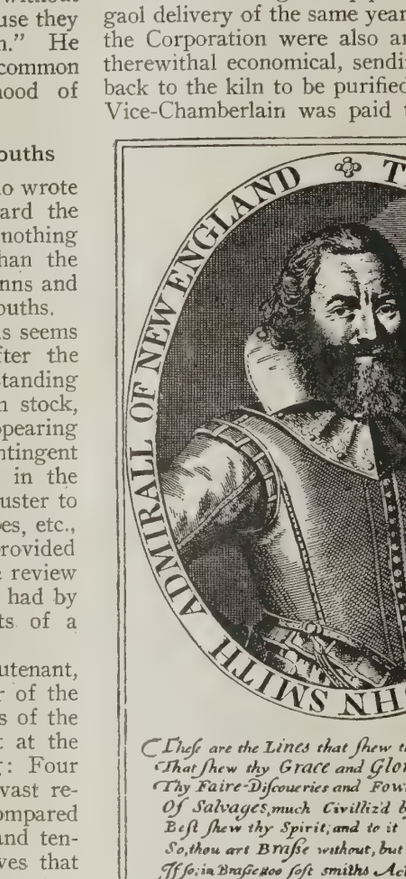
Clergymen with Long Pipes in Mouths

A Swiss gentleman, named Muralt, who wrote a description of English manners toward the end of the century, seems to have seen nothing in London that surprised him more than the spectacle of clergymen seated in all the inns and coffee-houses with long pipes in their mouths.

The annual muster of the trained bands seems to have become a mere formality after the Government had established a small standing army. Each parish kept one musket in stock, and paid a man one day's wages for appearing at the inspection in the Marsh. The contingent furnished by the corporation is shown in the Audit book, 1672: "Paid at a general muster to six soldiers—Wine, Sugar, Tobacco, Pipes, etc., £2:4:0." The festive accesories were provided for the civic dignitaries who honored the review with their presence. Tobacco and pipes had by this time become indispensable adjuncts of a corporate feast.

The Marquis of Worcester, Lord Lieutenant, having ordered, duly attends the muster of the militia in 1681. Among the minor items of the account in connection with the banquet at the Merchants Hall we find the following: Four shillings for two pounds of tobacco, a vast reduction in the price of that article as compared with earlier records—and one shilling and tenpence for a gross of pipes; which proves that smoking had become a postprandial custom among the upper classes.

A Famous Clerical Pipe Smoker



The greatest of clerical tobacconists of late eighteenth century and early nineteenth century date was the once famous Dr. Parr. He is said to have called for a pipe after taking a meal at the coaching-inn called the "Bush," at Bristol, when the waiter told him that smoking was not allowed. Parr persisted, but the authorities at the inn were firm in their refusal to allow anything so vulgar as smoking on their premises, whereupon Parr is said to have exclaimed: "Why, man, I've smoked in the dining-room of every nobleman in England. The Duchess of Devonshire said I could smoke in every room in her house but her dressing-room, and here in this dirty public-house of Bristol you forbid smoking. Amazing! Bring me my bill." The learned doctor exaggerated no doubt as regards the facilities given him for smoking; for it was his overbearing way not to ask for leave to smoke, but to smoke wherever he went, whether invited to do so or not.

The more fashionable folk of the Restoration era and later, began to leave off, if not to disdain, the smoking habit. Up to about 1700 smoking had been permitted in the public rooms at Bath, but when Nash then took charge, tobacco was banished. Public, or at least fashionable, taste had begun to change, and Nash correctly interpreted and led it.

It was the custom at this time for lavish expenditure to be made in connection with funerals, and it was alleged that the vanity of Bristolians incited them to an extravagance "beyond imagination." These funerals took place at or about midnight with great display; from a deprecatory *minute* in the records of the Society of Friends at Frenchay, smoking seems to have been an ordinary incident in the proceedings.

Had Old Pipes Renovated

At the Summer Assizes in 1702, Justice Powell was entertained at the house of Alderman Lane, who remitted to the City Chamberlain a detailed account of his expenditure during his visit. Among these items were 2 pounds of tobacco and 288 pipes. The Recorder was allowed five shillings for pipes and tobacco at the gaol delivery of the same year. The members of the Corporation were also ardent smokers, but therewithal economical, sending their foul pipes back to the kiln to be purified by burning. The Vice-Chamberlain was paid the following little

count of the audit in 1704: December 26th, 1703, paid for pipes, 5/-; May 15th, a gross of pipes and for burning of pipes, 2/-; July 2nd, pipes at muster and for burning of pipes, 1/-; August 8th, more pipes and for burning or foul pipes, 1/-; August 22nd, gross of pipes, and burning foul ones, 2/-. Another half-gross of pipes was bought in September at the celebration of the victory of Blenheim. The expenditure under this head increased in subsequent years, no less than nine gross of new pipes being bought in 1716, while several gross of old ones were reburned. At the yearly celebration of the King's coronation in 1723 the civic body, after ordering in 216 pipes consumed 2½ pounds tobacco with "6 Jugs of Ale, 10 quarts each," and upwards of 60 gallons of wine. In the petty payments for 1738 there are small payments for tobacco every day on which the Council assembled..

Raised False Cry of "Great Decay"

The Corporation in September, 1722, subscribed £50 toward a movement to obtain Parliamentary relief for the local tobacco trade, alleged to be in a state of "great decay." The true motive of the agitation was far from creditable. Glasgow, hitherto despised by Bristol and Liverpool, had opened a considerable import trade with the American Colonies, especially in tobacco, and offered that article in the English market at a great reduction in price. The under-sold dealers, greatly irritated, raised a cry t the Scotch traders were evading the Custo duties, and clamorous demands were made Parliament to suppress the alleged frau Owing to the influence of the English mercan interests, the Government raised a number vexatious actions against the Scottish import and though in every case the charges of fra proved to be groundless, the persecution redu the Northern tobacco trade to insignificance many years, to the great joy and profit of Sou ern competitors. A letter, written by Is Hobhouse, an eminent Bristol merchant, mitting that the charges against the Glasg firms were untruthful, is among the Newca MSS. in the British Museum.

Earliest Mention of Cigars

The earliest mention of cigars in English curs in a book written in 1735. A traveller Spanish America, named Cockburn, descri three friars in Nicaragua, who, he says, "g us some seegars to smoke . . . these are lea to tobacco rolled up in such manner that t serve both for a pipe and tobacco itself. . they know no other way here, for there is such thing as a tobacco pipe throughout N Spain."

About 1747 a swimming-bath was opened one Thos. Rennison, a threadmaker, at a sub ban place called "Territt's Mills," near the up end of Stokes Croft. The mill was used grinding snuff, and there was a large pond the premises, which was probably the origi bath.

When Snuff Was Much Used

The local press reported on May 5, 1753, t two young ladies had just been robbed by highwayman while walking in the fields near city, and that the thief had stripped them 35/- and two silver snuff boxes. Snuffing then a practice common to all ranks of soci and had many ardent votaries among the sex. Defoe, in whose time the fashionable snu sold at from 8/- to 32/- a pound, remarked one of his essays that his "servant-maid" t her snuff with the airs of a duchess." From accounts of the Gore family at Bourton, it pears that at least a pound of snuff a week an average was consumed in that family. manufacture of the article rose to considera local importance, and about this time many the corn mills in the suburbs were conver into snuff mills. The business must have tended rapidly, for at the Christmas Quar Sessions in 1756 the Grand Jury represented the Justices that the converting of any grist m belonging to this city to any purpose other t that of grinding corn may become very de mental to the public, and expressed pleasure t the aldermen had been animated by the sa sentiment in giving notice to the tenant of only mill belonging to the Corporation spec to quit the same. The mill in question was City Mill, St. James's Back, which was sho afterwards advertised to be let for the grind of corn only. Other snuff mills mentioned ab the same period are Territt's, Locks, Clif (site of the Observatory), Coombe Din Barrow, Frenchay, and one or two others on Frome.

William Hulme, a Scots-snuff-maker, Mary-le-port street, in 1754, leased a windmil Cotham, and transformed it into a snuff ma factory. When he became bankrupt three ye later the place was advertised for sale, "hav eleven mills erected for that purpose." stone work of this mill forms the foundations the lofty tower standing in Cotham Park. Th is reason to believe that the sign over Huln shop was a parrot, but it is suggested tha served as the sign of one Thos. Parrot, who a tobacconist in St. Mary Redcliffe parish sc thirty or forty years earlier. (Parrot's na appears in the poll book for 1722, as voting Redcliffe parish.) This sign now hangs in manager's office at Bedminister. Parrot st

he Artistic Tobacco Graters, Stoppers and Boxes in Olden Times

During the Sixteenth Century Smokers Were Willing to Pay High Prices for the Luxury of a Smoke—Pipe-Makers and Others Employed Artists to Embellish Their Products—Modern Smokers Enjoy the Pipe Without So Much Elaboration.

By Dr. ARTHUR SELWYN BROWN

WHEN the habit of smoking was very prevalent in Europe in the sixteenth century, smokers were willing to pay high prices for the luxury of a smoke. Only small quantities of tobacco were procurable in America and the demands for tobacco for medicinal purposes, for sniff and for smoking were widespread. This difficulty in securing tobacco enhanced the importance of smoking and led to pipe-makers and others, making smokers' requisites, to employ artists to design and make their goods.

Pipes were made so well that all the pipe-makers stamped their names on a prominent place on every pipe made by them. The makers of tinder-boxes, used for lighting pipes before matches were invented, showed great ingenuity in designing and chaste art in ornamenting their boxes and cases. The finest application of art to tobacco utensils, however, was in the decoration of tobacco graters.

Few people today have heard of such graters. Yet they were once indispensable to every smoker. In many of the European museums, one may see large collections of them and the visitors of these exhibits will indicate how common and wide-spread were their uses in the past.

Modern Smokers Enjoy Many Advantages

The smoker today unconsciously enjoys the effects of the cumulative inventions of a large number of inventors who have improved the manufacture, curing and packing of tobacco. Smokers of the sixteenth to eighteenth centuries did not have anything like these advantages. Their tobacco, besides being very expensive, was poorly cured and packed. They had no plug, cut plug, and similar types of manufactured tobacco. In hand made carottes, crudely cured, was the way they received tobacco from America.

Tobacco has always had a reputation for medicinal virtues, notwithstanding the tirades of anti-smokers, and the early smokers believed that for smoking purposes, it should be dry and uncut by steel knives. At first, they pulverized the tobacco by rubbing it in their hands. Then nutmeg graters were used. The tobacco-grater was developed from the nutmeg grater.

Nutmeg graters have also gone out of use; because of changes in social customs. Every business man in former years carried one, because they were used in flavoring wine and other alcoholic drinks.

Collectors Have Numerous Tobacco Graters

When the custom of drinking mulled wine, then called "negus," was common, drinkers had to make their own flavors by mixing spices with them. Most business men drank in those days and consequently carried spice graters with them and used special ones in their offices and homes. These spice graters were frequently made of gold, silver and enameled metals and were beautifully ornamented by engravers. An English collector possesses some fine examples of these graters and several silver tobacco graters made in London in 1798. The tobacco graters are similar to the article used in modern kitchens today for grating spices and cheese, the tobacco graters are shaped like walnuts, sea-shells or fruits. One of these tobacco graters is shaped like a walnut and has a detachable grater which slides in a slot.

M. Alaret, a French collector and connoisseur of tobacco-graters, has in his great collection in Paris, fine examples of graters made in Russia, Austria, Italy, Switzerland, England and Germany. The finest, and most artistic, appear to have been manufactured in France.

The term tobocco-grater was first used by smokers to designate the iron or other metal, made in rasp-like designs used to do the actual disintegration of the dry tobacco carottes. Afterward it was employed to describe the grater and its case or mounting. The mountings were made of most of the common metals, gold and silver, boxwood and ebony, bronze, jade, amber, enamel, ivory, coral, procelain, faience, tortoiseshell and similar materials. Ivory and boxwood were the commonest materials used.

Specially Engraved Tobacco Graters

It was customary for smokers to have their arms, monograms and other symbols engraved on their tobacco graters. Their professions and hobbies were also indicated through them in various ways. One shaped like a lute, mandolin or guitar indicated the owner was a musician or had musical tastes. One shaped like a boat, a fish or a shell, showed the owner followed the sea or liked fishing.

The artistic value of these interesting smoking antiques causes them to occupy prominent positions in the museums which have the good fortune to possess them. The Victoria and Albert Museum, London, and the Wallace Museum, have some fine specimens. Several of the museums in Paris exhibit exquisite specimens showing the large amount of artistic effort that was spent in their making.

The tobacco-graters used by priests and other churchmen form distinctive types. These are symbolical of the church and her history. Some are in the form of a cross, of a church spire, or carry decorations showing religious scenes.

Other graters embellished with allegorical or mythological scenes, the fables of La Fontain, drinking or smoking parties, love-scenes and operatic views, were used for marriage gifts.

History of Tobacco Graters Not Generally Known

Very little has been written about these magnificent art objects of former times. Some of the graters, however, tell us how they were used. Some of the enameled graters in the French museums contain pictures resembling the finest miniature paintings made today. A specimen in the Louvre Museum, Paris, shows a man actually preparing to fill his clay pipe by grating carotte of tobacco over a shallow dish.

Paul Hentzer, a German visitor to England in 1598, described his impressions in a book published in that year in which he stated how surprised he was by the popularity of smoking with men and women in England. Describing a visit he made to the Bear Garden Music Hall, Southwark, London, he said:

"At these entertainments, and everywhere else in England, the English are constantly smoking tobacco and in this manner: they have pipes made on purpose of clay, into the farther end of which they put the tobacco herb so dry that it may be rubbed into powder, and putting fire to it, they draw the smoke into their nostrils, like funnels, along with plenty of phlegm and defluxion from the head."

This author does not say that he learned how to smoke as a result of his English visit, but the care he took in studying the smoking habits of the English suggests that he did not envy the pleasure of the smokers in vain.

Mechanically Grated Tobacco

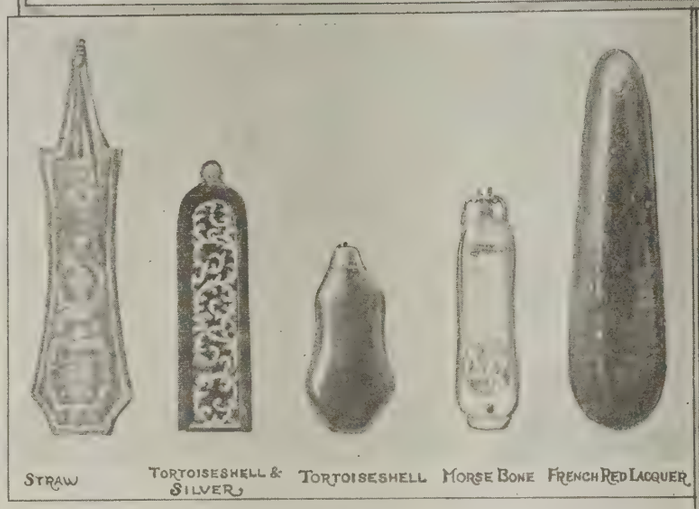
In 1730, British tobacconists began to put mechanically grated tobacco and snuff on the market. This gave a death-blow to the artistic smokers favorite, the tobacco grater. From that time on they became less prominent in public gatherings and at the beginning of the nineteenth century, only elderly smokers who clung to the traditions of earlier days, ventured to carry about with them a friendly old grater.

The newer generations of smokers preferred the shop-grated cans and packages of tobacco powder. Since the middle of the last century, the tobacco grater has completely gone out of use and like the mammoth, the auk and whistling swan, they are out of the modern mind, and completely forgotten, until we accidently catch a glimpse of one in a museum.

The Tobacco-Stopper

The tobacco-stopper is another smoker's article which was once common and is now never seen. When smoking was first introduced into Europe, the cost of tobacco was very high. It was smoked in a dry and powdered state, in pipe bowls which were made very small so that no tobacco could be wasted. The powdered tobacco was carefully put into the bowl and before the lighted tinsel was applied to it, a careful ramming was done, just as gunpowder was rammed into a flint-lock of the period. The tobacco was rammed, or packed in the pipe-bowl with a tobacco-stopper.

This was an artistically designed instrument of the sixteenth to eighteenth centuries made of metal, bronze, porcelain or other material with human figures and other designs at their butts. Large numbers of these, representing many curious designs in wood, ivory, tortoise shell, porcelain and metal have been preserved in the European museums.



They were sometimes combined with finger-rings, just as the private keys of the Romans were, and following the Roman fashion. These, with the graters, were as much treasured by early pipe smokers as a good pocket-knife is treasured by smokers today. They were intimate personal belongings. That is why they were so artistically designed and had such splendid workmanship bestowed upon them. Smokers did not mind what price they paid for them. All they asked of the makers was that they were chaste in design and suited the smoker's artistic taste.

The Old Tobacco Box

Tobacco boxes were other articles of the early European smoker's equipment. These were also made of metal, gold and silver, being the commonest. They were likewise beautifully carved and ornamented. Tobacco boxes held the powdered tobacco and were carried in the pockets of smokers, just as pouches, the modern equivalents, are.

Among the earliest tobacco boxes found in England and France, long, oblong boxes made of brass with Dutch designs, are prominent, indicating that a large trade in manufacturing these in the Netherlands was then done about the time of the reign of William and Mary in England. Many of these are engraved with scriptural and other subjects with inscriptions

Examples of ancient tobacco graters in boxwood, straw, tortoiseshell, bone, French red lacquer, bronze, copper, ivory and enamel; pipe stoppers and tob
boxes, also made of various materials

Dutch regarding the pleasures of smoking. A large industry in the making of tobacco ixes developed in England in the eighteenth ntury. These included some of the finest and ost artistic ever made. Since Celtic time, the itish have excelled in gold and silver work d the making of tobacco boxes in gold and ver plate appealed to the sentiments of the ldsmiths. Embossed subjects, portraits of en, women, ships and animals, and particular portraits of the popular hero of the time, ederic the Great, were the principal subjects the ornamentation.

Earliest English Tobacco Boxes

The earliest known English tobacco box is a tle thing in oval form, with a loose lid, 3½ hes long by 3 inches wide. Around the base its vertical sides is an applied cable or rope ulding. A similarly cabled moulding is ap- ed to the rim on the cover, which slips over e top firmly so as to make a tight fitting. It engraved with the arms of Wayte of Wayte urt, Isle of Wight, and appears to have been de about 1614 or 1615. At a later date, a mber of the same family had his initials en- aved on the bottom of the box and his crest s also nicely cut above the lettering.

In June, 1789, a subsequent owner, a mem- r of the same house, had his initials and arms graved. This illustrates how tobacco boxes, e tobacco graters and stoppers passed down families from father to son in the course of nturies and thereby became valuable heir- oms and family property. The older they be- me the more valuable they were because of ditions and the accumulated embellishments de to them by different owners.

Many of the tobacco boxes made in England d France in the time of William III of Eng- d were oval in shape and beautifully orna- nted with concave fluting.

Boxes Magnificently Ornamented

British tobacco boxes, generally of the eigh- nth and early nineteenth centuries were most- of oval shape, although round and hexagonal square ones are by no means rare. They re magnificently ornamented in the prevail- g styles of the period in which they were made d like tobacco graters, rivaled in beauty the ld and silver decorations of snuff-boxes, free- m-boxes and vinaigrettes of the day.

Smokers, in the early centuries, also took uff, and, therefore, carried a snuff box in ad- ion to pipe, tobacco box and stopper. These o were works of the goldsmiths' art. Po- nders, of perfume boxes, were also carried by gentry. These were commonly called unce-boxes or pouncets. The name was de- ed from the French words *pomme,* or apple d ambergris, grey amber wax from which rfumes were made. Shakespeare in King nry IV, act 1, scene 3, tells us about a char- eristic gentleman of the time that:

e was perfumed like a milliner;
d 'twixt his finger and his thumb he held
pouncet-box, which ever and anon
gave his nose and took 't away again;—
o, therewith angry, when it next came there,
k it in snuff;—and still he smiled and talked:
d, as the soldiers bore dead bodies by,
called them untaught knaves, unmannerly,
bring a slovenly unhandsome corpse
wixt the wind and his nobility."

Aestheticism Destroyed by Modernism

Our democratic times have spoiled our tastes artistic things and we find it difficult to lize the beauty of the smoking requisites of early European smoker. Today, in demo- tic countries, a smoker's pipe and pouch are chief concern and these are usually of the rest and cheapest quality in keeping with rything else he possesses.

This lack of taste in democratic and mate- istic times permeates our lives. It is due to extreme attention to business and to money king. The struggle for money develops cu- ity, and this vitiates every artistic leaning an individual might ever have had. Good taste and the money-making instinct are mutually antagonistic. When pipe smoking was first introduced into Europe knighthood was still in flower. The taste of the educated classes was at a high level, and little attention was given to business. The ordinary man of the world earned enough to support his family in ease at his profession or by tilling a small farm, the best part of the day was given to reading, study or art.

Today the best efforts of every one are given to the winning of dollars, and the fractional remainder of each day is wasted in trivial follies. Taste and mental elevation have no possible chance for development, and this explains the difference between the poor, extremely inartistic smoking article of today in comparison with the beautiful things owned and prized by early European smokers.

A man's personal possessions reveal his character. A comparison of such ordinary things as smokers' requisites in the sixteenth and seventeenth centuries with those of a modern smoker will show how far we have degenerated in taste and gentility in less than four centuries.

Smokers' Outfits Were Works of Art

In the time of Queen Anne of England, the contemporary writers refer to the wonderful art works which comprised the smoker's equipment. Gold, silver and all the precious stones were employed in ornamenting the tobacco stoppers, tobacco and snuff boxes, and pomerus. Diamonds, rubies, emeralds, agates, rare woods, mosaics and many other substances were used by the greatest jewelers of the day in making tobacco, scent and snuff boxes. A poet of the period described the boxes as follows:

For ladies fair, and formal men to please
The mines are robbed of ore, of shells the sea,
With all that mother earth and beast afford
To man, unworthy now, tho' once their lord:
Which wrought into a box, with all the show
Of art the greatest artist can bestow;
Charming in shape, with polished rays of light,
A joint so fine it shuns the sharpest sight;
Must still be graced with all the radiant gems
And precious stones that e'er arrived in Thames.
Within the lid the painter plays his part;
And with his pencil proves his matchless art;
There drawn to life some scene or sweetheart dwells,
Like hermits chaste and constant in their cells.

It was in the beautiful enameled and porcelain boxes that the richest and most luxurious paintings were used.

Art Gives Way to Materialism

Art, we are told, is not only an accomplishment, but a necessity, of civilization. As soon as man began to emerge from a barbarous condition he began to ornament his tools and fighting equipment. The more civilized he became, the more time and energy he devoted to art.

Art is nothing more than the realization of beauty. And beauty may be described as aesthetic emotions objectified. Art creates beauty and beauty inspires taste. It is a strong social magnet; because all who are attracted by art have warm sympathies. Sympathies develops public welfare and patriotism and is consequently a powerful force in leading to the elevation of mankind. It is a recognition of this fact which causes art to be made an integral part of every good modern scheme of higher education.

The Public Taste of Smokers

Protagoras taught that: "Man is the measure of all things." Educators today teach that "Art is the measurer of men." And herein lies the significance of the contrast between ancient and modern smokers—between the public taste of smokers in former centuries and the lack of taste today.

Character, as well as taste, is shown by workmen who embellish their works by artistic decorations. As Auguste Rodin truthfully said: "The art-worker is the confidant of nature. The trees, the plants talk to him like friends. The old gnarled oaks speak to him of their kindliness for the human race whom they protect beneath their sheltering branches. The flowers commune with him by the gracious swaying of their stalks, by the singing tones of their petals, each blossom amidst the grass is a friendly word addressed to him by nature.

"For him life is an endless joy, a perpetual delight, a wild intoxication. Not that all seems good to him, for suffering, which must often come to those he loves, and to himself, cruelly contradicts his optimism. But all is beautiful to him because he walks forever in the light of spiritual truth."

The art worker, of course, is more emotional than his patron who buys his works. The patrons of art, however, in an artistic age, must derive only good effects from works of art. Their taste must be elevated and refined by the contemplation of beautiful things.

Smokers Criticized for Expensive Habits

It was the custom of the satirists in the Sixteenth and Seventeenth centuries to ridicule the taste of pipe smokers. They found fault with their expensive dress and their more expensive smoking requisites. But ridicule was their business. They would have ridiculed saints just as freely. We, looking at the beautiful works of art bequeathed by smokers of those centuries to our art museums, cannot credit the writers of satire with judgment.

The universality of good art in those times was evidence of a universality of good taste. It remains for us to deplore the fact that our standards of taste cannot measure up to theirs. When future ages come to study our smoking requisites, the taste rating they will be compelled to assign to us will be in a much lower grade than that of the early European smokers.

Evolution of Artistic Taste

This consolation, happily, remains to the modern smoker. The history of art and æsthetics shows that the evolution of art and artistic taste is not steadily upward. It takes an irregular course. A great advance is often followed by a long period of decadence, which in turn, is followed by another art revival. The modern taste, judged by its exhibition in the design and fabrication of smokers' requisites, does not tend to elaboration. Is it not possible that a revival is near at hand?

Tobacchanalean Days

I love my fragrant brier
When I a-golfing hie;
A meerschaum by the fire,
Its charm who will deny?
A bog, if not too dry,
Evokes my meed of praise;
Then why decry! oh, why,
Tobacchanalean days!

Oft times do I aspire
(Be not the price too high!)
To that which they acquire
Beneath the Cuban sky
If goes the world awry,
Its cark and care allays;
Then why decry, oh, why,
Tobacchanalean days!

Though some may deem it dire
("Pernicious!" is their cry)
This is my deep desire
When midnight hours are nigh,
The cigarette whereby
Life's hung with happy haze;
Then why decry, oh, why,
Tobacchanalean days!

L'Envoi.

Comrades, no dearer tie
Makes bright our wander-ways;
Then why decry, oh, why,
Tobacchanalean days!

—Clinton Scollard.

Close Relationship With Customers Essential in Making Sale

Sale of Pipe Not Complete Unless Customer Is Thoroughly Satisfied — Dealers Should Fully Explain Important Features of Pipe to Purchaser—To Satisfy Customer, Convince Him That He Is Getting Best Service — Useful Suggestions.

By S. N. ZINBERG
U. S. Director of Sales, House of Comoy, Inc.

IN selling pipes the sale is not complete by the purchase of the pipe unless your customer is thoroughly satisfied he is receiving full value for the price he has paid. There are so few dealers who know the difference with reference to pipes in various qualities, that the average purchaser receives very little information, and a great many feel that they are buying a blind article. This is due to the weakness of the average dealer who fails to educate his trade between the difference of a fine briar and an inferior one. A few minutes' conversation in explaining something about briar wood; how the wood is abstracted from the ground; how they are manufactured; will help to create some favorable attitude with your customer which will react to your benefit once you have convinced him that you know something about pipes.

A Dealer's Greatest Asset

A satisfied customer is your greatest asset, and to satisfy your customer means that you must give him service. The profit in pipes is big enough to warrant your giving him a few minutes time in trying to answer any questions he puts to you, intelligently, and explain how to break in a pipe; and why it is necessary at times to have more than one pipe to smoke, due to the overheating of the briar by continually smoking of the same pipe. Closer cooperation will bring bigger dividends, provided you make truthful statements which can be substantiated.

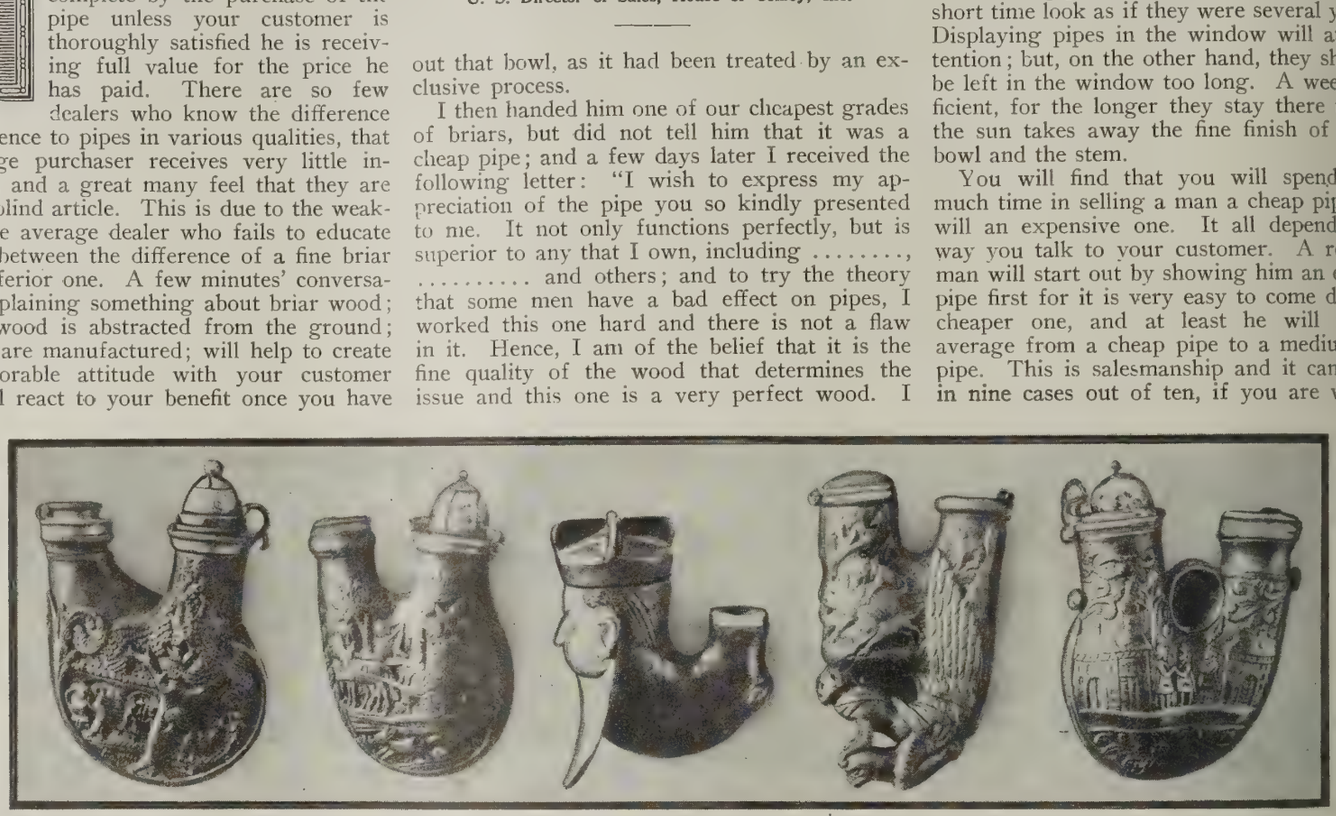
Effects of Correct Methods

Just to show what a talk brought up in the right manner will do, something occurred recently which might be of interest: A gentleman called at the office and stated that he had been sent there by a certain customer of ours to find out why he could not smoke a pipe without burning out the bowl. He showed me two or three pipes of various manufacturers and said that he had had no luck with any pipe that he had ever purchased. I talked to him about briar wood and explained to him how the pipe was made and then advised him how he should break in his pipe; and gave him as strong a talk as I could possibly make; and then, to prove my contention that a good selling talk is as essential as good merchandise, I told him I was going to give him a pipe which was made out of the finest briar obtainable, and this particular pipe had been selected as having that fine grain, full of rich sap and oils, and that he would find that it would be impossible to burn out that bowl, as it had been treated by an exclusive process.

I then handed him one of our cheapest grades of briars, but did not tell him that it was a cheap pipe; and a few days later I received the following letter: "I wish to express my appreciation of the pipe you so kindly presented to me. It not only functions perfectly, but is superior to any that I own, including ....., ... and others; and to try the theory that some men have a bad effect on pipes, I worked this one hard and there is not a flaw in it. Hence, I am of the belief that it is the fine quality of the wood that determines the issue and this one is a very perfect wood. I had exhibited it at the Engineers' Club, of which I am a member, and have pleasure in telling where it was obtained."

This only goes to prove that if your sales talk is convincing you will have no difficulty in convincing your customer that he is getting something beyond the ordinary.

Impressive Introductory Talk



Sales are made, not necessarily because the person wants the article, but due to your introductory talk you have created the desire and if you can follow this up with a strong selling argument you should have no difficulty in making the sale. Just because a man has purchased one pipe and is perfectly satisfied with his purchase does not necessarily mean that you cannot sell him more. If you have a selection, among which are several new shapes, and if your customer happens to be a real pipe lover, he will always see some shape that attracts his eye. A real pipe smoker is never satisfied unless he has at least one-half dozen fine briars. I have seen cases where a man has purchased as high as fifty or sixty pipes and is continually buying new shapes as they come out.

When you are making your sales-talk and the reply that you receive is that, "I will come back tomorrow or next week," you can rest assured that your talk did not have the pep that it should have. In ninety-nine cases out of a hundred this party will not come back.

Stock Must Have Attractive Appearance

To make your stock attractive to the customer it is necessary to keep it clean. This can be easily done in the spare time that you have during the day by polishing the bowls so that they look new at all times. No one wants to buy anything that has a second-hand appearance and I am sorry to state that in the majority of stores the pipes that have been in stock for a short time look as if they were several years old. Displaying pipes in the window will attract attention; but, on the other hand, they should not be left in the window too long. A week is sufficient, for the longer they stay there the more the sun takes away the fine finish of both the bowl and the stem.

You will find that you will spend just as much time in selling a man a cheap pipe as you will an expensive one. It all depends on the way you talk to your customer. A real salesman will start out by showing him an expensive pipe first for it is very easy to come down to a cheaper one, and at least he will raise the average from a cheap pipe to a medium priced pipe. This is salesmanship and it can be done in nine cases out of ten, if you are willing to spend a few minutes of your time in telling your customer the difference between a cheap briar and a better one.

Elaborately carved wooden pipes, with metal furnishings, made in the Alps

If your stock is carried in such a condition that it looks like junk, naturally, you cannot get a price for your goods. If, on the other hand, your stock is neatly arranged in your cases, the pipes polished, and you handled them the same as a jeweler would handle a fine diamond, you will find it very easy to make a sale. Suppose Tiffany put his fine diamonds in baskets and showed them that way! You can easily understand how many sales he would make.

Inducements to Offer Others

When a customer comes to you and tells you how much he has enjoyed the pipe and what pleasure he is having from it, you are a poor salesman if you cannot take advantage of this talk, not only by learning things that are told to you, but by using this as an argument to induce others to buy.

When a customer comes in and buys a cigar or package of cigarettes and starts looking at your pipe case, you can be sure you have a prospect. It is then up to you to interest him and you can do so by showing him something in the pipe line that is out of the ordinary. A freak shape will attract his attention and he will immediately make some remark which will give you an idea of the shape that he likes, and in this way you will have no difficulty in satisfying him.

Secure Confidence of Customer

Win your way into the confidence of your customer. If he tells you something and even if you know he is wrong, don't argue with him. Follow Statler's advice, "the customer is always right." Be very careful not to make bad fun

g and at some time or other when you have ed to make a sale and fallen down, leave a orable impression for there is no telling en this party will return again and he will member that you were not sore because the e had not been made. You must not only ure for the present but for the future as well. you are alert when this party calls a second e you will recollect your talk on the previous asion and try to overcome the weakness in ur sales talk by not repeating the same thing t telling him something new. Just make up ur mind that you are going to sell him.

Hold Customer's Interest

The difficulty in the average cigar store that ls pipes is, that only one clerk has to wait on all customers. The danger here is that en you have made a strong selling talk some- e calls you away to wait on another customer. is is dangerous, for when your prospect's in- est is aroused do not leave him until the sale made. If it should be necessary to leave for minute, be sure to keep his interest aroused stating, "You will pardon me for a minute, want to tell you something remarkable about se pipes," and when you return have a story dy. If you just simply walk away he will likewise.

There are so many clerks doing the same ng in the same way without using their ins that it is only the exceptional clerk who ows that it pays to think. Just give as much ention to your sales as you do to baseball and thing will stop you from being successful.

portance of Attractive Window Displays

There is more money lost through dealers t knowing how to properly decorate their ndows and taking advantage of this "silent esman" which could be overcome by a dis- y of pipes changed at least once a week. In king a window display, don't overcrowd your ndow with merchandise and especially with pes; try and give the background color to ing out the shape more prominently. A dark pe should always be displayed upon a light lored velvet. A natural pipe on a dark lored velvet. Keep the various priced goods gether and don't be afraid to price each grade pipe shown.

It would be well if the various members of e store, who wait on their trade and make a le that is a little out of the ordinary, if they uld talk this over together. In this way you t new ideas which you can use for a certain gth of time. You will find, however, that u must constantly change your selling talk. ou cannot use the same talk continuously, day ter day, without it boring you. Therefore. en you hear something that is new, don't be raid to use it and keep your ears open for other talk.

Just remember, as you sow so shall you reap.

National Importing Co., Inc.

The National Importing Co., Inc., 2-6 Elm reet, New York City, has been established for n years as dealers in raw material for the oking pipe industry. Their specialty is am- r, for which they are the agents for the Staat- he Bernsteinwerke of Konigsberg, Prussia. ny amber that may be desired can be found the company's stock.

The briarwood is imported from Italy and is nceded by the trade to be one of the most re- ble sources of supply. On account of the adily declining prices since the end of the r, the company has held a very small stock, that all benefits from reduced prices abroad uld go to the benefit of their customers.

The company keeps a stock of meerschaum d can supply this material at almost any time. he company believes that the present price of erschaum will not change much and that the okers are ready to take up this beautiful pipe ith enthusiasm. Supplies are still scarce, but ith the signing of the Turkish Peace Confer- ence, regular supplies will come, but on account of the increased cost of living in Turkey as well as here, prices are now at a point from which they can not come down much.

The company also carries other supplies, and will be pleased to answer inquiries from anyone who may be interested in any of their various lines.

The Sacrament of Fire

Bow always when you light a match!
Bow reverently and thankful be
For God's unfailing charity;
And on the ascending flame inspire
A little prayer, that shall upbear
The incense of your thankfulness
For this sweet grace
Of warmth and light;
For here again is sacrifice
For your delight.

Within the wood,
That lived a joyous life
Through sunny days and rainy days
And winter storms and strife:—
Within the peat
That drank the sweet,
The Moorland sweet
Of bracken, whin and sweet bell-heather,
And knew the joy of gold gorse feather
Flaming like love in wintriest weather.

While snug below, in sun and snow,
It heard the beat of the padding feet
Of foal and dam, and ewe and lamb
And the stamp of old bell-wether;—
Within the coal
Where forests lie entombed,
Oak, elm, and chestnut, beech and red pine bole;—

God shrived His sunshine and enwombed
For you the stores of light and heat,
Your life-joys to complete
These all have died that you might live;
Yours now the high prerogative
To loose their long captivities
A wider life to give.

Bow always when you kindle fire!
Bow reverently,
And grateful be
For God's unfailing charity!

—John Oxenham

World Renowned Edgeworth For Far North

The auxiliary schooner *Bowdoin,* carrying the Donald B. McMillan Arctic expedition to the Polar regions, left Boston about two weeks ago, and was recently reported to be well on her way up the coast of Labrador.

Captain McMillan, who is a veteran Arctic explorer, knows the value of having ample smoking supplies during the long winter nights that all sojourners in the Polar lands must experience. He has naturally seen to it that the *Bowdoin* carries supplies, not only for the members of his own expedition, but for trading purposes.

The permanent residents of the Arctic are dependent upon such expeditions, and upon the visits of whaling ships, for their smoking materials, and Captain McMillan will be able to supply these people in return for any services they may be able to render him.

There is nothing the permanent residents desire more than pipes and tobacco, and, consequently, these materials often take the place of money in the payment of wages or in the purchasing of food and supplies.

The reader will notice in the picture showing the loading of the cargo of the *Bowdoin,* reproduced on this page, that Captain McMillan has provided his expedition liberally with a supply of Larus & Bros. Co.'s celebrated Edgeworth tobacco, and D. C. & Co. Jumbo plug.

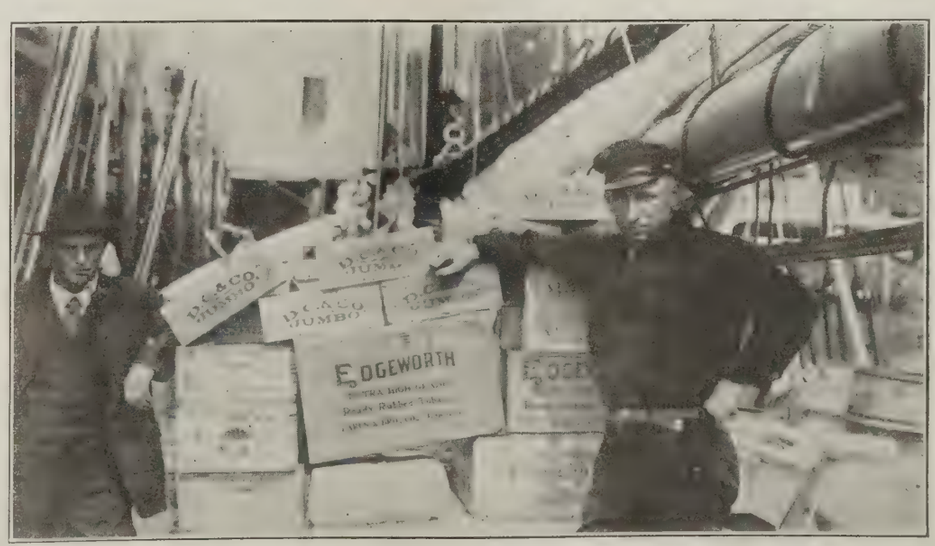
The fame of Edgeworth, as is well-known, has spread all over the world, and the fortunate denizens of the Frozen North are, undoubtedly, in for a rare treat.

Tobacco and Pipe Trade in Bristol, Eng.

(*Continued from page* 34)

had a great reputation, and was sold long ago in Mary-le-port street by Ricketts, the predecessors of W. D. & H. O. Wills.

During the later Georgian days smoking became unfashionable, and William Cowper, the poet, in a letter to the Rev. John Newton, writes:



"Says the pipe to the snuff-box, I can't understand
What the ladies and gentlemen see in your face,
That you are in fashion all over the land,
And I am so much fallen into disgrace."

This suggests that snuffing was going to be fashionable for a time, but, as will be seen, tobacco came into its own again later.

These notes, dealing with the tobacco trade in Bristol in the early days of commerce with America, throw interesting sidelights on the beginnings of the tobacco industries in Europe. Similar developments were taking place in other English seaports and in London. They subsequently followed similar courses in Continental ports.

Unsatisfactory Gift

Senator Capper is now attacked by the farmers for destroying the grain market, and the child does not love you when you give it the red hot poker it cries for.—*Wall Street Journal.*

Capt. Donald B. McMillan and loaded Schooner "Bowdoin," ready to leave Wiscasset, Maine, for an exploration trip to the Arctic Circle

Co-op Markets Open Early in South Carolina

FLORENCE, S. C., July 21.—The Tobacco Growers' Co-operative Association began its second year of marketing this week with a sharp rise in the cash advance which rejoiced its members at all of the forty-two markets of South Carolina belt, where the association received the first of the 1923 crop, two weeks in advance of announced opening of auction houses.

The cash payments for first deliveries to the association, which are 50 per cent beyond the cash advances made last year, when the organization began marketing, gladdened all members who ventured through the torrents of rain that fell throughout South Carolina Tuesday.

While the advances posted by the association for wrappers have jumped from $22.75 to $32.50 in less than twelve months, there is an even greater increase in the first payments made for primings, smoking lugs and cigarette cutters. In fact, the first cash advances paid by the Co-operative Association Tuesday were higher than the prices for many similar grades paid on the auction market in 1921.

Speculators' Heavy Buying

The prediction that the Co-operative Association would open its doors after the auction markets, and would base its prices upon those on the auction floors has been completely exploded. A small army of speculators and pin hookers has invaded South Carolina and are reported as buying tobacco in the rough, and at the barns for from 3 to 8 cents a pound.

One speculator alone is reported as having already bought 25,000 pounds of South Carolina tobacco for prices which are less than the first advances that are being paid by the Co-operative Association. It is generally known that the auction warehousemen, who recently met in Mullins, have decided to fine any member of their organization $100 for making loans to any farmer upon tobacco, which has not been delivered to the auction floors. The Tobacco Growers' Co-operative Association, with a large increase of cash advances, is amply prepared to protect its members and give others an opportunity to escape from the speculators, who are eagerly buying up tobacco from needy farmers.

Richard R. Patterson, manager of the leaf department of the association, and A. R. Breedlove, assistant, this week visited Lake City, Timmonsville, and other association markets. Mr. Patterson stated that the outlook for the association is, at present, brighter than at any period of its history.

Returning to Gotham

H. L. Lederer, of A. Oppenheimer & Co., sails from Southampton today on the White Star liner *Majestic*, due to arrive at New York August 1.

American Briar Pipe Co. No Fully Equipped

CHICAGO, July 21.—The Americ Briar Pipe Co., of 180-182 W. La street, announce it is now fully equipp in all departments, and with an increas sales force and a well selected line pipes and smokers' articles, of all t well-known brands, they are anticipati a big fall business.

Has Applied for Patent

Leo A. Levy, president of the Amer can Briar Pipe Co., has applied for patent on the Two In One holder, whi will be mounted on an attractive ar suggestive display card. The idea ar principle are entirely different from an thing ever on the market. Jobbe throughout the United States are urg to get busy and select their states, ar an attractive proposition will be pr sented to them.

sconsin Tobacco Selling Flurry Quiets Down

erators Say That Less Than 2,000 Acres Were Involved in the Short-Lived Movement—Hazard of Early Buying May Be Greater Than Formerly—Poolers Watching Events.

GERTON, Wis., July 21.—The buying ie northern regions has died down n. It amounted to little more than rry, and many operators state that than two thousand acres were influ- d by the movement. Sweeney and edal furnished the little excitement dant to the movement. ie trials and tribulations almost al- connected with a buying campaign 'arly in the growing season will be severe as latent risks than in er years. Unless a faultless grow- ear is enjoyed from now until har- and an excellent curing season in all, it will be an independent bunch rowers who will bring in their to- o at delivery time. The pool is hing the movement like a hawk, and already begun to make political al out of it.

Selmer Makes Criticism

lmer Neprud, who needs no intro- ion to these columns, has a "write about the matter in the last *Pool tin.* To the writer, it seems a very criticism Mr. Neprud makes con- ing spring buying of a growing crop. quote:

he pool is endeavoring to devise a ing system that will pay the grower the extra time and effort to produce ality crop. A system that will make ore profitable for the grower to raise acres of good tobacco, than to raise of mediocre type. The pooler be- to understand the system, and feel it is the only correct way to grow sell tobacco, even though the reports ing back from the buyers fighting the have it that it is impossible to devise a system.

The Grading System

ome growers have expressed them- es as being unable to understand lt system is being used by these rs that bought tobacco before it was transplanted into the fields from beds. What grading system is being ?

hose buyers still claim they are buy- from growers who are good growers, it is amusing to know that some ers outside the pool are holding because they claim their tobacco is er than their neighbors who are pro- ng a poorer type of tobacco. Fur- more some of them won't sell until know what the pool will do. Mean- le the pooled growers are sawing d in an earnest effort to raise the best ible crop."

Now Has More Modern Views

f course, Selmer always thought, ently, that poor tobacco brought just much money as good tobacco to the ner, in the past, and that it was not th while for a grower to raise two s of fine tobacco for thirty or forty s a pound, before the pool loomed n the horizon, when he could raise acres of stemming. Also, that in past a farmer was foolish to raise a d crop of tobacco. But, nevertheless. writer heartily agrees with him when says the pool's methods are far erior to guesswork buying when the lts are just getting a toe-hold in the ds.

od Growing Conditions in Northern Section

rowing conditions in the northern ions continue excellent. Trempealeau nty is having a banner year, especially. drouth did not ravage the northern ions, and fine weather has been the .

the south, the fields are uneven, and areas are spotty. The tobacco that thered the unfavorable conditions of e, is now becoming along in fine pe.

Tobacco Average Estimated

he State and Federal Crop and Live- k Reporting Service estimates the sconsin tobacco acreage at 44,000 res, and the condition as 80 per cent of normal. This increase is 11 per cent over the '22 crop. Operators in the trade figure this about five per cent too high. It is 3,000 acres less than the '21 crop, and 6,000 acres less than the '20 crop. From the *Reporter,* the condition this year being 80 per cent of normal, is compared with 84 per cent of normal last year on the corresponding July 1, and 91 per cent of normal two years ago. The low condition of normal this year is mostly due to the terrific heat at setting time, that shriveled such a large percentage of some fields, that the grower could never catch up with his resetting again.

Made Shipment to Lancaster

Sweeney shipped six cars to Lancaster, Pa., last week, and a few other small shipments went out. Cars are hard to get.

Art Shannon, the genial General Cigar Co. head for this state, is on vacation at Tomahawk.

O. J. Jenson, who handles Spitzner's account, is rapidly recovering from a severe attack of rheumatism resultant from a streptococcic infection in his throat.—BADGER.

Hail Hits Pitt County, North Carolina

(*Special Telegram to* TOBACCO)

WILSON, N. C., July 24.—The terrific hail storms which visited that section of Pitt County west of Greenville towards Wintersville and Farmville Sunday afternoon did great damage to at least five hundred acres of tobacco, corn, cotton and other crops. It was a hit and miss proposition. In some places the hailstones were as large as goose eggs. Several tobacco barns and pack houses were blown down. No loss of life.

Brazil's Tobacco Supplies

WASHINGTON. D. C., July 23.—Although Brazil is a large producer of tobacco at the same time it imports fairly large quantities from the United States, China and several other countries. China is Brazil's chief source of supply, and the United States is the next in importance in this trade, according to the report received by the Department of Commerce from American Consul at Rio de Janeiro. The Chinese tobacco, "Whongkong No. 1," is the principal quality imported and in some cases supplants the Virginia tobacco. Virginia tobacco is preferred by the trade on account of its quality, but larger quantities are not purchased because it becomes worm-eaten in this climate within three or four months. The quality of Virginia tobacco most used is "very bright, unstripped." Prices for the "Whonkong No. 1," as well as the Virginia above referred to, range from 24 to 52 cents per pound, according to quality, averaging 34 cents per pound. Kentucky Green River tobacco is also imported in moderate quantities, quotations range from 24 to 32 cents per pound.—LAMM.

Big Mergers and Other Changes Reported

The presence of James B. Duke and other important representatives of big tobacco interests in London, has given rise to several sensational newspaper reports. Mergers of world-wide importance have been reported. But no definite statements have been vouchsafed as having come direct from any official connected with the corporations specifically concerned. These rumors are probably based on plans for making some vast expansions in the tobacco industry, but which may not yet be fully matured.

"World-Wide Tobacco Interests Organize"

Under the caption, "World-Wide Tobacco Interests Organize," last Saturday morning's edition of the *Wall Street Journal* carried the following story:

"The world's largest tobacco combine is being constructed and is receiving the finishing touches.

"The *Wall Street Journal* learns that this combine will comprise under a new name the Tobacco Products Corporation, and the British-American Tobacco Co. It will not affect other American interests except, possibly, Philip Morris Co., Ltd.

"It is learned that George J. Whelan, James B. Duke and E. R. Tinker, the latter of the Chase Securities Corporation, are in London negotiating with the British-American Co.

"Tobacco Products is likely to recall its preferred stock and Class A shares may be exchanged for first preferred in the new company. About $30,000,000 new capital will be issued.

"It may require another month to complete details of the combine.

* * *

"Harold Stanley, president of the Guaranty Co., vice-president of the Guaranty Trust Co. and a director of the Tobacco Products Corp., arrived on the United American liner *Reliance,* after a trip of several weeks to Europe. He declined to discuss conditions or his business over there. He admitted, however, that he had seen in London George Whelan, of the Tobacco Products Corp., James Dixon, president of the Tobacco Products, and Elliott Everett, vice-president in charge of financing, and E. R. Tinker, president of the Chase Securities Corp. and a director of Tobacco Products. He did not see James B. Duke, however, because he sailed before Duke arrived.

"He declined to discuss what has been accomplished by the officers of Tobacco Products in London, but said there was no possibility of the French tobacco monopoly being obtained by the Duke and Whelan interests."

Duke to Quit British-American

In connection with these rumors, the New York *Journal of Commerce,* yesterday (Wednesday), published the following news item:

James B. Duke will resign the chairmanship of the British-American Tobacco Company and Cunliffe Owen will be appointed to succeed him, according to a report from London yesterday. Mr. Duke's resignation was not prompted by his desire to quit the business, but was demanded by the Imperial Tobacco Company, it is reported. Mr. Duke had to agree to the merger with the Tobacco Products Corporation or face a financial battle, it is said.

Harold Stanley, vice-president of the Guaranty Company and a director of the Tobacco Products Corporation, returned from Europe last Friday, but declined to comment on the activities of George J. Whelan and James B. Duke, who are thought to be negotiating for an expansion of their business in Great Britain.

Hill Denies Tobacco Merger Statement

Percival S. Hill, president of the American Tobacco Co., has denied making the statement printed last Monday, which reported him as saying that there was no foundation for the rumors of the big tobacco merger which the Whelan and Duke interests are thought to be negotiating in London.

"No such statement was made by me," said Mr. Hill yesterday, "as I know nothing of the matter at all."

James B. Duke will keep his minority holdings in the British-American company, according to reports from London yesterday. It is believed that the resignation of Mr. Duke as chairman of the company shows the determination of the British interests to keep the control in that country.—*Journal of Commerce.*

Making Extensive Havana Purchases

Jacob Labe, in charge of the Havana Department of H. Duys & Co., Inc., is still in Cuba supervising the firm's large operations in the 1923 crop.

Mr. Labe reports that the total purchases to date aggregate 10,000 Quintales (one million pounds) in bundles of the 1923 crop. These tobaccos were grown in the Camajanui, Guayos, Cabaiguans and Sancti Spiritus sections, which are conceded to be the best in the Santa Clara Province.

H. Duys & Co., Inc., have warehouses located at Camajanui, Guayos and in the town of Sancti Spiritus where their purchases are being packed in the best possible manner for the trade.

It has been the policy of H. Duys & Co., Inc., to buy only the best types grown in sections mentioned.

Off to Porto Rico

William Quanjer, New York representative of H. Fendrich, Inc., of Evansville, Ind., has returned from his vacation in Sullivan County. Accompanied by Mrs. Quanjer, he sails today for Porto Rico on the S. S. *San Lorenzo,* to study the prevailing conditions on the island.

Ends Long Stay Here

Leslie Pantin, Jr., of L. Pantin & Sons, tobacco brokers, of Havana, sailed last Saturday from New York on the S. S. *Pastores* for Cuba, accompanied by his family. Mr. Pantin spent some three months in New York, during which time he availed himself of the opportunity to make a close study of local conditions.

Estimated Tobacco Crop Conditions July 1, With Comparisons

WASHINGTON, D. C., July 21.—The United States Department of Agriculture sets forth the following tobacco crop conditions, as of July 1, with comparisons:

State	Preliminary Acreage, 1923: Per cent of 1922 Per cent	Preliminary Acreage, 1923: Total Acres	Condition July 1: 10-yr. aver. Per cent	Condition July 1: 1923 Per cent	Production: 1922, subject to final revision in Dec. Pounds	Production: 1923, forecast from condition Pounds
Massachusetts	108	10,000	88	90	11,925,000	15,210,000
Connecticut	108	30,000	90	92	35,000,000	44,712,000
New York	90	2,000	89	82	2,200,000	2,263,000

Making "Better Cigars Better Known"

It is generally conceded by expert observers in the cigar and tobacco industry that the Metropolitan District of New York is the most difficult territory in which to introduce new brands of cigars, cigarettes, or smoking tobacco. On March last, the Consolidated Cigar Corp. introduced its Harvester cigar—which had already attained an enviable record in twenty-eight states—to the New York public.

Mainly as a result of forceful and intelligent advertising in the newspapers and trade periodicals, directed by the F. Ross Co., Inc., followed up by an enthusiastic campaign by the selling force, under the capable guidance of J. M. Gans, sales manager for the Metropolitan District, the Harvester cigar, in the short period of four months, has become one of the most popular brands in the New York district.

Today, wherever you go, you will find New Yorkers who speak well of the Harvester. In all sections of the city you will witness men lighting Harvesters for real smoking pleasure and solace.

In connection with the publicity campaign, the Consolidated recently held a window display competition for retailers which proved highly successful. More than 300 windows were entered, and every borough in New York City was represented. Eighteen substantial prizes were awarded to the winners and many beautiful, unique and effective displays were arranged by the enterprising retailers.

Foundation of Industry

All is not sweet aromas, mild and mellow fragrance in the cigar business. It has its trials and tribulations just the same as any other industry in the country and in addition it has the competition of several other forms of smoking. So when Consolidated Cigar Corporation set out the first part of last year to reach a new and enviable position in the cigar industry, it set for itself some little task.

It's not too often that the manufacturer remembers that the foundation of his industry is the consumer. Consolidated did. It started off with this statement to the trade:

"The foundation of the cigar industry is the smoker. He is the industry's best customer. He is the industry's only customer. He does not buy as many cigars as there are not as many of him buying cigars as there should be.

"Other forms of smoking have invaded the cigar field. Many adherents have been lost to cigar smoking. The cigar industry has not gone ahead. It rests with cigar manufacturers primarily to change this. How can they change this? First. By making better cigars and maintaining their quality. When a smoker finds a brand that suits him, he is entitled to a continuance of the same quality—or better quality when the manufacturer can give it.

"Second. By making cigar brands and the pleasures of cigar smoking better known. If the public had heard as much about cigar brands and cigar smoking in the past ten years as it has about other forms of smoking, more cigars would be smoked today.

'Better Cigars, Better Known"

"The Consolidated Cigar Corp. commits itself to a policy of 'Better Cigars, Better Known.' Consolidated has not only broadcasted this signed statement through the trade papers, but it has been and is living up to it.

"No doubt you have marked the exceptional growth and popularity of Harvester—a Consolidated brand—during this year. While Harvester has only been on the New York market less than three months, it has already become a leading seller and a 'best seller' with hundreds of dealers.

"This policy of 'Better Cigars, Better Known' means much to you as a dealer. You know that the result of 'Better Cigars, Better Known' is better sales. Everywhere live dealers are looking for an opportunity of increasing their cigar sales. They are watching shrewdly every brand of cigars on the market. They are asking: What is the manufacturer of this brand doing to help me build up a good, steady cigar trade? They, too, are thinking along the lines of 'Better Cigars, Better Known.'

"Wherever you find Harvesters or other Consolidated brands, notice they are right out front—first row of the cigar case—sometimes on top. Why? Only because dealers feel sure about the quality of these brands. They know that it pays to feature a 'Better Cigar' which daily being made 'Better Known.' Ask them and they reply with a confident, intelligent statement about Harvester smoking qualities. It's the easiest thing you know to sell 'Better Cigars' that are day in and day out being made 'Better Known.'

"It will interest you to know that in line with this policy the Consolidated Cigar Corp. has seven distinct advertising campaigns now appearing in various parts of the United States on Consolidated brands.

"There's the 'Light a Harvester' campaign. Smokers in New York and twenty-eight other States are being tempted every week to 'light a Harvester' by beautiful advertisements which do pull in the customers. Other Consolidated campaigns are running on Dutch Masters—'nothing quite like it—so sweet, so mild'; Mozart—'mild as a May morning—and as fragrant'; 44—'that good cigar'; and El Sidelo, which is one of the most popular brands on the Pacific Coast, and others.

"From the Atlantic to the Pacific Consolidated brands are being advertised to smokers. This advertising is keeping old friends loyal and winnings lots of new ones.

Increasing Sales

"But the thing that's most interesting to you—a dealer in cigars—is how you can increase your sales on Consolidated brands. After all, it looks like the manufacturers of Harvester are doing about all one could expect them to. Not only are they making good cigars day in and day out but they are making these cigars better known, week in and week out. That leaves but one function for you to perform, provided you wish to get all possible benefit from the advertising, and that function is to display Harvesters where smokers can see them.

How Advertising Works

"Advertising usually works very quietly. A man reads what we have to say about Harvesters. He gets a good impression of this cigar. Again, he reads another advertisement and another, each one building up in his mind favorable opinions of the brand. One day he walks into your store. As he goes in he notices on your door or window a very attractive little strip which reminds him of all the advertisements that he has read and the good impressions are brought to his memory again. He walks up to your showcase and the first thing he sees is a box of Harvesters. Again he is reminded of what the advertising has told him about this brand. Immediately he is tempted to test the statements of the advertising. Ten to one he will if you have them where he can see them.

"That's just how advertising works and just how goods well displayed give advertising the opportunity to create sales for you. Now you see why Consolidated brands are being made better known year in and year out, and also why it is a fundamental policy of the Consolidated Cigar Corp. to make only better cigars, for, after all, the test of any cigar is not its advertising, but how good it smokes."

One of the prize-winning window displays in the recent Harvester competition, which proved so popular with retailers and the public

Returns from Porto Rico

Richard Baum, of J. Cohn & Co., arrived in New York from Porto Rico this week on the S. S. *San Lorenzo*. During his several months' stay on the island he secured a good supply of Porto Rican leaf.

Limited Sales

By LESLIE E. DUNKIN

Limited sales have proved to be a valuable help to the tobacco dealer in holding his present customers, in gaining more trade and in holding the increase. There is a limit to the merchandise put on sale; there is a limit to the price, and there is a limit to the customers, but there is no limit to the number of regular sales that are made during the time of the sale. There are several ways of presenting the limited sales, so as to avoid too much sameness to the business, but the results are pretty much the same—a big boost to the business of the store with plenty of enthusiasm left in the firm and in the customers for the next one on the program.

In the first place he limits the sale to just a few different kinds of merchandise—including cigars, cigarettes, pipes, smoking and chewing tobacco, etc. Except for the large general clearance sales, the number of the different kinds of merchandise seldom passes the half-dozen mark for the sale. This serves as a tonic for the business. It attracts the people almost as well as though he were offering a general sale in the entire business.

Limits Items

In the second place he limits the number of items of merchandise to be sold. Instead of announcing that certain items will be on sale, he takes a definite number of them for the sale and no more. On some occasions he selects this certain amount and leaves the rest of the same kind for the regular price, to be sold when the allotted number has been disposed of in the sale. On other occasions he takes all of a certain item of merchandise. When this is done, he does not advertise it as being all of it. He counts all he has on hand and advertises the definite amount to be sold.

In the third place he limits the price or prices, where it happens to be plural. As often as possible he will place two

ifrent kinds of merchandise at the ae price, thus seldom having more n one or two different special prices. the fourth place he limits the cus-rrs. Offering the merchandise at w low figures, he reasons that it is ot business for him to spread it out s many different customers as possi-le Then too there is danger of a rival r sending a representative to buy up a bit of the merchandise for their w store, so as to deprive the custom-rs of the advantage and so as to get the chandise cheaper than they can get it emselves from the wholesaler. To ar out this point of the program, he ns the amount of merchandise to e customer. Sometimes it would be ely one cigar to each customer at the al price, or a package of cigarettes. is care in the limiting of the cus-rrs prevents one customer from ing up in that line of merchandise, ang it unnecessary to come back a very soon for more of it. Being ed, the customer must soon come e later for more of the same kind of e handise at the regular prices, mak-gnore real business for the store.

Je next big question is the reaction o the limited sales and the real pur-s or reason behind them, that bring e esults.

I the first place the limited kind of e handise on sale save the business o the strain of a general wholesale e in the prices and yet offers in-ements that draw the crowds. By ng the kinds of merchandise on e he store can afford to make larger in the prices.

In the second place the limited num-er amount of the specific merchan-makes possible a definite knowledge hat is going on in the sale. He as definitely how much is lost in the ial prices. He can turn around and n the regular sales and see how e larger the grand total of the regu-ales is than a similar day in the e without the special. He can tell t last penny what has been gained lt by the limited sales.

T's leaves a calm certainty in the n of the dealer even though it seems the store is taking unusually large t A place of business can stand a adeal of punishment, for the sake of e ising, providing it comes in limited nts and the firm knows definitely w much it will be and when to stop ss.

nther advantage in limiting the nt of specific merchandise to be e on special sale is the psychological e it has upon the public. The limited nt of specific merchandise tends to on the public to making purchases, might be passed up otherwise. e the amount is unlimited, the pros-i buyer will say, "Oh, well, I'll l until this afternoon to make my l se," or "I'll wait until a little r In too many instances where done, something comes in to pre-nat person from taking advantage l sale. In the case of a limited t on sale, the prospective buyer y, "Just ten of them, eh? I sus-ere'll be a crowd of folks wanting but I'll go down as early as pos-efore they are all sold."

h skeptical merchant may suggest ith a limited amount of specific ndise there is great danger of a special sale for the first half f the day and then the rest of the ing regular business without the ied numbers. If there is any real e in this, the dealer can easily that by scattering the sales dur-day. For example, if he is to boxes of cigars in small quanti-will announce that one box will sale at eight o'clock in the morn-hen another at nine and so on the day. When one box is the cigars will sell at the regu-e until the time for another box aced on sale. This can be carried ughout the entire day, thus guar-a sales crowd for the entire day increasing the actual expense of

e case of the store's selling out all kind of merchandise that is in if he announces the definite instead of saying that all is go-e sold, there will be no hesitation sale of the merchandise. If the prospective buyer comes to buy that article and finds just one left, there are two possibilities of thought. If he knows that the store has no more of that kind of merchandise in stock at that time, he might say, "Umph! I don't want to take the leavings that everybody else has picked over. I don't want it." On the other hand, if he only knows that it is the last of the limited number that were put on sale, he will say, "Gee, ain't I lucky? Give it to me quick." The sale is made and everybody is happy and satisfied. The merchant plays fair with the trade and himself.

In the third place, the limited price and customers prove to be a benefit both to the public and to the store. The limited price holds the overhead expense and loss to a minimum, as well as giving the public greater bargains. Besides the advantages of the limited customers already mentioned, it places the firm in a good light before the people. The general public will realize that the merchant is trying to play square with them by passing around the bargains as far as possible and not permitting just a few to benefit from them.

Legal Lore

Two Cases With An Interesting Freight Rate Principle

Two cases have come under my attention recently which involve a fixed, but little known principle of law. This principle touches or could touch every shipper and receiver of goods and it therefore may be well to explain it a little.

CASE 1

"A commission merchant received a carload of goods by freight. The railroad company presented him with the bill for freight, which he paid. The goods were sold, the freight of course becoming a factor in making the price, and the commission merchant deducted his expenses and commission and remitted the balance to his principal. A week later the freight agent called him up and told him a mistake had been made on the freight. It should have been about $120 more than it was. The commission merchant refused to pay on the ground that it was the railroad's own loss. It had collected a certain rate from him, he had sold the goods and remitted on that basis, and had none of his principal's money in his hands from which to pay anything further."

CASE 2

"A jobber bought from a manufacturer twenty cars of merchandise, f. o. b. the seller's station, which mean that the buyer paid the freight. The railroad company rendered a freight bill which the jobber paid. Then he fixed a resale price, based on the freight among the other items of expense. He next went out and made binding contracts to resell the whole twenty cars. Before the goods were shipped the railroad company came along with a bill for $630.26 more freight, saying it had made a mistake. The jobber refused to pay on the ground that it was up to the railroad to know its own rates —*he* didn't know them, and after it had rendered him a bill which he had paid, it was too late, especially after he had resold twenty cars of goods on the strength of the bill rendered, to collect any more."

Judged by all the ordinary principles of justice and common sense, it would seem as if the railroad would have to stand the loss in both these cases. The mistakes were its own and it should not be allowed to throw the loss on an innocent shipper or receiver. Yet I was compelled to advise the clients in both these cases that they were responsible for the additional freight and would surely have to pay it. I was unable to convince them that there was anything fair or logical in this, and am free to confess that very frequently this principle of law works great hardship.

The principle is this: that it is of the highest importance that common carriers be held inflexibly to fixed rates, uniform to every shipper. So many and varied are the ways in which the uniformity of rates can be varied by guileful and dis-

How we feel about
JOHN RUSKIN
Best and Biggest

2 for 15¢
8 cents each

The dealers' success—and ours—depends upon permanent trade. We'd both go out of business if we depended upon the fellow who shops around from store to store, from cigar to cigar.

Our first consideration, therefore, has been to make the John Ruskin Cigar so good that it will make permanent customers for ourselves and our dealers.

The record for "repeats" that this cigar has made proves that we have moved in the right direction. It holds the trade of every smoker who is seeking the "Best and Biggest" cigar on the market, at its price.

Cleveland Dealers Having Good Run of Business

Steady, Profitable Trade Has Been On Tap for Past Weeks —Not Kind That Comes in Fits and Starts—Ever-Forward Movement Toward Success—Slot Machine on Trial.

CLEVELAND, Ohio, July 21.—Things are going along in very fair shape for local retailers. A steady, profit-making business has been on tap for the past weeks. This sort of business is not the kind that comes in jerks and spasms of alternating good and bad spells, but is that steady, ever-forward movement to the goal of successful trade. We like to see things come along in this way. Day in and day out the good cigarist, and none but good ones seem to be able to navigate during any sort of good shape, is assured of a very fair sized profit that though not exceptionally large in itself in comparison with some he may have once received, adds up to quite a respectable figure at the end of the month. A great help in arriving at this state of affairs is the fact that collections have, to a great measure, ceased to be a source of worry to the dealer. Collections all along the line are reported to be good. Deliveries also have ceased to be a fly in the ointment of good cheer and contentment in this grand business of ours.

Slot Machine War

Almost all cigar stores will be affected as regards the outcome of a law case in which the legality of certain slot machines is the issue.

No statute prohibits gambling devices of any sort but the fact that these machines give forth candy mints with each nickel inserted seems to bar the city's action in this instance in as much as the buyer gets something in value in return for the money invested. A lucky person may get "slugs" which entitle him to that much merchandise from the dealer in whose store the machine is located. The city, through Governor Donahey, has acted in now and demands that Cleveland follow the lead of a number of smaller cities and do away with the slot machines in this city. These machines have adapted themselves nicely to their surroundings and dealers will miss them. The result of the law case will be to settle the question for some time at least. Meanwhile the machines clink merrily along their untroubled way.

Novel Contest

We read where a very novel contest was held for smokers over in France the other day. All the winner had to do was smoke a cigar to the "bitter" end while the other fellows could get through with theirs. A M. Desaque smoked a cigar to the end in one minute and forty-eight seconds. The speed demon of the pipe section finished a bowl of Burley in five minutes and fifty-five seconds. The prize for slowness was awarded to a smoker who made a cigarette in thirty-seven minutes. Competitors were disqualified in this match for refusing.

Climbing On High

It happened to bump into Bill Oberfelder the other day. Bill sees to it that most of the local stores are supplied with nearly enough El Productos to meet requirements. I say "most stores," for it is a big job to get all stores—there is such a demand for this brand. I also say nearly enough," for they can't seem to get El Productos at the factory fast enough to fill all or every need of the various dealers. Guided in this territory by the A. L. Ehrbar Cigar Co., the good old El Producto is climbing the hill to success on high.

A Visitor

W. C. Heaney, representing the Consolidated Cigar Co., called on the local trade last week. Company with a representative of the Lewis Scrambling Co., local distributors of La Palina, this week, and was immensely pleased with the fine results that have been shown on La Palinas.

Reid Buys P. & A. Store

Robert Reid, formerly manager of the Cleveland Athletic Club cigar stand, has bought the Euclid-East 105th street store of the Pyle & Allen Co. This store is located very advantageously at the second busiest corner in the city and cannot but continue the same fine business it has enjoyed under the Pyle & Allen banner, now that it is under Bert Reid's control.

Selling Lots of Smokes

The city park refreshment stands are following through in good shape on a wave of warm weather that is sweeping towards them business of a very profitable sort. This year more than ever an enormous lot of cigars are being sold at each and every stand in all the city parks. Among the leaders when it comes to pushing a good cigar and getting good results with all the brands carried is the Washington Park stand presided over in great shape by Milton Mendelsohn. Milton lists as his leaders, Paramount, Reynaldo and Detroit Hand Made.

Joe Gets Back

Joe Klein, Clevelandite and exponent of Edgeworth tobacco, got back in town the other day after a short but very satisfactory cruise of the southern portions of this fair State. Joe was glad to get back, for he can rest up now after the terrible spell he had rushing around trying to get everybody fixed up with all the Edgeworth they needed and they surely needed an immense amount.—HERB.

Cigarette Consumption in China

WASHINGTON, D. C., July 25.—There appears to be a growing demand for American cigarettes in Hongkong, not only among the Chinese but the European residents, according to the report received by the Tobacco Division of the Department of Commerce from American Consul Webber, at Hongkong. Taking into consideration the South China market, which is chiefly supplied through Hongkong, the prospects for a steadily increasing trade in this article would seem to be very bright.

Imports Increase Rapidly

During 1922 the value of the cigarette imports into Hongkong increased 78 per cent over 1921. The United States supplied 59 per cent of these imports, North China 21 per cent, and the United Kingdom 16 per cent. Nearly all of these imports are intended for sale in South China, Straits Settlements and East Indian markets. The total imports of cigarettes into China has grown since 1919 from 7,854,482,000 to 9,982,754,000 in 1922.

Two Chief Factors

The cigarette trade in China, which has been developed enormously within the last few years, is today practically controlled by the British American Tobacco Co. and Nyang Brothers Tobacco Co. These two companies, which are in active competition, have perfected sales, advertising and distributing agencies in every town of any size in China, and are meeting with continuing success in increasing the consumption of their products. The purchasing power of the individual Chinese generally is extremely small. For this reason the bulk of the cigarette trade is in cheap native "Virginia" tobacco product manufactured in China.—LAMM.

Frank McCoy

Frank McCoy, 75, a retired wholesale tobacco pioneer here, died Wednesday night of last week, after a long illness at his residence at 646 Park avenue. Until five years ago Mr. McCoy was a figure in local tobacco commerce and long was head of McCoy & Co., one of the earliest wholesale tobacco and cigar houses in this city. He disposed of the business, and it later was taken in as one of the units of the present Consolidated Cigar Corporation.

Mr. McCoy was for forty-eight years a member of the Seventh Regiment, N. Y. N. G.

bacco Growing in the Irish Free State

e Free State Commission on Agri- ire has issued an *ad interim* report, section of which deals with the Irish co growing industry. Definite rec- endations as to its development are held, so as not to prejudice any views Commissioners may form later, but opinion is given that tobacco grow- up to an extent of 2,500 acres, would ommercially practicable if either a al inducement were offered to the mer to use an Irish blend, or manu- rers were enabled to use home- n leaf to advantage in the mixtures market. A considerable amount of nce was taken from growers, man- urers, and other experts, and certain esting conclusions were arrived at. instance, it was shown to the satis- on of the Commissioners that the cul- on of the crop entails the employ- of much more labor than any other crop commonly grown in Ireland, provides an opportunity for employ- auxiliary to agriculture, during ds when there is slackness in general work, so that the crop is particularly le for small holders and it possesses dditional attraction of being a crop when cured and packed is not per- le, but rather improves with age, and atively cheap to transport to distant ets.

e evidence before the Commission somewhat conflicting as to the possi- of making use of Irish-grown to- in the composition of plugs, rolls, res and cigarettes. While manu- rers said only 10 per cent could be Sir Nugent Everard produced sam- of plug and roll containing a very larger percentage and asserted that ch as 50 per cent of Irish tobacco be used in some mixtures.

er all, the question is one for the of the consumer, but the Commis- s, recognizing the slowness of any s of change in smoker's taste, and ng that it is rather in the heavier ed mixtures Irish tobacco would be considered 25 as about the outside le percentage likely to be used for time. Calculating the total annual mption of tobacco home and for- n the Free State, and the average e per acre of home-grown, they ted that a crop of about 2,500 acres ıt might be commercially cultivated. uestions of cost of labor, duty on bacco, effect of competition of for- abor, preferential tariffs, etc., were nsidered and the suitability of the f Ireland for the growth of the was emphasized. It was admitted Commission that the actual grow- as now beyond the experimental but the difficulties of marketing and ng have to be overcome. These arise mainly from the reluctance of manufacturers to use a raw material which in the present condition of the smoker's taste might injure their trade, and the Commissioners express the opinion that if the experiments are to be continued until the possibility of commercial success is proved or disproved "it will be necessary to take very definite steps involving some loss of, or charge to, public revenue."

The Commissioners discuss some methods of subsidy and of fiscal concession, but they state that "in view of the probability that on several other phases of the agricultural question, the question of tariffs will arise, they do not feel justified in making any recommendations at this stage," but for the guidance of the Ministry in deciding what course they might adopt in respect to tobacco cultivation the Commissioners give the following opinions:

(1) That tobacco-growing can be made commercially practicable up to an extent of, say, 2,000 to 2,500 acres if sufficient inducement is provided either to: (*a*) The consuming public by way of lower retail prices for Irish blend; or (*b*) the manufacturers to enable them to make profitable use of home-grown leaf in the mixtures they put on the market.

In the case of (*a*) it is estimated that a total remission of excise duty on home-grown leaf would allow, on a 50 per cent blend, a reduction of, say, 3d. per oz. to the consumer in addition to a small extra benefit to the manufacturer and the retailer, and a paying price to the grower. Such a reduction would popularize "Irish" among those smokers who are not averse to a strong tobacco. The loss to the Revenue would amount to about £270 per acre.

In the case of manufacturers (*b*) a remission of part duty would induce them to buy Irish-grown for blending purposes, in quantities which would tend to increase as tastes developed. Hitherto the sole inducement, which proved ineffective, has been the hope of satisfying a demand stimulated by the sentiment for Irish produce. Having no substantial benefit to anticipate, and having to meet the competition of widely and cleverly advertised brands on equal terms, Irish manufacturers made no sustained effort to create a demand for Irish tobacco.

(2) Whether the remission of duty is total or partial, the grower, as distinguished from the manufacturer, should be relieved of all excise restrictions and regulations which at present interfere with the successful cultivation of the drop.

All this is very interesting, but after years of experiment what are the prospects of the industry so far as they depend on the efforts of the growers? We find that in the latest issue of the "Journal of the Department of Agriculture," Ireland, there is a short article by the Department's Tobacco Expert which is not encouraging from the point of view of those growers who, at much cost and trouble to themselves, have been for some years experimenting with a view to the establishment of the tobacco-growing industry in Ireland. It appears that while only a part of the 1919 crop has been disposed of not a pound of the 1920 or 1921 crop has yet been sold. A total of over 100,000 pounds of tobacco is still in the hands of the experimenters "for the reason that Imperial Preference has almost ruined the market for Irish tobacco and the experimenters are holding their tobacco in the hope that something may be done to relieve Irish tobacco growers from an impossible competition with the cheap labor of India and Africa." We have already referred in these columns to the attitude of the Free State Government in connection with the suggestion of the growers that some duty concessions should be made until the industry is firmly established. The question has again been before the Parliament of the Free State and the President gave little hope that anything will be done in the present financial condition of the country, but that the whole fiscal arrangements of the Free State are to be reviewed immediately, and until the report of the Special Commission which has been appointed for that purpose has been made no concessions can be given to any trade which is a source of revenue at present.

This is one aspect of the question of tobacco growing, but there is another equally if not more important. No industry can prosper without care and efficiency on the part of those engaged in it, and before tobacco growing can become general the growers must do much better than the article in the Department's Journal indicates. Last year 51 statute acres were planted altogether in Meath, Louth, Dublin, Offaly and Limerick. The estimated dry packed weight of tobacco harvested was 35,000 pounds. But in many cases the growers have themselves to blame for not having more satisfactory crops. The article says that 17 growers were careless, 15 were guilty of serious delay, and 11 of neglect. It is somewhat absurd to press upon the Free State Government the necessity of making fiscal concessions to aid the industry when such a large percentage of the growers are guilty themselves of serious remissness, neglect and lack of intelligence in the cultivation of the crop. It is the duty of the Free State Government to help forward home industries as much as possible, but no government responsible to the taxpayers and having due regard to the responsibility attaching to the expenditure of the taxpayers' money would throw money away in propping up or trying to develop any industry in which the people most vitally interested in its success exhibit such a lack of efficiency as is indicated in this report. The growers must help themselves.—*London Tobacco Trade Review.*

Chicago Trade "Enjoying" Mid-Summer "Spurt"

While Some Are Complaining, Others Are Selling Goods—Credits Are Causing Considerable Concern—Collections Regarded as Poor—Some on Vacations, Others "On Job."

HICAGO, July 21.—Business is not rk and much complaining is heard nd the trade. We are going through h regular quiet business that comes n year about this time. Vacation time g here, many dealers feel the effect. lections remain very poor, and credits tighter and tighter all the time.

Talked About Credits

he cigar and tobacco division of the ago Credit Men's Assn. held their meeting Thursday at headquarters. lits received much attention during evening.

any familiar faces are missed from nd the counters these days. The are all away on their vacations. ral of the local salesmen are also beat," enjoying a quiet rest in some try nook.

Looping the Loop

thur Simpson keeps busy these hot . "Art" is the Loop man for the ral Cigar Co., and he is "some er." One can find Van Dyck, Robert ns, Bobbies and Wm. Penn cigars in he stores on his route.

Gaining New Grounds

Verso has not only regained its er popularity, but it is selling bighan ever for Steele, Wedeles & Co. r Manager John Christian and Wal- Fleckles, Diesel-Wemmer's sales here, are much delighted with the y demand for nationally known l.

Wodiska called again. While one e oldest cigar men on the road, Ed s with the bunch like a "country p." His Tampa made "Dulce" has d call here.

Featuring John Ruskins

Lewis Cigar Mfg. Co., of Newark, , is out with a brand new free offer e smoker. For each ten bands from Ruskin cigars and 59 cents in cash, .50 Auto-Filler Fountain Pen is . Large newspaper ads now feaJohn Ruskin and the free offer for gue-Warner & Co., who are the distributors.

Making Strong Appeals

ge Mozart newspaper ads again r, and the Consolidated Cigar Corp. ging a big advertising campaign on opular mild Havana. The ads say public, "Try Mozarts for a week atch." The way Clarence Hirsch- & Co., the distributors, send out rts is a good sign that thousands tried out the brand.

ther advertising campaign has been l by the Consolidated Cigar Corp. e Dutch Master cigar. Hundreds rge billboards now show Dutch r, "mild as a good cigar can be." brand has a wide city sales. ue, Warner and P. J. Rubey Co. e Dutch Master distributors.

Making Successful Efforts

rge W. Stocking spent several here calling on the local buyers. mes & Elson, local wholesalers, ute Don Sebastian to the Chicago George says that in the Buxr Co., of Milwaukee, Arango & o have a fine customer for the ian cigar. I understand it has laced all over the Cream City.

A Good Repeater

. Oakes is greatly pleased over y La Estrella cigar is repeating. trella, a Java wrapped from the Vest factory of the E. H. Gato Co., is "stepping fast" these days.

Going Ahead Well

D. Fleak, sales manager for the o Products Corp., was at local arters for a few days. W. D. F. a number of states and reports aders, Natural and Melachrino cigarettes, as both ahead of last year's sales.

Dulce and Perfecto Garcia, clear Havanas, are strongly featured by Bloom & Friedlander, who are popular Northside retailers.

Back from Fifth City

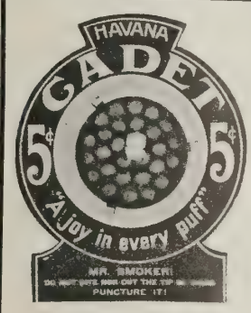
Doc Rosobro has returned from Cleveland, where he closed an important connection for the New York-Tampa Cigar Co. Doc left our Windy City in haste with Fred Davis, head of the New York-Tampa Cigar Co., as the deal was of such value, that he wanted Fred along.

"De-light-ful"

A very fine new Helmar cigarette ad appears on the billboards. "De-light-ful" is Helmar, a pure Turkish cigarette.

Some Notable Successes

Harry Friedlander, one of the best known cigar salesmen in Chicago, has connected with the Wm. J. Seidenberg Corp., and will cover the North side of the city. Harry will feature Pancho-Arango, made in bond, and Virginia Lee, mild Havanas. He was formerly with F. Vega & Co., of Detroit, and did much to bring the Las Vega brand to the front here. The Miles Cigar Co., 28 East Monroe street, has closed with the Wm. J. Seidenberg Corp. to feature Casa Del Rey, made in bond cigars. The opening order for eight sizes, nothing less than a 3 for 50 cent size and up to 50 cents straight will arrive shortly. The individual box business of the Miles Cigar Co. is one of the largest in the city, and their customers are among the city's wealthiest. They also feature Pancho Arango in 20 sizes, Du Belle in 6 sizes, both made in bond, from the Wm. J. Seidenberg Corp. Charles the Great from Salvador Rodriguez and Francisco G. Bances from the Preferred Havana Tobacco Co.—H. L. H.



Rules Against Cigar Company

WASHINGTON, D. C., July 24.—The King-Ferree Co., Inc., a cigar manufacturer of Greensboro, N. C., is ordered by the Federal Trade Commission to discontinue the use of misleading legends in connection with the advertisement and sale of cigars manufactured by the concern in Greensboro.

The Commission's order specifies that the King-Ferree Co. must cease and desist from using the word "Vantampa" alone, or in combination with other words, in brands, labels or legends on cigars, and the containers thereof, manufactured by it in Greensboro, N. C., or any other place than the City of Tampa, Fla., or the Tampa district, so-called, unless if the cigars in fact are not made in Tampa, Fla., or the Tampa district, such word or words are followed by words in type or lettering equally conspicuous with the word "Vantampa," which state the true place of manufacture.

Regarding Dealers' Records and Returns

WASHINGTON, D. C., July 23.—LeRoy Rogers, head of the Tobacco Division, and M. F. Snider, of the Bureau of Internal Revenue, were in Richmond, Va., last week, where they held conferences with the Collector of Customs and with members of the Tobacco Growers' Cooperative Association in regard to their records and returns as dealers in leaf tobacco to cover the next crop season.—LAMM.

—the smokers who never come back

IF you have ever stood behind a cigar counter as salesman or owner you have probably asked this question before.

Why is it that some smokers never come back?

Your store is well located—it is clean—you and your clerks are appreciative of trade—your stock is well kept—you are always on the job—and yet, some of your customers never come back.

* * *

Do you remember the new customer to whom you sold a box of "FLOR DEL MORTS" last week? Did you really expect him to come back for more?

Recall the day when the new manager of the street railway came in—you sold him a pocket full of "EL PROFIT GRANDS"? Why *should* he ever come back?

And Judge Fairway. First time in your store. He asked for "a *good* cigar" and you persuaded him to try the "FLOR DE HASBEEN". No—he'll hardly come back again. Can you blame him?

* * *

Some smokers don't know a good cigar from a poor one—but *most* smokers do.

When they ask for "a *good* cigar" there is but one safe thing to do—give them a *good* cigar.

* * *

It is the policy of this company to make Better Cigars and make them Better Known. It is a policy which should have your whole hearted support for Better Cigars Better Known produce but one result—Better Sales, Better Profits and smokers who *do* come back.

NEW YORK, THURSDAY, JULY 26, 1923

THE CONQUESTS OF THE PIPE

The pipe is a most remarkable social phenomenon of all time. Since early prehistoric times it has been a firm favorite of mankind. At a very early period in man's history the benefits and charms of smoking were discovered and appreciated by men. They found it an instrument of peace and solace, an instigator of thought and dreams, and, above all, an agent of harmony and social happiness.

The pipe has had a long and eventful history. Starting from very crude beginnings, it has passed through clay, stone and metal ages to its present high estate in rare woods, meerschaum, and composite materials. The history of civilization and esthetics, of art and industry, can be pictured by the development of the smoking pipe.

Contemporaneously with the evolution of the pipe, there was a series of changes in smoking mixtures. Men of the Stone Age appear to have smoked the leaves of common herbs, just as is done in some countries today. In early historical times, aromatic gums and spices burnt on charcoal in little vases and dishes were used. Then in America and in Asiatic countries, as well as in parts of Africa, indigenous tobacco plants were used for smoking. After the discovery and exploration of America by the Spaniards, we have seen how Europe and subsequently the whole world, fell under the spell of world conquering Virginia leaf.

The great popularity of tobacco smoking and its intense social and good-fellowship actions have at all times made it bitter enemies who have raised many a rumpus in their endeavors to have smoking prohibited. The world, however, is too wise to hearken to their howlings and goes on smoking more and more, fully confident that the teachings of history and present day experience show that tobacco smoking is not only a pleasant habit, but is also one which is beneficial to body and soul.

Many of the greatest statesmen, clergymen, medical men, artists and scientists have been great smokers all their lives. Artists like Franz Hals, Hogarth, Meissonier, Gerome and others have painted masterpieces representing smokers and smoking customs of their times. Poets have sung the praises of tobacco and tobacco pipes in many magnificent lyrics and there have been splendid sermons preached on the value of the pipe of peace and the importance of settling misunderstandings around a festive smoking table. table.

Thackeray, Charles Lamb, Tennyson and many distinguished writers have sung the praises of the pipe and Bulwer Lytton wisely said:

"He who doth not smoke hath either known no great griefs, or refuseth himself the softest consolation which comes from Heaven."

These virtues of the pipe were so well realized in Europe in the early days of tobacco smoking there that smoking clubs for men, and others for women, were organized, and were among the best places for social gatherings. Today the smoking rooms in clubs, homes, hotels, and steamers have supplanted the smoking clubs and are carrying on their work in an enlarged manner throughout the world on land and sea.

Naturally, the great growth in the popularity of smoking has enormously benefited the tobacco industries. Today these are world wide in extent and of an immense aggregate value. They are progressive industries and are everywhere in a most flourishing state. Unlike other great industries they are generally influenced by the economic conditions of the times, because of the high social value set upon smoking; men, no matter how depressed by the state of business, will not forego the pleasures of the pipe.

Great has been the role of the pipe in the history of civilization, great are its powers today; but it is easy to foresee that in the immediate future it will obtain a far more brilliant status in bringing about peace and good will throughout the earth and in promoting the brotherhood of man.

VALUE OF TRADE MARKS

A well-known cigar manufacturing concern, which is producing about 100,000,000 cigars a year, carries its good will and trade marks at $25,000 in its balance sheet. The company paid the original owners $300,000 for the trade mark. One of the officials estimates that the trade mark is worth several million dollars, and in fact offers of very large sums have been received from other tobacco concerns. There is hardly any prospect that the trade name will ever be sold; nevertheless as illustrating the lengths to which banking precaution sometimes goes the purchasers of a recent bond issue of this company had a provision inserted in the indenture that in case the trade mark should be sold the proceeds of the sale shall be paid to the trustee under the indenture for the benefit of the bondholders at the then callable price.—*Wall Street Journal.*

This gives one a pretty fair idea regarding the value of trade marks, or trade names. Of course, trade marks or trade names are made more valuable in proportion to the amount of publicity given to a brand, provided it is based on merit.

PROFIT BY EXPERIENCE

The resolution passed at the last meeting of the directors of the Dark Tobacco Growers' Association, prohibiting a director of the Association from holding a pay position, will meet with the full appreciation of all thoughtful members.

Perhaps it is wise that this move has been made after the association management has had a chance to get its feet solidly on the ground, toward the end of the first year's operation. It is certain that experience has taught the directors, managers and members of the big tobacco pool many things that will aid in the orderly and efficient handling of future crops as well as simplifying the methods of future business procedure.

Realizing as we do the tremendous job that faced the management when they took charge of the association's affairs last November, the *News-Democrat* feels that every tobacco grower as well as every citizen of the dark district is under lasting obligations to the men who have so successfully met the perplexing problems involved in handling the first year's operation of the association.

That economies in operation and improvements in methods of grading, handling, etc., w be made as time passes, goes without sayir One of the chief needs of the association is intelligent survey of the entire district, with t idea in view of reducing the number of rece ing warehouses to the lowest possible number, adequately handle the crop. Every receivi house that could be dispensed with puts an u necessary tax upon every member of the orga zation. Questions such as these should be n with intelligence and courage by the men w are responsible for the administration of association's affairs.

The fact that a considerable share of the 1(crop remains to be sold is in no sense the fa of the association management. The distr produced more of certain grades of tobacco th the market would absorb and the co-operative performing one of its chief functions in wi holding this surplus from the market. Un the old plan, this surplus tobacco would h materially lowered the selling price of the ent crop. In avoiding that condition, the asso tion is proving beyond question its value growers.

The *News-Democrat* welcomes the second tribution to association members. It has tal courage and confidence and confidence patience to put this great organization upon way to successful operation. That its princi are founded upon correct business proced and that it will bring financial salvation to tol co growers has been amply proven by its h dling of the 1922 crop.—*Paducah (Ky.) Ne Democrat.*

"BE YE NOT DECEIVED"

A Bible verse says, "Be ye not deceived." us not be too credulous. Unfortunately, press devotes much space to criticising var elective officers, both state and national. Ho criticism is a good political disinfectant. Mis laneous criticism is mostly political propaga It has often been said (but will bear repetiti that the "outs" seek to get in and the "ins" to stay in. That is about true.

In the meantime, those of us who have he and opportunity to work need have no appre sion as to the future of the state or nation. as level-headed, industrious citizens of United States are largely in the majority. are not noisy, but in stress we can be depe on.

You will remember the story of the man sold a carload of frogs to be used by sev restaurants. After employing all the men boys in the county to obtain the frogs, he less than 100, and when asked the reason he so many more than he had, he said: "I so carload of frogs on the supposition, from noise they made, there was no end of 'em."

Let us not take the noise we hear too serio Our main effort is to make a livelihood, rear families and do right by our fellows; and so as we are not too much concerned about far wrongs our country will continue to be a place in which to live.—*F. D. U. in Erie road Magazine.*

TOBACCO FIELDS AFTER HARV

There is no doubt but that our fight ag tobacco insects and diseases is harder and expensive and our losses greater when we d kill our tobacco stubble soon after the cr harvested. To allow suckers and sprout grow after the harvest—is not this just wha would intentionally do if we wished tobacc sects and diseases to multiply and live ove winter in greater numbers and prey upon next year's tobacco crop? No matter what rotations may be, we should prevent the fu growth of tobacco when the last of it goes the barn. If we don't do this and the to continues to grow, then we are permitting farms to become feeding grounds for the emies of tobacco and giving them opportuni multiply and increase our future losses.— *gressive Farmer.*

The Practical Fermentation of Connecticut Leaf Tobacco in Bulk

Sweating Is Done in Wooden Cases Holding About 300 Pounds—Crop Loses from 10 to 14 Per Cent in Process—Operation Largely Chance — Objects Sought Through Fermentation—To Develop Desirable Taste, Aroma, Grain and Style.

By MARCUS L. FLOYD
Tobacco Expert, Abstract of An Official Report to Division of Soils, U. S. Department of Agriculture

HISTORICAL reviews show that the quality of the tobacco grown on the present tobacco soils of the Connecticut Valley has probably not been materially changed in the last fifty years; that the yield per acre has increased considerably through improved methods of cultivation and more judicious fertilization, while the average price per pound is about as high at present as it has been for a considerable time.

Investigations of the soils of Connecticut and climatic conditions during the actual growing season and comparisons with similar data obtained in Sumatra, Cuba and Florida seem to indicate that a type of leaf could be produced which would be more acceptable to the trade and bring a higher price per pound.

Fermentation Procedure

Fermentation of the leaf is usually managed by the packers and not by the farmers. The sweating is done in wooden cases, strongly put together, holding on an average about 300 pounds of tobacco. These cases are not tight, but have a space of one-half inch between the boards. A good crop in sweating loses from 10 to 14 per cent of its weight, and there must be sufficient ventilation to allow this moisture to escape. On the bottom of the box is put a layer of top leaves, or seconds, as the outside leaves not sweat readily. The leaves are well shaken out and packed with the butts outside and tightly pressed down to exclude the air as much as possible. The tobacco is piled into the box and pressed down with a moderate pressure and then the top of the box is nailed on. The cases are then marked and piled up in the warehouse, in rows 3 or 4 boxes high, for the sweat. Twice at least during the season good packers turn the boxes upside down and put the top boxes at the bottom.

Even Temperature

Tobacco is cased in the fall and winter and remains through the next summer. The temperature of the warehouse is quite even during the winter. After the summer's sweat, the operation is finished and the cases are opened and sampled. This is done one year after the tobacco was harvested. The tobacco is returned to the case without breaking bulk after the sampling and remains in the case until it is wanted by the cigar manufacturer.

The whole process of fermentation in this operation is largely a matter of chance. It is not controlled, the temperature is not taken to note the progress of fermentation, and nothing is done except to maintain the temperature of the room moderately uniform during the winter months. Sometimes the fermentation is overdone and at other times it is underdone. There is a strong feeling among the more intelligent growers that more information is needed upon the changes which take place in order that these may be carefully controlled.

Chemical Changes Sought

There are objections to the case method of fermentation. The object is to induce certain chemical changes in order to eliminate undesirable qualities in the cured leaf; to develop desirable taste, aroma, grain and style; to secure uniform and desirable color as well as to make the leaf thinner and more elastic.

By the case method of fermentation, the kinds of tobacco are lapped for about one-third their length and the desirable color and grain have been developed chiefly in this portion, and for good cigars. The rest of the leaf may be poorly fermented, sleek and glossy, without grain or style, and is suited to lower quality cigars. The color of the leaf is also far from uniformity. The process requires from six to nine months from the time the tobacco is cased. Tobacco packed in December does not begin to ferment until the warm weather of the next summer, and lies in the warehouse for months in an inactive condition, subject to changes of winter and spring weather, with much warm, damp and foggy atmospheric conditions, which are liable to develop rot and mold of several kinds. There is always much uncertainty when the tobacco is ready to be sampled, as to whether it will be found sound and to the degree of fermentation it has undergone. There is also the certainty that the outside layers of tobacco in each case will not be fully fermented. All this represents a loss to the farmers. The cost of storage, insurance and loss of interest on the investment is large.

Bulk Sweating

The method of fermenting in bulk as practiced in Florida, with some modifications, was tried in Connecticut. That method is carried out essentially as follows:

The leaves are assorted as they are stripped from the stalk into three grades, bottom, middle and top leaves, simply to give each the fermentation adapted to the grade of tobacco, the final assortment and close grading being made after the fermentation when the colors are properly developed and well set. For this method of fermentation the hands as originally made up should be tied with string and not with leaves.

The light, thin tobacco of the bottom leaves, which needs but little curing, should be put in small bulks of from 3,000 to 6,000 pounds. The medium to dark leaves from the middle of the stalk should be put in bulks from 8,000 to 10,000 pounds, because more fermenting is required for the dark tobacco. The top leaves, which in Florida would be classed as fillers, should be put in bulks of from 10,000 to 15,000 pounds, as they need thorough fermentation and the larger the bulk the greater is the heat in the pile. In fermenting a large crop, the first grade to be handled is that from which light wrappers are to be obtained, then the dark, heavy grade and lastly the fillers.

Atmosphere Should Be Kept Moist

A platform should be provided, raised 3 or 4 inches from the floor, with bulkheads at either end, the whole being covered with burlap. When completed the bulk should be 6 feet high and about 6 feet wide and 12 feet long—the width and length, however, depending upon the quantity of tobacco to be handled. The fermentation should be carried on in a room in which the temperature can be maintained uniformly between 75 and 85 degrees Fahrenheit, and the atmosphere should be kept quite moist. This can be done best with steam pipes.

The bulk is built up and manipulated in the following way: Some trash tobacco is made quite wet by sprinkling and put in a pile in the fermenting room and covered with woolen and rubber blankets. After 24 hours, the pile should be turned. The water should all have been taken up by the leaf and the leaf should have become quite pliable and warm. The pile then remains covered for two or three days, when it should warm up rapidly.

Treating Heavy Dark Wrappers and Fillers

The heavy dark wrappers and fillers will need to be put in order or cased down if not already sufficiently moist and pliable. To do this, dip the butts in warm water for about 2 inches above the tie leaf or string and shake well. The tobacco is then put into cases or into a pile and covered and allowed to stand 24 hours to draw or absorb water. No water stains should be apparent if this work is properly done. The light wrappers should not be dipped in this way, as they should be fermented with the least possible amount of moisture. They can be brought into order by exposure to the damp atmosphere or by interbedding with layers of the hot fermenting trash.

Start the bulk with a layer 8 inches deep of the hot fermenting trash. The good leaf is put on this in layers, pressed firmly down by hand, but without any other pressure. As the bulk is 6 feet wide, each layer will require several laps, as the hands are put down in the way shingles are put on a roof. No mark or damage will occur where the butts rest on the lower leaves when the fermentation proceeds normally. When the bulk is 6 feet high, it is well to cover with a layer 6 inches deep of hot fermenting trash and then cover the top and sides with woolen, and if possible, rubber blankets to prevent the tobacco from drying out. The temperature of the room should be maintained at from 75 to 85 degrees Fahr., and the atmosphere kept moist with escaping steam.

The bulk should remain from 3 to 6 days, according to the condition of the tobacco and the rapidity of the fermentation, when it should be turned or rebulked. In judging of the progress of the fermentation, it is very helpful to know the temperature, at least in the middle of the bulk. In the light wrappers, the temperature should reach about 120 degrees Fahr., when the bulk is ready to turn for the first time. The fillers require a much harder fermentation and the temperature should reach between 130 to 135 degrees Fahr. Temperatures can be read from an ordinary thermometer inserted into the middle of the bulk through a hallow bamboo or other tube; but a much more convenient way is to use an electrical thermometer.

Shifting the Bulk

The bulk is turned in this manner: Six or eight cases should be filled with tobacco taken from the top of the bulk and then set to one side. Then take tobacco from the old bulk and lay a foundation for the new, continuing until the bulk is about half removed. Take the tobacco from the 6 cases first removed from the top of the bulk and put on the new. Refill these cases with the tobacco from the center of the old bulk, again setting these on one side. Proceed to take the remainder of the old bulk and put on the new until the old bulk is entirely removed. Then take the six cases that were moved from the center of the old bulk and put this tobacco on top of the new. Thus the top and bottom of the old bulk have become the center of a new one.

The dark heavy wrappers and fillers may need reordering before the fermentation is completed. In that event, they are dipped and put aside for 24 hours before rebulking.

The short top leaves, when properly fermented make fairly good fillers, and it is possible to pick the trash for the heavy-bodied leaves and ferment them to produce filler goods. Such work has been shown to be profitable when the fermenting is skillfully controlled.

San Francisco Dealers Make Strange Complaint

Assert That It Is Difficult to Put Over Even a Superior Article Without Stamp of Big Advertising—Small Manufacturers Must Face Issue—Keeping Tabs on Costs.

SAN FRANCISCO, Cal., July 17.—The complaint is frequently made by the smaller manufacturers, and just as frequently it is asserted by retail dealers, that we have no longer tobacconists in the trade, and even very few salesmen; and that for this reason, it is very difficult to put over even a superior article that does not bear the stamp of big advertising. That we have only clerks, capable of handing out goods and making change. We may as well face the fact that there is a world of truth in the charge; but when that admission is made, it is an admission that applies to practically every line of modern endeavor. The wise thing is to meet the situation frankly, and to realize that the small dealer or the small maker must face this situation. And it is up to him to use more individuality, more ingenuity and produce more of excellence, than can be expected from the mere hired man of a larger concern. He must of necessity build by patience and excellence, just as the local tailor builds his personal clientele amidst a flood of hand-me-down clothing, some of which has a national reputation for excellence. That this can be done is evidenced by the fact that it is being done, and how? Speaking generally, it consists in understanding the limitations of circumstances and fitting selling and advertising methods and efforts exactly to those limitations. The big problem in business is fitting advertising to the quality, quantity and circumstances involved.

Testing an Advertising Stunt

The San Felice distributors, Jos. Rinaldo & Co., are testing out an advertising stunt of this kind that will be followed with interest. Running through an entire year, certain windows will carry San Felice advertising a certain number of days each month, and the results will be followed up and checked up. The results of such advertising must be accumulative. Mr. Rinaldo is keeping track of the increase in calls for the San Felice not only in the stands where the advertising is placed, but in neighboring stands; and so far calls have registered in stands that before were not carrying the cigar. Mr. Anthony, who carries a window on Market street, testifies to the very material increase in calls. That, he says, is the only way to advertise. Just a shot now and then, and not followed up, he says is money thrown away.

Know How to Hold Their Own

The Anthony stand represents the small group of small fry who know how to hold their own. And back of it, one discovers a reason. The proprietor keeps posted on the exact cost of leaf, the amount necessary to a thousand cigars, the cost of wrappers, the waste, the cost of containers, the revenue; so that he can estimate with reasonable accuracy how much margin a maker or jobber must have to put over an honest quality of cigars. It is hard to fool a dealer who intelligently informs himself of the cost and conditions of making the goods he handles; and particular customers soon find it out, for he can always give a reason.

Necessary to Carry Melachrinos

The Melachrino is one of the advertising fraternity of San Francisco that is keeping everlastingly at it through the daily press. Of course it is a necessity in every stand.

One of the prosperous stands of the city is that of Abe Charnack. It is well located at the corner of Battery and Bush streets, and made attractive by outside advertising and inside appearance. Mr. Charnack has an excellent run of high-class cigars.

Joe Thorpe, corner of California and Kearny streets, finds business as good as the season will permit. But regardless of season, he says that increase of sales is not by any means equaling the increase of overhead in rent and wages and every thing else, not balancing the constantly decreasing margins, so the chances of pulling down any plums in the cigar stand business grow less every day.

Harry Bercovich, president of the H. Bercovich Cigar Co., says that as their stands appeal to the better class of trade, and these are the fellows who take the summer vacations, they notice quite a difference; but it is not a matter for discouragement, for these customers always make good when they come back.

G. W. Webb, who recently made the south part of the state, and is now making Humboldt County with his J. M. Martinez cigar and Webb's Hand Made, has been finding the outside trade in very good condition.

Good at All Points

John W. Glenn, factory representative of Seidenberg & Co., reports that the Northwest has come back in very good shape, and Los Angeles of course is always giving joy to the jobber. The last six months have been the biggest on Roi Tan.

Finds Encouragement

Leo Michael, vice-president of the Tobacco Products Corporation is busy in his office at 24 California street, rounding up the Products interests. He finds Pacific Coast prospects encouraging.

Harry Sklute, formerly salesman for H. L. Judell & Co., is in the city rounding up old acquaintances. He has a very prosperous cigar, soft drink, confection, news, etc., stand in the stage depot at San José, and is ordering supplies.

In the Political Arena

Adolph Judell, secretary and treasurer of H. L. Judell & Co., has his hat in the ring for Supervisor. When he is elected, the tobacco trade all know they will have a friend in office who will see that they get a fair deal. Mr. Judell has always kept well in touch with city affairs. He was commissioner of public works for seven years under the Rolph administration, having resigned in 1919 to give his attention to his present work. As an engineer of many years experience, he will be a valuable member of the Board of Supervisors.

Pleasure and Business

Bernard Schwartz, head of the Bernard Schwartz Cigar Corp., of Detroit, Mich., is enjoying an extended vacation at Long Beach, where he is enabled to keep in touch with the local leaf market. The Bernard Schwartz Cigar Corp. has recently taken over the factory of F. Vega & Co., manufacturers of Las Vegas, at Detroit, which will, in future, be run as a branch of the Schwartz Corp.

Burley Men Visit East Tennessee

LEXINGTON, Ky., July 23.—Vice-Presidents James N. Kehoe and Bush W. Allin and Chief of the Field Service William Collins, of the Burley Tobacco Growers' Co-operative Association, last week visited the eastern Tennessee territory where Burley is grown, and called on the bankers and leading business men of Knoxville and Johnson City, with a view to having them understand the plans and purposes of the Burley co-operative and what it actually has done for the Burley growers in the past two years.

Both Kehoe and Allin are bankers, as well as tobacco growers, and they called on the bankers of Knoxville and told them something of the work of the association. The Tennesseans were invited to send to Lexington committees of their men to report back to them what they may learn at first hand of the Burley co-operative's operations, the Kentuckians agreeing in advance to abide by the report that might be made by such committees.

Business Men Interested in Warehouse

The visitors learned that the Austin interests at Greeneville had interested Knoxville business men in a plan for a new $75,000 looseleaf house and that the business men for that reason were not inclined to look with favor on the co-operative plan this year, but some of them are for it and interested in it. At Greeneville the situation is said to be simply one in which the speculative interests are endeavoring, and so far successfully, to keep the growers and business men generally from learning the truth about co-operative marketing. It is learned that growers have been told that the expense of marketing in the association was $2.58 a hundred pounds, while as a matter of fact it was $1.54 a hundred, and this included the payments on the warehouse properties, which at the end of five years will be owned by the growers who are members of the co-operative.

Visited Burley Section of Virginia

The Burley officials also visited the Burley section of Virginia, about Abingdon, and steps will be taken to present the facts of co-operative marketing to the growers of that section. The same invitation to send their own people to investigate the co-operative and its workings were made to the Virginians.

Increasing Membership

An addition of 496 members the past week brought the membership of the association up to 86,430. A number of these were from West Virginia, where, under the direction of Director Elliott Northcott, a vigorous campaign is being made for members.

Large Crop Planted

J. Sherman Porter, editor of the *Burley Tobacco Grower*, returned today from West Virginia, where he addressed five big meetings of tobacco growers. Meetings were held at four points in Mason county and one in Logan. Several large landowners of the Mercer's Bottom neighborhood, who have about 150 acres of land in tobacco this year, were among the additions to the association. Mr. Porter said the speculative interests in West Virginia had deliberately encouraged the growers to plant a large acreage and that, except for the growers in the pool, this practice generally had been followed in the territory he had visited. He said the crop was in good condition and one of the largest in the history of the state.

Takes Fling at Pool

WILSON, N. C., July 24.—Latest reports from the South Carolina tobacco belt are that although the poolers have had their forty-odd receiving stations open for more than a week, they are receiving scarcely any tobacco. They appear to have ceased soliciting upon alleged merit, and invoked the aid of politicians to run over the state, getting the farmers together by means of barbecues and making incendiary speeches against the British companies, about which no farmer in or out of the pool has ever said anything except in praise. Farmers in this section regard it as the last wail of the dying calf, and now look for an early ending of the pool in South Carolina.—MCFARLAND.

Back from Porto Rico

Charles R. Gans, of Max Gans' Sons, returned from Porto Rico this week on the S. S. *San Lorenzo*. Mr. Gans has spent five months on the island and has secured approximately 8,000 barrels of choice Porto Rican leaf for his organization.

Bayuk a Fight Fan

Sam Bayuk, head of Bayuk Cigars, Inc., came over to New York last Monday to witness the Leonard-Tendler prize fight, and to look up his friends in the local leaf market.

Tobacco Products' Earnings for 1923

What effect dissolution of the United Retail Stores will have on earnings of Tobacco Products Corporation will be shown in consolidated income account of the parent corporation for 1923. If this had been done in 1922 it is estimated that Tobacco Products' actual net would have been $5,900,000, or in excess of amount shown, leaving balance of $2,000,000, or $4.50 a share on the 450,000 common shares, after interest, preferred dividends and four quarterly dividends on 7 per cent Class A shares.

On December 31, last, Tobacco Products held 90 per cent of 793,000 shares of United Retail Stores which, in turn, held 308,171 shares of United Cigar Stores common; 170,000 shares of Montgomery Ward common, part of which it sold; 400,000 shares of United Retail Candy, since distributed and a $1,600,000 interest in Gilmer, Inc., operating chain stores in the South.

Net available for United Cigar Stores common is estimated to have averaged over a period of seven years in excess of $3,800,000. Retail Stores' share in these earnings was better than $3,350,000, and Tobacco Products, in turn, shared to the extent of $3,150,000. Dividend requirement of Tobacco Products Class A stock is $3,150,000, so that equity in average earning power of United Cigar Stores fully covered this dividend.

Exclusive of dividend income from subsidiaries, for the first four months of this year Tobacco Products' net was $976,000 against $467,000 one year ago. Dividend income came to $1,067,000, making total of $2,043,000.

Acquisition of new factory in Richmond and purchase of Bagley concern in Detroit should add materially to Tobacco Products' earning power.—*Wall Street Journal.*

American Can Co.

Unless the last half of 1923 proves disappointing, stockholders of American Can will receive larger returns on their stock at the end of the year. No action is expected before that time, as returns will not be in the hands of the directors until November.

Volume of business in the six months to June 30 was larger than in the same period last year, and earnings are characterized as "satisfactory." Reports from canning centers indicate excellent crops, and the company should close 1923 with a profit well in excess of the $18.30 per share shown on the $41,233,300 common stock last year.

Notwithstanding rumors of a big stock split-up, probabilities are there will be no change in capitalization, some influential interests on the board being opposed to "turning the hose on." Likelihood is that either the regular dividend rate will be increased materially or a special extra cash dividend declared.—*Wall Street Journal.*

Boats That Don't Roll

"I have nothing against mortgages or mortgage certificates," says an experienced investor, "and some of them offer the highest form of security, but if I were selling them I would not attempt to market them on the representation that they don't fluctuate.

"I'm afraid of securities that don't fluctuate, because fluctuation is often the only cloud on the horizon that foretells the approaching squall.

"I once bought a boat, and the builder recommended a V-bottom because the boat wouldn't roll.

"She didn't—it swamped."—*Wall Street Journal.*

Declare Stock Dividend

HARTFORD, Conn., July 21.—Steane, Chapman and Company of Hartford, tobacco dealers, have increased their capital stock to $600,000 by the issuing of 2,800 additional shares of stock of the par value of $140,000. The additional stock is issued in the nature of a stock dividend and is to be paid for out of the surplus earnings of the company. The new stock has been distributed as follows: Gustave Hartman, E. M. Hartman, A. A. Olds and Frank H. Whipple, each receiving 350 shares.

Warehouse Earnings

CINCINNATI, O., July 21.—The annual report of the Cincinnati Tobacco Warehouse Co. was filed with the Cincinnati Stock Exchange recently, and shows gross earnings for the year ending June 30 last, of $67,540.59, and net after charges and dividends $14,794.44, with undivided profits of $9,026.70 and a total surplus of $143,851.52. A dividend amounting to $11,993 was paid May 15, 1923.

Tigett & Myers Dividends

Tigett & Myers Tobacco Co. has declared regular quarterly dividends of 3 per cent on the common and common B stock, both payable September 1 to stock of record August 15.

Kingsport Tobacco Market Receives Charter

KINGSPORT, Tenn., July 21.—Organization of the Kingsport Tobacco Market, Inc., was effected at a meeting of the stockholders of the corporation held at the Community "Y" Wednesday night. The charter, which had just been received from the hands of the county officials at Blountville, was accepted, and by-laws adopted. A majority of the stock of the new corporation was represented at the meeting.

Directors for the corporation were elected as follows: J. Fred Johnson, I. M. Fuller, J. B. Nell, C. E. Brooks, J. M. Cross, M. L. Simmerman, J. E. Huffaker, J. W. Dobyns, J. E. Miller, O. S. Hillman, Dr. W. H. Reed, A. D. Brockman, W. R. Jennings, Dr. S. L. Smith and S. C. Minnick. The directors in turn elected officers. J. E. Miller was elected president; J. W. Dobyns, vice-president, and H. H. Poarch, secretary and treasurer.

A building committee was appointed as follows: C. E. Brooks, chairman; J. H. Thickens, A. N. Dryden, J. E. Miller and J. W. Dobyns.

A finance committee was also appointed, consisting of I. M. Fuller, chairman; A. D. Brockman, H. H. Poarch, W. R. Jennings and J. B. Nall.

It was decided definitely at the meeting that work will be started on the big warehouse Monday, if possible. At any rate the building will be started some time next week. This will be in the hands of the building committee.

In the meantime the sale of stock is being continued, and it is believed that all the stock which the corporation desires to sell will be sold within the next week or so.

Activity of American Buyers in Bulgarian Market

WASHINGTON, D. C., July 24.—Consul Graham H. Kemper, Sofia, Bulgaria, reports that American buyers are again becoming active in the Bulgarian tobacco market, and it is reported that considerable quantities of tobacco have been purchased. It is understood that some of these purchases were made before the market had reached its present high level, so that the purchasers have suffered no loss on account of the exchange situation. At present, however, it is reported that tobacco transactions have practically ceased.—LAMM.

Crops Get Needed Rain

RICHMOND, Va., July 21.—Tobacco growers in a considerable part of the dark belt have been greatly cheered by helpful showers in the last few days. A Prince Edward farmer who was at the Department of Agriculture yesterday reported fine rains within the last day or two. These were local, but embraced several counties. He declared that this would hasten the growth of tobacco, which is doing very well now.

Imperial Dividend

LONDON, July 17.—The Imperial Tobacco Co. has declared an interim dividend of 7 per cent, payable Sept. 1. The dividend is free of income tax.

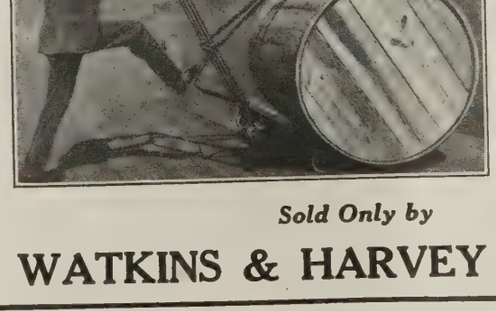
GET THE BEST PRICE

If you knew that we could tell you how to get a greater profit out of your tobacco crop you would write to us in a minute, wouldn't you?

We know that and we are anxious to tell you about it. It has been tested. There's no guess work about it.



Every grower of tobacco knows just how much depends on the curing of his crop, but some have not found the best way. A Johnson Tobacco Curing Furnace will make it easier for you to cure your tobacco right—*to get the best price.*

Crush An' Rush of Summer Travel Sells Cigars—Hotels F Gas Tanks Gurgle in Glee!—Strasser Sells No More matra Today!—Spark Plug Takes Barney Google to Sa toga!—Adonis of Arrowville Books Order for Murads Wheels and Weather Too Much for Izzy!—No More F nic for Peter's People!—Jam-o'-Joy Via Jordan!

New York State Capitol District.
Expansion-Week, 1923.

"You'd be surprised, Sam," started off Jim Stubb, just in from a trip to Troy for the account o' Stubb & Ash, Inc., wholesalers and retailers o' good cigars, as he hung his Porto Rican hat on a case of Habana resagos. "Yes, you'd be surprised to see the improvement in business. Why, up the River today, I sold—"

"Yeh, yuh should mebbe sell it some Camel cigarets!" snorted Sam Ash, trying to tell a tourist where the Capitol was and is. "Trade ain't so awful rotten, y'unnerstan, yet it should ought to be even better for this time o' year. Am I right or wrong?"

"Wrong Sam, wrong!" corrected Jim Stubb, digging up another seat in the Hot Chair Club. "In all my life I never saw so many people around the hotels. And lincolnettes! Say, Sam, we really ought to sell gas as a side-line! Perhaps there isn't much money in it, straight, but the way they gyp you on measure is a beat on bucketing!"

So That's Where the Kohinoor Was!

"To make money, yuh should ask Charley Shaxby," suggested Sam Ash, informing another travel stained customer that the hotel around the corner was not a Mills house. "For he knows how to turn a twist o' alchemy gout into gold, unnerstan me?

"An' this here *Albany Even' News* put his picture in the paper for tellin' folks how he did it, too! Because every customer of the J. W. Stevens store, at State and Broadway, was interested in knowin' just how Manager Shaxby had been walkin' around for years like a Barney Barnato without realizin' it!

"That is, he didn't realize it until his big toe pained him so that he had to go to his doctor. An' the doc, he nearly amputated the toe pullin' out a diamond which Shaxby had assimilated twelve years ago as he walked through the strong rooms of his West Van Vechten street palace!

"But when Boss Shaxby took the carbon to his friend, E. P. Miller for valuation analysis, Miller up an' said, y'unnerstan, that that there diamond never saw Kimberly, nor any other South Afric field, but that probably hailed from the well-known Pittsburgh stogie an' plate glass section!"

Not So Good, Not So Good!

"Well, down in my section, things are quiet," smiled Sam Fulder, the largest wholesale and retail cigar merchant on Beaver street. "I don't believe I ever saw trade in the shape it's in now. Profits are infinitesimal, notwithstanding that gross business was probably never so good as at present.

"This simply means that the const gets it all. Why it is that the sm should receive so much for his m from the cigar man I'm sure I know. No other trade offers so for so little. And it seems to me a time that sufficient steps were ina rated to put the cigar business up paying basis!"

Good, Strong Man Wants Wor

"Right! Very right!" agreed I. Strasser, he of Albany's oldest house, now retiring. "No use bat along in the tobacco business wit profit. So I got out. Practically my leaf is now sold, and I'm lookin work. Honest!

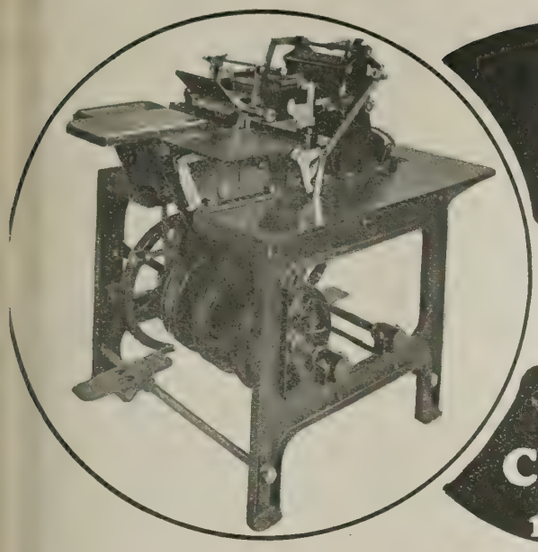
"Anything will do. Such jobs as ulating Firpo's pesos, or checkin Henry Ford's presidential vote, I handle nicely. But insofar as the or tobacco business goes, I guess thru! What's the use of workin the expense account?"

Giddap, Saratoga, Giddap!

"Expense account is all I hear days," mournfully sighed Cap'n F Doyle, just back from a flivtrip to toga and return—particularly the r "First one man, then another o famous Fatima crew reports no no spares, no gas, no oil, no nothi

"So, like Barney Google, I we Saratoga today with my rocking-h Spark Plug, to note conditions a track. Rosy! Yes, they're all set Spa now for a whooping big A And Fatimas? Well, the jobbers stocked 'em up, via express and freight, by the cartload! While Ch fields up there will exceed the e famous seven-billion slogan!"

Arrowville Remains Hot and D



"Our slogan is work!" spoke up Slattery, all the way from Troy wi P. Lorillard, a corporation, order-b his handy right arm pocket. "Yes, working the same line, no changes. know 'em—Murads, Moguls, He Deities.

"Hot days. And dusty. Not e rain. Looks like a shower now, th So, if you don't mind, let me hav order now, and I'll hurry right ba Arrowville-on-the-Hudson. Good and good luck! See you next wee maybe tomorrow!"

Fair and Warmer, Says Izzy

"Tomorrow may be too late," Izzy Fleischmann, selling cigars yeast. "That's why I always try my man *today!* I can't afford to Got to do business now! And wh do now is done—get me?

"But, aside from all that, trade i

AUTOMATIC LONG FILLER
BUNCH MACHINE

Two inexperienced girls can soon learn to operate this machine. One feeds the filler, the other the binders and the machine does the rest.

Gives you uniform work with unskilled labor.
Greater production and attractive savings in cost.
Easily adjusted to make light or full bunches.
Substantial construction gives long life.
Easy and inexpensive to operate.

Catalogue and any particulars upon request.

GREATER PRODUCTION AT LESS COST

fair. Not so good as the flivver business. Too many folks buying cars, I guess. Can't afford to smoke good cigars if they put all their spare change in gas and rubber. Uh-huh, it's hot—and I only hope the automobile people find it hotter!"

Peter's Picnic All Over!

"Pretty hot last Saturday," remarked Jim Stubb, moving the electric fan slightly closer to the Hot Chair Club. "But not too warm for the G. W. Van Slyke & Horton people to have their picnic. Anyway, it was advertised for last Saturday, and they had it.

"Some boys and girls came up from the lower River plants, but most of the crowd consisted of the Albany bunch—and bunchers—celebrating the driving of the last nail in the new machine shop of the Peter Schuyler plant on Clinton avenue.

"Now Van Slyke & Horton can go ahead and make some cigars. Not that they haven't been making any lately. But this new shop gives the big cigar firm in the hill the opportunity now of producing almost so many goods here in Albany as the River plants.

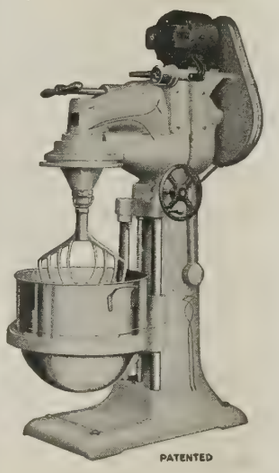
"And, according to Mike Gorman, they need 'em. For Peter Schuylers are selling just a lil' better day by day, in every store. Right now it's pocket-packs the smoker wants for his vacation smoking. So the firm continues to play 'em up in this style packing in the newspaper advertising they are doing in conjunction with their previous wallboard and street car campaign."

Joy-Jam for that Jimmy-Pipe!

"What do you think of our new billboard posters?" asked Cecil Jordan, stroke-oar for the R. J. Reynolds Tobacco Company, who is said to be the manufacturer of the Camel cigarette. Ever see anything to beat those Prince Albert and Camel designs?

"And I needn't tell you how the goods are going! They're simply speeding, and that's not all! Only goes to show that smokers appreciate quality—and no coupons!"—THE SMOKER.

Crop Prospects



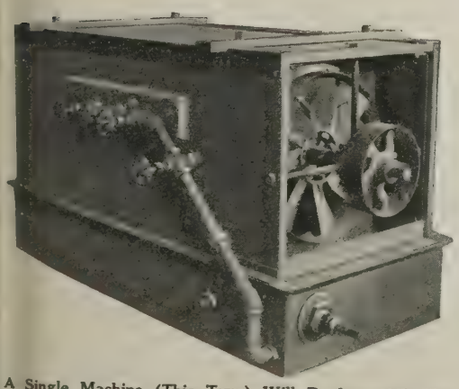
WASHINGTON, D. C., July 21.—Tobacco is mostly doing well, says a report to the Department of Agriculture on crop conditions. Cultivation is being rushed over large areas and conditions is generally improving. The crop needs rain in some sections. Further reports to the department on the tobacco crop say:

"Tobacco is somewhat late in Pennsylvania, but is now growing well. Setting and stocking over is completed in Connecticut and Massachusetts, but the crop needs rain. Crop is growing on a smaller acreage than last year in Maryland, due to shortage of plants and labor. Transplanting is still going on and planted fields are being cultivated. There is much complaint of 'wildfire.' The crop is late in Virginia and is making slow progress, due to unfavorable season. Local rains have helped in spots. Cultivation is being rushed in Kentucky, where the crop generally is in good shape. The condition in the Burley belt, central and northern counties, is excellent. The harvest is on in Florida, Georgia and South Carolina, with yields and quality good. The bright area is now being harvested, with excellent prospects. Season is favorable for the new area in North Carolina, but the old belt has suffered from drought. The crop in Tennessee is doing reasonably well, but is buttoning rather low, with but little topping done so far."

A Successful Trip

Charles L. Meister, of Arthur Bornholdt & Co., importers of Sumatra and Java leaf, of 139 Front street, is at present covering New York State and New England, and indications point to a very successful trip.

READ 3 SPEED
PASTE MIXER



Gum Trag, mixed on a READ, requires no straining at all. The thorough mixing action, which the READ gives, takes all lumps out of the batch.

These machines are used by the Otto Eisenlohr & Bro. Company for mixing all their cigar makers' paste.

Havana Cigarette Strike Causing Anxiety

HAVANA, Cuba, July 20.—The strike of the cigarette workers which has been on for several weeks, continues with no solution in sight so far. The supply of cigarettes is said to be growing short, and the supply of tobacco in the warehouses in Havana is growing long. Therefore there are efforts being made to reach terms of a settlement on which both sides, the workers as well as the factory owners can agree. There was a meeting held Wednesday and another meeting of representatives of both sides was held yesterday.

The Union of Cigar and Cigarette Factories has put it up to the tobacco workers' unions that if the strikes on in Havana are not called off at once the factories will be moved to the interior, and will be maintained there permanently. As many of the workers here are members of families resident in Havana and could not follow the factories to the interior they would be deprived of the chance to obtain this class of employment.

The leading members of the manufacturers' unions have refused to consider the last demands made upon them by the strikers.

North Carolina's Tobacco Industry

RALEIGH, N. C., July 21.—North Carolina ranks first in acreage planted in tobacco among the states of the union and is second in quantity and value of products.

Winston-Salem is the center of the industry, more than three-fourths of the tobacco products being manufactured there.

The tendency for the past 20 years has been to concentrate the industry in immense factories. In 1900 there were 96 factories in the state, 43 in 1910, and in 1922 only 15.

The value of products manufactured in 1910 was $35,987,000 and in 1922 it had grown to $214,830,348.

The industry furnishes support to 16,449 persons, with an average daily wage for men of $5.04 and for women $3.07.

Durham, Asheville, Greensboro, Hickory, Leaksville and Statesville are the principal tobacco manufacturing points, with Durham second to Winston-Salem, which leads all others. Durham, because of the product bearing its name, is perhaps the most widely known of these centers.

The value of plants operating in 1922 was $20,115,034 with a yearly payroll of $14,027,661.

North Carolina Tobacco Crop Prospects

RALEIGH, N. C., July 21.—Kentucky has never become quite satisfied with the rivalry that North Carolina has shown in the tobacco crop competition. Even last year our value was worth more than theirs, giving us a rank of first, but that state was first in production. It is interesting to note, however, that Kentucky strives for pounds whereas North Carolina strives for quality.

From reports, Kentucky seems to have put over her tobacco co-operative marketing work better than our Tar Heel State, but perhaps after things get settled down this state may show some surprising results in this respect.

Special reports were sent to the various independent Co-operative Tobacco Warehousemen, and the results indicated considerable increase in the acreage of southeastern and eastern counties, with considerable reduction in the old belt or the northern piedmont area. The regular correspondents of the Crop Reporting Service show the average to be one per cent higher than the tobacco specialists and a condition of exactly the same. It is therefore evident that our data is fairly well corroborated. The acreage seems to be about the same as last year, although the intentions were for some increase. The northeastern area has suffered most from the June dry weather conditions. The condition of 78 per cent as compared with 80 per cent a year ago indicates a poorer crop, but when we remember that last year's conditions were so unfavorable, we get some idea of the conditions on July 1. It is expected that July will show considerable improvement because of the rains that occurred between the time reports were made to us and the release on July 9.

The National Tobacco Crop shows a condition of 82.5 per cent or same as a year ago, and one per cent better than the ten-year average. The National crop is reduced about two per cent in acreage, indicating a production of 1,425,000,000 pounds. This would indicate a crop of about 100,000,000 pounds above last year or seven per cent increase. The prospective yield per acre is 808 pounds.

Nothing definite is established as to the outcome of the co-operative and the independent marketing methods. Each side is claiming the victory, but considering the difficulties to start with and the handicaps and lack of experience the co-operative people had, we feel that they have made a fairly good success to continue the race at all. At any rate, it is unreasonable to expect them to market their tobacco orderly and over a long season and at the same time for the members to expect full pay the first few months. Practically no new industry expects to clear profits the first year.—FRANK PARKER, Agricultural Statistician.

Homeward Bound

Manuel A. Suarez, head of M. A. Suarez & Co., Havana, and vice-president of S. Rossin & Sons, Inc., who has been in New York for several weeks conferring with his associates, is returning to Cuba this week.

...Guerra, Diaz & Co. are represented ...avana this week by Frank R. and ...Diaz.

...V. Merriam has been holding down ...oduction end while M. Bustillo was looking into the new crop situation in Cuba. Mr. Bustillo has returned, and Mr. Merriam will soon be following trade lines again.

"Pancho" Gonzalez, of Garcia & Vega, has returned from the Havana tobacco markets.

Raising Prices on the 44 Brand

The Consolidated Cigar Corp. has just sent to the trade the following announcement:

"We have to advise that the greatly increased cost of raw materials makes it necessary for us to advance the price of '44' Invincibles, effective August 1, to $60.00 per M for 1/20ths, and $61.00 per M for pocket packs.

"For several months we have delayed taking this step in the hope that price levels of tobaccos might come down, but just the opposite has occurred. Therefore in order to maintain the high standard of quality of '44' Invincibles, we are compelled to make this increase in price, which, however, is only a small part of the additional manufacturing cost.

"Trusting you will appreciate our position and awaiting your further valued favors, we remain."

Reward Offered for the Recovery of Cigars

CHICAGO, July 20.—Clarence Hirschhorn & Co., 217 W. Randolph street, are offering a reward of $250 for information leading to the recovery of 60,000 cigars, which the firm says was stolen from the Chicago Bonded Warehouse, 114 E. Austin avenue, sometime between last Saturday noon and Monday morning. The cigars stolen by the burglars were, 40, El Producto Bouquet, 10c size, and 20, Little Tom, 2 for 15c.

Warning to Dealers

The firm issues this warning to dealers: "Beware of any El Producto or Little Tom cigars offered you except through Clarence Hirschhorn & Co. We offer a reward of $250.00 for information leading to the recovery of the merchandise stolen. Call, write, telegraph or telephone Franklin, 5670."

Employment Statistics

WASHINGTON, D. C., July 24.—The Bureau of Labor Statistics of the Department of Labor has just announced comparative employment figures in May and June of this year and June of this year compared with the same month of last year.

The Bureau received replies from 176 cigar, cigarette and tobacco factories showing their employment in May to have been 31,471, decreasing slightly in June to 31,425, or a decrease of .1 per cent. The pay rolls in these factories, on the other hand, increased from $549,-268 in May to $566,426 in June, which was an increase of 3.1 per cent.

Replies were also received from 30 smoking and chewing tobacco manufactories, who gave their employment in May as 3,794, increasing slightly in June to 3,808, an increase of .4 per cent. The pay rolls in these establishments increased from $56,934 in May to $56,997 in June, an increase of .1 per cent.

The Bureau also received comparative figures from 54 cigar, cigarette and tobacco manufactories, showing their employment in June, 1922, to have been 15,-006, decreasing in June of this year to 14,935, a decrease of .5 per cent. The pay rolls in these factories, on the other hand, increased from $282,448 in June, 1922, to $286,948 in June of this year, an increase of 1.6 per cent.—LAMM.

Growers Fight for Lower Hail Insurance Rates

HARTFORD, Conn., July 21.—Independent tobacco growers are said to be making every effort to induce more insurance companies to write hail indemnity on their crops, in an attempt to secure very nearly the same low rates as are granted on the tobacco crops of members of the Connecticut Valley Tobacco Association by the syndicate headed by the Hartford Fire Insurance Co. Two more companies at least, the United States Fire and the North River, both of New York State, are reported to have entered this field of insurance on Connecticut grown tobacco.

The protests of some independents are based on the fact that their tobacco fields adjoin those of members of the association and yet command a much higher rate for hail cover.

Apparently this is the same problem recently passed upon by the Attorney General of Massachusetts, who decided that under certain trade conditions it might not be unreasonable to charge lower rates for hail insurance to members of one association than to other tobacco growers, and also that such lower rates may not constitute a rebate.

Belgian Cigar Exports Hit by Denmark's High Duty

WASHINGTON, D. C., July 25.—An association of cigar manufacturers has called the Dutch Foreign Minister's attention to the fact that since Denmark has doubled its import duty on cigars that market, which has been one of the few export markets open to the Belgian cigar industry, will be practically closed.—LAMM.

North Carolina Crop Conditions and the "Co-O

Prospects for Bumper Tobacco Production Are Lacking—ports from Various Sections Not Very Roseate—Do Cast on Regularity and Efficiency of Co-op. Move.

GREENVILLE, N. C., July 22.—June was a dry month, and all crops did well, though some few farmers were a little uneasy about their tobacco, seeing a very short crop ahead. Some tobacco began to fire up, and the alarm of poor crop went up. However, rains came with July and improvement began. Then growers began to wonder if there was too much rain. Tobacco took on some growth, but prospects for a bumper crop are not in evidence. There will be a fair crop. Reports from other sections are not altogether so favorable. Tobacco did not promise too well in June, but with the July rains it began to improve and corroborates the old woman who said that tobacco was *"one* of the outgrowingest things she ever seed." A fair to good crop in weight is expected.

Had No More Land or Tobacco Than Brass Monkey

Greenville has prospects of a good business. Warehousemen and their men are out every day advertising. Little Co-op talk is heard. More than a hundred suits have been instituted. More are to follow. Our farmers or many of them were badly misled by "spiels" of glowing pictures of future opulence per the co-op route. Their over 1,600 signers may be correct for Pitt County, but some of those signers had no more land or tobacco than a brass monkey. Taking these and others who signed just to help out a friend in his quota and $—per, added a number to the list. It is said that in many cases the landlord and tenant signed up for the same acres, which doubled the acreage and number of signers. A barber or two, who knew about as much about farming as some of the swivel chair promoters, signed freely.

From what the co-ops are doing in Kentucky, according to R-U-M-O-R-S, it is a wonder that farmers are not just falling over each other to sign up. Other reports do not verify this statement. In fact much news in the papers give an entirely different side of the question.

Going Away from Home to Get the News

It seems the old way of going away from home to get the news. It is said the North Carolina Co-op work is heralded out in Kentucky as doing wonders and is a howling success. And this reminds us of something about the Peanut Association. Some few months ago this writer was in a town at the time the peanutters were holding a big meeting. Their president was there and talked plainly about matters. He told them that if they did no better with their 1923 crop than had been done with of 1921-22 there would be no ass tion. A few days after this an At paper carried the reports of a Gee Alabama peanut meeting, in which speakers told of the great and wonc things the Virginia-Carolina Assoc was doing. Great things were pro and prophesied for the associ That's the way prosperity for the f is passed up for propagandic cons tion.

Should Co-op Judges Hear Cases?

What the future holds from the is problematical. But if the matte ever get to the jury, and it is bou go there, little uneasiness need be for the jury generally does the thing. So far the co-ops are jubil court proceedings. There is a per rumor that co-op judges have been ing the cases. You know almos lawyer can manage to get a little of land and become a farmer. Th is eligible to co-op membership. he morally or legally eligible to co-op cases? Now that Virgini might illustrate the point. The who gave that co-op decision ma have been a real co-op in memb but with his "own dear son-in-law ning the whole co-op business, he have heard the case? Should a Carolina co-op judge hear a co-op

The co-ops are needing money i crops. Tobacco men have sold holding, when they wanted to sell, have the higher-ups held their poo brothers' crop and cash? Will the to wait until there is enough 1923 crop on hand on which th borrow to make last payment o crop? There have been instances concerns of doubtful solvency ha rowed money with which to pa dends never earned, and thus f stockholders. It looks like the b of 1922 should be closed up befor ing up the 1923 with it.

Past Performances of Panac

This writer has seen a num benevolent movements, by politic the interest of the poor farmer Grange was an organization th benefit the farmers in some f matters, but it has long since f function in these parts. The came with its blasts of trump panaceas. A few landed in off the farmer continued his struggle low prices and hard times. The F Union followed and its promise resplendent. It is gone. ain left with the bag to hold. Others ve risen and gone the way of blue sky als. And now the Co-ops are the nder workers of all time for the bene- of the poor farmer. C-o-o-p-e-r-a- -o-n; that's a good word, sounds good, good and would be good, if theory and actice were not so diverse. But it ors too much of the tale of the fellow th the experience and another with the ney going into the co-op business. The st put in his experience and the second t in his money. At the end of the year first fellow had the money and the ond fellow had the experience. For it one time that might be a fair trade. t how often should it be repeated by same fellow?

From this angle it appears that many mers are again swapping for expe- nce.—HENRY T. KING.

Col. Webb's Dream of Past Events

Today is my birthday. While resting etly in my office enjoying my pipe ed with the prince of smoking tobac- and as the smoke from my pipe led gracefully around my classic ow, some thoughts passing through my nd caused me to remember my birth- and I yielded to the temptation to ulge in a day dream of a life of 71 rs, and as I smoked and dreamed, I fted back in my memory to my boy- od days, away back yonder on my ner's farm and in my dreams I heard e more the songs of the negroes, who e gathered around the old tobacco n at night, where curing tobacco was progress. I could hear the voice of g John as he raised his voice to lead with the old negro song:

I'm gwine down dar,
I'm gwine down dar;
I'm gwine down to Lynchburg town
To take my tobacco down dar."

nd as John would come to the rus, Cadmus, Crazy Jim and old rge would join in and I shall never r such music again—unless I shall permitted to hear the angels sing. I in my dream I could see myself in the tobacco patch, killing the ive horn worm, looking forward to urday afternoon when I would join r boys, both black and white, at the swimming hole. And then I saw elf leaving the old home to go out the world to make my fortune. I my father standing at the big gate I could hear him say, when he said dbye: "My boy, I have only one ce of advice to give you and that is never it rains, just let it rain." And I saw myself riding into the little oad station called Durham to take sition as clerk in a store. In my m I passed through my young man- l in Durham town, where at the age I began my career as a tobacco tioneer, and through my dream I saw Blackwell, the father of Durham. w him as he rode through the streets he town which he helped to make famous, with liveried footmen and spotted horses, and then I saw him walking the same streets looking for a job. I saw Jule Carr, when he came to Durham a poor boy, taking an interest in the Bull factory, and I could see all along the years that have passed the same Jule Carr; a millionaire, a man of the people, a statesman and a gentleman. And then I saw the Dukes as they came into the village to open up their business in a little wooden factory and I saw them when they had become rich and famous. I dreamed of the day, 36 years ago, when I left little Durham to come to Winston, and I could see myself all along these years selling tobacco, selling tobacco year after year. While many were growing rich I was selling tobacco. I saw men make fortunes and I saw some make and lose fortunes and I saw them all die, and yet I saw myself still selling tobacco. And I dreamed on as I continued to consume pipe after pipe of Prince Albert, and I saw myself making new friends, and I saw many of these men make fortunes, and still I was selling tobacco. I saw a man come down from the hills of Patrick county, a poor man, and I saw thousands follow his remains to the grave yard—thousands who loved him while he lived and who wanted to honor his memory. From the little wooden factory that he erected when he came from Patrick county, I could see enormous buildings everywhere in which were manufactured many millions of pounds of Prince Albert and other famous brands of tobacco. I saw such men as the Hanes, Vaughns, Taylors, Browns, Bohannons, Hills, Baileys, Norfleets and many others arriving in town, poor men, and I saw them as they developed great businesses and became fine citizens and useful men, and I still sold tobacco. Nearly all of those who were pioneers in this progressive city are sleeping in the "Silent City of the Dead." In my dreams I could see them come and see them go, and I could see myself selling tobacco. I awoke from my dream with the startling fact staring me in the face that I was 71 years of age. Is it possible that I have been selling tobacco 50 years? Well, yes. It looks as if men may come and men may go but I go on forever. And then it was with an awful realization of a startling fact that I was 71 and nothing to show for a long life of activities.

But then as I communed with myself I thought that maybe it, after all, has not been a complete failure. Failure as to money, yes; but are there not other things than money worth while. As a tobacco auctioneer I have tried to do my duty. As the editor of a trade paper, I have tried to be faithful and fair and just to my fellowman. In my local activities I have tried to be faithful and loyal—and now as I come to the beginning of another year, with the blessing of health restored, I trust that there are years of usefulness in store for me, and that some day "I may live by the side of the road and be a friend to man."—*Southern Tobacco Journal*, Winston-Salem, N. Denounce the Imperial Critics

WILSON, N. C., July 24.—Commenting editorially upon the ridiculous attack upon the Imperial Tobacco Co., made by Senator Smith, of South Carolina, in an address delivered before a group of farmers and members of the co-operative association, at Kingstree, S. C., the *Daily Reflector*, of Greenville, N. C., one of the best edited papers in the eastern part of the state, says in part:

"It is barely possible that Senator Smith was persuaded by the co-operative interests to come to the rescue of an ill-fated venture that is about to founder and save it, if possible, by one of his inflammatory speeches. Such remarks coming from a United States Senator is the only thing that gives his explosion a passing thought, much less credence. His utterances were both ill-timed and undignified. Had he made such declarations on the floor of the Senate they would have been passed unnoticed for it must be remembered that the South Carolinian has no particularly distinguished record either as a debater or author of legislation in that body. The Senator is a poor apologist for the co-operative selling plan, when he attempts to discredit the Imperial Tobacco Co. In fairness to the 'erudite statesman,' he is given the benefit of the doubt of not recalling the conditions that obtained in the bright leaf tobacco belts before the entrance of the Imperial into the buying field. Comparison is only necessary to completely satisfy the most prejudiced and biased mind that the grower has received a better price for his product than before the British concern became a factor. Business men without number are ready to say that their relations with the Imperial have been entirely satisfactory. In many instances, much more than with domestic concerns. . . . The English company has held aloof from controversy with executives of the association and have bought what and wherever they wanted without consulting or following the dictates of the organization. They have paid better prices than the association—and not on the deferred plan. Growers realized that potent fact early last season and it is growing with indelible impress."

Takes Fall Out of Co-op and Its Friends

The *Tobacco News*, of Lake City, S. C., makes some tart observations, in part, as follows:

"Although continuous effort of time and labor has been employed for the past two years to get the tobacco growers of Eastern South Carolina to become members of the Tri-State Tobacco Growers' Co-Operative Association, the workers have been unsuccessful in securing a majority sign up. A comparison of the amount of tobacco received by them last season shows they got only 36 per cent of the state's crop."

Referring to the speeches of Senator E. D. Smith and Gov. T. G. McLeod, it says:

"Not satisfied with giving gratuitous insult to those who exercise the right of free thinking, guaranteed them under the Constitution, they call into play whatever of passion and prejudice they can arouse by mentioning the name of the tobacco company. When argument falls to the plane of trying to arouse hatred and prejudice it has indeed fallen low. Who are these 'foreigners' whom the speakers charge as dictating the price of tobacco? They name the Imperial Tobacco Co., of England. . . . According to the pool propagandist's statement through the papers the day before these speeches, he said it was conceded that the association had made the price of tobacco in South Carolina last year. Now here come other speakers for the same association and say it is the Imperial Tobacco Co. that fixes the prices. All this is in line with the pool propaganda as those who have followed the trail will readily see. It appears they will make any statement that they think will serve their purpose for the time being, although a little later they may entirely contradict it. They appear to be 'opportunists' pure and simple. Had these speakers mentioned some other country besides England when they hurled that terrible name, 'furriner,' it might have had some weight, but when they name the best and only friend that the United States have had on the top side of the globe, they went beyond the bounds of reason. Two countries of the same blood and language, ideals and principles of liberty—the United States and England have been working in harmony for years. Liberty had its birthplace in England at Runnymede when the Magna Charta was signed and since that time it has been spreading to all parts of the globe, and there is yet hope that it will eventually reach those who are trying to tie up the farmers of the country into one-sided contracts to further their own selfish advancement. . . . Such tactics as these show the desperation to which the association is driven. They must have tobacco to operate their expensive system. With the amount they got last year the cost of handling is ruinous. . . . Many farmers were heard to say that they think the Senator and Governor have stepped out of their places to take this fight, and although they had been supporters of both that they had cast their last ballot for either of them."

Dark Fired Growers to Get Second Payment

HOPKINSVILLE, Ky., July 23.—Checks for the second payment to the Dark Fired members of the Dark Tobacco Growers' Co-operative Association will be placed in the mails not later than July 23 and should reach the growers before August 1. This distribution of funds, which amounts to approximately $4,500,000, represents 70 per cent of the first advance and was authorized by the Board of Directors.

A short discussion of the financing problems confronting the directors will be enclosed with each check in order that the individual member may thoroughly understand the action of the Board. In some districts the growers expected more than 70 per cent at this time, but a complete endorsement of the Association's policy has followed a detailed explanation of the financing problems.

The announcement which will accompany all checks is reprinted below in full:

The Second Payment

"The time of making a second payment to members of the Dark Tobacco Growers' Co-operative Association depends entirely upon the sale of our tobacco.

One Sucker

"In the One Sucker District this year the entire crop was sold before the first of May. This enabled us to make a 100 per cent second distribution to the growers in that section on May 15. The third payment to those members will be given out when the association winds up its business for the first year.

Dark Fired and Stemming

"In the Dark Fired and Stemming districts the need of a second payment was recognized by the Board of Directors in session at Paducah on June 7. The farmers who elected the directors needed money and it was their duty to get it to them.

Paducah Prospects

PADUCAH, Ky., July 21.—Deliveries of loose tobacco have been very light again this week. As the Co-operative Association warehouses are planning to close on August 1, no doubt all the crop will be in by then. Indications are that there is very little left in the country and by that time farmers will have ample time for delivering.

There have been a few sales of hogshead tobacco during the past week that were made privately, but available stocks outside of the association are small and are of very little consequence. A few independent sales were made at Paducah and Mayfield of common to medium leaf at prices ranging from 14 to 25 cents. There has been considerable inquiry for lugs both for the old as well as for the '22 crop, but if any sales have been made they have not been published.

The weather has been ideal on the growing crop which is doing finely. Local rains have fallen over the district which were not especially needed, but have been helpful. The crop is being well worked and is in first class condition. Topping began in some sections this week and quite a good deal of tobacco has been topped, which means that it is considerably earlier than usual. Indications are that the greater part of the crop will be topped by the middle of August, but there are some inferior crops over the country as we always have, but farmers who have taken good care of their crops have them in the best condition we have rarely ever seen at this season of the year, and prospects for a good crop were never brighter. —W. B. KENNEDY.

Owensboro Outlook

OWENSBORO, Ky., July 21.—With continued dry, warm weather during the week the tobacco crop is showing some improvement, and I can report its general condition as fair at this time.—J. S. PHELON.

"The association had not sold all of this tobacco, however, and consequently it did not have enough money to make a 100 per cent second distribution. A complete review of our finances showed that a second payment equal to seventy per cent of the first one could be made if a fifty per cent loan was placed on all tobacco held by the Pool. The financial report showed that approximately 109,000,000 pounds had been received in the Dark Fired District. Of that amount less than seventy per cent had been sold.

"If the association borrowed more than fifty per cent of the value of all stored tobacco, it would be able to make a larger payment. But if a heavy loan was placed on this stored weed, the association would be placed in exactly the same position occupied by the farmer before he was organized. Unable to meet its obligations it might possibly have been forced to make quick sales in order to obtain funds for its immediate needs. This course would be directly against the principles of co-operative marketing.

"On the other hand by placing a loan of fifty per cent on all stored tobacco the association was able to make a payment of approximately seventy per cent without injuring its financial strength. The immediate need of money in the country districts was taken care of and the association was in a position to market the remainder of its crop in a scientific manner and for a fair price. That is what we organized for.

"In addition to the association's immediate needs the directors were forced to consider the question of financing the first payment of the 1923 crop.

"As you know, there are two sources from which we may obtain loans:

"1. War Finance Corporation.

"2. District banks.

"The War Finance Corporation cannot advance more than fifty per cent of the value of our tobacco which must be prized in hogsheads and stored in recognized Government licensed houses before we make our application.

"The District banks lend us money on our loose tobacco. They represent the only source we have of obtaining funds during the delivery season.

"Therefore, the directors borrowed only fifty per cent from the banks because they knew that fifty per cent is all that the law allows the War Finance Corporation to lend us at any time. Next fall unless a considerable amount of tobacco has been sold in the meantime, we will borrow this fifty per cent from the War Finance Corporation and repay the banks.

"Then the banks can lend us money for the advance payment on the 1923 crop."

Manning Market Opens Aug. 1

MANNING, S. C., July 21.—The tobacco market opens in Manning August 1. There are two independent warehouses conducted by R. D. Cothran, John D. Gerald and C. E. Chestnut. A fine tobacco crop is in prospect. Hot days and seasonable rains have been beneficial to farms and the curing barns product is good and the curing barns are being well filled. Farmers are anticipating a better income from their crop than last year as the majority of the growers are in a much better condition. Tobacco curing continues with good results generally.

Brussels Leaf Market Active

WASHINGTON, D. C., July 25.—During July the Brussels leaf tobacco market was active due to heavy demand for American and San Domingo yellow leaf, according to the report to the Department of Commerce. This demand was mostly from Central Europe, with a few Belgian purchases.—LAMM.

Poolers Celebrate With Big Burgoo

FRANKLIN, Ky., July 21.—The town of Franklin, hospitable by tradition and newly prosperous as the result of good crops and eight months of co-operative marketing, on Wednesday extended a cordial welcome to more than 5,000 farmers and their families who held a huge festival in recognition of services rendered the county by the Dark Tobacco Growers' Co-operative Association.

State and county lines were erased for the day. Staunch pool farmers from the Dark field sections of Tennessee joined with the growers of One-Sucker tobacco from Logan, Simpson, Allen and Warren counties in a joyful celebration. One hundred non-poolers signed contracts pledging their leaf for 1923.

George Colvin, State Superintendent of Public Instruction; J. Guthrie Coke, Auburn; Virgil Chapman, Bourbon County Attorney, and Clifton Rodes, manager of the field service division of the Co-operative, addressed the growers during the morning and afternoon.

Mr. Colvin was introduced by Lawrence Finn, former chairman of the State Railroad Commission, at 11 o'clock.

"I am here to tell you the story of co-operative marketing," he said.

"And it is the second best story ever told," shouted a Tennessee minister, who operates a small farm.

After touching lightly on the immediate benefits of the new merchandising plan, Mr. Colvin drew the attention of the farmers to educational conditions in Western Kentucky.

"There are young girls in these fields today hoeing tobacco," he said. "Hundreds of them were there while school was in session. That is the tragedy of Kentucky.

"It is for our wives and our boys and girls that we must work for an economic independence. Hundreds of our best young men are leaving rural districts every year. They go to the industrial sections, and with them we lose our hopes for a better Kentucky.

"We must enter this fight now and win it. An improved standard of living shall be our heritage for our children.

"And now I want to pay this tribute to Robert W. Bingham, an honest tribute to an honest man. He is not a politician but the best friend the farmers of Kentucky ever had, and the success of this co-operative marketing plan will prove it to you."

Following Mr. Colvin's speech Clifton Rodes made a short talk and then Franklin served its burgoo. Ten long tables laden with provisions were uncovered on the Court House lawn and farm wives served the holiday lunch. A brass band took possession of the speakers' stand during this hour and helped the crowd forget the intense heat.

Hundreds of farmers from distant points came by train, automobile and buggy, and many of them carried baskets of food which they contributed to the general stocks.

Mr. Finn introduced Virgil Chapman at 2 o'clock. The audience was very much larger than in the morning and the third speaker was greeted with heartier applause.

Beginning with the fundamental principles of organization Mr. Chapman outlined the steps leading to the formation of the two Kentucky associations. He described conditions in burley district where the loose floors offered the only method of selling tobacco.

"The people there were bankrupt in 1920," he said. "The bankers were wondering where they would get money to meet their obligations and the farmers were in despair. Now these same farmers have bank accounts and they are paying their debts. The entire district is prosperous. Co-operative marketing made the change and it is doing the same thing for you people in the dark belt."

Mr. Chapman discussed in detail the ration of the huge association, laying rticular stress on the need of active operation within the ranks of the mbers.

The very life of the people depends on the loyalty of the growers," he id. "Nothing can interfere with the ccess of a co-operative association that a united membership. It is the duty every grower here to make all pos-ie efforts to increase the size of the l."

While Mr. Chapman was speaking ny farmers sought the field service kers and signed contracts, pledging ir crops for the next four years. A ps of employes and volunteer helpers s kept busy the entire afternoon hand-r out membership badges and taking tracts.

Ellis Malone, proprietor of a local de-rtment store, was especially active in alf of the association. He was one the first citizens of Simpson to realize l value of co-operative marketing last when the organization committee was t started in the One Sucker district he has been a leader in the drive this mmer.

ust before the meeting was adjourned mbers of the crowd called for Mr. Coke, who had arrived shortly after on. He responded with a fervent ech in which he emphasized the need co-operation in agriculture.

As long as the farmer tries to mer-ndise his crops individually, he will an economic failure," Mr. Coke said. he time is coming when all of the ducts of the soil will be sold by or-anizations similar to the tobacco pools u you will all receive more for your or.

It is your duty now, however, to ke this association stronger by obtain-new members."

Other citizens who participated in the gram were: C. G. Jackson, Robert rris, C. U. McElroy, W. T. Stringer, bert Wade, Will Meadows and F. D. oker.

Burley Selling Surplus Real Estate

LEXINGTON, Ky., July 24.—Sales of plus property of the Burley Tobacco owers' Co-operative Association, which rted last week, were resumed today. Lexington property, for which the asso-tion has no present use, is to be dis-ed of at auction. The Lexington perty included a number of city lots a new residence section laid out th of the big Burley warehouse, in ich a new street and sidewalks have n laid, sewers constructed and lots rked off.

The sale of property, according to Director of Warehouses Ralph M. Barker, must be confirmed by the Board of Directors of the Burley co-operative. Mr. Barker said that he would recommend the acceptance of the prices offered for the property already sold, with a few exceptions.

No warehouses are being sold, Mr. Barker said, and the statement previously made that some warehouses were being offered was due to the fact that some lots and small buildings taken over in connection with some of the warehouse properties are to be sold.

Nearly $30,000 worth of the excess property of the association was sold last week, Mr. Barker said. The tabulations were not made until today and the exact total of the sales was $28,567.50. The sales made last week were:

Falmouth, $9,000; Lancaster, $3,615; Campbellsville, $4,385; Springfield, $9,-190; Taylorsville, $877.50; Lebanon, $1,-500; totaling, $28,567.50.

Sales for the week will include auctions at the following points: Carlisle and Flemingsburg, July 26; Brooksville and Augusta, July 27; Maysville, July 28.

Next week sales are to be held as follows: Williamstown, July 31; Cynthiana, August 2; Madison, Ind., August 3; Carrollton and Sanders, August 4. The sales are to end August 7, with auctions at Vine Grove and Hodgenville.

Director Barker said that good prices had been realized for the property, with the exception of a few minor pieces. If the board of directors follows his recommendation these will be re-advertised and sold later.

Going to "Show" Missouri

Chief of the Field Service William Collins and Vice-President James N. Kehoe, of the Burley Association, left today for Missouri, where they will look into the proposition of enlisting the aid of the Burley co-operative for the tobacco growers of Missouri, who have indicated an interest in the co-operative marketing plan. They will be in Missouri until the end of the week.

Witnesses Sporting Event

Samuel Paley, of the Congress Cigar Co., Philadelphia, was in New York early this week and took the opportunity to witness a local sporting event.

MOST GOOD MILD CIGARS CONTAIN PORTO RICAN TOBACCO

At last Porto Rican Tobacco has attained its proper position with Cigar Manufacturers and Smokers alike.

No longer is it necessary for the Manufacturer of a good mild cigar to deceive the public by advertising it as a "Mild Havana."

Publicity campaigns such as are being run by the makers of "Ricoro" cigars and by others are helping to acquaint the smoker with the fact that an all Porto Rican cigar or one in which the Tobacco from that Island is skillfully blended with other high-grade tobacco, makes the ideal all-day smoke—mild, yet fragrant; free-burning and rich in body, but not heavy. In fact a Porto Rican cigar can be partially smoked, relighted, and finished the following day with practically the same satisfaction.

The Government of Porto Rico

Thru the medium of its Tobacco Guarantee Agency established in this Country is also carrying on an intensive educational campaign to both the Manufacturer and the Consumer.

The public is being informed that most good mild cigars contain Porto Rican Tobacco whether the Manufacturer states it in his advertising or not.

This Agency is also spreading the information among Cigar Manufacturers that they can now tell at a glance the origin of the Leaf or Scraps they buy from the Jobber or Dealer. Every barrel or bale of Tobacco coming from Porto Rico must have affixed a stamp. A White one guarantees it to be pure Porto Rican; Blue that it is part Porto Rican mixed with other Tobacco, and Pink that it is all Foreign grown and simply has been shippd from that Island.

Commission Sustains Freight Rates

WASHINGTON, D. C., July 25.—The Interstate Commerce Commission has handed down a decision in case No. 13873 of ...ge G. J. Helmerichs Leaf Tobacco Co. against the Cincinnati, Lebanon & Northern Railway Co., et al. In their syllabus in this case the Commissioners say:

"Any quantity rate on leaf tobacco, shipped in carloads from Dayton, Germantown, Middletown, and Miamisburg, Ohio, to St. Louis, Mo., found not unreasonable. Complaint dismissed." The decision in full is as follows:

"Complainant, a corporation engaged in jobbing tobacco at St. Louis, Mo., alleges, by complaint filed May 29, 1922, as amended, that the fourth-class any-quantity rate on leaf tobacco shipped in carloads from Dayton, Germantown, Middletown, and Miamisburg, Ohio, to St. Louis, was and is unjust and unreasonable. We are asked to prescribe a reasonable rate for the future and to award reparation on all shipments made since July 2, 1920. Rates will be stated in amounts per 100 pounds.

"The points of origin are in southwestern Ohio. The short lines or routes to St. Louis are the Pittsburgh, Cincinnati, Chicago & St. Louis, hereinafter called the Pennsylvania, from Dayton, 351 miles; the Cincinnati Northern and Pennsylvania from Germantown, 351 miles; the Baltimore & Ohio, the Chicago, Indianapolis & Western, and the Pennsylvania from Middletown, 352 miles; and the Cleveland, Cincinnati, Chicago & St. Louis and the Pennsylvania, 361 miles, from Miamisburg. The same class rate, based on the distance of 351 miles from Dayton and Germantown, applies from all the points of origin to St. Louis.

"The tobacco handled by complainant is packed in cases weighing from 300 to 400 pounds. It appears that 40 carloads of leaf tobacco, averaging 29,758 pounds, were shipped from these origin points to complainant at St. Louis between July 2, 1920, and the date of the hearing. Complainant states that the movement of leaf tobacco is constant throughout the year. In its jobbing business complainant encounters competition from tobacco dealers at various points in central, trunk-line, and western trunk-line territories. It contends that the present rate basis is too high to permit successful competition with many of its competitors, especially in the East.

"Unmanufactured leaf tobacco, in bulk, barrels, boxes, or hogsheads, is uniformly rated fourth class, any quantity, in the consolidated classification. This rating has been continuously maintained in official territory since the establishment of official classification No. 1 in 1887. One of the reasons for establishment of the any-quantity basis was the fact that most of the tobacco was at that time shipped in hogsheads, and that it was impracticable for shippers to load them into box cars of the small sizes then available. Since that time the dimensions of carriers' equipment used in the transportation of tobacco have materially increased, and the proportion of tobacco shipments offered in cases or boxes is much greater than it was in 1887. The rating and the fourth-class rate as such are not attacked. Complainant urges that the time has arrived for a differentiation in the rates on carloads and less than carloads. But under the issues presented the only question we are called upon to determine is the reasonableness of the fourth-class rate from the origin points named to St. Louis when applied on carload shipments of leaf tobacco.

"The fourth-class rates charged on complainant's shipments were 34.5 cents prior to August 26, 1920, 48.5 cents from that date to January 1, 1922, and 43.5 cents thereafter. Complainant refers to rates from Texas common points to St. Louis, from and to points in Ohio, from Nashville, Tenn., to Pittsburgh, Pa., and St. Louis, from Nora, Ill., to Janesville, Wis., and from and to several other points in official territory, ranging from 58 to 98 per cent of the corresponding fourth-class rates. All of these rates apply on any quantity, except the rates from Texas common points to St. Louis, from and to points in Ohio, and a rate from Lynchburg, Va., to Rochester, N. Y., which apply on carloads of certain minimum weights. The rates from and to Ohio points are for distances not in excess of 30 miles, and are of little value for comparative purposes. The rate from Texas common points to St. Louis is $1.215 and on shipments from Dallas, Tex., 688

Pennsylvania Market Holding Lively Interes

Trading Confined Chiefly to Small Transactions—Prices Hol ing Close to Level Set During Big Rush Earlier in Seaso —No Large Quantity Left in Hands of Any Packer.

LANCASTER, Pa., July 23.—Trading on the Lancaster market, while confined chiefly to comparatively small transactions, is keeping up very briskly for the mid-summer season, and at prices which are holding closely to the level set earlier in the season during the big rush which consumed the greater part of the Lancaster cigar leaf. Tocacco in any large quantity is not to be found in the hands of any one packer and sales of appreciable magnitude would be impossible.

Reports from the northern end of the county—a section which boasted some of the finest tobacco that was grown in Lancaster in 1922—have it that several packers in that neighborhood have not yet sold. The lots are said to be small and in no case amounting to more than two or three hundred cases. With the exception of this seedleaf, and some small amount in the western end of the county, the rural packing houses are about cleaned out of their 1922 goods.

No Large Lots to Be Had

The total available supply of the long lengths of 1922 tobacco is exhausted and what remains to be sold is mainly shorter leaf and low grades. There is very little of any kind left, however, and the chances are that the packers will buy their 1923 cigar leaf with no reserve supply on hand whatever. The stock of 1921 is steadily dwindling under the continued onslaughts of demands from manufacturers and jobbers and will soon be history from the packer's point of view.

Six Sales Recently of 1921

Six lots of 1921 tobacco changed hands during the past week. Of these, five were small and amounted to between two and three hundred cases each. The sixth transaction was a matter of about 600 cases. It is understood that most of this tobacco was bought by a large cigar manufacturer of New York at prices which varied little from those established through former sales. Other small lots of this old tobacco are being steadily gathered up by the large manufacturers and the remaining supply of these goods is small indeed.

Another transaction consisted of three lots of 1922 cigar leaf, all of which were in the neighborhood of 600 cases. Prices on this tobacco were consistent with current sales, although determined by the grade of goods that was bought.

Among the sales of the week was the packing of A. E. Gerlach, who sold to Cullman Bros. Gerlach disposed of about 500 cases. J. Miller Eshleman and Baker & Pfautz have also sold a portion of their 1922 tobacco.

General Still Buying

The General Cigar Co. has been active recently and has made a number of purchases, consisting mostly of small lots of both 1921 and 1922 cigar leaf. Among these transactions was the purchase of the tobacco packed at the Brown warehouse at Bird-in-Hand. Several hundred cases were involved in the deal.

Complain of "Black Rot"

The cry of extensive damage continues and several packers have declared that with the amount of "black rot" showing up in their goods they stand to lose money on their business this season. Damage to some lots will reach as high as ten per cent, it was stated. Aside from the rot which is showing up as the sampling of the goods progresses, the leaf is coming out of the sweat in very good shape and promises to be excellent. The amount of rot is noticeably less in lots which have been bulked. In some cases where t packer took exceptionally good care bulk sweating his leaf the amount damage is so slight as to be negligible.

Havana Type in Best Condition

Lancaster county's Havana crop about the best conditioned tobacco th may be found in the county during t present dry spell. This early maturi leaf is already topped and looks ve good. About 500 acres were planted t spring and, due to the early rains, go good start. The attempts of several fa mers at some distance from the Susq hanna river to grow this type of toba have every appearance of disaster as conditions in the interior of the county very unfavorable. Havana is grown a larger scale than the Pennsylvania se leaf, the acreages in the section ab Washingtonboro running between 75 a 90 acres. When the average Lancas county grower has planted 15 or 20 ac he considers it a large crop, and oper tions on the scale of the Havana grow would be out of the question. All La caster county tobacco is peculiarly ada ed, it seems, to the conditions under wh it is grown and the invisible bound line which marks the Havana territ from the seedleaf "stamping groun has never been crossed with success the many ambitious growers who fr time to time cross swords with Mot Nature and try to beat her at her g game.—KEYSTONE.

York County Activities

YORK, Pa., July 23.—Reports from v ous parts of York county indicat healthy condition of the cigar manu turing industry. A new factory wh opened here July 20 is the Fix-Ha Cigar Co. It is located on the third f of the John H. Baker leaf tobacco w house, North Queen and York str The factory opened with 35 employee the payroll. The company expects to crease the working force to 125 emplo within the near future and turn ou high as 40,000 cigars a day. I. H. Roj manager of the Fix-Haynie Co.'s tories, has temporary charge of the factory. Elder Horn is foreman of new establishment. The floor now in by the Fix-Haynie Cigar Co. was merly occupied by C. S. Gable as a c factory. He has moved the equipmer his two other factories at Strinestowr Jacobus, which will now be run on time. The Gable factory here empl 125 persons, some of whom have taken on by the Fix-Haynie Co. Gable will continue to maintain his office at the present location in the B building in this city.

Two recent notable instances whic dicate a revival of activity in the trade occurred at Red Lion. J. C. ter & Co. and William C. Fruting Co. each shipped within a week more a half million cigars. Similar repor received from other parts of the cou

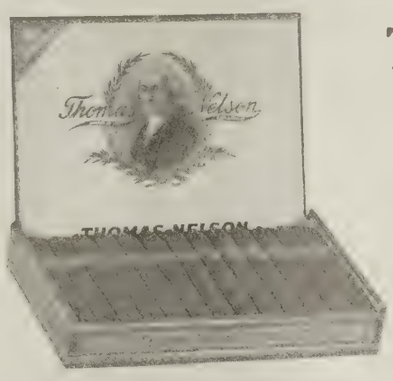
Uphold Merit of Five Cent Cigar

YORK, Pa., July 23.—York county cigar manufacturers don't think much of the criticism of the present day cigar by Dr. W. H. Ballou, which was reprinted in TOBACCO from the *New York Herald*. It didn't anger them, but rather amused them. It is too apparent, according to these manufacturers, that some one has been imposing upon the physician. It may be that some one who is alarmed at the return to favor of the 5 cent smoke, of which variety 90 per cent of the cigar output of York county is said to be made up, has whispered in the doctor's ear. If he did, it was not the truth he told him.



The York county manufacturers have been earnestly endeavoring to produce a better 5 cent cigar than ever, because they realize that it is the smoke at a price which best fits the average pocketbook, just as the 5 cent car fare, 5 cent shoe shine and 5 cent soda are most in favor. It is a law of trade that there is no demand for the article that fails to fill the bill. The York county cigar must be all right or there would not be the demand for them which has been on the increase since the war, as the returns at the U. S. Internal Revenue office at York will show. This, notwithstanding Dr. Ballou's criticism of the present day cigar.

It was a wise man, who lived probably before the time of Dr. Ballou's "enchanted years" when "life was lived at its best in all human history" who said, "Distance lends enchantment to the view." Always the years that have gone some one will declare the best. Yet no one really wants to return to the old days. It would bring about too many discomforts to which the individual of the present day is not accustomed. It is probably the same with the smokes of yesterday. If we had them alongside the product of today their faults would be very apparent. The earliest "fragrant tobies" which it was the custom in the long ago to give free of charge at many of the inns of York county, after a patron had paid for a meal, had the odor or taste in good measure of Virginal tobacco, of which Dr. Ballou speaks, but had nicotine in such amount that they were conceded to be injurious to the smoker.

The cigars of today are required to be better, the manufacturers say, because the smokers have accustomed themselves to better cigars. The cigars of 30 years ago, because of inferior quality, would not find a sale today. The tobaccos used then were not put through the fermenting or sweating process that they are today.

The doctor says: "Tobacco leaf is put

Philadelphia Keeping Up Usual Performances

Aggregate Cigar Output Is in Conformity With Regulation Summer Conditions—Big Factories Find Capacity Production Necessary—News and Incidents in the Trade.

PHILADELPHIA, July 24.—Normal mid-summer conditions prevailed in the Philadelphia Cigar manufacturing industry, in the aggregate output, but there was more accentuation of the abnormal conditions as between the big and the medium sized factories. In the group of the big fellows, whose distribution is in the national field, capacity production is keeping up, and every effort is being made to gain on overdue orders, because orders still are coming in quite as rapidly as goods are going out. On the other hand the medium sized factories are quiet, even dull, having barely enough business to keep organization together, particularly in view of the fact that the big competitors are welcoming all the skilled hands that apply for positions. Finally, the very small plants catering only to a direct and neighborhood trade are a little busier than they have been, unless they happen to be located in that section of the city given over to the dyeing and textile industries, in whose plants there is almost complete stagnation, with consequent decline of purchasing power. However, because of these peculiar conditions, somewhat contradictory, it may fairly be estimated that aggregate output is up to or in excess of the corresponding period of last year and with a prospect that business is slowly growing better day by day.

Leaf Trade Is Satisfactory

The leaf trade generally, reports a week of satisfying conditions. It, too, is convinced that marked improvement will set in before the month closes or early in August.

La Palina Offices Not All Moved Yet

While all the factory departments of the Congress Cigar Co., formerly located in the premises on 2nd street, and in the original home in this city at 3rd and Locust streets, are now located in the new building at the Southeast corner of 3rd and Spruce streets, there has been enforced postponement of the removal of the executive offices from 2nd and Market streets to the new headquarters. The delay was occasioned by the apparently slow process of installing the very elaborate office equipment in the new home. Just as the new factory will be the largest of its kind in Philadelphia, so also the new offices will be the most elaborately appointed, not only in this city, but it is believed in the entire United States. More than $20,000 is being expended in the decorations and appointments of the executive offices. The woodwork of mahogany is of richest design, and the artisans who are installing it necessarily are proceeding with utmost care towards the completion of what undoubtedly will be the great show place of the cigar manufacturing industry in this country. Elegant furniture and artistic draperies and rugs will add to the attractiveness of the office, the firm having determined to develop quarters for its executives worthy of the new building, realizing that perhaps a third of their lives are spent in them. Because of the vacation of Geo. Kraus, New York representative, who has been ordered to take a rest, sales manager Willis A. Andruss will be at the Metropolis headquarters for the next month.

Kimmigs in New Location

L. P. Kimmig, Sr., who formerly was located on 3rd street, and whose business history in the leaf trade of Philadelphia dates back for more than a quarter of a century, is now concentrating on the packing of leaf, specializing in Pennsylvania. The Philadelphia offices are maintained at 1207 W. Berks St., where Mr. Kimmig conducts a sales department as L. P. Kimmig & Co., while the packing department and warehouses are located in Lancaster, Pa. His son, William S. Kimmig, who was associated in the business, as wholesale leaf dealers, when the firm occupied the 3rd and Vine streets headquarters, is conducting a leaf brokerage business, occupying part of the offices at 1207 Berks St. He caters to the general leaf trade.

Velenchik Activities

Velenchik Bros., 134 N. 3rd St., have just completed the packing of the 1922 crop in the Lancaster warehouses at Plumb and Walnut streets. Hyman Velenchik of the firm who has been supervising the packing in Lancaster, has returned to the Quaker City headquarters after completing the packing of 1,600 cases in the four story warehouse which the firm purchased over a year ago. Most of the new packing has been disposed of through sale, orders having been placed before the stock was installed in the warehouse. Harold Velenchik, son of the head of the firm, who recently joined the ranks of benedicts, has returned from an extensive honeymoon trip in the South and is again at his desk.

Resting on Oars

The entire sales force of Morris D. Neumann & Co., who have been featuring the firm's leader, El Moriso on the road, have returned to headquarters at 324 N. 9th St. They will remain in the local offices until the middle of August when the rounds of the trade will be made for the Fall booking of orders.

Had Successful Selling Trip

An extensive newspaper campaign in the Philadelphia district has been inaugurated by the Progressive Cigar Corp., 1201 Race street, in its drive for the promotion of sales of Madam Butterfly and as a result the local factory is kept busy holding up production to capacity to meet the demands for increased sales. Max Lipschutz, of the firm, has just returned from the Middle West after a two weeks' visit to the trade and his well filled order book has provided the corporation with advance orders for many weeks to come.

Meeting with Success

Opening of several new accounts in the central New York state territory is announced by George I. Watson, member of the newly organized Associated Cigar Manufacturers Co., 1037 Race street who returned to the main office after two weeks' sojourn in that section, where he featured Rey Oma, the brand long established as a leader by the old firm of Sig C. Mayer & Co., of which he was a partner, and which he brought to the Associated Co. upon its organization a little over six weeks ago. Rey Oma and Dependo, the leader of the Smith Cigar Manufacturing Co., of Reading, Pa., are being pushed into an extended sales territory under the consolidation and both are meeting with increased popularity as the result of the impetus of concentrated efforts of the combine. A continued trip in the newly-opened distribution centers will be undertaken by Mr. Watson this week.

with his family, attended the final summer inscriptions at Amsterdam for the purpose of making another purchase of Sumatra, having previously made a large buy at the Spring sale, which has been almost entirely disposed of. While abroad Mr. Loeb will be the guest of friends in Germany and other parts of Europe. He will return to Philadelphia in September. George Cauffman, treasurer of the company, leaves this week for a trip through New York State and upon return to the city will spend the remaining days of Summer with his family in Ventnor, Atlantic City. Herbert Rheinstrom, of the sales force is now in the South making the rounds of the manufacturers, this week centering his efforts in Baltimore and vicinity. A large shipment of the new Porto Rican crop has just been received.

Keeping Up Action

Gumpert Brothers, formerly located at 227 Church street, are now completely settled in the new home at 207 Market street, where the firm has taken possession of the second floor for the purpose of conducting a sales office, the manufacturing having been confined to the Tampa factory. President A. A. Gumpert has just returned from an extensive trip to the Middle West where he featured the firm's new leader, the Philadelphia Club. He is to remain at local headquarters until the orders that have been booked to date are filled. They are estimated at 100,000 oversold, and are being rushed to completion by the factory. William H. Hartley is in charge of the office sales while President Gumpert looks after the road orders. The great demand for Philadelphia Clubs has temporarily suspended the manufacture of La Morena, the firm's former main brand.

Growing Demand for Tobacco at Canton, China

WASHINGTON, D. C., July 23.—American Consul Hamilton, at Canton, China, has the following to say regarding the growing demand for tobacco there:

"The growing demand for Canton tobacco is reflected in the rapid rise in price. Nam Hung No. 1 was quoted at $18 per picul of 133⅓ pounds on September 1, 1922, and at $27 per picul on March 15, 1923. Due to the brisk demand it is believed that production this year will be larger than last year, which may cause a drop in price. The yearly production of Nam Hung tobacco is estimated at about 30,000 bales.

"The principal varieties of leaf tobacco exported from the Canton district are the Nam Hung, the Nanning, the Chiv Young, the Pak Low, and the Tai On; of these the Nam Hung are by far the most important. The Nam Hung tobacco is grown near the northern border of Kwantung, north of Shiuchow. There is one crop a year, the harvest occurring in the month of July. As the crop is sun cured, it is not safe to ship until two months after harvesting. Practically the entire crop is marketed in Canton. When ready for shipment to Canton the tobacco is transported by water to Shiuchow and from there by Canton-Hankow Railway to Canton. The shipments which come down from the country are in native packing—that is, all grades mixed together in one bale. At Canton the tobacco is purchased from the up country merchants by Chinese dealers who specialize in tobacco for exportation. These dealers sort the tobacco into three grades, Extra—No. 1 and No. 2. By means of native presses, the tobacco is packed for exportation in bales of 110 catties or 146⅔ pounds net, with a double mat covering, and is sold to European commission houses for shipment abroad."—LAMM.

Baltimore Market

Sales Exceed Receipts

BALTIMORE, Md., July 19.—Gieske & Niemann, leaf tobacco merchants, make report as follows:

MARYLAND: With receipts of 855 hogsheads, and sales of 944 hogsheads, our market ruled very active, and prices for a few fancy hogsheads reached 50 cents, while prices for other grades ruled firm.

OHIO: Receipts 187 hogsheads, sales 13 hogsheads, all 1922 crop.

American Machine and Foundry Co., Ltd.

The stand of this house at the recent Tobacco Show at Olympia, London, was daily besieged by interested spectators anxious to watch the ingenious working of some of their latest machines. The larger model working and the one which attracted the greater attention was that wonderful machine which makes cigars with a dexterity and speed that is truly wonderful and which must in time and with development tend to revolutionize the industry. The plant is of necessity a large one, and has three girl attendants, but with an output of 400 perfectly-made cigars per hour how quickly the machine can become a business proposition is readily apparent. The process is very interesting. The cigar is fed in the ordinary way on a belt and the guillotine knife descends to cut the charge ready to suit the bunch. An apron rolls the filler into a bunch, the leaf is set on the wrapper die, and is transferred on to the binder. After the fixing of the binder, the cigar is passed on to a drum, which rolls the finished cigar and cuts it to the desired length. The machine turns out a product which is infallibly uniform in weight, size and dimension, and the shape appears to be very well preserved, which should not be the least of its claims these days. Working at the stand of Messrs. R. & J. Hill, the company had one of their standard cigarette making machines in operation making "Sunripe" cigarettes, and the qualities of this model were pointed out to numerous visitors. This machine has a speed of 850 cigarettes per minute, and it has the advantage of a single knife cut and a naturally forming tobacco which renders the cigarette very neat and evenly filled. On this machine no compression wheels are used and the cigarette is formed by a natural thrust of tobacco which ensures roundness and even packing. Attached to the machine can now be fittted the Ebco Tipping apparatus, for tipping with cork, gold or other materials at the rate of 600 per minute. The firm of Messrs. R. & J. Hill were themselves generous in the tribute to the reliability and efficiency of this machine. —*London Cigar & Tobacco World.*

Legal Lore

(*Continued from page* 45)

honest carriers, that the law compels everybody to pay the fixed price and posted rate, even under conditions such as rose in these two cases. A very good principle, no doubt, but in no other situation could one party to a deal make a certain price or charge, and then when the other party had acted on it, come back on him and say, "Oh, I made a mistake; you must pay me more than I agreed to take." The railroad law is peculiar unto itself in that it protects the railroads from any mistake they can make in the making and collection of freight rates, and empowers them to go back and get the balance if they have undercharged.

The following is from a leading case on this subject:

"It is now the established rule that a carrier cannot depart to any extent from its published schedule of rates for interstate transportation on file without incurring the penalties of the statute: Louisville & Nashville R. R. Co. vs. Mottley, 219 U. S. 467.

"The rate for transportation is made by the Interstate Commerce Commission Act a subject of positive law and contracts, express or implied, providing otherwise, or any consent or permission through which a lower rate is claimed or sought to be enforced is of no effect. Shippers and consignees are alike charged with knowledge of the rate to be paid and are not entitled to exemption from compliance therewith because an agent of the carrier made a mistake in giving a lower rate.

"Where a railroad company delivers goods to the consignee named in the bill of lading, and through the mistake of an employe demands and receives from the consignee a less amount than the lawful charge for the services rendered, the railroad company is not estopped from subsequently recovering the difference between the amount actually paid and the legal rate.

"Where there has been a departure from established and published rates for the transportation of freight, either by mistake or for other reason, the legal rate must be paid by the shipper.

"Where the agent of a railroad has by mistake charged and collected a less amount of freight than that specified in the published schedule, the company may thereafter collect the difference from the shipper or person liable for the freight." —*Copyright, 1923, by Elton J. Buckley.*

Sustains Freight Rates

(*Continued from page* 75)

miles, would yield 35.3 mills per ton-mile. The rate from Lynchburg to Rochester is 46 cents for 758 miles, yielding 12.1 mills per ton-mile. The any-quantity rates from Nashville referred to by complainant are 47 cents to Pittsburgh, 626 miles, and 48 cents to St. Louis, 323 miles, yielding, respectively, 15 and 29.7 mills per ton-mile. The assailed rate of 43.5 cents for the distance of 351 miles yields 24.8 mills per ton-mile.

"With the comparatively few exceptions referred to by complainant, leaf tobacco moves, and has moved since 1887, in official territory in any quantity at fourth-class rates. Defendants contend that this basis is reasonable, and in support of that contention compare the earnings under the assailed rate with earnings under rates for comparable distances from and to points in central territory on numerous commodities which are rated fourth class and move on the classification basis. They state that the tobacco business has adjusted itself to the any-quantity basis; that shippers generally are satisfied with this basis; and that to establish lower rates on carloads than on less than carloads would disturb commercial conditions. The great bulk of the tobacco movement in central territory is in less than carloads. It is shown that during 1920, 1921, and January, 1922, numerous less-than-carload shipments of leaf tobacco, ranging in weight from 1,575 to 8,165 pounds, moved from these points of origin to St. Louis.

"In *Official Classification Ratings*, 37 I. C. C., 166, a proposal to establish in official classification territory ratings on leaf tobacco, in barrels, boxes, or hogsheads, of fourth class in carloads at certain minimum weights, and of third class in less than carloads, in lieu of the any-quantity fourth-class rating was protested by tobacco dealers generally throughout the country and was found not justified. In *Mayfield & Graves County Commercial Club* v. *R. R. Co.*, 48 I. C. C., 45, the rates on unmanufactured tobacco, in hogsheads, any quantity, from Mayfield, Ky., to trunk-line territory, were assailed as unreasonable, unjustly discriminatory, and unduly prejudicial. The rates were published as joint rates but were based on a commodity rate from Mayfield to Paducah, Ky., and the fourth-class rate beyond. It appeared that the movement from Mayfield to trunk-line territory was practically all in carloads; nevertheless the joint rates were not found unreasonable or otherwise unlawful.

"We find that the rate assailed was not and is not unreasonable. The complaint will be dismissed."

Five Cent Cigars

(*Continued from page* 77)

through chemicals, which will produce every conceivable shade and appearance. Afterwards the wrappers are ironed until perfectly smooth. Chemicals are used to make mild smokes for those that call for them. Strength is given for dark colors of maduros and Colorado maduros or 'black' cigars by other processes. A visit to the vats, where the leaf for wrappers is in its original preparation, would cause the oldest smoker to give up his life-long habit."

"In the sweating or fermenting of tobacco, to which Dr. Ballou apparently has reference," said Charles C. Meads, secretary of the York County Cigar Manufacturers' Association, and one of the county's best authorities on tobacco, "cigar manufacturers use neither vats nor chemicals. The tobacco is put on bulks and during warm weather there is sufficient natural heat to start fermentation. During this natural sweating period, the gum, which is on the tobacco, and which is very bitter, leaves the tobacco.

"Great pains are taken in fermenting tobacco to bring out the quality of the leaf. No acids or chemicals are used whatsoever. This fermentation applies to all grades of tobaccos and the color of the leaf comes through fermentation to a certain extent. There are, however, many different kinds of tobacco and of different natures. Some tobacco is heavy, some thin, some broad and some narrow.

"The vats, of which Dr. Ballou speaks, can be found in factories in which chewing tobacco is made and are used to put licorice, sugar, chocolate and other sweetening on pouch tobacco. But no vats can be found in cigar factories. Anyone saying so only exposes his ignorance with regard to cigars.

"The nickel cigar of today is better than it ever was. Instead of using the cheaper and inferior grades the best tobacco is used. The average cigar manufactured in York county that retails for 5 cents has the quality of many 10 cent cigars.

"York county has made a specialty of the 5 cent cigar and only the best tobaccos obtainable are used. The wrapper on the 5 cent cigar costs from $3.50 to $6.00 per pound. The binder used costs from 30 cents to 50 cents per pound. The short filler used in the 5 cent cigar is made from the cuttings or shorts from factories that manufacture 2 for 25 cent and 3 for 50 cents. Combinations of Havana, Porto Rico, Pennsylvania Seed and Connecticut tobaccos are used. In York county there are concerns that have men well versed in the blending of tobaccos, so as to bring out the aromatic qualities.

"Dr. Ballou ought to purchase a 5 cent cigar made in one of the York county factories. He might also find it interesting to visit the factories and see for himself the sanitary conditions that prevail there. He would then learn that none but the highest grades of tobacco are used in the manufacture of cigars and that the 'vats' and the 'cabbage' and 'weeds' that are supposed to be treated chemically in them are myths, pure and simple."

Wisconsin Leaf Market in Comatose Condition

Sweeney's Withdrawal Seems to Have Pulled Life Out of Early Buying—Good Binders Show Strength—Pool Presents Perplexing Problems—Points Left Open to Choice.

EDGERTON, Wis., July 28.—The buying up north has remained seemingly dead the past week. There has been no life in it since Sweeney pulled in his buyers two weeks ago. The argument that the entire movement consumed less than two thousand acres makes new converts every day, and is now the accepted estimate of the northern '23 that has been lifted to date.

When it will start up again, of course, it is impossible to state. Unless the unforeseen happens, the general consensus has it, the campaign will not be renewed until the weed is at least ready for harvest.

Trade Is Bullish

The members of the trade in this state are all rather bullish on good binders. The antics of the stock exchange of late has failed to impress the Middle West a bit, and a general air of confidence prevails in all lines. The tobacco trade is no exception to this, and a very sane optimism is felt almost universally therein. Surplus stocks of old binders are not to be found, and the '22 crop seems to be in exceptionally strong hands.

Cigar Business Showing Activity

The small factories in Wisconsin are doing a good Summer run of business The retail stores are doing a flourishing Summer business. Wisconsin is flooded with tourists this year, and all the multitude of resorts are doing a record-breaking business. The state now enjoys the reputation of having the best roads of any state in the Mississippi valley, and the small factories, and the cigar stores are greatly benefiting from that reputation.

Crop Prospects

The growing regions of the north continue to cause the tobacco planter joy by the promises of what the '23 crop will be. In Crawford and parts of Vernon counties, however, rain has been absent for over three weeks, and the tobacco growing in the light sandy loam there is rapidly showing decided evidences of drouth. A light rain last week came just in time to postpone or prevent severe damages to the weed. The benefits of that have worn off at this writing, and rain is very badly needed. Around Sparta, in Monroe county, rain is sorely needed also.

In Jackson and Trempealeau counties ample moisture is reported, and the crops there are enjoying a banner growing season to date.

Spotty Conditions in Southern Section

In the south, the growing conditions are very spotty. On a recent ride through Rock and Dane counties, the writer saw one or two fields actually being topped, while across the road were fields showing an average height of only four or five inches. On an all-day's ride, two fields were seen ready to top, while the average field was very, very small. Fully half of the fields were very uneven and ragged looking.

Many of the pooled growers have been in the habit of raising the root-rot resistant type of seed the past few years, and have at the same time, perhaps, neglected intelligent crop rotation slightly. These growers, upon the advice of the pool, have gone to the Comstock or the "thirty-eight" type of seed. A very plausible explanation of the ragged appearance of many of the fields is that the more delicate types of tobacco are already showing signs of root rot. In many of the fields there is no doubt about it.

Wire worms are also causing some damage in different sections, both north and south. Many growers have commenced to complain about wire worms the past week. Wildfire is practically unknown anywhere this year to date.

Independent Acreage Believed Greater Than Pool Plantings

One northern operator writes that after doing several weeks' hard riding in the northern sections, and talking with informed men from practically every section in the north, that he is of the firm opinion that there is more independent acreage grown this year in the north than is pooled. The writer passes this along for what it is worth without comment. Whether or not the reader agrees with it, it is an important fact that there is an enormous independent northern and southern acreage being grown this year.

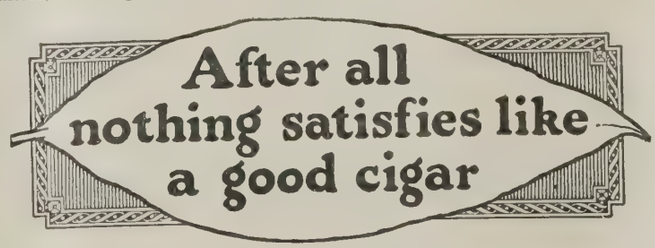
Already reports are coming in of pooled growers who cash rented their tobacco lands to men not in the pool, being among the number of growers who

(*Continued on page* 40)

Grocers Deny Price-Fixing Agreements

WASHINGTON, D. C., July 28.—The answers of the wholesale grocers to the charges of the Federal Trade Commission that they joined with tobacco manufacturers to illegally hold up tobacco prices, are beginning to come in. Declaring that it had never associated with any other jobber for the purpose of fixing the price for the purchase and sale of tobacco products in the State of Arizona, the Hall-Pollock Co., wholesale grocers, of Phoenix, Ariz., during the week answered the complaint of the Federal Trade Commission, charging it with conspiring with other dealers of tobacco products to fix uniform discounts or prices at which products of the American Tobacco Co., P. Lorillard Co., and Liggett & Myers Tobacco Co. should be sold. The company admitted that it had co-operated with another company for the purpose of agreeing on a cash discount on tobacco, but vigorously denied that it ever "associated with any other jobber for the purpose of fixing the price for the purchase and sale of tobacco and tobacco products in the State of Arizona."

After All Nothing Satisfies Like a Good Cigar



The Special Cigar Committee, appointed at the recent T. M. A. convention in Washington, and the Cigar Slogan Committee have come to an agreement on a suitable slogan for the cigar industry, which is: "After all, nothing satisfies like a good cigar."

Under yesterday's date, Charles Dushkind, managing director of the T. M. A., sent out the following announcement:

"*To the Cigar Trade:*

"As a first step in the promotion of the cigar business, the Special Cigar Committee, together with the Slogan Committee, have agreed upon a slogan, for the general promotion of the cigar business, by including in every advertisement a uniform slogan or statement, with a distinctive design. This would, at least for the present, serve the purpose of co-operative advertising with approximately two million dollars' worth of space to start with. Also that such slogan be used on all posters, show cards and all other advertising material, as well as on signs and in window displays.

"A sub-committee consisting of William Best, of General Cigar Co., as chairman; George H. Hummel, of P. Lorillard Co.; Robert E. Christie, of

or it may perhaps be better termed a Declaration of Merits, as well as upon an identifying design to be used in connection therewith, as herein shown by the reproductions thereof.

"It will be recalled that at a meeting of the Cigar Committee appointed at our recent convention, it was unanimously decided that, as a first constructive step in the direction of increasing cigar consumption, the advertising mediums of individual cigar manufacturing concerns, which are estimated to amount to over two million dollars a year, be utilized

American Cigar Co.; Julius Lichtenstein, of Consolidated Cigar Corp.; Ben R. Lichty, of Otto Eisenlohr & Bros., and Samuel Bayuk, of Bayuk Cigars, Inc., was accordingly appointed to confer with the Slogan Committee named at the final meeting of the former Cigar Slogan Contest Committee, and consisting of Frank W. Harwood, of General Cigar Co.; F. J. Ross, of F. J. Ross Co.; Charles H. Eyles, of The Richard A. Foley Advertising Agency; George C. Sherman, of Sherman and Lebair, Inc.,

(*Continued on page* 4)

N. E. Cigarmakers Go Out on Strike

BOSTON, July 28.—Four of the largest cigar factories in greater Boston were closed today as a result of a strike of cigarmakers for higher wages. Officials of the cigarmakers' union here estimated that between three and five thousand workers walked out this morning in this city, Springfield, Worcester, Hartford, Conn.; New Haven, Conn.; Portland, Me., and Bangor, Me.

Manufacturers today asserted that the present strike was uncalled for and did not have the sanction of the international headquarters of the cigarmakers' union. It was declared that in Boston the highest wages in the country were paid to workers. Union officials asserted, however, that all the small factories in this district have accepted the new wage scale submitted, and that already 500 workers are profiting by the increase demanded.

The union demanded a restoration of the wages which were paid previous to the reduction in May, 1922. The old scale called for $24 per 1,000 hand-made cigars and $15 per 1,000 for those made in molds. The present scale is $3 per 1,000 lower on the better grades and $1.75 less for the cheaper grades.

* * *

No Cigarmakers Out in Hartford

HARTFORD, Conn., July 28.—Secretary James T. Manee of the local cigarmakers' union said today that no Hartford cigarmakers had gone out on strike. The present wage agreement providing for $24 per thousand is still in effect and there has been no move for a change of scale.

* * *

No Strike in New Haven

NEW HAVEN, Conn., July 28.—All was quiet among the cigar manufacturers in this city Friday night, and up to noon today there did not seem to be any indication of a strike in this city. Nothing had been heard from the cigarmakers to indicate that they contemplated having a part in the strike of the New England cigar manufacturers which is prevalent today in Massachusetts cities, particularly in Boston.

* * *

In Violation of Agreement

NEW HAVEN, Conn., July 28.—The strike of cigarmakers in Boston is said to be in violation of the law of the International Cigarmakers' Union, which body had refused to sanction the application of that union to try and force manufacturers to grant a new bill of prices, and for that reason the strike is not expected to extend to this city, it was stated here today.

Ira N. Ornburn, second vice-president of the International Cigarmakers' Union, who lives here and is an officer of the Connecticut branch of the American Fed-

eration of Labor, today said: "The Boston strike is in direct violation of the law of the International union. Our constitution provides that a local union desirous of revising the bill of prices must submit its application to the general membership of the International union, which embraces unions in Canada, the United States and Porto Rico. The application of the Boston union for a new bill of prices was turned down, but in spite of that and in defiance of the constitution of the International union, a strike has been called. This matter will come up at the convention of the International union to be held in Chicago, beginning August 13."

After All Nothing Satisfies Like a Good Cigar

(*Continued from page 3*)

and C. R. Sherlock, of United Cigar Stores Co. of America, for the purpose of working out a suitable and appropriate slogan for the cigar business.

"With a full realization of the difficulty of the task, and with an intense desire to present to the trade a real appropriate slogan, such as would stand the acid test and would likely be accepted and used by the entire trade, both committees have devoted much time and effort to the study and consideration of the matter.

"As a result of the numerous meetings and conferences held and the expert advice of the eminent advertising specialists on the Slogan Committee, both committees have unanimously adopted the slogan, together with the design, herewith submitted, which we sincerely trust will be universally accepted and used by the cigar trade with beneficial effect.

A Forceful Selling Phrase Better Than a Catchy Slogan

"In reaching this conclusion the committees were by no means unmindful of the apparent general impression that a slogan must necessarily consist of a clever or catchy phrase or couplet. But the opinion was unanimous that as between clever and catchy phrases or couplets, which mean nothing and express nothing, and a short, definite and dignified statement of the merits of the products sought to be popularized, the latter is infinitely more desirable.

"The slogan adopted, which, as already stated, may perhaps be more properly termed a *declaration of merits*, is neither clever nor catchy, but it surely is a definite, dignified and emphatic statement of the satisfaction derived from cigar smoking.

"It may not bear popular repetition in jest or humor, but certainly is a sincere expression which cannot but make a definite impression on the mind of the reader. It may not be fanciful or striking, but it doubtlessly is a forceful declaration tending to set people thinking about smoking cigars as one of the pleasures of life.

The Value of a Slogan Depends Upon the Extensivenes of Its Use

"However, the value of a slogan or a selling phrase as a stimulant to business depends, of course, upon the extensiveness or wideness of its use by the trade. In other words, to get the full value out of it, it must be popularized to the fullest extent; it must be used continuously, widely and conspicuously so that the public might become indelibly impressed with the phrase or declaration.

"Nor is it of any less importance to popularize the very design or identification mark used in connection with the slogan by keeping the identifying mark constantly and conspicuously before the public, so that a mere glance at the distinguishing mark would necessarily operate as a reminder of what it says, without reading it.

"We respectfully urge, therefore, that this slogan, in the form or design presented, be used by the cigar trade in all advertisements and on all posters, show cards, and other advertising matter, as well as on signs and in window displays.

"It may also be used on envelopes and other stationery and perhaps also on boxes, labels or flaps.

"Electrotypes of the various sizes, or of any special sizes desired, will be cheerfully furnished by us.

"With the confidence that this slogan will be universally adopted and used by the trade to the fullest and widest extent possible, and in the hope that it may produce lasting and beneficial results, I am

"Respectfully yours,
"CHAS. DUSHKIND,
"Managing Director."

To Tour Europe

Benno Rosenwald, of E. Rosenwald & Bro., and Mrs. Rosenwald are scheduled to sail for Europe on August 11, and plan to visit the leading seaside resorts in England and the Continent.

Matoaka's (Pocahontas's) Spirit Speaks

By VIRGINICUS

They call me Pocahontas—
Matoaka is my name,
And all the educators
Are Battling o'er the same.

My name is Matoaka—
They find they have been wrong
To call me Pocahontas
In text-book and in song.

I wed young Rolfe—a Thomas—
Not John, nor Bob, nor Jim;
Nor Captain Smith—a boaster—
I have no use for him!

Said that I had saved his life,
When if the truth were told,
At that time I was very young,
A child of ten years old.

My name is Matoaka,
As searchers for my bones
Found in the church at Gravesend
Writ on the Chancel's stones.

Why disturb my body's rest?
In peace let it remain.
A skull, a bone, a hank of hair,
Will be of little gain.

My pride in life was as a wife
Who showed her husband how
To cultivate tobacco—
A wondrous business now.

* * *

Should you think some homage due
Her who first tobacco grew,
Matoaka, one and all,
"Mother of Tobacco" call.

Matoaks ats Rebecka daughter to the mighty Prince Powhatan Emperour of Attanoughkomouck ats Virginia converted and baptized in the Christian faith and Wife to the Worll Mr Tho Rolff.

Regarding the controversy about Matoaka Pocahontas, which, as you know, has spread over all the United States and the English speaking countries, it has been discovered that not only is the story of Pocahontas and Captain John Smith historically incorrect, but also that the name of her husband was Thomas Rolfe and not John Rolfe.

The only dependable documents about Matoaka are the portrait of her painted by Simon de Passe with the inscriptions around and beneath the picture referring to the name of her husband as Thomas Rolfe, and the church records at Gravesend, England, which also mention Thomas Rolfe as husband of Matoaka.

So not only must Rolfe's Christian name be corrected but substantial evidence has been found to prove Captain John Smith's story of very doubtful value.

Patterson Bros. Trade Continues to Expand

In a recent interview, F. A. de Pilis, chairman of Patterson Bros. Tobacco Corp., expressed his views on export trade and the development of his corporation to a representative of TOBACCO. Mr. de Pilis, who has complete control of the sales department, in addition to his other duties, stated that the Patterson corporation has established offices at Seattle, San Francisco, Boston, Buffalo, Richmond and New York, and that distribution in the East, the West and the Pacific Coast shows a pleasing and flattering increase. He emphasized the fact that their agencies, district managers, and dealers are assured of their sincerity and loyalty.

To Increase Capital

Mr. de Pilis said that the capital of the corporation will be considerably increased in the near future, and that a certain amount of stock will be laid aside in the treasury for jobbers, dealers and salesmen, for which subscriptions will be taken on a deferred payment plan. This idea of selling stock is intended to interest the dealer in the progress of the corporation. Of course, this proposition will be entirely optional.

An Amalgamation Pending

Mr. de Pilis announced that an amalgamation with another company is to be consummated shortly, which will make Patterson Bros. Tobacco Corp. a very large independent concern. He also declared that the export department of the company is meeting with wonderful results, and that a big advertising campaign will be launched on September 15.

Mullins Auction Mart Opens Higher

(*Special Telegram to* TOBACCO)

MULLINS, S. C., Aug. 1.—Auction market opened here today with prices on common tobacco about 25 per cent higher than last year. Good tobacco a shade higher. Around 100,000 pounds on the market of which 80 per cent are primings. Farmers well pleased with opening; all the companies buying.—MCFARLAND.

Buys Warehouse

TULLAHOMA, Tenn., July 28.—The Tullahoma Tobacco Growers' Association has purchased a warehouse and lot in the eastern part of the town from J. W. Horton to house its expanding business, and will erect an additional building with modern equipment. The warehouse contains 11,000 square feet, and is well adapted for handling and storing tobacco. A big season with efficient handling and good prices paid, with an increased acreage of the leaf planted this season in Coffee County, have contributed to a healthy growth of this cooperative movement and necessitated increased space and better facilities.

Pasbach-Voice Outing

The Annual Summer Outing of the employees of the Pasbach-Voice Litho. Co., Inc., was held a short time ago at Belvedere Park, North Beach, Long Island. A most active committee took care of all details and several days prior to the outing interesting signs were placed all through the factory advising both the male and female members of the organization what they were to expect in the way of games, prizes, etc.

Employees left the building in special cars and arrived at the park at about 11 o'clock. Activities immediately started with a baseball game; this was followed by a most interesting series of races for the girls, boys and men. A number of attractive prizes were awarded to the winners in addition to prizes that were raffled off at the dinner.

The jazzy jazz band started its activities at 3:30 and all employees gathered in the dance hall where a most delightful time was had until about 9 o'clock, when the party started for their homes.

In Mr. Voice's absence, Oscar Pasbach, president of the company, officiated and was proud of the spirit shown, for the employees assured Mr. Pasbach of their appreciation for the assistance and fairness always shown by the corporation and promised every possible co-operation in the future.

Queed's New Slogan

F. A. de Pilis, chairman of Patterson Bros. Tobacco Corp., has adopted the following alliterative slogan for the popular Queed tobacco:

"Queed's quadruple quantity quaint quality quickly quells quarrels with your smoke appetite."

A Dutch Wedding

Jules de Vries, representative of E. Rosenwald & Bro., in Amsterdam, and Miss Mini Weyl-Koch, daughter of Mr. and Mrs. S. Weyl-Koch, of Amsterdam, were married last week.

To Study Cuban Market

Alvero Garcia, of Garcia & Vega, cigar manufacturers, sailed last week for Havana, where he will study conditions in the Cuban tobacco market.

Connecticut Valley Growers Have Big Field Day

President Joseph W. Alsop Praises Spirit of Cooperation Among Members of the Growers' Association—Reviews First Year's Work of Organization.

SPRINGFIELD, Mass., July 28.—Rain apparently had no terrors for tobacco growers or their families, for between 5,000 and 6,000 of them turned out for the first annual field day of the Connecticut Valley Tobacco Association at Riverside Park, Wednesday, despite a steady downpour the greater part of the morning.

The gathering is believed to be the largest of its kind ever held in New England. It also was one of the most remarkable considering the conditions. It is said that a crowd of at least 10,000 would have attended the outing had the skies been clear at the start of the day. At least 90 per cent. of the association's 3,500 members had signified their intentions of being present, and most of them planned to take their families along, says the *Union* of this city.

It was one of the largest crowds ever entertained at the down-river park, and rain or no rain the crowd had a wonderful time. There were no formalities. The affair reminded one of the old Sunday School picnics when father, mother and all the children came and brought their luncheons. There was a get-together meeting late in the morning in the new dancing pavilion when President Joseph W. Alsop, of Avon, Conn., made an address in which he reviewed the results obtained during the association's first year, after which General Manager Fred B. Griffin gave some sound advice for growers, and Judge Levi P. M. Hickey, of East Hartford, head of the field service division, urged everyone to go out and have a good time. He also outlined the program of amusements and sports prepared for their benefit.

Tobacco Was the Theme

The men for the most part got together and "talked shop" with the officers of the association. The women and children went out in search of diversion, and found it in abundance. The park was open to them at all points, and it proved to be a day well spent.

There were many interesting features of the day, but one of the most interesting seemed to be the attitude of individual members toward the association and its accomplishments during the year. It is remarkable, it is pointed out that a cooperative association, formed a year ago in a section of the country which knew little or nothing of such things, composed of men noted for their conservatism in such matters could have timed it so well and everyone be so enthusiastic about it, boosting sturdily for it, and boasting of the results attained.

This has been a poor tobacco year, compared with other years. Last year's crop was a poor one as Connecticut Valley crops are judged. Yet the sentiment expressed at Wednesday's gathering was apparently summed up in the words of a grizzled old veteran of some 70 years, who declared that "the boys certainly have put over something big," alluding to the work done by officers and directors of the association.

This feeling of almost universal approval was evident in President Alsop's reception address, when he spoke to them of the work done during the past year and the hopes held out for the future. It was a friendly audience, one that showed great trust in the man selected to head the organization, and the tribute to him, to Mr. Griffin and the others seemed interested to hearten them in their work and indicated that their efforts have been appreciated.

The get-together meeting started a little late, but a full house awaited President Alsop when, without any preliminaries except the singing of "Hail, Hail, the Gang's All Here!" he rose to give the audience an address of welcome.

As it was the first time they all had been able to meet together, he felt that it was the right time to review the work of the year and perhaps outline the tentative program for the coming year, he said. For a baby organization, the association is a surprisingly healthy infant, he declared, and one of which they should be justified in looking upon with pride.

Reviews Work of the Association

He reviewed the experiences of the past year beginning with July 25, 1922, when the association was formally organ-

"Last year's crop was a poor one," he said. "The tobacco we raised in 1921 and sold last year, brought unusually poor prices. The average paid for our crop was about 16 cents a pound, and many were compelled to sell out as low as from 3 to 8 cents a pound, which represented considerable loss. That was for Havana seed, and broadleaf was about as bad.

"From that experience we realized that our only salvation lay in devising some means for marketing our own crops. We decided to start a new way of marketing and formed this association. It was a big job, we knew, but we knew it was our only salvation for the future.

"The year is nearly over and we are far enough along to take stock. All of the Havana seed expect a small number of cases has been sold, for prices averaging from 29 to 31 cents a pound, a figure far better than a year ago in spite of the fact that crop conditions were not better. All the broadleaf has been packed, although hardly any has been sold. Yet the outlook is for as good returns as from the Havana seed. The prices naturally are not as good as they would be with high-grade crops.

Spirit of Friendship

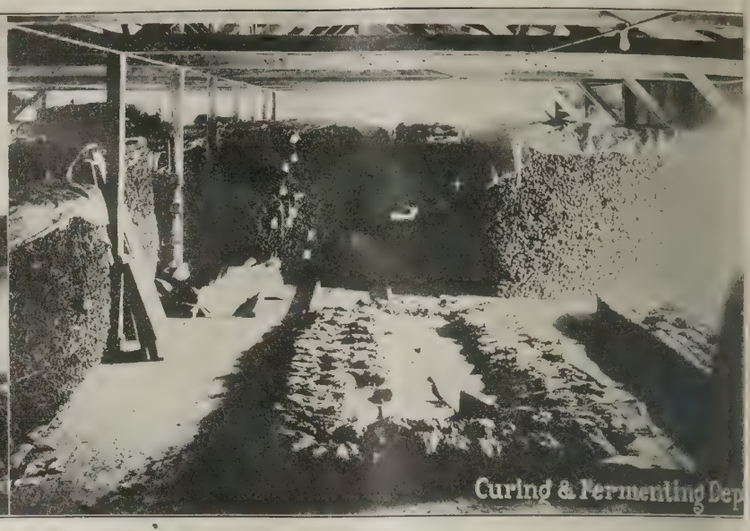
"Another important thing accomplished, for which Mr. Griffin deserves the greatest credit, is the spirit of friendship and co-operation which exists throughout the association. It has been a tremendous asset. It has given us the confidence we needed that the association stood squarely behind us. We are now selling 90 per cent. of our tobacco directly to the dealers. But few of the big dealers are buying elsewhere, and all with whom we have dealt express themselves thoroughly satisfied with the new arrangement of marketing.

"We represent 90 per cent. of the acreage in the valley. The other 10 per cent. is represented by the men who want us to hold the umbrella and permit them to shake the fruit off the tree. They have profited from our experience, and they know that they never would have secured high prices for their crops had it not been for the association. This is a free country, and, of course, they can stay out if they want to, but I predict that the coming year will see a large increase in new members as a result of our first year's experiences.

"The association officers appreciate the forbearance and patience of the members and their willingness to co-operate," Mr. Alsop said. "Most of them realized that the association would not bring high profits immediately if at all, but they realized that it was a distinct advance in the right direction. The association is not perfect and naturally some faults have developed, but in the main the tendency always has been toward improvement. For the coming year, new financial arrangements have been made which will greatly assist the grower. Two valley banks have arranged for a much more liberal credit. Where they loaned about $350,000 in secured notes last year, they are ready to loan $650,000 this year on unsecured notes. It will make it possible for growers to get their money much more easily through the system of open accounts, where during the past year they could only secure their money after the issuance of warehouse receipts."

Mr. Alsop spoke also of the hail insurance plan, whereby 16,000 acres were insured by the association at about half the cost. There were 109 claims for losses, and of this number only one was not satisfied with the adjustment. He announced that the directors had voted to insure tobacco in sheds against fire, a plan which will save 50 per cent. of the premiums over the old way.

Objects of Association



"In summing up, let us consider our objects in forming the association. We

ought to stabilize the industry, to elimiate speculation, to sell our tobacco for hat it was worth based on production osts, and to sell it when the market is eady and the best prices could be obained. We have stabilized prices, surely, nd for the most part speculation is gone. Ve have avoided dumping our tobacco nto the market at the most disadvantageus time for us. We release it now when ne demand exists. As a result of this eeding process, we have secured what nay be termed the highest possible prices. Juring the remaining four years of our riginal contracts I believe we shall demnstrate our ability to stabilize the indusy. We shall tend to keep the young eople on the farms, rather than drive iem into the cities.

"It is significant that we have not had o prosecute a single member, a remarkble record in view of the fact that other ssociations have had to institute many rosecutions. But we have watched for ne violations as rigidly as they. The act is, there was little or no desire on ne part of any member to violate his ontract.

Good Crop in Prospect

"There seems to be no doubt of the utcome now. We have a good crop in rospect for this year, and it will bring ood prices without doubt. When we lant next year we shall know that we re going to get good prices for our rops, that we will get a fair return on ur investment. That alone would make ne association the success we hoped it ould be and now know it to be."

General Manager Griffin Talks

General Manager Griffin spoke briefly, iving some sound advice regarding the reparations of crops for warehousing, elling of things which would work to he advantage of the association and the ndividual growers. Judge Hickey outined the program of sports, and everyone urned out for luncheon. Most of those who had brought basket lunches scatered all over the park to find whatever helter was offered.

The Festivities

McEnelly's Singing Orchestra furished a concert from 1 to 2 o'clock, after which there was dancing in the ballroom hrough the rest of the afternoon. This rew many of the young people, but there were many more who, as soon as the sun ame out, flocked for the amusement ceners, where they took in everything, the oller coaster, caterpillar, swings and all orts of things. Then they tried their uck for the various rewards offered by he noisy ballyhoo men on concessionaire ow.

Mid-afternoon found between 4,000 and 5,000 of them back again in the vicinity of the ballroom, beside which is located he athletic field. A brief program of sports furnished a large amount of interesting competition. The girls from the Hartford office of the association staged a 50-yard race which was won handily by Miss Alice Campbell of Suffield. Gen. Mgr. Griffin and Secretary William F. Whitmore of the association ran a 75-yard dash which ended in a dead heat. They refused to run it off again, and it was suggested by someone that the contestants purposely ran that dead heat.

The male employees of the association likewise staged a 75-yard dash which Charles Massare, of Hartford, won after a struggle with several contestants. Then the association members, more than 30 of them, settled the question of whom could do the fastest 75-yard sprint. There were five preliminary heats, two semifinals and a final heat. Henry Seymour, of Suffield, brought joy to the hearts of the Connecticut contingent by winning a close race from Robert Collins, of Sunderland, winner of second place, and T. L. Warner, of Sunderland, vice-president of the association.

Mr. Warner gave the Massachusetts contingent most of their few chances to enthuse. He played in the seven-inning ball game which closed the day's program, and which was won by the Connecticut boys by a score of 11 to 0. Warner started out to manage the Bay State boys, but finally stepped into center field where he hauled down several difficult fly balls, on one occasion doing a graceful back somersault after catching the ball, but coming up with it securely in his clutch. He made two good hits and tried hard to score for his team, only to be thrown out twice at the plate on close plays.

The game ended the program, and shortly before 6 o'clock the company started for home. All agreed the day had been both profitable and enjoyable and many announced the firm determination to come again another year when, it is hoped, the weather man will do a bit better by them.

Mr. Cullman Delighted With Crop Outlook

Joseph F. Cullman, Sr., of Cullman Bros., Inc., spent a few days in Connecticut last week, inspecting the 1923 crop. He was fortunate enough to see the plants last Saturday, following the beneficial rain of the preceding day, and was delighted with the present condition of the crop, and optimistic regarding the season's yield. In fact, Mr. Cullman described the crop to a representative of TOBACCO as one of the finest he had seen for many a long year.

Cullman Bros., Inc., packers and importers of cigar leaf tobaccos, are raising a quantity of shade tobacco of the 1923 crop on farms at Hoskins Station and East Windsor Hill, Connecticut. The growing of this tobacco is under the supervision of Fred B. Griffin, M. L. Floyd and William J. Hayes.

These plantations have been noted for style and quality of leaf and so far this season the elements have been most favorable to this section. The crops are packed under the supervision of Fred B. Griffin and M. L. Floyd, and warehoused in Hartford and East Windsor Hill, Connecticut.

Until 1922 Cullman Bros., Inc., were not large factors in the growing of shade tobacco, but beginning with the 1922 crop, arrangements were effected with Fred B. Griffin, which have proved so successful that this corporation has considerably increased its acreage in the interest of its many friends in its packing of shade.

While the year 1922 practically marked the inauguration of Cullman Bros., Inc., as factors in the shade industry, this concern had originally grown shade on its Tariffville plantations on a modest scale, which crops were more or less pioneer movements.

Business and Pleasure

I. M. Jacoby, treasurer of Meyer & Mendelsohn, is looking up his Philadelphia clients this week and looks forward to running over to Atlantic City, where his family are enjoying a vacation.

Secures More Broadleaf

Ira Strouse, of Strouse & Holzman, paid a flying visit to Connecticut last week and secured some additional Broadleaf crops for his firm.

Sails for Porto Rico

Meredith Kohlberg, of E. L. Kohlberg & Son, sailed for Porto Rico last Thursday on the S. S. *San Lorenzo*, and expects to stay on the island for several weeks, making his headquarters at the Kohlberg-Gonzales Co., Inc., offices.

Buys in Gotham Market

Morton P. Miller, of the Frank Lewis Cigar Co., of Peoria, Ill., is in town this week inspecting and purchasing fancy wrappers in the local leaf market.

Surveys San Domingo

R. A. Echevarria, of Theyskens & Shaw, who has been visiting Porto Rico, is studying conditions in San Domingo this week.

Pleased with New Crop

Fernando A. Selgas, of Selgas & Co., has returned from Porto Rico. Mr. Selgas is highly pleased with the new crop, of which his organization has secured a satisfactory share of the choicest lots.

Chicago Business Is Showing Considerable Life

Several Important Transactions Take Place Indicating That the Industry Is Progressing—Ryan & Raphael Cigar Co. to Distribute Personality—News Notes.

CHICAGO, July 28.—As reported in our last news letter, W. W. ("Doc") Rosobro, of the New York-Tampa Cigar Co., who had closed an important connection here, now announces that the Ryan & Raphael Cigar Co., exclusive cigar jobbing house, will distribute the Personality line of cigars in this market. This is one of the most important deals made in Chicago this year. The Ryan & Raphael Cigar Co. is the sole distributors in the United States for Lucius cigars made by Coral, Wodiska & Co., of Tampa. This firm also distributes locally Cressida from the E. H. Gato Cigar Co. A large sales force covers Chicago and the Middle West, and is under the management of Walter Woolfson. John Ryan, Jr., is the general manager. The introductory campaign on Personality will shortly go into effect. A large advertising campaign, both in the newspapers and on the billboards, has been arranged for by the New York-Tampa Cigar Co., which will also have a special crew here assisting the Ryan & Raphael sales force in introducing their cigar.

Johnathan Label Sold

The Jonathan label of the Ryan & Raphael Cigar Co. has been purchased by the New York-Tampa Cigar Co., which will manufacture this brand in the future. In years gone by Jonathan had a large following in Chicago and the middle west. For the past few months the Jonathan has been made in Tampa by the Eduardo Gonzalez & Co. It was revived by the R. & R. Co. early in April of this year.

Stolen Cigars Still "Absent"

No trace has been discovered as yet of the 60,000 cigars stolen from Clarence Hirschhorn & Co., as reported last week. The mystery of the "missing cigars," which were stolen from the Chicago Bonded warehouse remains as deep as ever. Clarence Hirschhorn, head of the house, has returned to his desk after spending five weeks at home, recovering from an automobile accident. A "stray" motorist crashed into Mr. Hirschhorn's car and he was badly injured.

To Distribute Benwade Pipes

Fred Schwarz, manager for Landau & Cormack, Ltd., of Montreal, Canada, manufacturers of Hudson Bay Imperial Mixture and Cut Plug smoking tobacco, spent several days here last week. He made his headquarters at the offices of Hargraft & Sons. The latter are waiting the arrival of the first shipment of Benwade English pipes, for which they have just become distributors.

New Size of Perfecto Garcia

A new size of Perfecto Garcia cigars, to sell at 3 for 50 cents, has been placed here. It is known as the Imperiales size and comes packed 3 in foil. Many cigar cases show this new size.

Branching Out

H. M. Schermerhorn, Inc., who now operates six Loop stores, will shortly open two new stores in the Chicago Trust Building. This is one of the liveliest firms here. It carries many brands. The concern will shortly start its introductory campaign on the Personality cigar, and is now painting Personality signs across the fronts of the Schermerhorn stores. This brand from the New York-Tampa cigar Co., will be featured in large window displays as well.

Rumors are flying around that Schulte has taken over the Fair's cigar department. The Fair has for years been known as the largest cigar operator on State street.

Law Showing Real Teeth

The De Jonghe Hotel, at 12 East Monroe street, has been ordered closed for one year by the Federal Court. The order, issued under the abatement clause of the National prohibition law closes the entire building for a period of one year. De Jonghe's several cafes were largely patronized. They have always enjoyed a large cigar business, "but it's all gone" now. The guests were granted two weeks to locate new quarters; same time was given to the cafes to dispose of their food stuff. This is the first time under the prohibition law that an entire building has been closed by the Federal authorities.

Julius Fernback and Matt Wenglev, well known cigar manufacturers, are in Havana on a leaf buying tour.

Julius B. Annis, of Gradias, Annis & Co., of New York and Tampa, accompanied by Mrs. Annis, is here on a visit. Don Julian cigars have a good distribution in this territory, which is quite gratifying to both Mr. and Mrs. A.

William Tobias, the general manager of Iwan Ries & Co., wholesalers, at 104 N. Wells street, has returned from his vacation. He reports having had a good time.

A. Arias is here representing Fernandez, La Rosa & Co., of Tampa and New York. He is featuring La Camporita, a Tampa made cigar.

Package of 12 for 10 Cents

Large billboard signs of Chesterfield cigarettes are displayed. The Liggett & Myers Tobacco Co. is featuring the box of 12 for 10 cents on all the billboards.

Celestino Vega of Celestino Vega & Co., Tampa, was here on a visit to the firm's Chicago office. The firm manufactures the La Vega, a big selling clear Havana cigar in the Middle West.

Sells One of His Stores

George Keissling has sold his cigar store at 22nd street and Michigan avenue to a merchant from Joliet. This location is one of the best on the South Side, and was opened by Keissling several years ago. He will now devote his time to his store at 39th street and Vincennes avenue, and his real estate holdings.

Jacob Rosenberg of Eduardo Gonzalez & Co., Tampa, has returned to his Chicago headquarters after a very successful road trip.

More Sky Writing

Lucky Strike sky writing is again in order, and Mr. Aviator, or rather his "smoke" is seen daily, "high up in the blue," writing out "Lucky Strike" for the Chicago visitors.

New window signs of La Palina cigars are now shown.

Seidenberg Activities

All sales records for new accounts were broken this week, when Harry Friedlander, Frank Murray and George

Progressing with New Building

INDIANAPOLIS, July 28.—Work is progressing at a rapid rate on the new home of the Hamilton, Harris & Co., now under construction at 308-12 North Ninth street, Terre Haute, and it is expected to be ready for occupancy on or about October 1. Being erected at an estimated cost of $66,000, exclusive of the cost of the ground, this new building will be one of the largest and most modern of its kind in the state and is typical of the organization which it will house.

Of re-enforced concrete construction, the building will be faced with brick and stone trim and be two stories in height, in addition to a large basement. The outside dimensions of the building are approximately 63 by 100 feet, and at the rear is being erected a garage 63 by 40 feet. Probably the two big features of the new home is the giant humidor to be located on the first floor and which will be the largest in the state, with a capacity for a million cigars under moisture at all times. This humidor, the moisture of which will be regulated by special electrical equipment, will enable this firm to keep its stock in the best of condition and guarantee the retail trade of securing moist cigars.

A Good Pipe Room

Another feature of the new building will be a special pipe room. Here thought has been given to display instead of moisture. Convenience and efficiency is expected to result to a higher degree in the handling of pipes, due to their arrangement in this room on long racks of special design, and through other special displays. No woman could be more exact in her choice of merchandise than a man is in the selection of his pipe. The new pipe room will enable the company to carry a most complete line, so displayed that every style will be visible and insuring a minimum loss through breakage. Some idea of the number of pipes carried in stock is given by the fact that the present stock represents an approximate investment of $30,000.

The general offices will be located on the first floor, as well as the shipping room and a store-room for broken package stocks of merchandise. The second floor will be mostly utilized for the proper storage of the large stock of merchandise carried at all times by the company.

Looking forward to still greater expansion, the building has been so constructed that three or four additional floors may be constructed on top of the present structure at any time desired.

The present building in itself seems quite spacious for a cigar and tobacco jobbing house, and perhaps would be, but the house of Hamilton, Harris & Co. is infinitely more than that, and represents one of the largest organizations of its kind in the middle west, which has built a phenomenal volume of business on a policy of real service and high quality merchandise. The local organization is an important part of a firm which extends throughout the state, with branches located at South Bend, Kokomo and Evansville, and with headquarters established at Indianapolis. In fact, Hamilton, Harris & Co. are considered the largest tobacco jobbers in the whole United States, with a yearly sales record approximating $12,000,000 and a yearly sale of about 50,000,000 cigars.

The Terre Haute branch of the firm has a territory reaching a radius of about 40 miles in Indiana and extending for some distance into Illinois. Some idea of the sales of the local branch alone is seen in the fact that they buy and sell an entire carload of one popular brand of cigarettes about every three weeks. The war tax on one carload of these cigarettes alone approximates $15,000, a carload being 5,000,000 cigarettes.

D. W. Eggleston, vice-president of the Hamilton, Harris & Co., is general manager of the Terre Haute branch. This firm has the exclusive selling rights in Indiana, and part of Illinois, for the Dun Master, Cinco, Lincoln Highway, Valentine and Harvester brands of cigars all in addition to these lines, jobs of all kinds of cigarettes, tobacco, chewing gum, fountain coca-cola and pipes.

A Big Merger

The local organization was formed the Vigo Tobacco Co., which was founded in 1918, and of which D. W. Eggleston had charge. The merger of the organizations was completed in 1921 and the Vigo Tobacco Co., which was originally capitalized at $100,000, now has a capitalization of $4,000,000.

Thirty employes carry on the work of the organization under the personal direction of Mr. Eggleston. George V. Eggleston has charge of the sales department and officiates as house salesman and manager of credits. The other salesmen Harry Wheeler, Jim Harber, Charl Eberhardt, William Smith, A. J. Switz and Jim Adams, are known throughout the district as salesmen of the highest type. Harry Stanger is in charge of the shipping department and Miss May Alexander has charge of the bookkeeping department.

Will Seek New Quarters

The building in Lafayette, Ind., now occupied by the Bauer's Cigar Store on Fourth street, has been sold to a dry goods company and at the expiration of the present lease the cigar concern will be forced to vacate. A new location has not been selected.

Harris C. Jacobson has bought the cigar store in the lobby of the Consolidated building.

Business Is Prosperous

F. O. Gwin, branch manager of the United Cigar Stores Co., 227 South Illinois street, says the sale of cigars and tobacco provides an excellent guide to existing business conditions. When smokers are prosperous they indulge in high priced cigars. When business slumps they smoke less and buy cheaper grades. Business for this year has been unusually good, Mr. Gwin says. The store being near the Union Station enjoys a large transient trade. Other branch stores are at Pennsylvania and Market streets and 137 North Illinois street.

Reports Crop Conditions Are Being Good

WASHINGTON, D. C., Aug. 1.—T. Hughes, chief of the tobacco section of the Department of Commerce, has just returned from a two weeks' trip in connection with the tobacco survey, which is being made by the Department.

Mr. Hughes visited Connecticut, Pennsylvania, New York, Ohio and Wisconsin, and he reports the tobacco crop condition, as to quality and quantity, to excel the situation last year at this time. Mr. Hughes states that all of the 1923 crop has been lifted from the hands of the grower at satisfactory prices and most of the tobacco is now in the hands of the manufacturers.

Mr. Hughes says that he is getting splendid co-operation in his survey work and he hopes to have the matter well in hand within the next 30 days.—LAMM.

Cigarette Consumption in Aden

WASHINGTON, D. C., July 31.—Although the manufacture of cigarettes has never assumed great proportions in Aden still it has been considered one of the principal local industries, but with the growing popularity of the British cigarettes, which are made from American tobacco, the locally manufactured product is being supplanted by the imported article, according to the report received by the Department of Commerce from Arabia.

Inasmuch as there is a growing demand for cigarettes made from American tobacco it might be well for American cigarette manufacturers to investigate the field more closely.—LAMM.

Detroit Market Conditions Continue to Be Good

Cigar Production Proceeds at High Level—Some Apprehension Felt Regarding Future Prices of Raw Materials—Louis H. Fink Meets Death in Auto Accident.

DETROIT, Mich., July 28.—Conditions n the Detroit markets continue good, with cigar production still at a high evel, although considerable apprehension 'or the future is felt by manufacturers ver the outlook in the raw material narket. The proposed high prices for iew tobacco will make it almost impos- ible for manufacturers to continue mak- ng cigars of the present standard of uality, size and workmanship without material increase in the wholesale rice, and naturally work a hardship on he dealer whose margin at the present ime is small enough.

Sam T. Gilbert, president of the Web- ter Cigar Co., returned this week from short vacation at his Summer home at harlevoix.

Pleased with Business

Wm. Legge & Co., manufacturers of ol Smith Russell and Mark Hopkins igars, report the demand for their prod- cts coming in strong from all terri- ories. Sol Smith Russell is especially trong in this market, and is well up mong the leading eight cent, two-for- fteen cent sellers. The Mark Hopkins rand has not yet been introduced in this narket, but is going strong in other tates where it has been placed.

To Increase Production

The Bernard Schwartz Cigar Corp. as purchased the cigar factory for- erly owned and operated by F. Vega & o. on Gratiot avenue. This will per- it an increase in production on R. G. Dun cigars of about 50,000 cigars a day, nd greatly relieve the oversold condition ow existing on this popular brand.

A Fatal Accident

Louis H. Fink, aged 56, wholesale and etail cigar dealer of Muskegon, Mich., as killed in an automobile accident out- de of the city last Saturday morning. Ir. Fink was one of the most promi- ent merchants in Muskegon, having een in business in that town for the ast thirty years. Coming from Milwau- ee, the city of his birth, to Muskegon irty-nine years ago he started in to arn the cigar business, and a few years ter started in business for himself, perating a jobbing house and three re- il stores. At the time of his death Ir. Fink was manufacturing a brand of s own, and likewise had the cigar privi- ges in the Occidental Hotel. He is rvived by two sons, both living in Muskegon. Funeral services were held last Tuesday afternoon at 4 p. m. from the Elks Temple. Burial was in Oak- wood Cemetery.

Recovering

Walker Monroe, one of the oldest cigar men in Michigan and father of Tom Monroe, vice-president of Spietz Cigar Co., is recovering from an opera- tion he underwent at Ford Hospital a few weeks ago. Mr. Monroe was re- moved to his own home last week, and it is hoped that he will be entirely re- covered in a few weeks.

Full Speed Ahead

The Mazer Cigar Manufacturing Co. is working on capacity production to take care of the increasing demand for El Javana, Dime Bank, Humo, Miss De- troit, Detroit Hand Made, and Macico cigars.

Going Strong

At the office of San Thelmo Cigar Manufacturing Co., the report is thor- oughly encouraging. Robert Bacon, Joan of Arc, Court Royal, La Resta and Saturday Evening Post cigars continue to show the proper speed in all terri- tories.—JIM.

Favorable Season at Oxford

OXFORD, N. C., July 30.—Favorable seasons during the past two weeks have materially improved our crop, the bulk of which is now in top and shows good, smooth texture and rapid growth.

In the northern section the late plant- ings are small and show a tendency to button low. With the good rains Satur- day, this section should show good im- provement by the end of the week.

We look for some curing to begin, in the southern section, about August 6.— W. A. ADAMS & Co.

Greeneville Men Migrate to South Carolina Marts

GREENEVILLE, Tenn., July 28.—A group of men prominently identified with the tobacco interests in this city left this morning for South Carolina, where they will spend the next two months on southern markets. Included in the num- ber were Col. J. S. Bernard, Park Ber- nard, J. S. Bernard, Jr., C. B. Austin, Frank Emerson, J. J. Russell, and God- frey Vann.

Reports from the markets in South Carolina are to the effect that tobacco in that section is unusually good, and indications are that the price will be equally as good if not better than that of last year.

Growing Tobacco Seed

A writer in the Johnson City (Tenn.) *Chronicle* says:

"One can easily produce his own to- bacco seed and if he does so according to the correct method he is just a little more certain of getting the kind of seed he wants without any mixture of varie- ties. I distributed seed enough last spring for about half of the tobacco crop of the county and it was the best seed that could be obtained, at least it was from our most noted tobacco seed producers and I find evidence of mixture even in the one va- riety that could not be purchased for less than $24 per pound no matter how many pounds one was buying. Much of the rest of the seed used in the county was as good and perhaps some of it much better than the seed distributed through me. If we will only take a little time we can save better seed than we can buy and improve our tobacco from year to year, provided our tobacco has done well and we have good vigorous plants of a good variety that doesn't show too much mixture.

Method Outlined

"Go over your field carefully and select thrifty plants that are true to type, avoid- ing those that are too large as well as those that are too small. Allow the seed head to grow up and a few blossoms open, as this enables the stalk to harden and support the bag which you must use to cover it. The blossoms which have opened should be picked off as they have had opportunity to be cross-pollenated. The small leaves and branches just below the flower head should be broken off, also. Bud worms sometimes play havoc with the seed head. If signs of worms are seen, dust arsenate of lead over the seed head. To cover the head use a 12-pound manila bag. Pull the bag as far down on the stalk as it will go without crum- pling the head, then tie the mouth of the bag securely with any convenient string. At the end of the first week the bag should be pulled up slightly as the head may grow through the end of the bag. In about two weeks the bag should be removed, and all suckers pulled off and nothing left but the 'crow-feet' as the three or four limbs in the top are called. In many cases the seed head will continue to bloom an indefinite time, and the late blossoms should be pulled off in order to make the seed all mature about the same time."

NEW YORK, THURSDAY, AUGUST 2, 1923

NICOTINE AS AN INSECTICIDE

The use of insecticide dusts in place of the common spray mixtures has attracted much attention among fruit growers of late due to certain advantages of dusts over sprays, chief of which are the ease and rapidity with which dusts may be applied. Specialists at the New York State agricultural experiment station at Geneva have made a special study of many phases of dusting and have just issued two reports on their work. One of these, Bulletin No. 501, entitled "Factors which Affect the Volatility of Nicotine from Insecticide Dusts" by Dr. R. W. Thatcher and L. R. Streeter, is a chemical study of the effect of different dust "carriers" on the release of nicotine from tobacco dust and from other nicotine containing materials.

The second publication, Bulletin No. 502 entitled "The Aphiscidal Properties of Tobacco Dust," by G. F. MacLeod and S. W. Harman, gives the results of experiments in which different grades of tobacco dust were available for free distribution.

From the chemical studies it was found that in the case of nicotine dusts the common carrier may be placed roughly into three groups, as "adsorbent," such as kaolin, kieselguhr and talc, which tend to check the volatilization of the nicotine; "inert," such as gypsum, sulphur, slate dust, etc., which have no effect on the nicotine; and "active," such as carbonate and hydrate of lime and similar materials, which cause the nicotine to be given off rapidly. Too much moisture was also found to reduce the value of the nicotine as an insecticide.

In general, the experiments with tobacco dust on greenhouse aphids confirmed the conclusions drawn from the chemical tests. In this connection, the station entomologists say "it seems evident that tobacco dusts undoubtedly have a field of usefulness which warrants further investigation. The possibility of growing tobacco at home for use as a dust, the perfection of efficient grinding machinery, the standardization of the commercial preparations, and extensive field tests to determine the range of effectiveness of such a dust are some of the problems which are presented for future attention."

VIRGINIA'S MAIN MONEY CROP

Tobacco has been the principal cash or money crop in Virginia since colonial times and for many years it was used as money. For more than three centuries tobacco has been the largest source of income for the farmers of that state, according to Henry M. Taylor, statistician of the U. S. Department of Agriculture.

Early records unfortunately do not show the acreage in tobacco during colonial times. The exports of tobacco from Virginia, however, show that in 1618 only 20,000 pounds were sent to England. Production increased rapidly for, in 1627, about 500,000 pounds were exported; about 1,500,000 pounds in 1639 and more than 100,000,000 pounds from Virginia and Maryland by the time of the Revolution. In 1790 the production was estimated to be 130,000,000 pounds for Virginia, which at that time included what is now Kentucky, West Virginia and Ohio, and for Maryland. The first census of agriculture, for 1830, reported a crop of 75,347,000 pounds. In 1849 the census gave only 56,805,000 pounds, but the production of 1859 was reported to be 123,968,000 pounds, which was the largest crop recorded until 1902, when the production was estimated to be 136,769,000 pounds. The largest crop ever produced in Virginia was 179,580,000 pounds in 1920.

The price that the growers have received for tobacco has varied considerably. In the money of the times, the Jamestown tobacco sent to England in 1618-20 had a price of 54¾ cents per pound, but by 1639 the price had fallen to 6.08 cents and by 1664 to 3.09 cents. A price of 1.52 cents is recorded for the crop of 1730, and this is probably the lowest price that the growers ever received. From 1735 to 1790 the price ranged from two to five cents. In 1847 the average price was about five cents per pound and in 1853 the average of 10 cents is recorded. From 1866 to 1870 the average price was 8.4 cents; from 1877-1886, 7.1 cents; 1887-96, 6.8 cents; 1897-1906, 7.0 cents; 1907-16, 10.6 cents and 1916-22, 28.6 cents. The highest average price since early colonial days was 47.4 cents for the crop of 1919.

The largest amount that a tobacco crop ever brought the growers was $57,000,000 for the crop of 1919, and the smallest amount received for a crop since 1866 was $2,868,000 in 1871. The 1922 crop was the fourth largest in value ever produced in the state, bringing the growers approximately $42,000,000, a highly satisfactory return

DIRECTION OF THE TRADE WINDS

Advertising activities of the great corporations are always a sure index of the trend of trade, and whenever these big fellows pour out their millions of dollars for publicity, it is certain that they see prosperity on the horizon and are pushing out to meet it.

The following from a prominent journal will show the trend of trade:

"The largest advertising contract of the year has just been placed by the General Motors corporation. It calls for $400,000 worth of advertising a month in newspapers alone for the remainder of this year. Nothing more significant of the general trend of business and the probability of continued prosperity for the remainder of the year has made its appearance than this contract.

"It not only indicates the condition in the automobile industry, now come to be regarded as the second greatest line of industrial endeavor in the United States, but involves a supposition on the part of keen investigators that the people of this country in general will not only have money, but have it to spend for at least six months to come.

"The campaign of the American Tobacco Co., which is one of the largest now being carried on, shows no sign of slackening, and other heavy national advertisers are spending only a slightly lesser amount than in the peak year of 1920, when advertising ran riot. Then, however, conditions in the business world were not truly represented.

"The most significant phase of the campaign of the national advertisers today, however, is the tendency to pay for smaller space frequently on pages 2, 3 and 4 rather than larger space less often on less prominent pages. Expenditure, however, is little changed."

A STUDY OF PIPES

The retail tobacconist should not neglect t study pipes. About any good pipe there a many things to discover and admire. He wh handles fine pipes is almost sure, rather soo to develop a pronounced affection for them. T become well acquainted with pipe values, to b truly appreciative of what there is in a pipe, t be able to judge quality correctly, more than pe functory application is required. It is a fasc nating task to ascertain facts concerning pipe It is desirable for retailers to know what mos influences smokers in choosing pipes. Ho many retailers really can speak authoritativel in discussing pipes? Pertaining to pipes, ther is a woeful lack of accurate information, a though pipes are used so numerously and cor stantly. Because most pipes are identified b brands or trademarks, because the reputation of the principal pipe manufacturers are strongl established, it is not possible for much deceptio to be practiced in selling pies. Nor does the self respecting retailer resort to unfair procedure i making pipe sales.

A good pipe trade means also a demand fo smoking mixtures, and in this connection w commend the example of a tobacconist in th West End of London who goes to the length o making a special mixture for each customer wh desires it. This tobacconist puts before his cus tomer a *questionnaire*,, which he likens to th question and answer passing between doctor an patient before a medical prescription is writter and among the matters which the smoker i asked to state are his objections to his "presen mixture," whether his pipe smoking affects hin in any particular way, whether he inhales whe smoking a pipe, whether his sense of smell i greater than that of taste, whether he is "mostl an outdoor or an indoor smoker," and whethe he has a difficulty in keeping a pipe alight. O receiving the answers to these and other ques tions, the blender has resort to the nest of bin and duly prepares a special numbered mixture— retained as required for the future use of th customer.—*London Tobacco Trade Review.*

FRANKLIN'S JUBILEE

As was indicated in the speeches at Frank lin, when 8,000 people of the dark tobacc district gathered to celebrate the prosperity which has come to them through co-operativ marketing, there is something more to b gained than a mere increase in the price of a farm product. Professor Colvin, looking a the situation from the educator's viewpoint deplored an economic condition which kep girls and boys in the tobacco patches whe the schools were in session. The continue success of the co-operative movement wil relieve the children of this handicap agains their education.

Then, too, the greater prosperity of th tobacco growers will retard the movement o progressive young men and women to th cities. The question of farm labor has be come acute through inability of the farmer to pay the wages that attract young people Price protection for tobacco and other things raised by the farmers will permit the farm scale of wages to be adjusted to compete with the scale of the factories and the stores of the cities.

The farmer feeds and clothes the nation and is entitled to a generous reward for his labor and time and investment. But he is realizing that he must improve his own condition. Politicians have professed love for the farmer, but they have done little for him. They have robbed the consumer to enrich the special interests and have solved none of the problems of the agricultural sections.

If tobacco had followed the price trend of wheat, there would have been no jubilee at Franklin. Tobacco is protected. Wheat sells for what the speculators are willing to pay for it.—*Louisville (Ky.) Times.*

The Shade Wrapper as an Outstanding Feature of Domestic Tobacco

The Connecticut Product Has Forged Ahead from a Condition of Doubt and Criticism to a Leading Position—Its Excellencies Generally Acclaimed—Has Enhanced Value of Valley Lands—Outline Some Routine Work That Must Be Performed.

By ERNEST G. BEINHART

OUTSTANDING as a feature of the domestic tobacco industry of the present time is the Connecticut shade wrapper. Developed within a comparatively short time, it has forged ahead and moved from a condition of doubt and criticism to a leading position in the tobacco markets, where its excellencies are generally acclaimed. Merit, business skill, and favorable conditions of culture and marketing have enabled this unique American product to rise to its present commanding position in the cigar tobacco markets. It has won friends everywhere, brought much wealth to Connecticut, given employment to many men and capital and has furnished American cigar manufacturers with an unexcelled wrapper.

The phenomenal success of this fine tobacco has, naturally, enhanced the farm values of the excellent Valley lands along the Connecticut River where it is grown. And that, in turn, has had beneficial effects in stimulating approved cultural methods and attention to the teachings of agricultural science. Much has been written about the methods employed in cultivating the shade grown crops in Connecticut. But it may be of interest to recall, or outline, some of the routine work that must be pursued in raising heavy Cuban seed shade grown tobacco.

From sowing the seed bed to packing the top leaves is approximately one year. The seed beds are sterilized either in the fall or early spring, the seed sown in April, transplanting is usually begun about the middle of May and finished by June 20. Under normal seasonal conditions the plants grow so rapidly that in 4 or 5 weeks after setting hoeing must be stopped and in six weeks the last cultivation is given.

Within 8 weeks from setting the bud or terminal flower head is picked to retard maturity of the leaves and increase their size. The first 4 or 5 leaves on the lower part of the plant (sand or ground leaves) are picked about this time. The succeeding leaves are picked in bunches, 5 to 9 days apart, depending upon the number of leaves taken at a picking. Usually four pickings of 4 to 6 leaves each are taken. The harvesting of any one field covers about 30 days. The first picking of a normal crop is usually harvested about 60 days after setting; the last picking about 90 days after setting.

If the top suckers, which are in fact secondary seed heads, develop rapidly they in turn must be cut off, as they will drop their petals on the leaves below causing fungi to develop and destroy the leaf tissue, thus making holes.

The harvested leaves are hung on string or nails attached to wooden lath and placed in specially constructed barns to cure. This requires 3 weeks or a month to complete in shade tobacco where no special curing equipment is used, and late pickings frequently hang even longer because of the low temperatures obtaining in the fall.

The "tent," as the covered field is termed, is made by stretching a specially woven cotton cloth over a wire frame. This frame is formed of wires stretched tightly on posts which are set in rows 33 feet apart. The posts are 12 feet long and set in the ground 3 feet, putting the wire frame 9 feet above the ground. The cloth, which is made in sheets 33 feet 4 inches wide is stretched and sewed to the wires. This is continued until the entire field is covered. The effect is that of one great white sheet held above the field. The ends and sides of the field are enclosed with a double curtain of cloth; this is fastened to a wire at the ground and can be rolled up to allow entrance to the tent.

The cloth is known in the trade as "tobacco tent cloth." The grade most frequently used is an 8 by 10 mesh of medium ply cord; practically a coarse, strong mosquito netting. The deterioration of the cloth under the rain and sun of summer and the moisture of winter storage is so great that it is unsafe to use it a second summer. It could not withstand the heavy winds and would be a constant menace. Occasionally a heavier cord, closer mesh cloth is used which will last a second year. Cloth used one year in the Connecticut Valley is frequently salvaged for use on the Florida slat tents or in the West Indies.

The costs of producing shade tobacco have been steadily advancing until at the present time the farm value is more than 100 per cent higher than it was two years ago. The primary item of cloth has greatly increased, fertilizer and other costs have doubled and labor is at war time wages. The industry must successfully weather the present crisis as upon it depends the economic and social existence of a very considerable group of our population.

Shading the field diminishes the sunlight, increases the soil moisture content, decreases the velocity of the winds and maintains a slightly higher humidity and air temperature. The distinguishing characteristics of the shade grown leaf are due to this environment. The direct effect of shading, as compared with the same tobacco grown in the open (sun-grown), is a lighter body, a thinner texture, finer venation, grain and finish and more desirable colors, with higher table yield.

Wind is the chief enemy of the shade grower. In a heavy wind the tobacco is frequently blown over, although the cloth may not be torn. A tall, quick growing plant, it lacks the sturdiness of the sun-grown tobacco and is unable to withstand the high winds occurring in July and August. Leaves may be broken or the stalk so badly bent that they can not be set upright. This may result at picking time in great destruction of the brittle green leaves. Should the cloth be torn greater damage may occur, as in restretching it the tobacco is likely to be trampled down. The use of the better grades of heavier corded cloth and strong careful sewing are the only insurance against such tearing. If the cloth is sewed with stout string in short stitches and the string is frequently tied around the wires the danger of torn cloth is greatly minimized.

Shade tobacco is one of the few crops to be insured against fire during its entire growing period. The inflammability of the cloth makes this crop particularly liable to damage. Burning cloth falling upon the leaves scorches them and destroys their value. Each year there are fires in the Connecticut Valley shade fields; those which may occur during the first and last parts of the season do less damage naturally than those during mid-season when all the leaves are on the plant.

The principal causes of fire are lightning before rain storms, sparks from passing locomotives or carelessly dropped cigarettes and matches. Fireproofing the cloth has been tried, but so far has been unsuccessful. The only method of fighting a fire in a tent is to cut away with sharp knives the cloth which is in the path of the flames, thus stopping their progress.

Hail is not the menace to the shade grower that it is to the planter of sun grown. Only when the cloth is torn by the wind is there danger that the shade tobacco may be hail cut, as ordinarily the hail stones are caught on the cloth. Cloth is the only preventive of hail damage.

Insect Pests

Tobacco insects give less concern to the growers in the Connecticut Valley, perhaps, than anywhere else in the United States. Cut worms and wire worms frequently do serious damage over small areas, but their depredations are local and in most cases the injured plants can be replaced or the entire field reset. Shade fields and those which are unshaded are attacked with equal severity by these pests. The cloth, however, affords protection from the grasshopper and from the moth of the tobacco horn-worm. The former sometimes threatens serious damage to the outside or sun grown tobacco, but a small flock of turkeys will do

good police work and practically exterminate the hoppers and the few worms in the field.

The black flea beetle is sometimes found under the tents, but rarely in sufficient numbers to do appreciable harm. The bud worm, leaf miner or split worm, the borers and other insects which claim heavy toll in the southern fields are unknown to the Connecticut Valley growers and the warehouses are as yet uninfested by the cigaret beetle.

During recent years the tobacco fields of the country have been subject to epidemics of soil parasites which reduced the yield and quality of the crops produced, often to a great extent. New England was no exception and numerous shaded fields were found to be infected with certain parasitic fungi. Practical methods of control have been found which reduce to a minimum the possibility of a recurrence of the trouble. Seasonal influences play an important part in the development of the parasites and with wider adoption of the control methods there is good reason to expect less and less damage.

Grading of shade tobacco is based upon the almost indefinable something termed "quality." Each component part of this whole is important in itself, yet they are so interrelated that it is difficult to arrive at a balancing of their several values. Crop differences are one factor but more important is the element of seasonable influence. The sorting of the splendid 1918 crop, for instance, will demand different standards from those used on the 1915 crop. The grading of fillers by length, texture and simple colors does not serve. Fortunately the type of plant grown over the Valley is markedly uniform. The proportion of width to length varies but slightly and one can usually judge of the leafiness of a particular grade by its quoted length. Again the harvesting of the leaves in several pickings automatically classifies the grades within certain limits. Where four pickings are made the character of the first picking is always typical—being of open grain, porous texture, medium body and light color. The second picking, which yields the largest percentage of wrapper tobacco, is of smooth texture, thin body, light in color, with the favored olive overcast. The third picking is similar to the second but of thicker body and heavier texture and usually the colors have more red. The fourth picking, which includes the tops, is of heavy body although frequently thin, brown colored leaves of red shades are secured which make acceptable wrappers. When not too thick good binders are gotten in this picking. The rest of the leaves when properly handled, make a filler of fullness and aroma, which is unexcelled by any domestic filler and which compares favorably with certain grades of Cuban and Porto Rican fillers.

In sorting as many as 18 grades are sometimes made in one picking. However, these are made because of minor differences and the following four color grades are basic: Light Yellowish Brown, Light Greenish Cast, Greenish Brown, Brown. They are subdivided into thin and heavier texture. Second grades of good quality are made of thin leaves, the colors of which are not complete, the leaves being marked by spots or areas of lack the desired texture are put into the third or binder grades. The heavier leaves are usually classified with the tops.

There are important minor differences in the same grades secured from different pickings; for istance, a light wrapper from the first picking would be more porous and open grained with less lustre and smaller table yield than the same grade in the third picking.

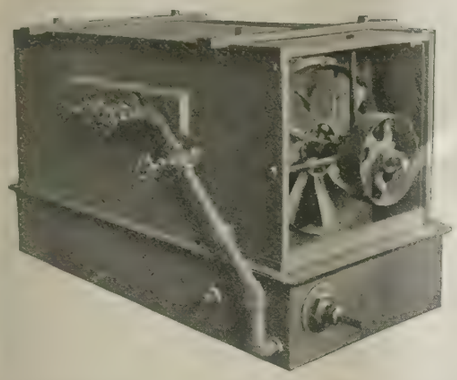
Shade tobacco is also graded by length of leaf. Beginning at ten inches there is a grade for each inch up to 20 inches, then a twelfth grade for 22 inches. This sizing automatically unifies the grades.

Shade grown has proved its worth and the cigar industry has accepted it at its real value. Although its present costs are heavy and its handling detailed, the growers are ever striving to maintain its high quality. Continued experiment in field, barn and warehouse throughout the Valley will keep this tobacco in the front rank. Many local problems are being answered by the growers and as time passes, the present acreage, which will wrap over two billion cigars, will be greatly increased.

A Big Tobacco Crop

Reports from the various tobacco sections of the country show that there will be a large tobacco crop this year, but that it will not be nearly so large as was at first predicted, amounting to only about 10 per cent more than the crop of 1922.

That, however, will be quite large enough. The Burley co-operative, while it sold 150,000,000 pounds for more than the entire crop would have brought if the farmers had not been organized, still has 47,000,000 pounds on hand. It would not surprise the *Interior Journal* if, at the opening of the loose leaf markets this fall, the growers received such small return for their 1923 crop as to cause them to take it to the pool.



Ordinarily, the pool has had a closing date for each year. It doubtless will have a closing date this fall. It would be no more than retributive justice if these fellows caught in a dumping market slump should be refused admission to the pool and compelled to do business with the warehouse interests and the speculators whom they have kept alive for the past two years, in spite of the fact that many of them admitted that the pool had made the high prices they enjoy.

The indications are that tobacco prices this fall will not be as high as they were last fall. With more than 87,000 growers in the pool, the *Interior Journal* does not believe the loose leaf men and the speculators will find such easy picking this fall as they found in 1921 and 1922.—*Stanford (Ky.) Interior Journal.*

THE "EBULATOR SYSTEM" of AIR CONDITIONING HAS NO EQUAL

LET ME PROVE IT ON YOUR PREMISES

Individual Machines for Separate Rooms, or One Large Machine Serving Several Rooms Using Distributing Air Ducts.

A Single Machine (This Type) Will Produce 80% Humidity in a Room of 100,000 Cubic Feet. Perfect Diffusion of Moisture Secured.

A. N. SHEPARD & SON
Growers and Packers of Connecticut Shade Primed and Broadleaf
HARTFORD, CONN.

Mr. D. P. Gosline, July 14th, 1923.
6 Northampton St., Boston, Mass.

Dear Sir:

We have your favor of the 8th inst. and in reply to same would advise that we have used your large humidifier with the Duct System during our last packing season. It has proved satisfactory in every sense of the word. Our tobacco was kept in proper shape during the process of assorting and packing.

We were also very well pleased with the temperature feature, as we were able to regulate the temprature of our rooms from this humidifier except on extra cold days when coils were naturally used in addition.

The smaller humidifier, which we used in our bulk room, gave also pleasing results, and we are sincere when we state that of all the humidifier systems we have investigated, we believe yours gives the best results.

Yours very truly,
(Signed) A. N. SHEPARD & SON,
By G. W. Stewart.

East Tennessee Burley in Fine Condition

GREENEVILLE, Tenn., July 28.—A party of Greeneville tobacco men made a three-day inspection tour of the east Tennessee Burley tobacco section this week, which proved to be most gratifying. Many interesting interviews were had with tobacco growers throughout the section visited.

The local party left Greeneville early Monday, covering sections of ten or more east Tennessee counties, visiting only sections in which Burley tobacco is being grown successfully at the present time and the territory where development is expected.

The party was composed of men who have been engaged in the tobacco industry from almost every angle, some of them practically ever since the establishment of the tobacco market at Greeneville, more than 35 years ago, and who have spent their time and means in an effort to develop this section of east Tennessee as a tobacco center and it is due to their untiring efforts largely that the development of the crop has spread throughout this section.

Farmers generally were found to be interested greatly in Burley culture, eager to get first-hand information as to how to grow, handle and market to best advantage. Particular efforts were made by every member of the party to answer all questions, and in many localities groups of planters, learning of the coming of the tobacco men, had gathered to receive instruction and advice.

Books Distributed

Books on tobacco culture were distributed in all localities and everything possible done to aid the inexperienced Burley planter with his first crop. The members of the party were treated royally by citizens of Knox and adjoining counties. Greeneville boosters feel that the instruction, or get-acquainted trip, will prove of much benefit to the city of Knoxville just now in its efforts to establish a permanent tobacco market there, and the men who have been laboring so industriously to make this possible have been assured of the earnest co-operation of the Greeneville tobacco men in their work.

The party visited Maryville and other points in Blount county, touching Sevier county at a number of points, reaching Dandridge in the early afternoon Wednesday. Some very fine crops of tobacco were seen in all sections; in fact some of the very best seen on the three days' tour, and the successful grading of Burley tobacco in these fine farming communities is no longer problematical, experts say.

Crop Seen More Advanced

The tobacco in these counties is further advanced than in many of the extreme east Tennessee counties, and much of it will be ready to cut during the next two or three weeks.

The tobacco belt of Cocke county was covered, as was also the lower Greene county district. These communities have suffered great damage from the drouth, and on this account not only will the tobacco crop be short, but the corn and hay crops on these fertile farms have been damaged seriously.

So enthusiastic are members of the booster party over their trip that it has been announced that another tour of like nature will be made and on a more extensive scale some time in October, and it is hoped to include in the personnel of the party at that time, representatives of the Johnson City, Abingdon and Knoxville districts.

Those Making Trip

The personnel of the party on the trip this week was as follows: C. B. Austin, President of the Austin Co., Inc.; John S. Bernard, Jr., warehouseman; W. A. Armitage, representing American Tobacco Co.; Wilson Britton, independent buyer; Chas. H. Bewley, postmaster and old tobacco man; James Rush, live stock dealer, farmer and experienced tobacco grower; Don Russell, special demonstration agent, and W. R. Lyon, publicity agent.

Crop in Fine Condition

Taken as a whole, the east Tennessee tobacco crop is in fine condition. The farmers are well satisfied and very much encouraged with the increased tobacco acreage in this territory. It is confidently expected that this section will sell from 18,000,000 to 20,000,000 pounds of Bur[illegible] during the coming season.

To Visit Porto Rico

Robert Gans, of Max Gans' Sons, I[illegible]., sails for Porto Rico on August 9, to supervise the stripping of the new crop at the five plants of his organization.

Manila News Notes

The Germinal Cigar & Cigarette Factory Co., Ltd., of Manila, P. I., have appointed Frank E. Childs & Bro., Inc., of 79 Front street, New York, their sole representatives for the distribution of their products in the United States for all territory east of the Rocky Mountains.

The Germinal brands are so well known to the trade generally—as a result of extensive distribution during past years—that it is hardly necessary to refer to the high quality and intrinsic merit of these cigars.

They are today one of the foremost and best Manila brands imported into the United States. The products of this company are all manufactured from the highest grade of Isabella tobacco, grown on the company's own plantations.

The factory in Manila is recognized by all who have visited the Philippine Islands as one of the landmarks of the city of Manila, and stands unique as one of the most up-to-date, sanitary and extensive factories of the cigar industry.

The exacting supervision of the merchandise produced and the outstanding fact that no shipment from this factory has ever been received in this country other than in perfect condition, guarantees perfection in every detail.

* * *

As pioneers in the Manila cigar business in the United States, Frank E. Childs & Bro., Inc., assure the trade of experienced attention to their inquiries, and guarantee complete satisfaction at all times. It is their desire to assign exclusive territorial rights and they assure positive protection where they are granted.

* * *

In a communication to the Manila Ad Agency, New York, R. J. Stadler, cigar manufacturer and jobber, of Nassau, Bahamas, declares that there is a good market for mild Manila cigars in the islands, and requests samples and prices.

* * *

C. H. Hilbert & Co., cigar importers and distributors, of 80 Wall street, New York, are preparing to open up territory for the La Solera cigar, manufactured by the Insular Cigar Factory, Manila, P. I., and will feature the same sizes and the same quality of Class A cigars under this label that have won such a large distribution on the Pacific Coast under the direction of the Marks Bros. Cigar Co.

* * *

Charles A. Bond, United States tobacco agent for the Philippine Government, visited Indianapolis and Cincinnati last week to study market conditions and the new overland freight situation.

Mr. Bond noticed a distinct improvement in the Manila trade and found that job lots had all been cleaned up, and that heavy orders are being placed for stabilized goods.

* * *

David F. Morris, United States tobacco agent for the Philippine Government, is now at San Francisco, Cal. Mr. Morris reports a very heavy increase in the Manila trade on the Pacific Coast.

Importers in that section are depending on consumer demands to stabilize their merchandise, and are placing large orders with the factories at Manila.

There are no job lots or surplus stocks in that territory. Trade is invariably normal, while the steady increase experienced during the past three months, compared with the slump in the East and the West, indicates the growing interest

Spain's Monopoly Profits Show Increase

WASHINGTON, D. C., July 31.—According to a report received from Commercial Attache Chas. N. Cunningham at Madrid, the operations of the Tobacco Monopoly of Spain (*Compania Arrendataria de Tabacos*) for the fiscal year 1922-23 have been more profitable than any previous year of its existence.

During this period, the sales of tobacco products aggregated 394,652,712 pesetas as compared with sales of 346,101,167 pesetas during 1921-22. After deducting the expenses, there remained a net income of 235,274,307 pesetas in 1922-23 as compared with 194,530,881 pesetas in 1921-22. Of these amounts, the State Treasury participated to the extent of 227,133,251 pesetas and 187,338,361 pesetas, respectively, and the Compania Arrendataria de Tobacos received 8,141,055 pesetas and 7,192,319 pesetas, respectively.

The sale of stamps produced a net income of 197,903,260 pesetas in 1922-23 as compared with 196,070,798 pesetas in 1921-22, from which the State Treasury received 196,278,527 pesetas and 193,916,281 pesetas, respectively, and the company received 1,624,733 pesetas and 2,154,517 pesetas, respectively.

A dividend of 11 per cent, free of taxes, was distributed to the stockholders of the company.—LAMM.

Bayuk Bros. Make Good Showing

Income account for the six months ended June 30, 1923, of Bayuk Bros., Inc. (name changed from Bayuk Bros., Inc., to Bayuk Cigars, Inc., effective on and after Aug. 1, 1923), as submitted to the New York Stock Exchange, shows a net profit after expenses and depreciation but before Federal taxes of $592,113, equivalent to $29.65 a share earned on the $2,000,000 outstanding 7 per cent cumulative sinking fund preferred stock.

Income account for the period shows as follow:

Six months ended June 30, 1923—Earnings from operations, $1,147,848; other income, $18,700; total income, $1,166,548; expenses and depreciation, $574,435; profit before Federal taxes, $592,113.

Balance sheet as at June 30, 1923 (subject to adjustment upon completion of physical inventory), shows as follows:

Assets—Cash, $391,124; open accounts and bills receivable, $1,422,776 sundry debtors, $81,201; inventories, $4,040,188; revenue stamps, $53,249; investments, $15,037; land and buildings, equipment and fixtures, less reserve for depreciation, $734,928; cigar making machines, $97,267; prepaid insurance, $25,706; refinancing expense, $136,334; total assets, $6,997,811.

Liabilities—Loans, $861,379; trade creditors, $130,213; sundry creditors, $27,066; accrued wage payable, $28,508; accrued taxes, $2,076; Federal taxes, 1922, $80,420, and 1923, $74,014; dividend payable July 15, 1923, $60,610; mortgage payable, $20,080; reserve for first preferred sinking fund, $15,000; capital stock, 7 per cent cumulative sinking fund preferred stock, authorized 50,000 shares par value $100—issued 20,000 shares, $2,000,000; 8 per cent second preferred stock, authorized stock 13,000 shares par $100 each, issued 12,805 shares, $1,285,000; common stock no par value, authorized 250,000 shares, issued 77,121 shares, $1,668,088; surplus, $749,856; total liabilities, $6,997,811.

General Cigar Co. Shows Increased Earnings

The General Cigar Co. for six months ended June 30, 1923, reports surplus of $1,081,711 after charges and federal taxes, equivalent after preferred and debenture preferred dividends to $4.22 a share earned on $18,104,000 common stock. This compares with $1,016,075, or $3.83 a share on the $18,104,000 common stock in first half of 1922.

Income account for six months ended June 30, 1923, compares as follows:

Gross earnings	$4,270,822	$3,861,477
Exp. tax, etc.	3,138,951	2,876,777
Net	$1,131,871	$984,700
Other income	78,885	89,061
Total income	$1,210,756	$1,073,761
Interest on loans	129,045	57,686
Surplus	$1,081,711	$1,016,075
Pfd. dividends	175,000	175,000
Deb. pfd. divds.	142,450	147,350
Com. dividends	543,120	543,120
Surplus	$221,141	$150,605

Balance sheet of General Cigar Co. as of June 30, 1923, follows:

Assets: real estate, equipment, etc., less depreciation, $2,292,600; investments in

Lorillard 7s in Investment Class of Securities

High property values, earnings and financial strength behind P. Lorillard Co. debenture gold 7s combine to give this issue a high standing among industrial bonds.

At the close of 1922 the $9,998,150 outstanding bonds of this issue were backed by net tangible assets of $54,755,553, of which $47,992,832 or five times the amount of the bonds was in the form of net liquid assets.

Since 1915 the company has made remarkable progress as evidenced by the fact that during this period it has more than trebled its profit and loss surplus, and almost doubled its net working capital. Latter item, on December 31, 1922, was more than twice total funded debt of $20,615,000. Profit and loss surplus was $14,673,330, compared with $12,593,419 at the close of 1921.

P. Lorillard's earnings in 1922 were $8,133,398 after federal taxes, or 6½ times $1,231,163 interest on funded debt, compared with earnings of $7,616,545 to cover approximately the same charges in 1921, when interest was earned 6.06 times. For the last six years earnings have been at the average annual rate of 5.8 times interest charges.

While the debenture 7s are not secured by mortgage, the company imposes a charge in favor of the trustee upon all of its property and net earnings for the benefit, first, of these bonds, and, second, of the 5 per cent debentures, over which they constitute a prior claim.

Bonds are not callable, but the company is required to pay to the trustee, during January of each year, the sum of $100,000 for purchase of debentures at not exceeding 130. To date $1,021,000 of the issue has been so retired.

Price range for the year to date is: High, 116½; low, 111⅞. For 1922: High, 119¼; low, 112. Investment return, based on present price of 116½, is 5.58 per cent.—*Wall Street Journal.*

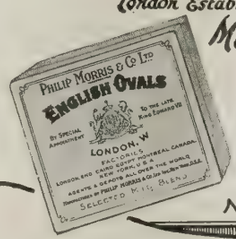
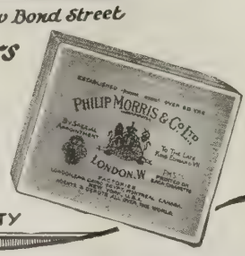
Leaf Stocks Show Decrease

WASHINGTON, July 31.—A decrease of approximately 150,000,000 pounds of leaf tobacco on hand was reported for the second quarter of 1923 by the Bureau of Census today. On July 1, it stated that the aggregate of tobacco stocks was 1,607,844,445 pounds, as compared with 1,846,555,045 on last April 1, and 1,616,396,137 on July 1, 1922.



The outstanding reduction was in burley, stocks having declined from 463,000,000 pounds on April 1 to 404,988,000 on July 1. In the bright yellow district of Virginia, Georgia and the Carolinas, leaf tobacco on hand July 1 was 438,667,032 pounds, compared with 490,426,128 on April 1.



For New York, the bureau reported there were 3,981,716 pounds on hand July 1, as compared with 4,235,366 pounds on April 1.

Havana Tobacco Market Continues To Be Active

Export Houses Still Buying Bundles Wherever Obtainable—High Prices Are Prevalent—Cigarette Strike Comes to an End—Manufacturers Reduce the Price of "Fags."

HAVANA, Cuba, July 27.—In the Remedios section the export houses continue buying bundles from the first and second hand as well as ready packed tobaccos. The owners of the piles (pilones) naturally asked and got high prices for their tobacco, and the respective buyers certainly must have resold these goods at still higher prices. All these purchases in the first place are for North American houses, but the South American firms also have already placed orders with their local representatives, buying probably much less than they expected, but paying the prices. There is no doubt about it, that in Remedios the upper grades are scarce this year, but at the same time there is likewise no doubt about it, that the exporting houses, who tried to reduce the cost of the tobacco for their customers, through buying in bundles and pack, obtained just the contrary result. There is not a single packer—engaged or not engaged in packings—who does not admit that tobaccos were entirely too high priced.

Cigarette Strike Ends

The strike of the cigarette laborers is finished. Some of the large factories agreed to the pretensions of their laborers and at the same time reduced the price for a package of cigarettes to what it was before. The rest of the factories, willing or not, had and will have to follow this movement. Probably the same thing will happen with the laborers in the packing establishments in several sections of the Santa Clara Province, where packers, who paid too much for their tobacco, are trying to squeeze a few cents out of the laborers, who, in consideration of the relatively small quantity to be selected and packed in carrots, asked higher wages. Many packers do not select the tobacco at all, but just pack it in two or three grades for stripping purposes. This method naturally takes the labor away from so and so many people. The low grade of Vuelta Abajo as well as of Remedios, at least as far as the Botes are concerned, will sell well and sell fast and the best consumer of these grades is the Island itself. The local cigarette factories, as well as the large cigar factories in the country, have bought large quantities. A factory from the southern part of the Island bought several thousand bales in Havana in one day.

The tobacco of the Remedios section cannot all be judged as being "alike," for there is a big difference from one section and one farm to another. There are really first-class packings, the 3rd Capaduras of which are just as good and as leafy as the 2nd Capaduras of other packings. All tobaccos not fit for stripping purposes will have to be sold to the cigarette factories, as Europe most probably will not be able to pay the prices for loose leaves which people are getting for the Botes at present.

Of Vuelta Abajo, that is the so-called export tobaccos, very little has been sold. The tobacco is first class, but as the packings in general only started a short time ago, these goods need storage. There are some excellent lots in the market and many American buyers, who have stayed out of the Remedios game, will find a good selection among good and heavy Vuelta Abajo and Semi Vuelta Fillers. In the Low Land Section, however, large sales took place.

Don Ramon Nava returned the other day after having secured in the San Juan and Martinez section over 3,000 bales of the finest factory Vegas for the celebrated Gener Factory. Also Don Juan de la Puente is going often to Vuelta Abajo in order to inspect the various packings his company has under way there, having secured a first-class lot of tobacco right at the start.

In the Partido section, where packings have been started and are going on, several large sales have been made, although the main Partido buyers from the north have not shown up yet.

In the far east part of the Island there is very little tobacco left, most of it being sold to exporters and cigarette factories. —GALLO.

Tobacco Consumption Shows Increase in Germany

WASHINGTON, D. C., Aug. 1.—A cable from Alfred P. Dennis, Special Representative of the Bureau of Foreign and Domestic Commerce in Europe, states that although the present economic condition in Germany has changed the buying policy of the German manufacturers from wholesale to hand-to-mouth methods, it has not reflected unfavorably on consumption. He states that German tobacco consumption has increased in a proportionate degree to the reduced scale of living, and that workmen supplement their meager lunch by increasing use of tobacco. Consumption of chewing tobacco, for which Kentucky, Ohio and Maryland leaf is used, is steadily expanding. Pipe tobacco consumption has increased 50 to 60 per cent, and the use of cigarettes fully 100 per cent. above prewar years.

Although the production of tobacco in Germany has increased since the war, the quality of the leaf is inferior and substitutes for tobacco are being used on a broad scale.

Important Suggestions

It is suggested that factors in the tobacco industry in this country might secure additional business by carrying warehouse stocks in Germany, in order to effect sales to the some thirteen hundred small tobacco manufacturers who are unable to carry large stocks of leaf but are quite capable of purchasing small quantities of spot goods.

Answers Complaint Made by Federal Commission

WASHINGTON, D. C., July 31.—William L. Hoffman of Sacramento, Cal., has filed an answer with the Federal Trade Commission in connection with the tobacco complaint issued against him in cases 1032 and 1033.

Mr. Hoffman states in his answer that the Sacramento Wholesale Tobacco Dealers' Conference which consisted of tobacco jobbers of Sacramento was only in existence for three months in 1921, and only three meetings were held, following which the organization was dissolved. Inasmuch as there is no such organization at this time, Mr. Hoffman asks that the complaint against him be withdrawn.—LAMM.

D. Dreux's Activities

D. Dreux, president of D. Dreux, Inc., has returned from a highly successful business tour of Pennsylvania. Mr. Dreux will next visit his New England clients, with whom the fancy Sumatra wrappers which he recently purchased at the Amsterdam and Rotterdam inscriptions are in great demand.

Tampa Tidings

To Erect New Building

TAMPA, Fla., July 28.—The real estate branch of the firm of Sanchez & Haya are having plans drawn for the construction of an attractive brick building on Seventh avenue near Sixteenth street. The building will cost about $35,000 complete. Plans are being prepared by the office of Architect F. J. Kennard. The new building will have a frontage of 70 feet on Seventh avenue and will have a depth of 95 feet. It will have stores on the first floor and offices on the second. The structure will be modern throughout and will add considerably to the good appearance of that portion of Seventh avenue on which it is to be located, say the architects.

Returning from Havana this week are Manuel Corral, José M. Diaz and F. R. Diaz.

Francisco ("Pancho") Arango, has returned to Havana to select leaf from his recent purchases.

Arango & Arango are being kept *more* than busy. The demand for Don Sebastian in Buffalo, where Jos. P. Snyder operates, and who is pushing this brand all along the line of his chain of stores, together with the efforts of George W. Stocking, keeps business on the increase.

Back in Business Harness

Joe P. Perez and bride arrived in Tampa Monday. Joe is busy looking over factory affairs before going to Havana to buy leaf. He reports their business this year, up to now, as more than double the same period last year, and anticipates no let up in demand.

Eli Witt Factories Combined

The Eli Witt Co., operators of the San Luis and Hava-a-Tampa factories, have combined these two factories, in the recently enlarged building of the latter company. The San Luis factory was producing Tampa Straight and Above the Average, each five centers. By far the biggest portion of the production of the combined factories now operating as one plant will be the Hava-a-Tampa brand. Last year the Witt factories turned out about 40,000,000 Hava-a-Tampa and in the first six months of 1923 more than 35,000,000 were produced. With the fall trade to swell the totals it is anticipated that the record of last year on Hava-a-Tampa will be more than doubled. June was the best month which the Witt factories have ever enjoyed. This company, in addition to manufacturing cigars and jobbing its own and other products, operates a string of retail stores about Tampa. These stands are illuminated by large electric signs, bearing the one word, "Eli."

Don Julian Doings

Leo Gottsegen, president of Gradiaz, Annis & Co., is still vacationing in the East. It will probably be several weeks before he returns to Tampa. J. B. Annis is out hitting the high places and is keeping bunches of good orders in transit. The factory is busy.

An Interesting Engagement

Menko Rose, of Rose & Wobbe, announces the engagement of his youngest daughter, Miss Edith Rose, to Jerome Kohlberg, eldest son of Eugene L. Kohlberg, of E. L. Kohlberg & Son and Kohlberg-Gonzales Co., Inc.

The Florida-Georgia Wrappers

QUINCY, Fla., July 28.—The 1923 Florida tobacco is a normal crop. By that is meant that it is the kind of crop that it is always hoped to get. It is the second crop in succession that Florida has produced that contains a very high percentage of the finer grades of tobaccos. This is of course heartening to every one who has the industry at heart. It is indeed of more than passing interest to those manufacturers who have been forced to pay the unheard of high prices for the imported wrappers. Right here in this county wrapper tobacco is being produced surely equal to anything that has been imported from across the seas, possessing all the characteristics of what good wrapper tobacco should be.

The colors of the 1923 Florida are uniformly bright, lustrous and are coming through the first bulks with the finish that good tobacco only can acquire. The body colors are light browns and light with the delicate olive green shading uniformly spread over them. The growing season happened to be such that sufficient rains fell or heavy dews prevailed through the time the crop was in the field that there was no retarding of the growth in the field. These weather conditions continued on with the curing so that regular program of firing in the barns and the humid atmosphere of the evenings the final colors secured naturally are ideal L V shades. E. G. Beinhart, who for the past two months has been in charge of plant breeding investigations for the Florida-Georgia Tobacco Growers' Association, has this to say relative to the 1923 crop:

"The burn of the crop is right. I have had occasion during the past 60 days to see nearly all of the fields in the Florida area, and throughout the curing season watched the development of the burn in the barns. A 'normal' crop of course has a 'normal' burn—clean cut, fire line, absence from coaling, gray or white ash and fire holding capacity in the leaf. Out of the hundreds of leaves that I have tested during the curing season just closed I did not come upon a leaf that did not come up to the standard of the trade.

"It is remarkable and quite unfortunate that recent Florida crops have been questioned as to their burn. There may be occasional crops here and there which do not have all the factors of burn. This is true of tobaccos everywhere and in all seasons. But there is still the misapprehension existing in certain quarters that Florida is uniformly a slow burner. No more so than Connecticut or Wisconsin. Every apprentice used to be instructed that Florida was a poor burn. I remember one of the first lessons that was given me by my father and later by others of the cigar makers was that 'Florida did not burn.' That was something over twenty-five years ago and the science of fertilization has progressed tremendously in that time. Poor burning tobacco is nothing more than a legend now. I have been watching Florida tobaccos intimately since 1909 and the advances made in that period have been one of the finest achievements in American agriculture. There is probably no more progressive set of tobacco growers in this country than you will find in the Florida-Georgia district. During the past generation they have made wonderful advances in every branch of their art, and the greatest advance has been in the subject of fertilizers. Florida wrappers do burn.

"Another fallacy of the cigar manufacturing trade has been its reticence to universally use the prime grades on high grade cigars. Florida has been identified with the low priced cigar; it has gone on the 'cheap' cigar. No care has been exercised in selecting the binder or the filler. Most times when a poor burning binder or filler are used the wrapper gets the credit. This is, of course, wrong. The real facts in the case should be studied. Furthermore there is no wrapper that excels Florida for use on the finer blends, and the sooner the trade realizes this the sooner they will discard the higher priced wrappers and use quality Floridas. And the low priced cigar will be improved by allowing a wider use of better fillers—this, too, may help in

(Continued on page 40)

CAUTION

THE LA ROSA DE PARIS CIGARS are not genuine unless our name (Starlight Bros.) is printed on the labels attached to the inside of the box. Every box bears our name in order to protect smokers against unscrupulous sellers who are trying to supplant the well-known LA ROSA DE PARIS CIGARS by inferior goods.

San Francisco Interested in "Merger" Reports

"General Sentiment" Shows Seemingly Groundless Fear for Small Dealer—Passing of Jay D. Van Buren a Surprise and Shock to Friends—Simon Myrson Has Serious Accident

SAN FRANCISCO, Cal., July 25.—The big tobacco merger is the main item of conversation among the trade of San Francisco. While the general sentiment is that it is not a cheerful omen for the small dealer, it is generally realized that it is but a part of the process that is going on in every line of business.

A creditor's settlement is being made for A. C. Hirschfield Co. The Hirschfield Co. has been doing a general jobbing business for some time, and not long ago bought out a small factory. It is rumored that the concern will be obliged to cease the jobbing business, and confine itself to its excellent retail stand on Ellis street.

Jay D. Van Buren Passes Out

The death of Jay D. Van Buren, secretary and treasurer for S. Bachman & Co., came as a surprise and shock to all his many friends. He passed away Sunday last after spending a few days at home fighting off a threatened attack of pneumonia. It developed that he had a weak heart, and when he went to bed and to sleep, it was to never awaken again. Deceased leaves a widow, a married sister and a brother. He was 62 years of age, and had been with the Bachman Co. for 25 years, after having spent several years in the journalistic field.

Hit By Automobile

Simon Myrson, one of the old-time retailers and salesmen, was hit by an automobile last week, and had his skull and one leg fractured. He is in the French hospital doing very well, but it will take some time to recover.

George Saalburg has been appointed Pacific Coast representative of the New York-Tampa Cigar Co. and the Porto Rican American Cigar Co. J. R. Brimstin will take up the specialty work Saalsburg has been doing, while the latter visits the coast jobbing points.

Rode the William Goat

Mack Horn was a visitor from Los Angeles for a few days. He stopped to ride the Masonic goat for the third time, and has now sufficient practice so that he returned to the Angel City prepared to ride any business goats that might come along.

Mrs. Leona Potage is taking several weeks' vacation, visiting friends and relatives in Oregon. She has intrusted the books of the Golden State Leaf House to Dave Horn.

The Regal Cigar store has for a time been under a new management, which believes in making the place a good looker and using every bit of available space to display goods. That is the reason the business has been increased 100 per cent.

J. C. Wood, representative of J. C. Winter of Red Lion, Pa., who has been visiting the city, has left on his return to the factory.

Jack Loftus, who has been with Schubert Bros., is visiting in Denver with his folks.

John Berry, who has been with A. C. Hirschfield & Co., has joined the sales force of Jos. Rinaldo & Co., and is busy "drumming" up the trade.

Frank Tuchler, doing the Richmond, Mission and South Market street territory for Jos. Rinaldo & Co., reports sales keeping up admirably for this season of the year. They always do for Tuchler.

Conspicuous Successes

Arthur Bachman, of S. Bachman & Co., is still with his family in Paris. M. Peters, sales manager for S. Bachman & Co., reports the R. B. Invincibles, the New Currency and the Gato Key West-

GREATER PRODUCTION AT LESS COST

are all making exceptionally good
vings. He says that some of the
d owners who thought that high-
ed cigars were about all that were
th pushing are beginnig to learn that
e are smokers of five cent cigars in
y section, no matter how aristocratic,
that they have been overlooking some
itable bets.

m Israel, the Jackson street jobber,
rts that the Garcia y Vega, for which
s distributor, is holding up a good
Business is keeping up very good
Sam Israel.

ave Horn reports everything very
t in the leaf business. Many small
ories are scarcely running, and the
er ones running more to be prepared
the holiday trade than from any
to fill present orders.

O. Reeder, prominent cigar dealer
anta Rosa, is making a long auto
through the northwest, visiting Salt
, Yellowstone Park and other points
terest.

Effective Efforts

s. Rinaldo & Co. report that the San
e campaign appears to be bringing
h while results. The window dis-
, wherever made, are increasing the
for the San Felice cigar.

irman Bros., Horn & Co. are pleased
eport that the California cigarettes
are manufacturing are developing at
y satisfactory rate. Barney Levy, of
, is now featuring the entire Ehr-
Bros., Horn & Co. line.

Tobacco Flavorings in the Irish Free State
